Mr. Hanrahan seemed unconscious of the quandary Jule was in. Whiles he sauntered at her side, happy-hearted, not touching her but fiddling with his straw hat, which was immaculate; and whiles he pitched into her causing her to shriek faintly, forget Blatch, protest, squirm and avow that he was pulling her all to pieces. Whereupon the young lion would make velvet paws again. As it chanced, he had hit upon the very sort of treatment calculated to win confidences from Miss Horrocks, whose middle name was horseplay.

"Aren't you the limit?" she gasped appreciatively after one of these romantic onslaughts. Still breathing hard she said: "I do love to wander under the stars away from all those people—there's no use talking. There's nothing like the open air, is there?"

The village street was in fact deserted, for the Pavilion's effect upon the population was like that of a magnet upon iron filings. But before long they saw two figures approaching, which turned out to be Jim Sanderson with Gertie Furlong on his arm. As the couples passed each other the two girls inclined their heads and smiled graciously, but Sanderson could be heard saying: "Sinners certainly stand in slippery places, as the Good Book says," before his voice got indistinguishable.

"Who's your friend?" inquired Hanrahan.

"Don't you recognize him? That's our man Friday, who spoke to me a while ago on the floor."

"He seems to make a specialty of Scripture."

"Oh, nobody who amounts to anything pays the slightest attention to what he says! He's just one of the characters about town. He's an odd stick if ever there was one and he just seems to take delight in going round saying disconcerting things."

"He said something then," replied Hanrahan, who came to a full stop and looked across the street blandly. Jule, who felt that Blatch now lurked in every shadow, twitched his elbow and did not at first follow the direction of his gaze. When she did she saw that he was gazing at the sign reading, "This safe is not locked," which had been hung from the knob on the front of the safe in the strong glare of an incandescent. The watchman was walking up and down outside now, but at a later hour he would likely snatch forty winks.

"What could they have been thinking of to hang up such a sign?" said Jule under her breath.

"As a matter of fact they acted on my recommendation," replied Hanrahan. "I put it up to them this way: If these yeggs who are making the breaks get past their watchman they won't have any trouble getting into an old-timer like that, locked or not locked. So why not save the safe at least?"

"You think they might blow the whole thing into the middle of next week? What is their professional term for it now?"

"Putting soup on the hinges," said Mr. Hanrahan abstractedly.

"How do you come to know so much, if I may make so bold as to inquire?" asked Jule coyly and with an implication of utter trust in his status as a respectable citizen so that it was entirely safe for them to joke together in a matter of this kind.

"Well, sweetness-and-light, I run for a firm that makes safes and installs them, and the maker of a safe is running a race with the breaker, don't you see?"

"Of course you would have to be up to all their little tricks," Jule agreed thoughtfully. She waggled her ring finger and looked at the central fires in the diamond unemotionally.

"Naturally, in order to guard against them. You know the worst kind of a thief is a locksmith who leaves the paths of righteousness."

"All the same," she said anxiously, "uncle was furious when he heard about that sign. He's taken every last cent he owns out of the bank and put it in his own safe. He said a man who talked of making a safe safe at the expense of what was in it was a madman and not to be trusted with other people's money. He's awfully outspoken, you know. Some think there'll be a run on the bank if it don't change its tactics."

"His own safe is pretty much of a broken reed," said Hanrahan. "I told him that I could get into it in ten minutes or less by a little ear work on the combination, and he looked at me as if he thought me capable of beating up money."

"You don't say! Then I suppose a professional burglar would make short work of it."

"I should say so! Of course I'm what is known as a good safe man myself," he added jokingly. "I've worked on safes all my life."

"I hadn't intended to breathe this to a soul, but I know I can unbosom myself to you and it won't go any farther: He took my entire personal fortune out of the bank along with his own money and that's in that safe at the present moment."

Hanrahan whistled long and low.

"That's bad," he said seriously. "That puts an entirely new light on the situation. As a matter of fact, little girl, if I had any money in that safe right now I would take it out and bury it before I would allow it to remain there."

"Oh, dear, now I am in a quandary!" sighed Jule, who was in danger of forgetting Mr. Blatch entirely under the loom of this greater danger. "Are you sure you did everything in your power to convince him?"

"Everything but tie the safe round his neck and heave him off his own wharf."

"I'm afraid that would hardly answer, would it?" said Jule with a pale smile.

"What form do your securities take, if it isn't too personal a question?" inquired Hanrahan, moving on with her again.

"I'm ashamed to confess I've never laid eyes on them. Fancy! You see, Uncle Jed is executor of the estate and holds it for me until I am twenty-five or until I marry, and he's as close-mouthed—he says I'll learn all in good time."

"Until you marry?" repeated Hanrahan softly.

"Of course that won't be for years and years," she said, turning him an indifferent cheek.

"I don't want to alarm you," he went on, "but have you ever considered the possibility that he may have gambled it away in stocks? He was certainly complaining about the state of the market the other morning when I looked in on him."

"Do you mean to insinuate that my uncle would be guilty of any such gross breach of trust as that?"

"Well, not your uncle, of course. But if another man situated as he is should have overstepped and lost everything what's to prevent him from pretending to take the securities out of the bank and arranging to have his own safe robbed at just such a time as this? Wouldn't that clear his skirts?"

"Do you suppose it's ever been done?" quavered Jule.

"Many a time," responded Hanrahan, whose voice had grown very grave. After a few steps he said with a return to his jocular manner: "Of course in your case I don't really suppose there's reason to worry. But it would be a good joke, wouldn't it, if we were to break into the safe ourselves and come to him with the contents in our hands just in order to convince him that what I say is so?"

"Wouldn't it?" cried Jule, fascinated, but keeping her thoughts in the realm of pure speculation.

"The trouble is, I suppose the store is locked up."

"That part of it would be easy enough for a determined man," she flashed with one of her sudden inspirations. "If anyone was so minded they could get up through a trap there is under the counter—at about half tide. He uses it for getting up lobsters. You know he makes a specialty of them in the summertime."

"As it happens, it's about half tide now," observed the runner with a glance at the water. They were halted in the middle of the commercial district. All sorts of waterside buildings were heaved up here, departing variously from the perpendicular, some of them well propped with solid side props. "What do you say? The skiff to my speed boat is lying out at this wharf end. We could pole in under."

"Nonsense!" retorted Jule in a thin voice, and feeling that it was time to get a better hold on the realities. "Really, I think I'd better be wiggle-waggling home."

"Think twice. He may not be leaving money enough to jingle on his tombstone and the sooner you know it the better."

"Oh, I know better than that!"

"If you know everything and I know nothing tell me what I dreamed last night," quoted Hanrahan in yet more confidential tones.

"What makes you say that?" whispered Jule, strangely moved.

There was no answer. Raising her eyes, she caught sight of two tall figures swinging toward them through the silent street. Herself shrouded in shadow, she felt that she was unperceived. She was equally sure that one of the two men was Blatch, not so much by his western ocean roll as by the pure parabolic traces made by his cigarette. No other man known to her could put the fag-end from him so expertly.

"Let's just dodge out onto the pier a minute," she faltered, embracing the lesser of two evils.

The man with Mr. Blatch was Jim Sanderson. Gertie Furlong, feeling one of her sick headaches coming on, had left him at her gate and he had had the good luck to run into Sam Blatch on the next corner. Personally, as he had told Gertie from the first, the man gave him a pain. But if Jule was fond of him that was all that was necessary from their point of view, and Jim's one hope now was to prevent Blatch's running across Jule before she had left the company of Hanrahan. Plans for the double marriage would now be pushed forward with all speed—if satisfactory to Blatch.

On falling into step with him, however, Jim could not but see that his motions were anything but aimless. He went along rapidly and nothing Jim could say could draw him out or deflect him in the least from his course, which seemed to be taking him toward the lower business district. So in almost total silence they came abreast of the alley into which Jule and her escort had dodged so opportunely and indeed so recently that the trail of the perfume still lingered.

Apprised by an undeniable whiff of that arrogant perfume that he was in Jule's neighborhood, Jim felt a tingling necessity to head back toward the better-lighted district and he consequently asked Blatch if he would not care to bowl a string or two. Blatch shook his head. For some reason best known to himself he too had hauled up short and begun to make himself a cigarette, a token of there being a crisis of some sort at hand.

The cigarette made, he hung it out negligently at one corner of his mouth. He struck fire by running the edge of his thumb nail well into the tip of the match, but first he lifted his arm into the air so that the whole effect was as if he had snatched fire impiously out of nowhere—out of the heavens.

"I understand you are thinking of getting into double harness too," said Jim casually. "How do you feel as the fatal day approaches?"

Blatch was gloomily silent and his bulbous lips shone in the expanding light of the cigarette, after which darkness fell again. He looked down, flicked the ash and nothing was heard but the long weary whistle of his exhalation.

Jim's thought was that the man probably considered his silence more civil than his speech.

Blatch in point of fact was hardly conscious that he was not alone. He looked down the alley steadfastly. The perfume's first brilliance was fading out, but Jim now felt certain that the man's suspicions had been roused and that he was lingering there on the assumption that something fishy was in progress. If so, he was not deceived.

This particular portion of the wharfage had been built up out of planks wrenched from the hulls of condemned schooners, rock hard and brine soaked for the most part but having here and there patches of dry rot which made them dangerous to the tread of heavy animals. One of them in particular, near the wall of the fish market, had been stove in apparently by a horse's hoof and a considerable hole remained which had never been plugged.

From this hole there came a tiny flash of light.

"What was that?" said Blatch in thick tones.

"A spark of phosphorescence probably," replied Jim, but he gave up the day for lost. At the same time a certain theory of the case occurred to him and he drew his keys softly out of his pocket. Blatch had dropped his cigarette and had fallen to his hands and knees, with rigid jaw and staring eye applying himself to the hole. Without trying to distract his attention Jim fitted his key into the lock of the ship chandler's front shop and entered, swinging the door to noiselessly behind him.

"his is altogether too realastic for my
o" said Jule. "I can't help it if it is
'n uncle's place, I have a feeling come
e me just as if we were breaking and entering. Don't you feel like a cat in a strange garret yourself? Oh, don't look at me like that! I shall begin to think you are the real thing."

"Well, it's no errand of mercy, is it?" inquired Hanrahan. "We've started it and now the thing is to get away clean."

"I think you might refrain from using these awful professional terms," whispered Jule. "They give it *such* an aspect. As it is," she continued, shaking in every limb, "it's got crime written all over it from start to finish. Are you getting anywhere with that door?"

"What was that?" hissed Hanrahan, stopping the movement of his fingers. Jule had just breath enough to utter the words, "Scooch down, can't you?"—feeling the flesh creep on her body all the while. Her companion snapped his light off and there they were in the thick of that fearsome shop, not knowing from what quarter to expect attack or even whether an attack was meditated.

For the life of her she couldn't help reaching out her hand and touching him—it all seemed so unreal. But what her fingers first came in contact with was the cold barrel of a revolver and then as she said to Sade Haskins later she very nearly passed away in her tracks.

"Burglars will always have my sympathy henceforward," she told Sade. "I think it takes more downright courage than to commit suicide."

In point of fact what they had heard was the swish of waters under the building occasioned by the wake of the little excursion steamer which had just slipped into its berth. Jule scarcely knew when Hanrahan resumed operations, so taken up was she with her own predicament; but she presently heard him say, "Here it comes," and the heavy door swung open at one solemn stride.

Even then she lacked animation to take proper advantage of her chance or even to utter a word of protest until she saw him draw out of one of the lower compartments a bundle of crisp money newly minted in notes apparently of large denomination and held together by a broad red elastic.

"I think we've gone quite far enough," Jule whispered at this stage.

Mr. Hanrahan only dropped the money negligently into his side pocket and was next absorbed in the contents of a long bulky yellow envelope, pulling out different items and reading what was on the front faces of them.

"Here's your share of the loot," he said, passing it over his shoulder. "A nice little thing, but not very negotiable. Bonds mostly."

"I think I'll just have you put it back without looking inside," she said in shaky accents. "And I'll thank you to put back that money you just dropped into your coat pocket, Mr. Hanrahan."

"What? Not weakening, little girl, are you?" he said. He snapped off his light, peering through that maze of tackle tensely, and Jule's nervous reaction brought her once more into his neighborhood with a slight gasp.

Fairly encircled, she heard him murmuring into her very ear the words, "What do you say to our beating it together? That speed boat of mine is the fastest thing along this coast. All you have to do is to take what is yours. It's yours when you marry, you know."

Jule now somehow saw Mr. Hanrahan stripped of the last vestige of his sheep's clothing; and then she knew that no less a one than the dreaded yeggman known to fame, shrouded in the dark and smiling his wolf's smile, held her in his clutches.

"Are you going to put that money back in the safe?" she whispered.

"Not this side of the Jordan," answered the professional.

"I shall scream," uttered Miss Horrocks, but the dictating ganglion that caused her heart to beat behind that Nile-green band of pussy-willow silk seemed to have forsaken its function.

"If you utter a sound you're a dead woman!" answered Mr. Hanrahan in a polite whisper. He laid a sheet of paper on top of the safe and unscrewed the cap from his fountain pen. "Now," he continued, "write at my dictation."

Jule took the pen and cramped her fingers round it more from force of habit than free will.

"My dear uncle," said Mr. Hanrahan in distant tones, "you have only yourself to blame in this transaction. Owing to your tyranny I have been forced to take what was mine, using my own poor judgment as to ways and means. Do not try to follow me. I shall be happy, though far away. Your affectionate niece, Jule Horrocks."

"You have really written him a nice little letter," he said, inspecting it closely. "Now then we will pigeonhole it and make for the ladder."

With a despairing heart Jule saw that she and she alone was to be made responsible for this outrageous theft. Indeed was it not true that the full burden of it should be rightfully laid at her door? She it was who had suggested the means by which they had got at the safe. Steeped as she was in this atmosphere of crime, Jule could not but wonder if the opinion she had formerly held of herself as an honest girl were not ill founded. She had lost her bearings. For the fraction of a second it even seemed to her that perhaps flight with Mr. Hanrahan was best, all things considered. There is no accounting for what will come into a person's mind in times of stress. Even the best people play the involuntary host to ideas of dubious moral quality.

Jule's revulsion of feeling was instant and now she felt that if she still had a place in the world of righteous men it was by the side of solid Mr. Blatch, whose countenance had grown more precious than rubies to her. How could she ever have questioned the eligibility of that rugged soul? If he was not a charmer in the full sense of the word he was at least a man you could put some dependence in. He would certainly not sanction an escapade of this character.

But alas, how small was the likelihood of ringing him in aid! The trap door yawned for her and if a film octopus had lurked below she could scarcely have regarded that hole in the flooring with more horror. Perhaps she was bidding good-by to the scenes of her girlhood forever!

Poor Jule, pale phantom that she was, could not hold her knees so close together that they would not knock, though she was quite the reverse of bow-legged; and even at the risk of death she felt that she must lay her hand over her swelling heart or fly in pieces. This motion brought her elbow sharply against a ponderous something hanging there behind her, which moved and gave out a deep note like a cathedral chime.

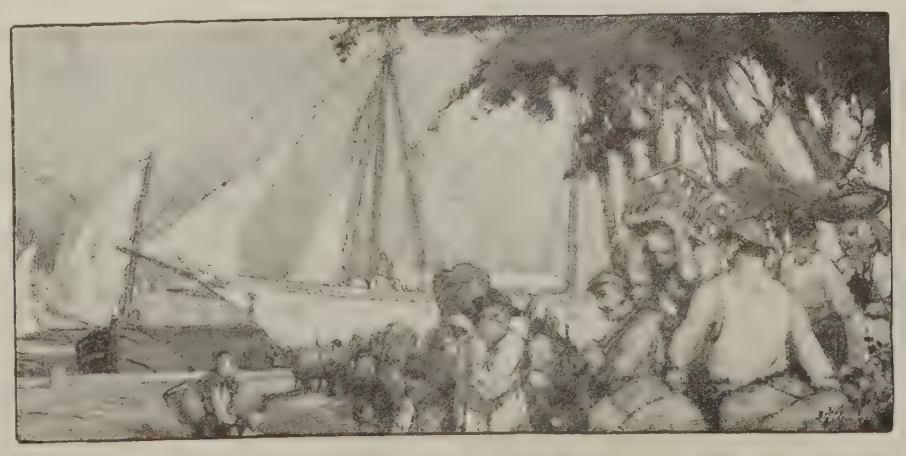
It was the ship's bell.

What followed had for Jule rather the opportuneness of a happy dream than the angles of reality. Unless her eyes deceived her, she saw Jim Sanderson risen out of the midst of a coil of six-inch stuff and covering Hanrahan with a weapon of some sort; and on the heels of this a racket resounded from the outer shop, occasioned by the forced entrance of Mr. Blatch, whose last mental image of any great clarity had been of Jule in evening dress floating amongst the piles which upheld the shop. After a vain endeavor to seek her out at the wharf end he had returned to the shop as offering the best chance of a meeting.

He came lumbering in like a great honest workhorse. More than anything in the world Jule wanted to return to him, but before doing that she knew that she would have to say a clarifying word or two regarding her situation here at this hour of the night and in such dubious company.

It was a case for inspiration and she fell back upon one all but bodily. Mr. Blatch said nothing; he saw nothing indeed but guilty Jule half fainting in their midst, who with a backward viperous look toward her companionable yeggman cried "Trapped!" in merciless shrill tones—and so it was she snatched the fat out of the fire.

Then before anyone there could speak she threw her arms about Blatch's neck and putting her cheek against his in a passion of welcome, whispered, "I can explain everything, darling," and with a glance at Jim full of understanding, which seemed to say that she would take charge of her own case, she transferred Blatch's ring—behind his back—to her engagement finger.



"The one thing I take exceptions to is your both keeping me in the dark about it all," said Gertie when she and Jim were talking it over on the outskirts of her sunken garden. "You two conspirators, you!"

"Jule was afraid the state of your nerves wouldn't warrant your knowing what she had up her sleeve," Jim answered.

"Well, I don't know how she found strength to go through with it," sighed Gertie. "To play a part as she did and give him to understand that she was heels over head, and all the time leading him on to that final moment when she stood confronting him. The constable says he seemed some surprised—and I don't wonder at it. 'Take it from me, the girl is there,' he said, when they were leading him away. Just you think, he had laid his plans to rob the bank too and they say now he must have given a sleeping potion to the watchman, because he was found asleep later, with his gun on the sidewalk, and they might have walked away with the bank itself and he never have mistrusted a thing.

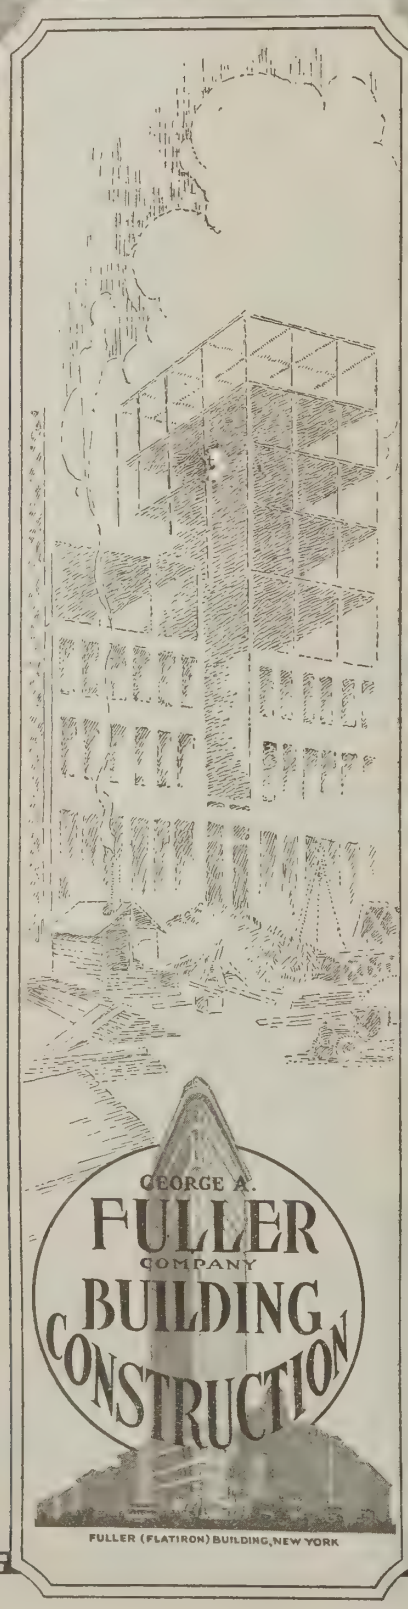
"And to think that you and Jule had it all arranged that you were to appear on the scene when she struck that bell. How one frail woman could summon the courage passes my understanding. I should think some of her critics would feel cheap. Jule says herself she never put in such an evening in her life and never hopes to again. Why she was practically forced, she says, to make love to the man and enter right into his plans, to bring him to the point where he would open the safe and look at her securities.

"Imagine what her state of mind must have been! You know she got a scratch an inch long on one of her limbs getting up that awful ladder and never once mistrusted it at the time, she was keyed up so. But she told me when she came to get her clothes off her and saw this great streak of blood on that white silk she just took one look and down she went in a heap. Isn't that always the way? We seem to bear up under the big trials of life better than we do the trivial ones. I asked her how she came to suspect him in the first place and she said she knew he was bad because he hadn't any hair on the backs of his hands, and it seems that's a sign of their being degenerate. I guess there's no fear for you on that score, is there?"

"How is Blatch feeling about the wedding to-morrow night?" inquired Jim.

"He's coming round. Though he was awfully grouchy at first and so slow of comprehension. He says he doesn't see the need of her taking it on herself to go through all those theatricals under the shop. Really I sometimes think that glimpse he had of Jule's securities is all that is keeping him up to the mark. It's Jule's attitude that I can't understand. She was *so* lukewarm and now she's so devoted she can't seem to do enough for him. I don't see what she can possibly see in him. How are you going to explain such a right-about face?"

"Everybody to their own taste, as the old woman said when she kissed the cow," responded Jim inscrutably.



"Fuller-Built" Landmark

THE building of a terminal such as the Pennsylvania Station, in th heart of New York City, called for experience in building co struction and engineering service embracing practically every know phase of building work, and ability to solve many new problems th had never presented themselves before in a building operation.

Working in close harmony with the architect and engineers of th Pennsylvania Railroad, these problems were met and handled by th George A. Fuller Company in a way that is typical of the charact of service that is available to any architect, engineer or owner.

Other notable Fuller-Built Terminals are:

Kansas City Terminal—Kansas City
Javis Hunt, Architect, Chicago

Chicago and Northwestern Railway Terminal, Chicago
Frost & Granger, Architects, Chicago

Michigan Central Terminal, Detroit
N. Y. Central Railroad Co. Architects
Geo. H. Webb, Chief Engineer

Wabash Depot, Pittsburgh,
Theodore C. Link, Architect, St. Lo

Hudson Terminal, Hudson Tubes, New York
Clinton & Russell, Archite

The New Pennsylvania Railroad Freight Terminal, Chic
Price & McLanahan, Archite

Canadian Pacific Terminal, Montreal
Frank L. Ellingwood, Chief Engin

Whether your contemplated building operation is usual or unusu there is experience here that will aid you to solve it most effective and economically.

Consultation is invited through any of our offices.

There were not enough places on the chart to ... the chore: "I took a full bath on each day of the ...hat is checked—X."

...I thought that there were 3,000,000 children in the ...ted States enrolled in the modern health crusade and ...he was perhaps the knight most perfect and most ...ut reproach filled her with elation and made it easy ... to stand up straight. There were moments, when ...Curwin commented enthusiastically upon the chore ...of Miss Oliver, when Miss Oliver stood so straight ...e was in danger of falling over backward.

...all the while an obscure knight, scorned by Miss ..., was slowly creeping upward in the chore scores, ...hreatening to equal the peerless champion. It might ...d that out of the grime that had obscured his face ...ck for years a Roland was emerging to challenge her ..., but the name of the knight was Mick Grogan.

Out of the obscurity that had—so to speak—covered his patched breeches and faded shirt Micky Grogan was first dragged by Knight Daisy Oliver the very day Miss Curwin proclaimed the six-row tourney.

"And so," said Miss Curwin, facing her six rows of boys and girls, "we are going to have a real tourney such as the knights had in days of old and I will keep the score of each row separate, and the row that wins will have an honor flag. The row that has the best score for the ten days will win. Now, are there any questions?"

There were six rows—three of boys and three of girls—and from them hands rose until it seemed to Miss Curwin that every hand was in the air.

"Now, now," said Bertha Kubelik excitedly; "now, Chore Eight says I got to be in bed ten hours or more every night, Miss Curwin, and—now—I ain't got no bed, because I sleep in a cot."

"A cot is the same as a bed," said Miss Curwin. "Whatever you usually sleep in is your bed."

"Miss Curwin," said Daisy Oliver, "I don't have to sleep with any windows open, do I, because I sleep outdoors on my sleeping porch—and it don't have any windows, only screens. So I don't have to have any windows open, do I? Because Bertha she says ——"

"Anyone who sleeps outdoors or on a sleeping porch can count as sleeping with the windows open," ruled Miss Curwin.

One by one the questions were answered and the hands fell. It was evident to Miss Curwin that the tourney would be a success. Already a fierce partisanship was developing between the rows. Across the narrow aisle between their seats the blond and inseparable Ferris twins were indulging in a whispered controversy.

"'Tis, too!"

"'Tain't either!"

"'Tis, and I'll tell teacher if you drink a single drop. You're a cheater if you say you didn't when you did!"

"Dorothy Ann! Gladys!" said Miss Curwin. "What is the trouble?"

"Well, grape juice is a injurious drink, ain't it?" demanded Gladys. "Because Dorothy says it ain't, and it is, ain't it? And she can't either say she didn't drink a injurious drink if she drinks grape juice, can she? Because she drinks lots of grape juice."

At such moments one cannot hesitate.

"Grape juice is not an injurious drink," ruled Miss Curwin.

"Yah!" said the Dorothy Ann twin triumphantly to the Gladys twin; "just because you don't like it you think I got to stop drinking it!"

As the less violent knights subsided, their simple queries answered, it became evident that others were prepared to maintain the rights of their rows to the last bitter swish of toothbrush across tooth and to protest every irregularity that might benefit an opposing row.

"Miss Curwin, now," said Bertha Kubelik of the second row, "Rosa Lagomarcino she ain't wholesome when she now sleeps in her undershirt, is she?"

"I don't no such thing!" declared Rosa. "I don't sleep in it, because I don't wear none."

"She does too!" insisted Bertha. "Her mother, now, sews her into it."

"Only winters," Rosa declared. "Summers not. My mother she should take a chance I should maybe take off my undershirt and lose it winters and get sick by my lungs, Miss Curwin. But summers I don't wear none—no, ma'am."

"Does that answer your objection, Bertha?" asked Miss Curwin.

"If she don't believe it," said Rosa, her black eyes snapping, "she could come out in the hall and I show her once I ain't got no undershirt on but my skin."

Bertha seemed to be satisfied, and Miss Curwin—glancing over her six militant rows—had an inspiration.

"I am going to appoint a captain for each row," she said. "If there are any other questions that come up the knights may ask the captains and the captains may ask me. If there are any objections to anything or any protests they can be told to the captains and the captains can tell me."

She paused a moment while she let her eyes run over the faces before her.

"The captains will be," she said, "Row One, Rosa Lagomarcino; Row Two, Bertha Kubelik; Row Three, Daisy Oliver; Row Four, Michael Grogan; Row Five, Edward Petzoff; Row Six, John Schultz."

Instantly Miss Oliver's white and plump hand shot into the air.

"Daisy?" said Miss Curwin.

"Please, Miss Curwin, it ain't fair," said Miss Daisy, "because all my row has two hands to wash and Micky Grogan he only has one hand, so it ain't fair, because his row don't have to wash as many hands as my row does."

Miss Curwin looked from Daisy to where Micky Grogan sat, his left coat sleeve doubled at the elbow and its cuff fastened to his shoulder with a safety pin.

"Aw, gee!" said Micky scornfully. "If she's goin' to kick about dat I'll wash me hand twicet. I know what's eatin' her—she's scared she'll be beat."

"I am not!" declared Daisy. "But his row hasn't got as many hands to wash."

"I am sure Michael would be glad to have another hand to wash," said Miss Curwin. "I shall rule that it is only necessary to wash as many hands as you have."

"It ain't fair!" declared Daisy.

Miss Curwin glanced along Daisy's row. In the mouths of many of Daisy's rowmates were great gaps where the first teeth had departed and the second had not yet come. Even in Daisy's pretty mouth there were gaps from which the pearls had fled.

"If we began making handicaps, Daisy," Miss Curwin said, "we would have to deduct quite a little from your

row's score, too, because your row has so few teeth to brush. Your row has a great many teeth missing, Daisy."

"Well," said Daisy, turning to look at her row of lady knights, and then she took her seat suddenly and said no more. She was a wise captain—the missing teeth vastly outnumbered the missing hand of Row Four. Captain Daisy knew when to file a protest, but she knew equally well when to let the protest go by default. Some of the mouths in Row Three seemed to call less for a toothbrush than for a vacuum cleaner, there being little but a vacuum to clean.

During the days of the tourney—if never before—the chore cards of the pupils of Miss Curwin's room reached perfection. For the moment health and hygiene surpassed Thrift Stamps and tin-foil gathering as matters of vital interest and sources of conversation.

There were incidents that shook the class to its center, as when Mamie Best came to school weeping because during the night she had fallen out of bed without wakening, and feared therefore that she had failed in Chore Eight, which required her to be in bed ten hours or more, while she had slept part of her ten hours on the floor.

As captains of Row Three and Row Four the pink-and-white Daisy Oliver and the red-and-freckled Micky Grogan held their respective rows so strictly to the spirit and letter of the eleven chores that before the morning that began the eighth day of the tourney it was evident that the honor flag would inevitably be won by Row Three or Row Four.

Knight Daisy had for the six little lady knights in Row Three a method of maintaining the proper morale that was different from that used by Knight Michael, for Micky's one fist—however thoroughly it might be washed—was hard and to be dreaded.

"Lemme look at yer neck, San. All right! Lemme see yer finger nails. All right! Lemme look at yer neck, Rocco. All right! An' don't you go an' fergit to wash yer ears like you did once, or you know what I'll give you, see?"

He illustrated with a swing of his right fist against his own jaw, but a tempered swing, not the short-arm jab his faithful knights knew they might expect if they neglected a chore. For Micky was a scrapper when there was need of scrapping. He had learned because it is unfortunately the pleasure of some small boys to pick on those who have lost a hand or are otherwise seemingly easy conquests. Micky had early learned that he must protect himself, and now he was usually left in peace, for he had also learned that one fist can be at a disadvantage against two, and he fought close in so that he could parry and block with his stump of an arm while his right gave short swift blows.

Knight Daisy on the other hand used all the social wiles.

"I guess my mamma'll let me have a party if my row wins, but I guess she won't if it don't. Anyway, I guess she wouldn't want me to 'sociate with anybody that didn't do her chores."

Before the eighth day of the tourney the party was an assured fact—if all the little girls of Row Three bore themselves with knightly honor during the entire ten days. Nor was this difficult, for the chores were not hard—especially for little girls. Row Three having duly impressed its parents with the necessity for a supernormal record bathed as it had never bathed before. Every day was checked by each and every child where the chart said, "I took a full bath on each day of the week that is checked—X." They mourned that there were not more days to check.

For Micky Grogan's knights the schedule was somewhat more difficult to maintain. Micky himself had to wait until the shades of night had fallen before he could be sure of the washtub, for if he got up in the morning before his mother needed it to do her taken-in laundry work he would have had to cut short his ten hours in bed chore, his mother was such an early riser. Washing his hand did not bother him; he had long since learned how to give it a good cleaning by rubbing it on a scrubbing brush submerged in the hand basin. He could attend to his five finger nails with a stick pointed and stuck point up in any crack or crevice. His mother's unalterable objection to open windows he overcame by making his bed in a hammock on the small back porch, and the other chores were simple.

On the morning of the ninth day of the tourney Miss Curwin called the leaders of Row Three and Row Four before her.

"I wanted to tell you, Daisy and Micky," she said, "that your rows have made really wonderful scores thus far. Both of the rows are perfect for the first eight days. Unless you have some unreasonably bad scores to-day and to-morrow one of your two rows is pretty sure to win."

"Dere ain't nobody in my row goin' to make no bad score, I betcher!" said Micky. "He'd better not!"

"My row either!" said Daisy.

But after school Micky thought it as well to gather his faithful round him and give his final instructions.

"Nobody don't want to throw me down to-morrow, see?" he said. "Us an' them girls is scored up jess the same an' they ain't goin' to fall down, and if one of yous does we're goners, see? You got to wash your hands and everything. Don't none of yous go and fergit to drink a glass of water before each meal or nothing, or I got it in for yous. Git to bed early, see? 'Cause maybe the house might burn down or something. Don't take no chances. Do like the chart says."

"Aw! We're goin' to, ain't we? You do like the chart says yourself," said Bud Craggin. "You jaw too much."

"Don't you fret about me," said Micky. "I wouldn't skip a chore if you killed me. Not to-morrow, anyway."

Mrs. Grogan was herself deeply interested in the tourney by this time. When Micky came to supper she asked, "Have ye washed yer hand, Micky?" And demanded to see it before she would serve him. She listened with pride when he told her his row was jousting on even terms with Row Three for the honor flag.

"Are ye right sure ye took a glass of water, Micky?" she asked anxiously as he raised the first forkful to his mouth.

"Sure, I did! I ain't fergittin', you bet!" he answered.

"I left the tub on th' back porch for ye," she told him, "for yer bath, an' full of water it is at that. An' Micky——"

"Yes, ma?"

"I've got to be takin' Mis' Oliver's washin' home, so I'll be lockin' up th' house before I go. I've slang yer hammick on th' back porch for ye, thinkin' maybe ye'll be wantin' to go t' bed early t' git th' full tin hours' slape. I put yer toot'-brush on th' porch railin'."

"Yes, ma."

So Micky retired to his hammock after his bath for a night of the soundest of sleep, and his mother locked the doors and windows safely, and then—as Fate would have it and as she had not deserved—fell down Mrs. Oliver's back steps and broke her leg.

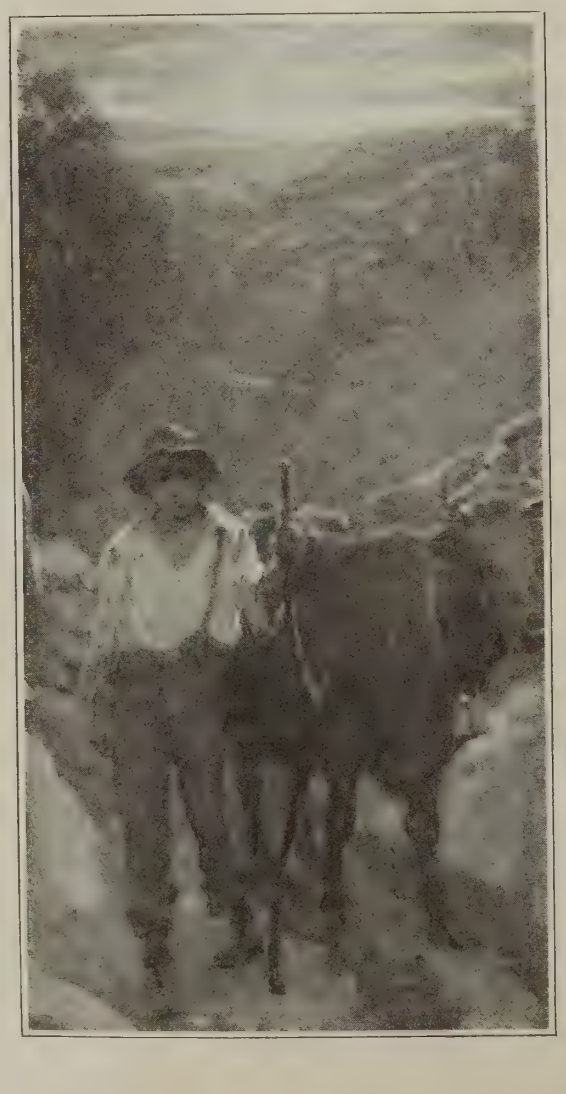
When Micky awakened and tumbled out of his hammock he knew by the slant of the sun that he had put in the full requirement of hours in bed—and more, but his mother was not yet at work at her washtub. He beat on the back door, not knowing yet that she was on her back in one of the beds of the Westcote Hospital, and when she did not answer he decided to get that day's full bath out of the way. He filled the tub at the spigot under the back porch and plunged into it. He rubbed himself down with the towel that hung beside the kitchen door. He brushed his white teeth. He cleaned his finger nails. He took ten and then ten more deep breaths.

And still his mother did not open the kitchen door.

Micky sat on the back steps and waited. Now and then he looked over his shoulder at the closed door of the kitchen. He was getting hungry. He went to the faucet under the back porch and washed his hand. He did his duty by his finger nails. He took the cracked tumbler to the faucet and filled it with cold water and set it on the step. He did not mean to forget the glass of water before each meal on this most important morning.

And still his mother did not open the back door.

At half past eight Micky became restive. The duties of the captaincy of Row Four demanded—he felt—that he be



at the schoolhouse gate to give his knights the once-over and to make sure that their faces and ears and necks had been chored beyond question. He pounded on the door again and listened. His mother, he decided, was not in the house.

That she should not be in the house did not strike him as particularly strange; she sometimes went out washing and she might have gone early this morning. In that case he would have nothing to eat until noon. Even this did not dismay him; it had happened before. He turned from the door and went slowly down the steps and raised the pail of before-meal water and put the edge of the glass to his lips.

And then he paused.

How could he drink a glass of water before a breakfast that he was not going to have? Breakfast! He might have no dinner and no supper, and he visioned the eager cast of Row Three rising in her place in the class and holding an imperative hand until Miss Curwin bade her speak. He could hear her saying: "It ain't fair, Miss Curwin, because Micky Grogan didn't drink a glass of water before meals to-day because he didn't have any meals," and Miss Curwin saying: "Of course, if Micky didn't have meals he could not drink a glass of water before them, but did not do Chore Four and your row wins the honor flag, Daisy."

Micky put the glass of water beside him on the step and scowled at the back fence. A fine one the fellows would think him if he was the one to fail the row when he was captain and all! And then he had the great idea.

Four minutes later Daisy Oliver on her way to school stopped and stared over the low picket fence at Micky in the side yard. He had swallowed the glass of water and was having his breakfast on his hands and knees.

"Teacher," shrilled Daisy when school had assembled and her madly waving hand had drawn Miss Curwin's attention. "Teacher, grass ain't breakfast, is it?"

"Grass? Breakfast?" queried Miss Curwin, puzzled. "Whatever do you mean, Daisy?"

"Well, Micky he didn't have any breakfast, because his mother she fell down our steps and her leg it got broke and the amberlance it took her to the hospital, because she was coming to our house with the washing——"

"You asked something about breakfast?" said Miss Curwin.

"Yes, ma'am, and Micky he drank a glass of water before I was coming to school and I says, 'What you doing, Micky?' and he says, 'I'm having my breakfast, what you think I'm doing?' And grass ain't breakfast, is it, Miss Curwin?"

"Aw!" exclaimed Micky, his face reddening.

"You mean Micky was eating grass?" asked Miss Curwin, unable to believe her ears.

"Yes'm, like a horse," said Daisy. "On his hands and knees, chewing it in his side yard. And grass ain't breakfast, is it?"

Many difficult matters come before a teacher for judgment and the wise teacher thinks before she speaks. Miss Curwin hesitated.

"Just so he could say he drank a glass of water before breakfast!" said Daisy indignantly. "And grass ain't breakfast, is it? So he didn't do Chore Four, did he, Miss Curwin?"

"Didn't you have any breakfast, Micky?" asked Miss Curwin kindly.

"Yes'm."

"What did you have?"

"Grass," said Micky defiantly. "I got a right to eat grass if I want to."

"Did you forget to drink a glass of water before your regular breakfast, Micky?"

"Aw, chee! I didn't have no other breakfast. I didn't fergit nothin'. I got a right to eat grass if I want to. I ain't the only one what done it."

"You are too!" said Daisy.

"I ain't neither. King Neb—Neb——"

"Nebuchadnezzar?" Miss Curwin aided.

"Yes'm, he done it," said Micky triumphantly. "If a king done it a feller can, can't he?"

"But why did you do it?" asked Miss Curwin.

"Well, I got to, ain't I, so I can drink me glass of water before it?" demanded Micky.

Miss Curwin opened her desk and took out her purse. She took a shining quarter dollar in her fingers.

"School!" she said, rapping on her desk with authority for attention. "You have heard Micky and Daisy. I will explain clearly then that Chore Four does not require meals, but only that if meals are eaten a glass of water must be taken before the meal. And I want you to be proud of Micky, even if he misunderstood the chore, because Micky, you are a gallant, valiant knight without fear and without reproach, and I am proud of you. And Micky, I want you to take this quarter and go down and get a real breakfast at the restaurant at the corner."

She stepped down from the platform and laid the coin on Micky's desk.

"Aw, say!" said the Knight Without Fear and Without Reproach, "I can't swaller no more breakfast; I'm all fulled up with hay."

Bonus Systems in Modern Models

By Frederick S. Bigelow

MONG the newer phrases in the lexicon of industry is the term "economy sharing." Like most new substantives it is a freshly coined name for an old and quite familiar thing. The term was invented to get away from the word "bonus" and the things that it implies; for to many minds a bonus means a tip or gratuity or a piece of impulsive liberality on the part of an employer toward an employee.

Economy sharing is none of these things, but a logical, constructive business transaction which is coming into increasing favor as a result of the necessity for increased production, higher personal efficiency and the conservation of raw materials.

Bonus systems and economy-sharing plans have one distinguishing characteristic in common: Both are figured in dollars and cents, and the best authorities are unanimous in agreeing that few employees are so prejudiced that they will refuse an extra ten-dollar bill on account of the name attached to it by the paymaster. So long as the bank does not call it a counterfeit no name or nickname can rob it of its purchasing power. Its appellation may, however, diminish its value to the employer as a buyer of service. Bonus systems and the creations of the economy-sharing genus are in many respects alike, and yet they have their sharply drawn differences.

For economy sharing is always based upon a community of interests between employer and employed. It is never conditioned by circumstances that rob Peter in order to pay Paul Capital or the other way about. It is never a tug of war, but always a double pull in one direction.

Simple in theory, it is often complex in operation; but while its intricacy is a matter of slow growth, stimulated by increasing stores of experience and changing conditions.

The first step in the adoption of economy-sharing methods is for the executive to determine precisely what results he is getting from his men and their machinery and to ascertain the ideal results that ought to be obtained. Economy sharing is merely one of the devices that have been successfully employed to bring the actual and the ideal within handshaking distance.

Better Work and More of It

SCIENTIFIC economy-sharing systems, no matter how carefully worked out, often have a rough road to travel, the reason that employers and employees alike are apt to confuse them with older schemes that have been thoroughly worked out and cast aside as incorrigible trouble breeders. Too often industrial reformers have gone off at half cock with ill-considered programs for hastening the arrival of the millennium and have achieved no substantial result except the creation of bad blood, mutual suspicion and animosities.

Manufacturers who have fought shy of bonus systems may perhaps profit by the information given to me by Mr. V——, because his methods are readily applicable to operatives who run a vast variety of automatic machines and because years of practical experience in the operation of such machinery furnish strong testimony in contradiction of an assumption often made against bonus systems applied to machine work. Mr. V—— is an accountant. That is to say, he is not only a bookkeeper but an analyst, a diagnosist, an efficiency expert, a leak-stopper, an inventor of economy systems and a money-maker for his employers. A mass of figures is to him what a container of coal tar is to the chemist who can resolve it up into a series of dyes of every color of the rainbow and make a dozen formulæ of medicinal agents out of the residue, to say nothing of a set of useful by-products that will pay for the whole operation. The director of his company told me that the new ideas and systems that originated in Mr. V——'s department saved the house so many times the cost of maintenance of the accounting force that it ranks among the highly productive departments of the business.

"For example," he said, warming to his subject: "Suppose V—— saves us $100,000 a year. We are not at the expense of collecting that money. It is right in our own bank and has been there all along. Another thing: That hundred thousand is absolutely net—and $100,000 net is a lot of money. We are quite satisfied if we make a clear ten per cent; so if V—— saves us a hundred thousand his performance is rather better than that of a salesman who can sell a million dollars' worth of goods, for in making V——'s profit we run no risk of bad debts."

After this introduction I was prepared to listen very respectfully to what Mr. V—— had to say. He began with a statement that seemed scarcely credible:

"My experience is that offering bonuses on automatic-machine work need not result in inferior work or lowered production. Those are the charges made by the opponents of such bonuses; but I think I can show you that the very reverse is true.

"Let me tell you our experience with a battery of Holt machines, for they are so typical of a large class of machinery that what we have discovered about their effective operation applies to every other machine in the same mechanical family.

"As you will see when we walk over to the factory, this is a large and very complex piece of automatic machinery. Partly manufactured material is automatically fed into it at one end. As it passes along, many things happen to it, till at last it comes out at the other end in nearly completed units. These units require only one or two rather simple finishing operations for their completion.

"These machines are so delicately adjusted that not infrequently they are bound to jam or foul, but an automatic device instantly shuts off the power whenever this occurs. The operator then clears the machine, makes whatever little adjustment is necessary and starts up again.

"When we came to analyze the operation of our Holts we found that there were three sources of waste: Small output, spoilage of material, and imperfect units that had to be reworked. The superintendent of our factory warned me that if I tried to increase production our gains would be more than canceled by losses arising from spoilage and imperfections. It was nearly a year before I could persuade him to sanction the introduction of any sort of economy-sharing plan.

"Finally he consented, and we introduced an economy-sharing feature based upon a spoilage record running below a certain standard. At first the men were not strong for it. They agreed with the superintendent that no bonus system could be adapted to their kind of work. Increased production meant more hasty work and more spoilage as a natural and inevitable consequence.

"Well, we tried it out. To my delight I found that we practically eliminated our spoilage! To the surprise of everyone our production jumped 23%. Not only that, but the number of imperfect units was cut down 50%!

"How do I account for it? Well, success doesn't have to be explained—but if you want my personal opinion you shall have it. When our operatives really made up their minds to earn the spoilage bonus they quite unconsciously became very much more alert and watchful than they had ever been before. Despite the fact that they were tending automatic machines their whole minds were on the job. They detected faulty adjustments before the machine did, and remedied them on the instant with the result that production increased as spoilage diminished.

"We have had this experience with so many different classes of machine work that I am almost tempted to say the greater the production the better the work, and vice versa. For purposes of analysis we have platted the performance of our Holt operatives over a long period. Our graphs show not only production but spoilage of material and imperfect units."

Mr. V—— walked over to a filing cabinet and selected a card at random.

"This graph will illustrate my point," he said. "Observe the steady rise of this operator's production line, and note how his spoilage curve has fallen during the same period. Follow this vertical line on the card and you will see that during the week of maximum output the percentage of spoilage was lowest. This card is typical of the others. Pick out some cards for yourself and you will see that for the most part they tell the same story."

Speed and Accuracy March Abreast

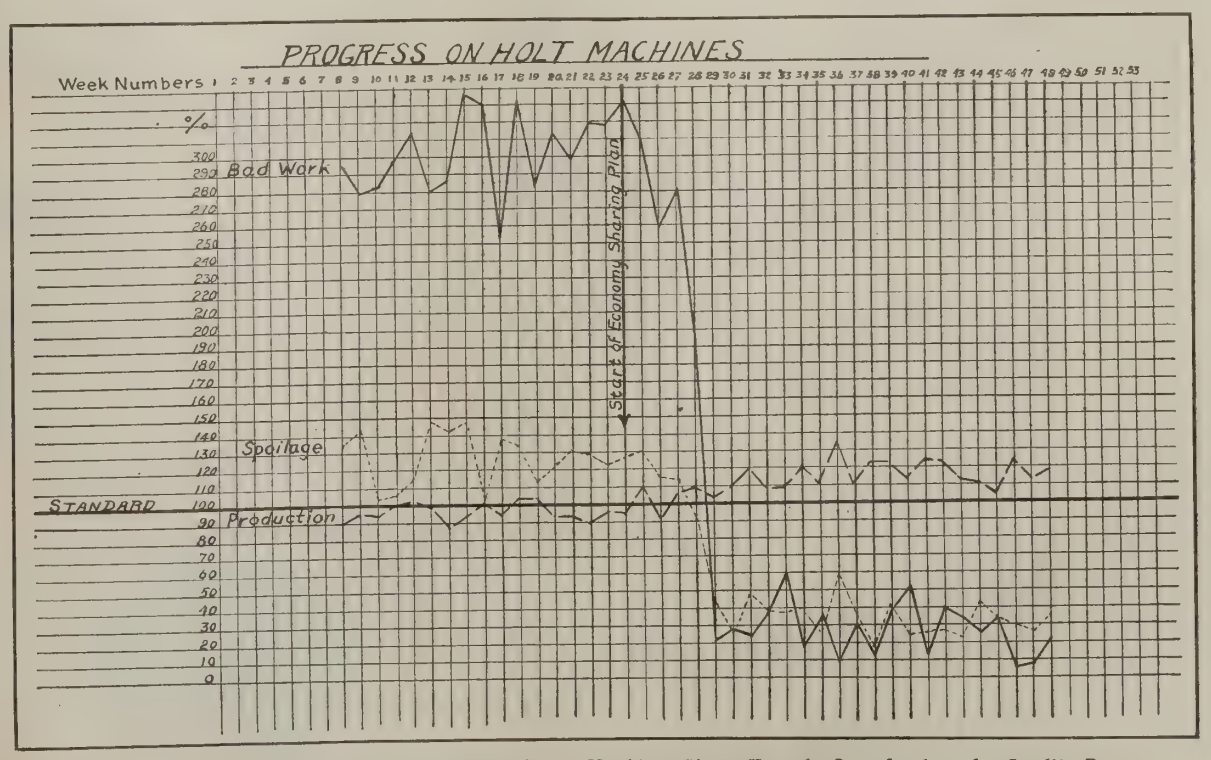
CURIOUSLY enough, what Mr. V—— told me about automatic machine operation appears to be equally true in clerical departments I had visited. I immediately recalled the surprising statement made to me by another executive: "The clerks who are earning the largest quantity bonuses make the fewest errors."

The significant fact about the testimony of these two experts is that they were not expressing mere personal opinions, but literally spoke "by the cards." Their records were precisely the kind of records that would be made by an engineer who was testing out a new type of dynamo or motor in his laboratory. Neither man was stretching the glove of fact to fit the hand of theory.

Mr. V——, after he had outlined to me some ingenious extensions of his economy-sharing methods, went on to discuss the subject from an entirely new angle.

"Of course," he said, "the company pays me for my services as an accountant and not for those of an altruist; but I don't mind saying that I should not take half the interest in my work that I do if I did not feel that the methods I have been describing are doing our employees a lot of real good and teaching them lessons of lifelong value.

"Let me tell you how it works out: If we enable our people to increase their earnings they can improve their living conditions. They can save money and in time own their own homes. They can bring up their children under better conditions and can give them more education than would otherwise be possible. Consider the girls in our manufacturing and clerical departments. If we can teach them how to work to the best advantage and double their efficiency they will apply the same ideas to work in their own homes. When they leave us to marry and settle down they will carry with them lessons that will make them better wives and mothers. Their experience as wage earners will benefit them for many years."



This Record of the Performance of a Battery of Holt Machines Shows How the Introduction of a Quality Bonus Not Only Reduced Spoilage and Bad Work But Actually Increased Production

Remember it was no mawkish sentimentalist or amateur uplifter who spoke thus, but a professional penny splitter—albeit a man who has not yet scrapped his heart to make room for a cash register.

Through the courtesy of a bonus enthusiast who has done much original and valuable work along these lines it is possible to include in this article a summary of fifteen years of study and experimentation in a large clerical department. This review is significant for several reasons: First, it indicates how a similar system may be installed by any manager who is disposed to attempt it; second, it traces the natural development of a very simple and somewhat crude system into one that is highly organized and notably successful; third, it points out the pitfalls that yawn for unwary managers and clearly indicates the paths of procedure that must be followed if the highest goals of success are to be reached.

In the year 1904 Mr. X—— found himself in charge of a large clerical department numbering upward of 200 clerks. Several distinct kinds of work were carried on there. There were orders to be booked, a vast correspondence to be conducted and, alas, thousands of complaints to be investigated and adjusted! Only a small number of the typists in the department were stenographers. For the most part dictating machines were used, and the typists worked directly from the phonograph to the keyboard of the typewriter.

It soon became apparent to Mr. X—— that his department was far less efficient than it was possible to make it; and so he instituted a careful analysis to show up the weak points of his clerical force. His first object of inquiry was the matter of costs. To this end he installed a number of inspectors, each armed with a transparent celluloid scale by which she could readily determine the number of square inches of typed matter turned out by each typist.

A Typical Case of Economy Sharing

THIS was a useful but not a happy beginning. "Simon Legree" was the kindest name by which Mr. X—— was called behind his back; but the celluloid scale stuck for years, and long before it had been superseded by a time-saving improvement it had come to be regarded as a friend rather than as a foe.

After the measuring scale had been in use for a sufficient length of time the wages paid during the period were divided by the number of hundreds of square inches of matter typed. The quotient thus obtained was equivalent to the cost of 100 square inches of typewriting. It worked out at about 23 cents.

As this force was working 44 hours a week it was apparent that the average rate of production should be 100 square inches an hour, in order to earn a weekly salary of $10. This, it should be borne in mind, was in 1904, when the going wage was far lower than it is to-day.

Having definitely ascertained that his typing cost was 23 cents for 100 square inches Mr. X—— was in a position to make his first essay at economy sharing. His first step was to post a notice that for each 100 square inches of work in excess of 4400 a week he would pay 16 cents in addition to the regular wage. Under this arrangement each 100 square inches turned out saved the company 7 cents and netted 16 cents to the employee. In other words, the company profited 30% and the employee 70% on each unit of increased production.

Experience soon proved that the production standard—that is to say, 4400 square inches per 44-hour week—was so reasonable that nearly every girl in the department was able to earn a bonus. It was not long before several $10 girls were earning anywhere from $4 to $8 bonus money every week.

Now to the average clerk bonus money is not like honest-to-goodness salary money. It is, to be sure, paid in bank notes and ringing silver; the shops accept it without question; but to the employee it often seems like a sort of stage money that merchants and movie theaters are foolish enough to accept.

If Sadie gets $10 salary and $5 bonus, week in and week out, she still considers herself to be on a $10 basis. In other words, her employer may get little or no good-will credit for a full third of the money he is paying her.

It took Mr. X—— some time to become aware of this curious psychology; but as soon as he was convinced of its reality he cast about for a new line of procedure calculated to make the bonus money seem like real money and to flatter the financial dignity of his young ladies.

With this end in view he instituted a policy whereby any girl who thought she was entitled to a raise of pay by reason of her ability to earn a bonus might win her raise by earning for six consecutive months a combined amount of salary and bonus 10% in excess of her new basic rate. A specific illustration will show the simplicity of this rather intricate statement.

Let us suppose that a typist who is receiving $10 in salary and $3 or $4 in bonus thinks she should have a flat wage of $12 and as much bonus in addition as she is able to earn.

"Certainly," says Mr. X——. "Earn a total of $13.20 a week for six months and at the end of that period you shall have your $2 raise and bonus besides. The more you can earn the better I shall like it. Work hard for bonus, and when you are ready to be advanced to $14 your card will show it, and the pay clerk will give you your raise without our even having to remind him of it."

The only flaw in this plan was that six months seemed like a long time to wait for an increase when the ability to earn it could be demonstrated in a much shorter period. Recognizing this defect Mr. X—— has reduced the probationary period from six months to two, and says that the shorter term gives better results. Mr. X—— continually lays stress on the importance of keeping employees interested and encouraged. He never reproaches his clerks with their small output. If he finds a girl who lags behind the others his method of approach is to show her the records of other girls doing the same kind of work and to express regret that she is not taking home $10 or $15 a month extra that she might have just as well as not. No stronger pressure is put upon clerks who appear to be faithful and diligent.

When the cost of living began to advance sharply Mr. X—— found it expedient to raise the basic wage in his department in order to keep it on a level with the going rate in other concerns. Economy-sharing features have been retained and elaborated to such an extent that typists who received $10 a week a few years ago now earn $25 to $27. This is not true in every case; but the amounts named represent the average earnings of many of the brighter and more diligent workers.

In almost any kind of work quality is as much to be desired as quantity. It is the business of certain groups in Mr. X——'s department to read letters, book orders, check remittances and to send inquiries through the proper channels. Errors in this work cause an incredible amount of trouble and occasion considerable needless expense. The standard production rate among these groups had called for the disposal of 70 letters an hour. In order to lessen the number of errors Mr. X——, of his own volition, reduced the requirement from 70 to 50. As an additional incentive he offered to pay a bonus of $2 a week for every week in which not a single error was made. Perfection was his goal. He knew that it cost the house precisely 34 cents to handle every complaint letter that came to it, and in his heart of hearts he dreamed of the day when there should be practically no chance for us tomers to complain.

Mr. X—— was much elated over his new idea nc expected great things of it.

Sad to relate, the new plan was a complete failure. es work was done than before and the percentage of erro ra not appreciably reduced. For weeks not a single b iu was earned and it did not seem as if one ever would be.

It appeared upon investigation that the terms o ih arrangement were a little too stiff. Suppose a girl le e Monday afternoon that she had made a mistake a morning. The week's bonus was lost beyond possibili recovery. For the rest of that week the bonus idea a entirely inoperative so far as it concerned that parti la clerk. There was every temptation to slack a little it the beginning of a new week brought a new opport it to try for a bonus prize.

After revolving the matter in his mind for some time X—— put into effect a new plan calculated to remov elements of discouragement and lack of incentive. U te the amended rule any clerk who has lost her bonus s given week may recover it by winning the bonuses fo h two succeeding weeks. Even if she has the misfortu t lose for two consecutive weeks she still has a chan t recoup all her losses by a run of unusually good w The operation of the plan is most readily shown in th ular form:

First week's bonus	o
Second week's bonus	o
Third week's bonus	0
Fourth week's bonus	0
Fifth week's bonus	0

*First week's bonus recovered.
†Second week's bonus recovered.

About the time the amendment to the rule was put t effect Mr. X—— chanced to reorganize this departm and in doing so he learned for the first time the gre contributing cause of the failure of his original idea. reorganization took the form of breaking up the departm which had formerly operated as a single large group u one supervisor, into five groups of eight girls each, o whom acted as supervisor of her own group. Some of new supervisors had come from other departments, w they had been accustomed to earning considerable nuses. They were imbued with the bonus idea and oughly believed in it. Instantly there rose a rivalry am the different groups having for its object the win of more bonus money than the other groups.

Rivalry Among Bonus-Earning Groups

QUITE by accident Mr. X—— learned that the fo supervisor had not been "sold" on the idea. She had no experience with bonus systems and could n brought to believe in them. Quite unintentionally, doub she had communicated her aloofness to the other girls n four or five other skeptics among their number had d the successful adoption of the plan impossible. Mr. X— says that in point of loyalty and efficiency this div supervisor was one of the best women in his section n he quite absolves her of any intention to thwart his

Under the régime of the group supervisors the sch came into such full flower that after it had been in op tion a year Mr. X— thought it high tim show some practical r ognition of the intelli coöperation that he receiving from his su visors; so he institut special supervisors' b award.

This was based c comparison of the records of the cur month with that of corresponding montl the previous year. prizes went to the hea those groups that sho the greatest increase o curacy over the mont the preceding year. I group speedily develo sufficient esprit de c to lend a certain spor interest to the results tained, quite apart f the extra earnings volved. Rivalry heightened by posting group scores on the sional bulletin board by awarding gold stars silver stars to the gro with the best records sustained accuracy.

It is a significant fact that the most ardent advocates of bonus systems are so thoroughly aware of their limitations and of the precise conditions that must exist if they are to thrive.

"It is absolutely necessary," says Mr. X——, "to sell your employees. You must sell them not only collectively but individually. Four or five Doubting Thomases in a large department are enough to wreck the best-laid plan. A single supervisor or foreman if either hostile or aloof can upset the most beneficent scheme that can be devised. On the other hand, when these systems work out as they should, they are capable of increasing the efficiency of a clerical force 100%. I mean literally 100%, for that is the result that I and others have obtained time, time and again.

"There is scarcely any sort of departmental work that cannot be improved by the introduction of these systems. All a manager has to do is to study his problem, make his time studies, decide clearly upon the result he wishes to secure, and ascertain how much he can afford to pay for that result. The rest is merely a matter of patiently working out the details. Be sure you are right before you go ahead. The slightest false step may jeopard the whole system. Above all, the plan must be simple to begin with. It must be intelligible to every employee in the department in which it is to be worked. It must be explained fully and introduced tactfully. The employee's self-interest must be appealed to and he or she must be convinced of its fairness and impartiality.

"Another thing must be borne in mind by managers: The standards of production which are set must be so moderate that a good clerk will find it possible to earn a bonus of 20 or 25% of her basic wage. Shortsighted managers are often obsessed by the idea that employees may derive too great benefits from these economy-sharing systems; but experience has shown that if standards are set with this thought uppermost in the manager's mind his plan is foredoomed to failure."

Mr. X—— told me that the happiest days he has spent during the past fifteen years were those on which he had succeeded in thinking out new and useful adaptations of the economy-sharing idea. During those years he has seen his department transformed from a loose, inefficient organization into a close-knit model of efficiency and accuracy. He has seen his girls double and triple their former pay. He finds them contented, loyal and ambitious; and he has the further satisfaction of reflecting that his constructive and original work has saved his company a great many thousands of dollars a year, with the annual score to his credit continually growing.

Less Checking and More Accuracy

AN INSTRUCTIVE instance of quality economy sharing was found in the administration building of a manufacturing concern which has a vast number of small customers and is obliged to maintain an accurate mailing list of literally hundreds of thousands of names. Before the adoption of newer methods an infinite amount of trouble and no small expense were caused, first, by incorrect addresses and, second, by duplicate mailings of catalogues to careless correspondents.

According to the old procedure names and addresses were taken directly from customers' letters, and addressing-machine stencils were cut by girls employed for the purpose. When this operation had been completed two girls checked the printed addresses, one reading from the stencil and the other verifying it with the customer's letter in her hand. This checking of addresses involved an expenditure of about $3000 a year; but the volume of complaints of merchandise and catalogues not received appeared to indicate that the standard of accuracy attained was far from satisfactory.

At last the matter was put into the hands of the economy-sharing expert. After having made a thorough study of the system and its defects he installed entirely new methods. His first step was a bold one. He abolished the checking system entirely.

Next he called in the stencil girls and asked them if they did not think they might be able to turn out more accurate work if they knew they were not to be checked up; that their errors would remain undiscovered until the complaint letters came in from irate customers. The stencil operators thought they could, but expressed a fear that if they were expected to do very much more careful work their production would be so cut down that they would be unable to maintain their old piecework wage.

The expert came back with a new proposal.

"I'll tell you what I'll do," he said. "Do the best you can while the experiment is being tried out and I will see that your pay envelope does not suffer. In the meantime you shall be paid $1 bonus—in addition to what you are now getting—for every 800 stencils you cut, but in order to keep you up on your toes you will be fined 25 cents for every incorrect address that is traced to you."

From the girls' standpoint this was not a very attractive proposal, but they were quite willing to try it out on the understanding that they should lose nothing by the experiment. After a short trial there was a marked improvement in accuracy with practically no diminution of output. Faithful Fanny's knowledge that Hazel and Sadie were not on hand to check her work appeared to act as a constant stimulus to accuracy.

Week after week the red curve on the complaint graph sagged and sagged until it finally straightened out at a low level and ran across the sheet as a sort of permanent low-water mark. Meantime the economy-sharing wages of the stencil girls were steadily rising and everyone was happy.

The executive who installed the system summarized the results obtained:

"In the first place the work was better done. Cutting out the checking process was a long step in advance. This is the most monotonous work you can imagine. After an hour or so the mind wanders and the work becomes mechanical. The checkers are about as useful as a pair of wooden Indians and much of their work is sheer waste.

"Second, the company saved one-half of the $3000 a year the checking had cost.

"Third, the girls were able to earn more and took more interest in their work. Fifteen hundred dollars a year that had been going to checkers went in bonuses to the stencil operators."

The executive quoted above felt so much encouraged by his innovation in the stencil-cutting room that he determined to go a step farther. Every large corporation and mail-order house experiences untold annoyances growing out of the carelessness of customers and correspondents. Blind handwriting can usually be deciphered by someone in the office. Insufficient addresses can often be completed by reference to postmarks and the Official Postal Guide; but if Mrs. John C. Perkins so signs her first letter ordering a small piece of merchandise, and a fortnight later writes over the name Rose Perkins that her order has not been filled, finally taking pen in hand to say that she is putting the matter up to the post-office inspectors, "Yours truly, Mrs. Doctor Perkins"—the tracer has a hard nut to crack. He is very apt to settle the matter by sending the Perkins person a duplicate of the article she ordered, with a soft answer of the sort that turneth away wrath.

The offer of small cash prizes for the mating of letters written by the same person over different signatures has done much to put an end to this annoyance.

A novel application of the economy-sharing principle has recently been tried out with great success by a large concern engaged in a light manufacturing business. In the autumn of 1918 this company found its output growing so materially that it was deemed necessary to increase its fleet of motor trucks by 25%. It then appeared that the motor-truck manufacturers were so far behind on their orders that the newly ordered trucks would scarcely suffice to handle the company's local hauling.

Under these conditions it was suggested the bonus system be given a trial, to ascertain if it would not be possible to make the existing trucks meet current conditions until the new ones could be delivered.

With this end in view the regular hauls were listed and timed and specifications were drawn for the standard day's work. The plan was carefully explained to the truck drivers, the possibilities of time saving were suggested, and the whole trucking force was given to understand that company and drivers should share and share alike in any cash saving that the new system might be responsible for.

Truck-Driving as an Outdoor Sport

WITHIN a very few days all the drivers but one were earning bonuses. Every driver when he put up his truck for the night knew precisely what he had done during the day and just what amount of bonus money that day's work would put into his envelope at the end of the week.

Under the old system these drivers were good men who did a fair day's work; but they were human and were not inclined to crowd themselves. When they brought a load to the freight platform and found that there was not quite room enough to get their trucks into a good position for unloading they were very apt to pull off to one side, find a shady place and smoke a pipe or two while waiting for a vacant berth at the platform.

In a single week the economy-sharing system changed all that. To-day if there is a crowd at the platform something is done about it. At once there is a lively barrage of that hearty teamsters' vernacular which Ralph Waldo Emerson assures us is so much more effective than the suave, well-turned sentences of the most learned Oxford graduate. It is a case of youth will be served, and served quickly; and those truckmen manage to get a chance at the platform or know the reason why.

After this system had been in vogue for a few weeks the records showed that one driver had not earned a bonus on a single day's work. The manager sent for him and asked what was wrong. The driver replied that there was nothing wrong, but that he was perfectly satisfied with his basic wage and would rather go without a bonus than exert himself any more than he had in the past.

The manager told him that this attitude could no tolerated; that, though the driver had a right to ear as little as he chose, the company could not afford to l slacker trucks at a time when the shortage of mo power was greatest. The company was not slave-dri or trying to get more work than it paid for, but it wasteful to allow the hauling power of one truck to far behind that of all the others of the same type.

The ton-mile haulage of this fleet of trucks has bee greatly increased that it not only does far more work ever before but it has demonstrated its ability to ha any volume of traffic that the approaching busy seas likely to bring. So confident is the manager of this partment of the company that his present equipmer all he needs that he voluntarily proposed that the con cancel its order for the delayed motor trucks.

"But what is new about this application of the econo sharing principle?" the executive responsible for it asked. "Is it not in essence an application of the pi work system, with loads instead of production-units the basis of payment?"

"Not at all," came the answer. "In piecework the is the limit. That was the trouble with many of the called efficiency systems, which made men feel that were just so many machines speeded up to the limi physical endurance.

"Under the plan I have been explaining to you there limit. Obviously we cannot have our trucks das about town through crowded streets, running down tr police and bumping into small-fry motors. My pla based upon the idea that there is a speed limit, a s which if exceeded is wasteful for both the company for the employee.

"There is another thing you should know about results of economy sharing experienced in our truc department: The increased efficiency that our rec show is by no means entirely due to the opportu afforded for making higher wages. The bonus systen troduced a new element of rivalry into the day's w The men make a game of it. They boast to one anoth the number of trips they are making and lay side bet the amount of their weekly bonuses."

General Hints for Executives

"THEIR rivalry is so keen that they are impatien the slightest delay at our shipping platform. week after we introduced the new system the girls i office overlooking the loading platforms sent a delega to me to complain that the language of the truckmen something awful, and quite unfit for maidenly ears to h that the teamsters were so anxious to take on their l and be off that they cursed each other up hill and d dale if they were kept waiting for a moment. Of co profanity is not a thing to boast of, but in the presen stance it is proof positive of a new and wholesome int in the job.

"Furthermore ——"

The manager's peroration was cut off short by the hi ous entrance of his young assistant.

"Say, boss," the youngster began, "you know you a me to look into Bob Tucker's record for day before ye day, and I've just been talking to him."

The manager hastened to put me in touch with situation.

"Bob is one of our best men," he explained. "H planning to get married next spring and these bonuses quite in his line. A stray dollar has to have long legs a good wind to get away from Bob. On Monday he b all previous trucking records so handily that I asked assistant to look into the matter. How about it, son?

"Well, boss, I had hard work to make Tucker give but finally he told me how he managed to set a new rec It seems that just as he was reporting for work at the w house on Monday he heard that Larry Thompson was and would not show up; so he asked to have Larry's t loaded and ready to go out in forty minutes. The brought his own load to the plant. As soon as he arr at the unloading platform he hopped off the truck took a street car back to the warehouse. Larry's t was all ready for him and he brought that along too. the time he reached the plant his own truck had been loaded and was ready for the return trip. In this wa ran two trucks all day Monday and so made his rec I'll tell the world that Bob is some truckman!"

"Irregular! Very irregular!" laughed the mana "but Bob seems to have gotten away with it this time I do not see but what he has earned all the bonus his calls for. . . . I must look into this matter. Perh Bob's idea is good enough to adopt as a regular th We'll see."

Economy-sharing experts are agreed that when a c prehensive system of bonuses is to be introduced in e department of a large organization it is much the be practice to have it worked out and introduced by a sp bureau created for the purpose than to allow each dep ment manager to go ahead on his own account. If

(Concluded on Page 79)

(Concluded from Page 76)

omen devise systems for a dozen de-rtments they profit by an interchange ids with departmental managers and le to view every part of the sys-n in its proper proportion. Furthermore ey re able to turn to account the les-ns aught by failures or successes in any e epartment for the benefit of all the ne.

By concentrating on this work these in-nts of bonus systems become highly pe, and acquire an aptitude for their rk that saves a great deal of money ducing to a minimum the number of cosidered schemes and the false steps t would inevitably be taken by the xperienced in the introduction of plans t re, in themselves, entirely sound.

An executive who heads such a bureau d as under him half a dozen young ex-rts in economy sharing says that one of greatest troubles grows out of the very cacy of his men. Repeatedly he has t he of his assistants to study the weak-ss of a run-down and semidemoralized department and set it upon its feet. No sooner has the department been reorganized and brought to a high state of efficiency than the head of it comes to this executive to beg, borrow or steal the young man who did the work, with the intention of making him his right-hand man. It is all the head of this bureau can do to keep the members of his little force away from the clutches of his envious colleagues.

It is interesting to note that the most enthusiastic advocates of economy-sharing systems are able to regard them judicially and without fanaticism. They admit that perhaps these plans are not economically sound; that self-interest is not the loftiest motive for doing better work or more of it; that the bonus is not the infallible cure-all for industrial ills. They simply say that they must take conditions as they find them and that if economy sharing produces beneficent results they will continue to practice it until some better and more efficacious plan is devised.

These experts, almost without exception, have at heart the interests of the employee quite as much as those of the employer, and when they point with pride to increased output or to workmanship of higher quality they call attention, with equal elation, to the higher wages that have been paid. They do not regard labor in the light of raw material to be bought in bulk by the haggling of the market.

From the Year of Peace to the reign of Henry VIII is a long leap backward; but in taking off for a jump into the sixteenth century one has the assurance that it is possible to alight upon an economic idea so basic and timely and significant that it was embodied in one of the early provisions for the League of Nations.

No man can read of social conditions in sixteenth-century England without an involuntary sigh of compassion for the state of the laboring classes.

Everyone knows of the heartbreaking hours of labor; the severity of the apprentice system; the harshness of a penal code that punished with death more than 100 crimes, and inflicted barbarous penalties for trivial offenses; the hardships of daily life; the squalor of lodgings and the roughness of fare.

And yet, with all these conditions in mind, Mr. Froude, in his History of England, favorably contrasts the lot of the workingman who was a subject of Henry VIII with that of his descendant who was a subject of Queen Victoria.

"There was," he says, "this essential difference, that labor was not looked upon as a market commodity; the government—whether wisely or not I do not presume to determine—attempting to portion out the rights of the various classes of society by the rule, not of economy, but of equity."

Thirty or forty pages farther on, Mr. Froude adds:

"Looking, therefore, at the state of England as a whole, I cannot doubt that under Henry the body of the people were prosperous, well-fed, loyal, and contented. In all points of material comfort they were as well off as they had ever been before; better off than they have ever been in later times."

A PARABLE OF TRIFLES

(Concluded from Page 29)

irense hatred for each other. A grinning levongol boy picked up the fragments te ball and pulled them curiously pces.

"nssen turning abruptly on his heel irl to his room, where he flung himself wand sobbed with rage and mortifica-n Gay returned to his kang and sat on e ge of it, his chin in his hands, think-g pomily.

"om that day they would not speak vcl to each other.

"his sounds simple enough to you here, e it is cheap to chatter; but these nad before them a journey of months d very trying conditions. Infinite itle pressed in on all sides. No longer il they rely on the sympathetic guid-cend understanding of a friend. Friend-p as dead and the nearest acquaintance tlir own blood and breed many weeks tivel removed from them. They were ery sense in the center of vast deserts. "ortunately to a certain degree they a ed their common sense. Each pos-s certain qualities that the other was ul for practical purposes to recognize. ugh they maintained a sullen silence in ei personal relations, on matters of sless they had sense enough to speak, oth curtly and abruptly, with not a g syllable more than was immediately cssary. In this manner the caravan was leo move on.

"s they swung round the vast arc that ought them nearer the northern but-ess of Tibet the caravan gradually nished. The cargo was lightened at the lles through which they passed and the lsen camels sent back. Eventually e mber of camels was reduced to such oot that it became necessary, when the d of the survivors were worn through to e nick on the rough and shingly soil, to g e the beasts and stitch bits of rawhide t the calloused edges of the raw and eeng pads, while the camels bawled and niled with pain.

"ccasionally policy required that they ct the hospitality of some of the desert ines. In the homely yurts of felt and tls, grimy and saturated with the ice of the burning argol they sometimes u ted and ate with seeming relish the li cies that the plains afforded—tea e d from dirty cubes that had passed orfilthy hand to filthier hand for months, vich green soft cheese of mare's milk asdropped; and quivering lumps of alucent fat cut hot and slimy from the ilf broad-tail sheep.

"hey went through these episodes to-t r with outward decorum, but it never ved the slightest confidence. Rather re new occurrence increased the con-rt and hatred they felt for one another. "ittle things took on horrid signifi-nce. Rheum in the eyes in the morning; a husual snort in blowing the nose; an ni entional sucking of the teeth—things eynd control and utterly silly filled them it mutual discomfort and disgust. They o reached a stage where in the waterless a s they were unable to wash for long erds. This of course is one of the things a people who gloat over the romance of d nturous travel leave out of their reck-ng; nevertheless, it is a contingency over which you cannot triumph. They became, therefore, grossly filthy. The season having advanced, the night air in the higher altitudes became very cold and they were obliged to put on their sheepskin coats. These quickly became infested with vermin.

"Now the Mongols of course are always filthy. It is a racial characteristic. They satisfy their religious obligations of one bath a year by baring their heads if a chance flurry of mist scatters from the sky. But the white men had known each other in civilized or near-civilized settings, where they were well-groomed and clean, presenting themselves always in fresh and shining aspects. So, as they became more and more dirty, they resented it in their own case and despised it in the other. Each thought: 'I may be pretty bad. But I'm certainly not so filthy as he is!'

"And the flickering suspicion that perhaps the other entertained the same thought increased their rage. As they rode along they stole surreptitious and surly glances at one another and revolved subtle homicidal schemes in their minds.

"When they reached Lanchow-fu it seemed that only the lack of opportunity had prevented murder, so thoroughly did each resent the presence of the other. Fortunately in the Kansu capital they encountered some Europeans—priests of a French mission which had a station in that remote city.

"Both spoke French, and these priests entertained them joyfully, so that they tasted again some of the fruits and customs of civilization. Particularly they made themselves clean and procured new garments. Nevertheless, there was still no unbending in their personal relations.

"They saw each other again in decent array, acting with natural courtesy toward their hosts and entering into discussions that proved them to be still gentlemen in the eyes of others, familiar with the customs and conventions of the world; but the remembrance of all the little pettinesses of the desert trail was still monstrous in their minds. There still glowed an unalterable scorn. They believed they could never forgive or forget each other's despicableness. Their illusions had been completely shattered. On their next trip, by heaven, they would select each a different type of man for companion!

"Orders came unexpectedly by pony express, via Sigan-fu, to leave the remnants of their cargo with native agents in Lanchow-fu and return in all haste over the mountains before the approaching winter made the passes impracticable.

"Fresh ponies were therefore procured and they set out with great speed eastward toward the province of Shen-si, each pondering over private plans.

"Sometimes the marvelous little ponies accomplished fifty miles a day for several days in succession. It was a supreme test of endurance for men and beasts and all rose to it grandly, though indifferent to their achievement. They felt simply the desire to push on, and their resolution was strengthened by the constant thought that every day brought them nearer the end of their journey and the dissolution of a hated partnership.

"Their hate had now simmered down into a sullen indifference. Had one plunged over a cliff the other would hardly have turned in his saddle! They were done with each other!

"One evening as they entered a small mountain village and were inquiring their way to an inn they were told that another European was already in the village. They learned that this stranger was in the employ of their own company, the company that had sent them to the borders of Tibet. Thrilled and stimulated by this sudden contact with their old firm and the resumption of personal relations with old acquaintances they turned their ponies toward the inn and made off at a fast trot.

"Struck by a vague bashful curiosity that suddenly overtook them they stole glances at each other. The past lay behind them, though recollection had not yet been richened by ripening time. Nevertheless at the moment both came near forgetting the terrible bitterness that had very nearly made the long trip tragic.

"They reached the inn. Swerving abruptly through the great beamed gateway they entered the courtyard in a cloud of dust.

"A man rose as they entered, and taking his pipe reluctantly from his cracked lips stared at them with a sort of defiant welcome. His swarthy complexion intensified the lowering effect of his direct gaze. There was a slight suggestion of affected condescension in his gait as he walked slowly toward the newcomers. His heavy sheepskins exaggerated his swagger.

"Gay reined in his pony to steady it before dismounting; but the more impulsive Janssen swung lightly from his saddle, and walking quickly forward with outstretched hand exclaimed: 'I'm Janssen. We've just got back. We're on our way to Sigan.'

"'My nyme's'Ammond,' said the stranger unexpectedly. 'Glad to see someone, I can tell yer! No bloomin' fun muckin' abaht this blinkin' plyce!'

"'Well, I'm glad to see you, Mr. Ammond,' said Janssen with enthusiasm.

"A shadow drifted across Hammond's face. His chin set aggressively.

"'Hi said m'nyme's 'Ammond!'

"The Dane was perplexed and embarrassed.

"'Yes. Quite. Well, I say I'm very glad to meet you, Mr. Ammond.'

"'Strike me pink!' shouted Hammond with protruding eyes. 'Wot the blinkin' 'ell's the matter wiv yer? Eyn't yer got no ruddy hears? 'Ammond! 'Ammond! 'Ammond!'

"Janssen, growing hot with indignation at he knew not what, turned instinctively to his old friend and said quite naturally:

"'I say, old boy, what the devil's the matter with this chap? Is he mad?'

"Gay had dismounted. The full force of the brief conversation had struck him squarely. In a flash he had visualized himself in the center of Mongolia alone with Hammond! Instantly he realized what unappreciative fools both he and Janssen had been—what consummate asses!

"When Janssen's eyes fell upon his partner, therefore, the latter, overcome by the reaction of his emotions, was lying on his back in the dust of the inn yard, kicking his heels, spluttering, shrieking with laughter and gurgling between gasps: 'Strike me pink! Strike me pink! Strike me pink!'"

The traveler paused.

A cool gentle wind was blowing in from the water, sweet with the mingled perfume of the sea and fresh wet grass. All were aware of a peculiar tenseness at the conclusion of the parable, as though each found its personal application.

"So you see," added the traveler, lighting a fresh cigarette, "how lightly people may make fools of themselves and throw away the chances of happiness that are about them. If only we could realize it! Gay and Janssen of course again became the best of pals. But if they hadn't run into that blustering cockney and understood the possibilities ——"

A strange sound interrupted the traveler. One of the guests had risen to his feet, spluttering and stammering with indignation. Everyone was nonplused.

The traveler trying sardonically to identify him in the dark said: "What the deuce—who in the world are you?"

"My name's 'Am—— Hammersley! Blast you!" Turning to the rest of the company he added: "I can stand some things, but not straight insult. I'm orf!"

Upsetting a chair in his awkward haste, without another word to hostess or guests, muttering explosively, he left the veranda and disappeared in the house. Before anyone seemed equal to the occasion the sound of a motor was heard, and all knew that Hammersley was really off!

Shrill and guttural protests immediately broke forth. Opinions were aired. Indignation was variously expressed. The hostess was restrained but furious. Several expressed the idea that he had taken offense at the traveler's delineation of an Englishman. The traveler laughed.

"He was certainly born in London," observed the traveler. "But I assure you he's not a representative Englishman."

Two only failed to express opinions.

They were the husband and wife who had stood sponsor for the departed guest. Apparently overcome with mortification they had nothing to say. But as the company was breaking up each separately sought out the traveler.

The husband clasped his hand with expressive firmness and said: "I'm glad you agreed with my point. Your description was great! I want to thank you! Eh? Thank you very much!"

The wife was more gushing, possibly in an effort to overcome her embarrassment and mortification, though a more subtle reason was also added thereto.

"Your story was wonderful! Wonderful—and apt! People are inclined to be too unimaginative, I think—don't you? Things like that are so seldom brought home to one. And then, you know, people are so unappreciative! Oh, I want to thank you so much!"

The traveler acknowledged her compliments politely; then watched her as she left, leaning confidingly against her husband, new and false animation in her face as she prattled in his ear, and a heavy expression of contented possession on the face of her spouse.

The label that's linked with history. It is our guarantee to you of quality and service—look for it.

All Wool

Overcoats and Mackinaws That We Weave and Tailor

OUR mill is right in the heart of the big wool country where the finest, longest, warmest wool is grown.

We have the first choice of fleece as it comes from the clippers' shears. The wool is cleaned, dyed, spun and then woven into wonderful, staunch Oregon City fabrics on our own looms.

Our tailors then take these fabrics and fashion them into smart, well-made garments for men and boys. From the wool to the finished overcoat or mackinaw—under one roof.

Oregon City Overcoats appeal to those who demand real overcoat service. Every detail of manufacture is designed to meet this demand.

The genuine all-wool warmth and weather-resisting qualities of Oregon City Mackinaws make them the ideal garments for those who work or play outdoors.

You can see a complete line of Oregon City Overcoats and Mackinaws at representative stores in your city. Look for the label—it's OUR guarantee that these moderately priced garments will give you satisfactory wear and service.

"WOVEN WHERE THE WOOL IS GROWN"

OVERCOATS MACKINAWS FLANNEL SHIRTS INDIAN BLANKETS MOTOR ROBES BLANKE

THE CAPTAIN

(Continued from Page 9)

e ceived an executive pardon, but they ro ed him from the Army.

Several things happened immediately te hat. Ike O'Brien, the wop cook, tried wip the top sergeant, and failed dis- al"; the sergeant was a holy terror in a h and had any man in Company F been ble o clean him he wouldn't have been lding his job. That's the kind of a com- n they were. But Ike did so well that e hers almost forgave him the slum.

Al Kibbey enlisted, though well over al age—that's what he did. Moreover, e isted in the Blanks. Most men would v been content to sink out of sight, to p ff where nobody knew them and start re again. A few of sterner stuff might ve enlisted, but it would assuredly have e in organizations which did not know th ir disgrace and could not remind them it daily, hourly, by a thousand unavoid- le signs.

Kibbey possessed the finer grain. In the a s he had fallen, and in the Blanks he ld win back his name. It meant deeper mi iation, but he was prepared for that. Hi weighed any humiliation his com- di could make him feel, against the tit humiliation of his self-reproach?

She enlisted, and they made him a run- ir t regimental headquarters.

Everybody wondered how the men of C mpany F would treat him the first time he et them as a private. As a general pr sition the man in the ranks would le nothing better of a kind heaven than a ch ce to settle scores with his platoon or C mpany commander with the odds even; if there were many Oskowitzes in Com- ar F, now was their time to square ac- ou ts. They could browbeat Kibbey with- ut fear of punishment beyond what he mi ht be able to administer personally.

About a week after his enlistment the sc ame. Private Kibbey carried a mes- sa e to the new commander of the company wh it was in the line. The officer, who ac never met him, scarcely glanced at Ki ley.

"All right," he said, after reading the no "Wait outside somewhere. I'll have a report ready in twenty minutes."

"Yes, sir." Kibbey clicked his heels to- ge her and climbed into the trench.

It was about eleven o'clock in the morn- in at which hour the Germans invariably sp ed up on the company kitchen and ma s sprayed round the captain's P. C. Th efore he did not remain in the open re h but descended into a dugout where a cop sergeant and a bunch of men holed. So me of them were shooting dice on the co by candlelight. Two or three of the mo industrious were engaged in cleaning th ir rifles. One was stalking cooties in his un erwear. The others slept. Seated on a el h in front of a soap box was the ser- ge nt, busily writing. He raised his head an earing Kibbey come clattering down- st s, then sprang to his feet.

"Ten-shun!"

Pr ivate Kibbey glanced round at the ti rigid figures and his face flamed. Ve they mocking him? But surely that re pectful silence was never intended for a ri l joke! One questioning look at the ob sergeant's face and every doubt was di pelled. Kibbey gulped and turned pale as sheet.

"Thanks, boys," he said brokenly and ac lown.

Th en here came Ike O'Brien, hotfoot fr m the kitchen, with coffee and dough- nu for the "capatin." Not h. Ike was actually carrying hi n, for one Private Osko- wi performed that office; bu the coffee was hi st as warm as wh n it left the fire be ause Ike had ta n the precaution to keep close to Osko- wi 's heels with a co look.

From that day not a an of Company F ha d to stand at at ntion whenever Pr ate Kibbey ap- pe red. Not a man of the mall but re- pa d to him with "K." They might ch vy him about at he dquarters like any other doughboy but to Company F he was still the captain.

It must have been fearfully hard on Kibbey during this period. Everyone knew his story and it made him a marked man. With fine delicacy the doughboys among whom he lived made it as easy as possible for him, but Kibbey was never a very approachable person at best, owing to his shyness, and with the weight of humiliation upon him he grew even more retiring. The boys would have welcomed him as a comrade and put him perfectly at ease; he could have become one of them, for being busted counts for nothing with them—they figure it's apt to happen to any man and the bulk of Company F, being new to soldiering, didn't take rank very seriously anyhow. Kibbey, however, never gave them an opportunity to get close. He worked like a red ant and held aloof—a solitary, grieving, broken-hearted man.

The officers of the Blanks were firmly convinced that it was only a question of weeks before Kibbey would get bumped off. No man could take the chances he took and come through. Once—twice—three times, perhaps; but the Lord can't take care of a fool forever, and Kibbey would try it once too often!

In his efforts to do some act which might win him a commission he did take appalling risks. The enemy made a raid on the Blanks just after they took over from another outfit, and telephone communication with the front line was absolutely cut off early in the bombardment. Nobody knew what was happening to two companies out there, and the Old Man raved.

"Fourteen ways of communicating with them, hey?" he stormed. "I guess those're only on paper! They're lost, I tell you! Don't seem to have even a rocket. We've got to reach 'em."

Kibbey penetrated twice through the barrage with messages, though "to attempt to do so seemed like certain death." He showed "an absolute disregard of danger" and "readiness to undertake any mission, however perilous. Although wounded in the abdomen, he refused to be evacuated, but volunteered to go through the barrage a third time with a message, and received medical aid only after he collapsed." The Old Man recommended him for a D.S.C., for "exceptional bravery and eagerness to face any peril," and in talking about it afterward swore even more than he was wont—which is saying a good deal. Also—but of this he did not drop a hint—he recommended Kibbey for a commission.

Kibbey went back to a hospital, where a nurse showed such kindness to him that he told her, in his weakness, a lot nobody in the regiment knew. She didn't take his view of the case at all and roundly denounced a certain girl's conduct as outrageous, selfish and shameful. Later she remarked to her chum, Kemp, that men like Kibbey always fell for hussies like that; and Miss Kemp replied it was queer how that kind of creature always picked the nice men too.

Kibbey did not blame the nurse—women are apt to be harsh judges of their sex, he reflected—but she did not understand. Nobody was to blame—not even the other fellow. It was simply that he, Kibbey, proved not to be the right man.

He rejoined the Blanks just before the Soissons fight in July, and got another wound and a second recommendation for a Cross. That was about the last paper the Old Man signed before leaving the regiment to take command of a brigade in another division.

"If it'd have the same effect on all my officers as it's had on that man," declared the colonel, breathing like a horse with the heaves, "I'd import a keg of the stuff and let 'em all load up."

The feat which called forth this tribute consisted of carrying in a major helpless from a shattered leg, under a hot machine-gun fire. The incident was never mentioned between them.

Kibbey took part in the capture of St.-Mihiel, but nothing of special moment happened to him there. He came through without a scratch and was still a runner when the Blanks went into action in the Meuse-Argonne offensive in October. Somewhere at G.H.Q. reposed two recommendations for a D.S.C., and Washington was still considering the matter of his commission, if it had not already pigeonholed the papers; meanwhile he remained Private Kibbey, No. One Million and Something. The prized things of life are so easily lost, so terribly hard to win.

Chilly weather had set in. Transportation was short, as usual, and the regiment had to hike. The first day they hiked from an hour before dawn until eight that night, through rain and mud, along roads jammed with grinding trucks and guns and smoking slum carts and tanks and machine guns and infantry. Everything became hopelessly mixed up, as it always is in open warfare—artillery and engineers and signal corps and doughboys, medical outfits and supply trains and trench-mortar companies—and everybody demanding of everybody else: "Who the hell are you? What outfit's this?" Officers hunting for lost kitchens; a colonel bellowing to high heaven to know whether anybody had seen his third battalion, and where in blankety-blank-blank could it have strayed to?

Poor Kibbey carried messages until his knees shook under him, and then rallied to carry another at the double. About midnight he dropped on a bank beside the road, all in, and slept there in the rain, dreaming that he was warm. And when he woke in the bitter cold of dawn, with aching limbs and body racked with a chill, it was to pray that he might die and get out of it all.

He bummed a breakfast at a slum cart; it was the last hot meal he was to eat. For forty-eight hours he lived on a cake of chocolate. The chow failed to appear, and his iron ration proved to be uneatable. Gas had penetrated it while Kibbey, with an order for Major Biggar, whose battalion stuck obstinately to the wrong side of a hill, was wading through a small mustard-drenched valley.

Meanwhile the Blanks were fighting manfully for the objectives assigned to them, but fighting in vain. Both artillery and machine-gun fire swept them from either flank and when they advanced behind a barrage our own shells smashed into their line.

As he was dog-trotting laterally from left to right across the slope of a ridge to find out from the colonel why Company K did not maintain liaison Kibbey saw two men of an advancing wave killed by one of our own shells not thirty yards from him.

Kibbey Went Back to a Hospital, Where a Nurse Showed Such Kindness to Him That He Told Her, in His Weakness, a Lot Nobody in the Regiment Knew

TRADE MULTIKOPY MARK
The Carbon Paper That Gives Satisfaction

Business Dress for Office Records

Business women consider neatness in dress first. In office work also, high-salaried stenographers and private secretaries think of neatness first. Especially in carbon copies does neatness pay.

Employers rely on carbon copies to keep them in touch with work in the office. The copies must be clear, sharp impressions without streakiness or fading in order to be easily read.

MultiKopy Carbon Paper insures impressions as legible and as lastingly fresh as the original letters. Such work is quickly noticed and brings suitable reward.

It pays to MultiKopy your letters. MultiKopy gives clear, permanent impressions. Always uniform, cleanest to handle, and unequalled for manifolding.

Write us to send you samples of MultiKopy

We are anxious to send you samples of MultiKopy Carbon Paper so that you can see for yourself how to make carbon copies that bring business advancement.

MultiKopy is sold by principal dealers throughout this country and Canada.

Improve the appearance of your letters by using Star Brand Typewriter ribbons. These give clear, sharp impressions.

Made for all machines.

"Say," yelled a doughboy, "they're shootin' short!"

"Then why don't you back up, you ignorant ——?" he bawled, for the mildest of men will cuss in the heat of battle. Evidently the thought had not occurred to them. The line moderated its pace until the barrage fell well ahead.

At another point in the advance he perceived a company moving slowly across a field against machine-gun nests, over the bodies of comrades. The dead lay in windrows, face downward toward the foe. As he watched, the fire grew so terrific that flesh and blood could not stand against it. Slowly they retired, never turning their backs, but facing the enemy; it was exactly as though an irresistible force were shoving them.

He found Major Biggar in a shell hole crouching over a map; a blanket supported by trench sticks stuck upright in the mud, formed an awning to protect it from the rain. Three or four soldiers sat outside the blanket, on the slope of the crater. Just as Kibbey slid down to join them they heard the screech of a shell and the doughboys made a dive to get under the blanket. The burst showed forty yards beyond, and the absurdity of such protection suddenly struck them. Everybody laughed. But men will instinctively seize any cover; a wild daisy is better than nothing.

"If we could put that damned nest out of business, we might be able to do something. It's holding up the whole show," fumed the major, resuming his study of the map, and Kibbey learned that Company F had failed to win their objective, with disastrous results to the entire operation.

"None of them came back?" the major continued. "And you haven't heard anything from them?"

"No, sir."

"Who didn't come back?" whispered Kibbey to a soldier.

"A bunch volunteered to clean it up, but that's the last we seen of 'em," was the reply.

It was no longer Private Kibbey, but the captain of Company F with the responsibility for all his men upon his shoulders, who now spoke up: "Let me try, sir."

"What could you do?"

"Give me a bag of grenades and you'll see."

They gave him a bag of hand grenades. Armed with these and his rifle, Kibbey set out.

Company F were hiding in a small wood like rats until they could reorganize for a fresh effort. The boche artillery was pounding the position with heavies. Trees toppled and crashed; geysers of dirt and sticks and stones spurted high in air. The doughboys huddled behind rocks and piles of logs and in the fresh shell holes, badly shaken from the terrible drubbing they had received, but ready to try again. They could have gone on against artillery—bad as it was there was a chance against it—but the objective lay beyond a wheat field bare of cover and a machine-gun nest had a clean sweep of every foot.

"It's suicide—plain suicide," declared the lieutenant who had succeeded to command of the company an hour before, after the captain was killed. "We're down to ninety men now—out of two hundred and forty. And the last bunch we sent out—seven of 'em—never showed up again."

Nevertheless, Kibbey went—and alone. How he managed to cross the field without drawing fire they never learned. Company F heard the whang of his first grenade; an interval, then the savage chatter of a machine gun followed by three grenade explosions. After that, silence. They waited for Kibbey to report, but he did not return.

"He's done for, sure," declared the lieutenant.

"Maybe he got 'em" the top sergeant suggested.

"We daren't risk it until we're certain. See if you can draw their fire."

They offered the enemy several fine targets, but not a shot came from the nest. The lieutenant thereupon organized an attack and led the company forward to their objectives, without encountering real resistance.

It was Ike O'Brien who found Kibbey. The cook had abandoned his pots to shoulder a rifle on learning that the battle was going against the Blanks, leaving to his assistants the job of getting up the chow; in more than one fight last year cooks and field clerks and every man in an outfit who could walk went into action.

Approaching a shell hole about ten yards from the machine-gun nest, Ike heard a feeble voice say: "Best keep out of here. There're four stiffs here already and I'll soon be another."

Four indeed; and one of them was Kibbey, with fourteen bullet wounds. The soldier still alive in the hole told the cook that Kibbey reached the spot without being detected and flung a grenade at the nest. It fell wide, and to make sure that the next went true, he had exposed himself above the rim. Though badly shot up, the soldier had handed the grenades to Kibbey, one by one. The Germans killed him as he threw the third.

"Gee, he was a game bird!" he said weakly. "I reckon I'm going west, too, don't you? Look—got it here—right through the stummick."

"Hell, no!" cried Ike, though the death pallor was already round the boy's lips. "You'll be sittin' pretty in a hospital mighty soon, ol'-timer."

Stumbling and panting the cook ra[n] for aid. They carried the wounded man [to] a dressing station, but Kibbey's body [was] borne to the new company P. C., just e[s]tablished in the captured German positi[on].

"It's the captain," he explained [in] reverent whisper.

"Captain?" cried the lieute[nant]. "What're you talking about? This [man] was a runner."

Which is about all there is to Kib[bey's] story. They found an unmailed l[etter] sadly stained, in the breast pocket [of] blouse. It was unsealed—anyhow, [Ike] O'Brien read it.

Of course it was to his girl—or rath[er] her who had once been that. He did [not] reproach her; neither did he do any m[ore] lin grieving.

The only sign he betrayed of the m[ost] hurt she had given was in the request [that] in the event of anything happening no[body] should mourn for him.

"For I'm not half as afraid to die [as I] am to live. Many a time during this a[wful] horrible business, when I could h[ardly] stand on my feet and the strain was b[eat]ing my nerve, I would have welc[omed] death—I've actually prayed for it."

"If he leava her the insurance," [Ike] claimed Ike, sniffing as he read on, "I [will] up this letter."

But he did not go to that length. [The] full amount of his insurance, and e[very]thing else he possessed, were bequeath[ed] a small brother living with an aunt in [New] Hampshire.

His old company buried Kibbey [in a] little cemetery behind a village ch[urch] within sight of beetling Cornay Ridge. [It] is very quiet and peaceful there. He [lies] in an angle of the old stone wall. A w[ild] whispers to him when a breeze stirs it, [and] the mellow evening light seems to l[inger] above the spot.

The sexton tells of escorting two A[meri]ican officers to the grave not long afte[r the] armistice sent blessed silence over al[l the] country. I happen to know that one [was] Lieutenant Dougherty, who devoted [his] days of his leave to the purpose. The [other] was Ike O'Brien, the wop cook.

"They made a noise with their heels [at] this," reported the sexton; "and salut—*comme ça!* Then they strewed flowers [they] had brought. *Regardez!* They are [still] there. He must have been a very b[rave] soldier, *hein, m'sieu?*"

Let no one pity him. For he won [what] he always sought. Not by any Act of [Con]gress was he "officer and gentleman," but by gift of the men he had led. They placed a tiny wooden cross at the head of his grave, and on the cross:

CAPT. FRANK KIBBEY
KILLED IN ACTION OCT. 9, 19[18]

SENSE AND NONSENSE

A Delicate Question of Identity

COLONEL McRAE and Mr. Rhodes, both gray-haired, white-mustached, old gentlemen of Mississippi, lived in the same sizable community. They might have been taken for twin brothers, so alike did the one resemble the other. Indeed the favor was so striking that it was the occasion of frequent remark in the locality.

Often too their customary clothes were noticeably alike. From broad gaiter shoes to soft felt hats their dress was to all intents and purposes identical.

Wholly-pated Nelse, ex-slave and gentleman extraordinary, knew only one of the two distinguished citizens, however—Colonel McRae. One day he stopped Mr. Rhodes on the street, mistaking him for the colonel, and lifting his tattered old hat with a flourish which indicated both humility and a consciousness of good breeding, he said with an assumption of great privacy: "Kunnnel McRae, ef hit's convenient, sah, I'd like to git de pay fur dat wood I tuck up to yo' house las' Chuseday, sah."

Mr. Rhodes, sensing fun, answered, "No, uncle, I am not Colonel McRae."

"Ain't you ain't?" questioned the negro incredulously.

"No," said Mr. Rhodes, "I assure you that I am not the colonel. However, I am quite unconscious of the compliment your mistake implies, and I thank you accordingly."

"Well, sah," continued the negro, "you does favor de kunnel. Ef you ain't him you mus' be his paw."

"No," answered Mr. Rhodes with a gleam of merriment in his shrewd eyes, "I am not the colonel's father. On the contrary, uncle, he is my father."

"Say he is?" said the old darky, seemingly satisfied.

"Well, I thought, sah, dat you all mus' be one anudder's paw."

Now in the Next War——

"YES, an' d'yuh remember the morning after an all-night hike when we wakes up in Nesle Wood with that overdead Jerry layin' right alongside—an' no rations for twenty-four hours past?"

It was at a meeting of the Three-Ought-Zumpth Infantry veterans and as usual past grievances were to the fore.

"Do I! Gee! And how about the day we're up in the Argonne and my right hand's just been gummed up with a machine-gun bullet when some stiff back at headquarters wants me to sign a paper about allotments or somethin'!

"Oh, you can snatch it from me, bo, I'm off the infantry in the next war! Me for a job some place in the quiet sectors—say in the chemical-warfare line. In the next scrap I'm going to be a cross retort."

Epitaph for an Internationalist

HERE lies the body of John Smith.
He was born an American; he died an Internationalist—that is to say, an enthusiast for all nations except his own.

He was constantly agitated lest his own country should grow too great, too prosperous, too proud.

His was the type of mind which education succeeds only in making turbid and cantankerous.

He did not believe in force—unless employed to supplant success by failure.

He hated war, unless for the purpose of imposing an untried scheme upon recalcitrants—then it must be pitiless.

He believed vaguely that there must be something fundamentally wrong with any system of government which has been found workable.

In political economy his notion was that the ideal wheel should have no hub; and that the direction of the vehicle should be decided by vote of the spokes.

He overflowed with sympathy for felons, bombers, jailbirds; but for the plodding honest citizen he had only a cynical smile.

All things foreign seemed to him admirable; all things at home undesirable.

As he decried patriotism as a selfish frailty; scorned national pride as weakness; spat upon flags, boundaries and homes ——

And as he craved to live the broader life free from vulgar acceptations of honor, courage and chivalry:

HERE HE LIES

In a land where his remains will not be disturbed by that vulgar acceptation of honor, courage or chivalry; where instead of a nation there is a flagless mob; where the wheel has no hub and the spokes vote early and often; where the last honest man was long ago murdered for his boots; where nobody is great, prosperous or proud:

REQUIESCAT IN PETROGRAD

FORTY YEARS OF A DIPLOMAT'S LIFE

(Continued from Page 23)

...hastively expressed my views on this ...ject in the aforementioned memoran...m of March, 1897, as well as in my dis...ches from Japan, I did not make any at...pt at pressing them upon him again in a ...ie personal interview, considering that ...y such endeavor on my part would ac...ding to bureaucratic ethics be held to be ...encroachment on the province of my ...cessor at Tokio, and being convinced, ...oover, that Mr. Iswolsky would very ...ncome to share these views and would ...ail to take them up in his reports to ...e Foreign Department.

After a short stay at St. Petersburg and ...farewell audience with the emperor, in ...e course of which Japan was not even ...entioned, we left for our new destina...n—that is to say, Munich, by way of ...Warsaw and Vienna. The post of Munich ...as merely, so to speak, a post of cour...sy devoid of any business importance, ...e might have prolonged our stay at St. ...etersburg for a couple of months but for ...y desire not to miss the celebrated Octo...erfest—something like the national festi...al of Bavaria.

We arrived at Munich in the early morn...g of a beautiful autumnal day. Having ...ce my family comfortably installed in ...e Continental Hotel, which in those days ...as the favorite hostelry of Bavarian ...ukedom and traveling royalties, I went ...out for a walk, just for exercise, without any ...particular object in view. Puffing away at ...y cigar and lost in thoughts thousands of ...iles away from Bavaria and Europe I ...ardly knew where I was going and sud...enly raising my eyes found myself in an ...pen space with in front the Propylæa, and ...n the left and right buildings in the clas...ic Greek style. The thought flashed ...through my mind: "This is not Munich—...'s Athens." It was a curious confirma...tion of the truth of the saying: "Coming ...vents cast their shadows before"—for ...exactly a year later we arrived at Athens, ...the only difference being that it was late ...at night and it was raining cats and dogs. ...I shall not attempt to give a description ...of this beautiful and interesting town with ...its narrow streets and medieval architec...ture in the old parts and beautiful avenues ...of fine modern buildings in the new part, ...interspersed with such samples of Greek ...classical style as the Propylæa or the Pina...kothek and Glyptothek which had evoked ...in my mind's eye the image of Athens, ...though I had never before seen that city so poetically called the "City of the Violet Crown." But when I look back these nineteen years and recall my first impressions of Munich it seems to me almost incredible—though I have seen with my own eyes what a pathetic wreck human madness could make of the magnificent capital of a once mighty empire—that this beautiful capital of all the arts and sciences with its staid, laborious and well-disciplined population should have become the theater of such events as Spartacide riots, sanguinary street fights and the installation of a soviet government, that insane device of Russian Bolshevism.

Shortly after my arrival I had my audience with the prince regent for the presentation of my letters of credit. Prince Luitpold had been governing Bavaria as regent ever since his nephew, King Ludwig II, had been declared insane, as well as after his mysterious death by drowning in the Stahrenberg Lake, when his brother, likewise mad and confined in one of his castles, had nominally succeeded him on the throne. The prince regent was a very old man but hale and hearty, and a great chamois hunter, with the exquisite manners of a *grand seigneur* of the *ancien régime*. He governed his kingdom constitutionally with level-headed wisdom and discretion, and as far as I could judge to the entire satisfaction of his people, with whom he was fairly popular, though strange to say their enthusiastic love was still faithful to the memory of mad King Ludwig in spite of his having done everything to ruin the state by his insane extravagance and mania for building palaces and castles. One could watch manifestations of this curious trait of the popular character at moving-picture shows when at the close of the performances the usual loyal counterfeit presentments would appear on the screen; that of the Emperor William always being received in dead though respectful silence, that of the regent being greeted with perfunctory applause, but that of King Ludwig never failing to evoke outbursts of manifestly sincere enthusiasm.

We had not long to wait for the famous Octoberfest. It takes place in a vast open space on the confines of the town in front of the colossal statue of Bavaria. A pavilion is erected in the center for the accommodation of the royal family, the diplomatic body and the ministers of state. That was where we were to be presented to all the numerous princes and princesses of the royal house, thus obviating the necessity of special separate audiences with each one of them. The center of attraction for the masses seemed to be the arrival, one after the other, of the various princely turnouts, which were greeted with graduated applause according to the degree of popularity of their owners. On this occasion the most enthusiastic applause fell to the lot of Prince Louis Ferdinand, a practicing physician, and his wife, a Spanish princess, who came in an old-world Spanish state coach drawn by a team of Spanish mules. The whole thing was a combination of country fair, cattle show and race meeting for the peasantry, who galloped along quite informally on a kind of primitive race track. The all-pervading atmosphere was one of cheery good nature abundantly sustained by libations of the famous Munich beer.

Munich is quite, or used to be, the center of the German art world. Most of the noted painters and sculptors live and have their studios in what they like to call the German Athens. One of the means by which the aged prince regent had known how to acquire a wide popularity in the world of artists and savants in his capital is the care he would take to pay periodical visits to the studios not only of the celebrated but even to those of the more or less obscure painters and sculptors, and the frequent dinner invitations he used to shower on them and the scientific luminaries of the university. The fortune of the royal house being greatly embarrassed through the financial follies of mad King Ludwig and part of the civil list serving to pay off his enormous debts, the prince regent, who personally was not rich, was allowed by the state a certain sum to cover daily dinners of a dozen or so covers, to which he was in the habit of asking painters, sculptors or professors, the lists of his dinner guests being published in the papers the following day. In this way everyone would have at least once the honor of being the guest at the royal table and having all his friends appraised of the fact the next day.

Everything belonging to the court was kept in perfect state in spite of the embarrassed condition of the royal finances, as we had occasion to convince ourselves directly after the Octoberfest, when we were invited to witness in the chapel of the castle the ceremony of the marriage of the present King of the Belgians to the Duchess Elizabeth, daughter of the Duke Charles Theodore, of Bavaria, the celebrated oculist, and

Pipe-Smokers are Concentrated Thinkers

Authors are heavy smokers and notably heavy pipe-smokers.

Why?

Well, for one reason, because they have to do so much highly concentrated thinking.

As one author once put it, "I smoke to keep me from thinking."

That sounded sleeveless, but it turned out to be a perfectly sound habit. When he ran into a snag in his work, he thought hard for a time to get past it, then if he failed, he automatically picked up his pipe, lighted it and began calmly to smoke.

He appeared lazily to be dodging the issue, only he wasn't. He was merely relaxing in preparation for a fresh attack.

While lighting his pipe, he ceased to worry his fagged mind with the problem perplexing it.

Presently his rested mind swung back on that subject with a refreshed clearness not to be stopped.

The reason why so many highly concentrated thinkers are pipe-smokers is that they work so much better after the temporary relaxation that a pipeful of the right tobacco affords them.

It has to be the tobacco that just suits them or else they go up against certain other petty irritations that keep a troubled mind from relaxing completely.

The petty irritation of not having just the tobacco you want never seems at those times like a petty irritation at all.

It seems like the last straw.

To secure the kind of smoking tobacco that just suits you is not always the easiest thing in the world to do.

Individual tastes differ so widely.

Many men have found that Edgeworth is the tobacco that just suits them. That may be the pipe-tobacco that just suits you, and then again—well, it may not be.

Would you like to learn?

Merely send us upon a postcard your name and address, together with that of the dealer usually supplying your smoking needs, and we will despatch to you generous samples of Edgeworth in both forms—Plug Slice and Ready-Rubbed.

Then you can try it and judge it in your leisure, quite at your own convenience.

Edgeworth Plug Slice is pressed into cakes, then cut by keen knives into thin, moist slices. You rub a slice for a moment between your hands. You have an average pipe-load.

Edgeworth Ready-Rubbed arrives ready to be poured right from can to pipe. It packs splendidly; it burns freely, evenly, to the very bottom of the bowl.

For the free samples, which we should be glad to have you judge, address Larus & Brother Co., 1 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants—If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

EDGEWORTH

SMOKING TOBACCO

sister of the Princess Rupprecht, since deceased. The diplomatic body was accommodated with seats in the choir from where we could watch the arrival of the procession headed by the prince regent and King Leopold of the Belgians, who had arrived from Brussels by special train just in time to be present at the ceremony, after which, apparently not being on good terms with Prince Luitpold, he left immediately so as not to be present at the formal wedding breakfast.

At the close of the religious ceremony a court functionary conducted us downstairs and placed us in the hall in a position from which we could see the procession on its return from the chapel descending one monumental staircase and mounting another leading to the interior apartments of the royal palace. When the young couple, handsome and radiantly happy, leading the procession, appeared at the head of the stairs, a hidden orchestra struck up and played softly Elsa's Wedding March from Lohengrin, and as the procession, preceded by Court functionaries, the ladies' trains being borne by pages in blue and white, moved slowly and silently down the stairs lined by the stalwart men of the traditional bodyguard called *hartschiere* in medieval costumes of blue and silver and shining armor, it was like a scene from fairyland in its poetic beauty.

It was my first experience of life in Germany, not counting the three weeks I had spent in Doctor Pagenstecher's clinic at Wiesbaden, and a day or two at Berlin on the way to or from Paris, and I was greatly interested in sensing the social and political atmosphere. Having merely a book or newspaper knowledge of life in North Germany, or rather Prussia, I had no criterion by which I could have determined precisely in what respect it differed from life in the southern part of the country, whose population is perhaps of purer Teuton stock than the Prussians, Pomeranians or Mecklenburgers, who must have absorbed no small amount of admixture of the blood of the Slav aborigines. This may perhaps account for the differentiation in the characteristics in the two branches of the same nation. There is, however, one thing that strikes even a superficial observer, and that is the strong dislike Bavarians feel for their Prussian countrymen, a dislike they are at no pains to conceal.

Nor was there much love lost between the courts of Munich and Berlin. The Wittelsbach dynasty, reigning in Bavaria, counted among their ancestors wearers of the imperial crown of the "Holy Roman Empire of German Nationality" when that crown was an elective one, and they were said to be inclined to look upon the Hohenzollerns as upstarts.

Personally the Emperor William was certainly not popular in Bavaria, for which he had mostly himself to blame. For instance, on one of his state visits to Munich, when asked to inscribe his name in the Golden Book of Royal Visitors at the City Hall, he had written above his signature the following sentence: "*Suprema lex regis voluntas.*" He evidently failed to realize that the ostentatious parading of similar medieval ideas of kingship might not please a people who for many decades already had been accustomed to live under a moderate but nevertheless real constitutional régime.

And then again, an incident that occurred during my short stay in the Bavarian capital: The lower house of the Bavarian Parliament had for some reason failed to vote an appropriation of a hundred thousand marks for a patriotic object—an addition to the building of the national museum, I believe, or some similar object—whereupon the Emperor William had immediately sent a telegraphic message to the prince regent expressing the profound indignation he felt on learning of the unpatriotic action of the Bavarian Chamber, and offering to place the required sum at the regent's disposal out of his own funds. This tactless offer, inspired evidently by the kindest intentions, naturally hurt the feelings of the legislators accused of want of patriotism; nor did the prince regent or, for the matter of that, the Bavarian people enjoy being treated as poor relations in need of charitable assistance. The prince regent was, however, able to reply immediately, thanking the emperor for his kind intention and adding that one of the peers of his realm had already made good the deficiency in the appropriation voted by the Chamber of Deputies. This little incident provoked no end of sarcastic comments in society and in the press, and did not add to the emperor's very limited popularity in the country.

Berlin being naturally the center of the political life of united Germany, Munich might justly claim to be to some extent the capital of German art and letters and science. There seems to be something in the social atmosphere of Munich in which devotees of art and science find it easier to breathe than in the stifling air of the northern capital, where the military and bureaucratic elements are supreme. The same attraction and the same repulsion seemed to influence likewise the highest ranks of the German aristocracy—that is to say, the so-called "mediatized nobility," who had been holding sovereign power and rank in their sometimes even very small possessions, and to whom the Congress of Vienna in 1815 in depriving them of their sovereign powers had granted the right of equality of birth with actually reigning houses. Many of the leading families of the mediatized nobility had their town residences in Munich, adding luster and distinction to the social life of the southern capital.

It would, however, be a mistake to conclude from the unquestionably existing differentiation in the social as well as political atmosphere as between South and North Germany that the governments and populations of South Germany would go in for what Germans call "particularism," as far as to entertain really separatistic tendencies. That was one of the erroneous impressions upon which were based the calculations of Napoleon III's diplomacy in opposing and trying to block the way of German unification, a policy which led to the outbreak of the Franco-Prussian War.

As there was nothing in particular to do at Munich, and I was entitled to a three months' leave of absence, we left after the usual reception at court on New Year's Day and went to spend the rest of the winter and early spring on the beautiful shore of the Lake of Geneva near our former home at Vevey. On our return to Munich we busied ourselves house hunting for our definite installation in that capital, where I supposed my sojourn would be a very prolonged one, considering that not being in favor at our Foreign Department my chances of promotion in the service were slender indeed. For the coming summer we had rented a charming villa belonging to the father of the present Queen of the Belgians, in the mountain country surrounding the beautiful Lake of Tegernsee. We had barely established ourselves and spent there a couple of weeks when I received a telegram from Count Lamsdorff asking me in most obliging terms whether I would be willing to accept the post of Athens, which had just become vacant through the sudden death of Mr. Onou, our minister there. Considering that this offer was evidently meant as a kind of reparation for my undeserved recall from Japan, because the legation at Athens ranked in our service higher than the other legations in Europe, due to the fact that the Queen of Greece was a Russian grand duchess, I could but accept the offered post in spite of the personal inconvenience and considerable expense entailed by a new change of residence.

When I had my farewell audience with the prince regent he expressed in most gracious terms his regret at our departure, but said that he was also sorry to find that of late the legation at Munich seemed to have become in the eyes of our diplomacy merely a stepping-stone to something better. He had some reason, by the way, for being a little touchy on the subject of our diplomatic representation, which had for a time been entirely abolished for motives of economy, and had been reëstablished only at the request of Prince Bismarck, who was always most anxious to spare the susceptibilities of the Bavarian court. The prince regent took pains, however, not to make us feel his displeasure and came the next day to our hotel bringing with him a large photograph in an artistic frame which with true old-world gallantry he insisted on carrying upstairs himself to present to my wife.

Palace of Emperor Francis Joseph, Vienna

xx

ON ARRIVAL at St. Petersburg I found that I was not expected to join my new post before the return of the king, who was spending his usual summer vacation in Denmark and France and whose arrival at Athens was not expected before the end of October. This left us plenty of time to go to Paris and attend to the complicated business of preparing for our removal to Athens, which included the necessity of completely furnishing from top to bottom the house which the government was renting for the accommodation of the legation and where only the bare walls were ready to receive us.

In the beginning of October we returned to St. Petersburg and started from there for Athens by way of Vienna and Triest, where we embarked on an Austro-Hungarian Lloyd steamer which after touching at some way ports, as far as I can remember, landed us safely at Patræ, a small port on the north coast of the Peloponnesus. From there we reached Athens by rail, crossing the Canal of Corinth over a bridge high enough for allowing the passage under it of the necessarily small craft which use the very narrow and I suppose rather shallow canal.

We had landed at Patræ in a rainstorm and all the way we had atrocious weather, which may have affected my disposition and made me take a gloomy view of things. Thus, when our train stopped at the station of Corinth, and I could see from afar appeared to be a wretched hovel sta on the very site of the magnificent which ages ago had been one of the g of the ancient world, I could not fight o gloomiest reflections on the perishabl ture of all human achievements and o almost complete disappearance of th terial monuments of the proudest and refined civilization mankind had known, a fate which may be in store fo own as well.

We arrived at Athens late at night went to the Hôtel Grande Bretagne, v rooms had been prepared for us and v we stayed until our departure, in Ju the following year, as our furniture ha arrived in time to allow us to take u residence in the legation building. ever, mine host Lampsa and his very able and accomplished wife, a French made us very comfortable indeed, so we had no reason to regret not having able to move into our own house. glad of the occasion to express here t worthy couple my sincere gratitude fo kind attention they showed my wife daughter when they returned to Athe the second year of the great war after had been obliged hurriedly to leave where we had established our hous after my recall from Washir at the time of the threatenin proach of the enemy to Compi

The Hôtel Grande Bret stands in the Place de la Cons tion, and from its windows on a good view of the royal pala the left, and on the right, i distance, of the rock of the A olis, whose outline as seen the windows of my room i hotel bears a striking resemb to the profile of Gladstone— Lord Byron the most popular lishman—whose name will al be gratefully remembered b Greek people as that of the st man who made restitutio Greece of the Ionian Islands, v for half a century—for their good, be it said—had been British rule.

A week or so after our a we were startled by the outb of something like a revolution small scale, provoked by the extraordinary of causes and ated by the people whom one have least suspected of bein clined to organize a popular ing for such a cause. The fa the case were as follows: Olga, who was, as mentioned a by birth a Russian grand duc a niece of Emperor Alexand was, though most loyally att to the country of her ado nevertheless a great Russia triot, and on that account unpopular in Greece. She most kind-hearted woman and entire voted to all works of charity, especial the care of the sick and wounded. D the Greco-Turkish War she had been ally a daily visitor to the military hosp and in trying to read the Gospels t wounded soldiers she had noticed tha language of Holy Scripture, which wa classical ancient Greek, was quite unin gible to the men. As there was no tra tion of the Bible into modern Gre existence, the queen determined to such a translation made by duly qua ecclesiastics, and to have it publishe the benefit of the masses of the peop whom ancient classical Greek is a c book.

She had naturally consulted the m politan archbishop of Athens, who ha only unreservedly approved the qu plan but had even, if I am not mist actively supervised the work of transla

Apparently there was nothing in work, undertaken entirely and exclus in the interest of the people, that have furnished ground for malevolent cism, let alone open dissatisfaction an volt. But, strange as it may seem, publication of the translation of the Go into modern Greek excited the patr indignation of the university students extraordinary degree against the queer the metropolitan archbishop, as the thors of such a profanation of what held to be the palladium of Hellenis that is to say, the original text of Gospels as written by their authors i ancient Greek.

(Concluded from Page 86)

It appears, besides, that at the same time one of the Athenian sensational newspapers, To Asti, had begun the publication of the Gospels in a translation of its own and printed in that part of its paper which in Continental European news sheets is called *feuilleton* and is mostly reserved for literary productions in a lighter vein—a proceeding which indeed deserved to be called a profanation. The queen having been the originator of the idea of having the Gospels translated into modern Greek, the publication of the translation was attributed to Russian or Panslavist intrigues against Greek supremacy over the Orthodox populations in the East, and the streets resounded with shouts of "Down with Olga!" "Down with Russia!" "Long live the king!"

Mild rioting continued for three days. I call it "mild" because its manifestations were mostly limited to formidable-sounding vociferations by seemingly infuriated crowds without any damage being done to life or property. The whole garrison, however, was on foot, including artillery, part of it guarding the royal palace, being lined up along the boulevard between the palace and the Place de la Constitution. I had to traverse the cordon of troops stationed there every day in order to reach the office of the legation in the street behind the palace, and had no difficulty whatsoever in doing so, though I had no pass or permit to show, and as a newcomer could hardly have been known to any of the officers in command of the troops. Altogether, a certain amount of good nature seemed to prevail, to which I could testify from personal experience. Nothing of an alarming nature happening, I saw no reason why I should interrupt my official round of calls on my colleagues, and it so happened that in order to reach one of the foreign legations I had to cross one of the main streets filled with a ferociously howling mob.

My cabby dashed at a gallop right into the crowd, and nothing daunted by their wild shouts of indignation turned round to me with a broad grin and said in broken French: "Never mind them, monsieur; their howls are not against you but against Minister Theotokes."

The Premier's Resignation

The queen continued her daily drives in an open landau accompanied only by her lady in waiting on the road leading to the Piræus, where she was in the habit of visiting the Russian hospital, one of her charitable foundations; and to the credit of the populace of Athens let it be said, she could quite safely drive through the streets filled with the hostile crowds, who would always let her pass in respectful silence. I have since had some experience with so-called bloodless revolutions and would not wish even my worst enemy to have to witness one; but if what I saw of the rioting on that occasion is to be dignified by the sinister name of revolution I would not mind so much seeing another one myself—in Athens, of course.

However, on the third day the troops, probably thoroughly tired of their long inactivity and defenseless exposure to the jeers of the rabble, were ordered to fire a volley, with the result that six or seven innocent bystanders were killed, one of whom fell dead at the feet of a twelve-year-old boy whom his father, one of my colleagues, had taken out to see the fun and who paid for his curiosity with a bad attack of hysteria.

One of the curious features of these riots I had occasion to notice during these three days was the presence, sometimes in the thickest of the trouble, of numbers of babies in perambulators attended by their excitement-loving nurses.

The funeral of the victims of the shooting took place the same evening, the corpses being carried in open coffins past our hotel on the way to the palace, presumably to be paraded before the eyes of the king.

The next day perfect quiet was restored and the whole affair ended with the resignations of the prime minister and of the metropolitan archbishop, who had sanctioned the translation of the original text of the Gospels into modern Greek.

It must be noted also that the events of these troubled November days, though implicating in a measure the responsibility of the queen, in no way impaired the popularity of the king. Shouts of "Long live the king!" were mostly intermingled with cries of "Down with Olga!" When in speaking of the king I used the word "popularity" I was perhaps slightly stretching a point. He was too much of a typical, blue-eyed, blond-haired Norseman, not only in appearance but also in his whole mental make-up, ever to have become a really popular figure among a people of a southern race. He also disdained all such cheap devices of popularity catching as, for instance, his predecessor's—King Otho, who was a Bavarian prince—habit of wearing sometimes the supposedly Greek but really Albanian national costume with white leggings and a fluted short white petticoat, which made him look like a great burly red-bearded ballet girl. But King George unquestionably enjoyed the highest esteem and the fullest confidence of the nation, which could not but recognize the invaluable services he had been able to render to his adopted country, thanks to his intimate family connection with the reigning dynasties of Russia and Great Britain as brother-in-law of Emperor Alexander III and King Edward.

Relations With Greece

At the time of my arrival at Athens the memory of the recent Greco-Turkish War had apparently been more or less obliterated, and the fact seemed to have been thoroughly forgotten that it was Russia's ultimatum to Turkey which had arrested the triumphal march on Athens of victorious Edhem Pasha and had saved Greece from the horrors of a Turkish invasion. Popular feeling seemed to be decidedly unfriendly to Russia, to some extent, no doubt, as a result of the part our government had taken in the curious muddle the Great Powers had made of the settlement of the Cretan question in attempting to conciliate Turkish claims with the national aspirations of the Greeks. In this question, as in every other connected with Near Eastern politics, the traditional rivalries among the Great Powers played the same baleful part that for so long had served merely to bolster up Turkish domination over subject Christian races, and it was but natural that Russia's participation in policies antagonistic to Greek national aspirations should have appeared in the eyes of the Greek people as a particularly odious betrayal of a long-suffering and helpless coreligionist.

In a confidential letter to the Minister of Foreign Affairs I took the liberty of pointing out that none of our political interests could possibly be served by an attitude that could not but alienate the sympathy of the Greek people, the same people who in the hour of our need at the time of the Crimean War had stood by us and had at grave risk to their own country sent a brigade of volunteers to fight in the ranks of our army; a people who, though they could call but a small territory their own, represented Hellenism—that is to say, a very great ideal and cultural force in the whole Near East, which could not by any means be treated as a negligible quantity. I further called attention to the fact that the change in the attitude of the Greek people toward Russia dated back from the time in the seventies of last century, when in order to favor the political interests of our Bulgarian protégés we deliberately provoked a schism in the Orthodox Greek Church by giving our powerful support to the severance of the Bulgarian Church from the Ecumenical Patriarchate of Constantinople. The Greeks could never forgive us an action which they interpreted as a desire on our part to undermine their supremacy over the Orthodox populations in the Orient. Lastly, I suggested that a day might come when perhaps we would be but too glad to welcome the support of Hellenism as a counterpoise to Bulgarian preponderance in the Balkan Peninsula.

My advocacy of the discontinuance of our opposition to the annexation of Crete to the Greek Kingdom as the only logical and rational solution of the Cretan question may have been attributed to a desire on my part to ingratiate myself with the Greek court and government though, of course, neither of them could possibly have had any knowledge of it, as my confidential correspondence was always forwarded by courier. All I know is that it remained resultless.

The most interesting personality in Athens was unquestionably King George, with whom I had the honor of being brought into closer contact than my colleagues—except the British Minister, whose wife, Lady Egerton, née Princess Lobanoff-Rostovsky, was a special favorite of the queen—owing to the circumstances that Queen Olga as a great Russian patriot never failed to attend the numerous lunches and dinners which were constantly being given in her honor on one or the other of the vessels of our Mediterranean squadron, one of which was always stationed at the Piræus. On these occasions the queen was usually accompanied by the king, and in this way I had many a chance for private and quite informal chats with His Majesty.

I remember that one beautiful spring day, after a copious lunch on board our flagship, the king asked me to come with him on the bridge as he wanted to show me some object—I forget what—of interest in the harbor. Having done so he turned round and pointing out to me the new part of the town he said that all that part of the Piræus, which was now worth millions, had been nothing but a hopeless-looking dreary waste when he first arrived in his kingdom, and that he could have bought it up for a few thousand drachmas. To my rather indiscreet inquiry why, then, he had not jumped at such a rare chance for a magnificent real-estate speculation he laughingly replied: "To begin with, I hadn't the cash"; and added in a serious tone: "To tell you the truth, I did not know how long I was going to stay in Greece."

Then he went on to tell me how, as a mere boy of sixteen or seventeen, having been elected to the throne of Greece after the expulsion of King Otho, he had arrived in his new kingdom among total strangers, whose very language he did not understand, with nobody of his own people to counsel and support him, and how he had spent his first night in the royal palace, which he found absolutely bare of every vestige of furniture except a camp bed and a cane chair, on which he placed his watch and his revolver, in the great throne room where he had given me audience for the presentation of my letters of credence.

I could only express my profound admiration for the wonderful success the king had achieved in his reign of nearly forty years. Aside from such advantages as he derived from his family connections his success was entirely due to his personal qualities, his liberal mind, his dispassionate, always level-headed judgment, his knowledge of men and consummate skill in handling them.

I must confess I was very much under the charm of his extremely winning personality and never enjoyed anything so much as my occasional long and always most interesting and illuminating conversations with the king.

With the beginning of spring the court was in the habit of retiring to Tattoi, a property not far from Athens, which the king had acquired for a summer residence and where he had laid out a large park of which he was very proud and which he liked to show personally to visitors.

Royal Entertainment

The chiefs of foreign legations with their wives would every now and then be invited, each legation in its turn, to spend the day at Tattoi, when the program always followed consisted of luncheon with Their Majesties in the garden; a siesta in the rooms reserved for guests; at five P. M. a drive round the park lasting exactly one hour, the king himself driving in the front seat of the *char-à-bancs* with the minister by his side and the queen occupying the back seat with the minister's wife; and finally tea with the royal family in the château, and return by rail to Athens. The great attraction at these outings to the royal summer residence was the occasion they offered for a very long and undisturbed conversation with the king on every subject under the sun as the fancy would strike him.

On one such occasion I remember a conversation after luncheon in the garden at Tattoi when the queen, who always has had a tender spot in her heart for our navy, of which her father, the Grand Duke Constantine, had been the grand admiral, and who took a lively interest in the state of affairs in the Far East, where our fleet was naturally expected to take an active share in events in case of war, asked me what I thought of the political situation in that part of the world.

I replied that I had no doubt that unless we abandoned our aggressive policy in Korea we should in the near future find ourselves engaged in an armed conflict with Japan, the issue of which, I apprehended, would spell disaster for us, considering that we did not seem to make any adequate preparations for meeting such an eventuality. This casual expression of opinion turned out to have much impressed the queen and caused her to report it to me as it most concerned, a circumstance which stood me in good stead later on, as will be seen in one of the following chapters of these reminiscences.

In the beginning of June our furniture began to arrive and we were kept busy preparing our house for occupancy for the winter. When the heat became unbearable in the beginning of July we made up our minds to spend the summer somewhere in the Swiss mountains. I procured three months' leave of absence and we started on our journey from the Piræus in an Austrian steamer which took us round Cape Matapan, on the southern extremity of the Peloponnesus, to Corfu and, touching at Brindisi and Ancona, finally to Venice, which we arrived there in the morning of the fifteenth of July.

Having made a sight-seeing excursion in one of the lugubrious black floating hearses they call gondolas we went to dine at the Quadri restaurant on the Piazza di San Marco, and after dinner we had a look at the famous Campanile. In walking around the monument we noticed some cracks in the walls, which did not seem very unnatural in a building that had been standing for so many centuries, and without attaching the matter a second thought we sat down on one of the benches in the piazza to listen to the brass band, which had just struck up a lively tune. However, the band suddenly stopped playing and were replaced by another circumstance to which we should pay attention and of the meaning of which we did not learn till the next day from the afternoon papers. Being rather thirsty we followed the band's example and went home to our hotel.

The Fall of the Campanile

The next morning—it was the fourteenth of July, the date of the fall of the Bastile—I went out early to have my coffee on the Piazza di San Marco. Having bought a copy of the Paris Herald, and while I was studying the snobs column sitting at a table in the open in front of the Café Florian with my back turned to the Campanile I was startled by a sinister crackling sound which made me turn round, and I saw the Campanile not falling but settling down on its base in a most extraordinary way, as if only having fallen off and smashed the wall of the Biblioteca Reale. It was an astonishing sight, so I pulled out my watch, conceding to the instinctive impulse for such things which every diplomat should cultivate, and found that my timepiece showed exactly nine-fifty-two A. M.

At the same moment a soul-stirring cry of "*Fuggiam*" went up from the crowd and some two or three hundred people who happened to be on the piazza, and they all in a wild rush in my direction, followed by an enormous cloud of marble dust and the dust of centuries—from both of which I discreetly sought safety in precipitate flight into the courtyard of the royal palace.

As soon as the dust was laid I rushed to the telegraph station in the precession of such a marvelous scoop dashed off to my editor—I mean my ministerial chief—a rush telegram couched in the terms of the most exquisite journalese I could command, giving all possible details about the tragic end of "the wife of forty centuries of a glorious history" in words to that effect.

I did this because I happened to have seen in the morning papers that the Queen of Italy, who was on a visit to the Austrian court, would attend that very evening a state banquet at the Palace of Pola, and I wanted to enable my chief to be first before a foreign monarch the wonderful efficiency of the information service of my department. The next thing I did was to buy up all the postcards with pictures of the piazza and Campanile and to send them off to all my friends whose addresses I could recollect, marked with the date and the hour of the event and the words "*Chute du Campanile.*" Had I then possessed the gift of second sight I should not have failed to send an extra-fine photograph of the piazza and Campanile to THE SATURDAY EVENING POST as a souvenir from a futurist contributor.

Editor's Note—This is the ninth of a series of articles by Baron Rosen. The next will appear in an early issue.

ta to have you see me looking like this,
Bno, but I sat telephoning until half
a four, and baby was under my feet
v y minute. And then there wasn't any-
hg in the house for dinner. And she'd
ethe fire go out too. And of course it had
o e on such a hot day that it took baby
ors and hours to go to sleep. I'm going to
u up and change in just half a second."

"That's all right," said Mr. Bangs,
iously adjusting his cuff links. "So it's
goround to the cooks, too, has it?" With
hi coat half on he attempted a sweeping
gesture, which ended so abruptly as to dis-
cert him. "All right! That's the finish!
" stood all I'm going to, and so have you,
ar we're through! We've had something
il eleven cooks in five months, haven't
w Well, by George! Here's one place
w re they can't get our goats again. If we
ca't have any peace in a house of our own,
wil go live in an apartment, by George!
Al we'll eat in restaurants and ——"

"Don't be silly, Bruno! You can't de-
ci things on the spur of the moment like
ht. Now if you'll just pour some water
ar put everything that's on that table on
th tea cart, I'll run upstairs."

"Take your time, take your time," said
M. Bangs soothingly. "I'm going to have
a ith and change my clothes. I don't give a
w oop whether we eat at seven or at mid-
nht, but I'm going to be respectable when
I o it, cook or no cook! And I've got a
sc eme too. It occurred to me this after-
no n when the newsboys boycotted the Journal. All we need to do to protect ourselves from this sort of mess is to get together and protect ourselves. Listen ——"

Behold them, then, an hour later—Mr. Bangs in blue coat and white flannels, and Sylvia, her normal attractive self in crisp white linen—smiling brightly at each other across the dining table. Mr. Bangs, rendered eloquent by applause, had not only related what had occurred to him this afternoon, but he had also enlarged upon it extemporaneously. He had pictured Wellington as an ideal community, whose every industry could be governed by sheer bulk of public opinion. Could strikes be called if the public forbade? Impossible. Could retailers cheat a public which declined, in mass, to be cheated? Nonsense! Crystallize your public opinion, and the thing was done!

"And Then You Volunteer to Do a Constitution; Don't Say You've Done Most of it Already. Understand?"

"It's a lovely scheme, dear," said Sylvia a little breathlessly. "It's wonderful! And the best part of it is that it might work. But won't it be awfully hard to get the people together?"

Mr. Bangs shook his head. "No. This isn't like starting something that costs money, and it isn't anything that has to be argued. You and I and the Eversons and the Kelloggs can begin. That's plenty. It'll spread like wildfire."

"Well, when shall we begin?"

"Why not to-night? The only way to start a reform is to start it. And this isn't a new condition; it's universal. When we're through here you can go over and get the Kelloggs and I'll get the Eversons, and bring them over, and we'll thrash the whole thing out before bedtime. If they'll come in with us we can have headway inside of a week. And to-morrow I'll work out a sort of prospectus, and inside of two weeks, by George! we'll have a hundred members or I'm a lobster! And a hundred representative people in a town of this size can do anything they put their minds to." He rose, confident, and nervously energetic. "Finished? Let's rustle these things out, then, and put some ginger ale on the ice and go recruiting. Shall we?"

III

AT THE first mention of reform the Eversons, whose horrid fear was that sometime they might be considered socialists, had balked visibly and tried to invent an alibi, but as soon as Mr. Bangs had introduced the servant problem Mrs. Everson was ready to address a mass meeting, or speak from a cart tail at any street corner. The Kelloggs, as Mr. Bangs learned afterward, had required little solicitation; for Ruth Kellogg had been without a cook or nurse for seven weeks, and Henry was an inveterate joiner. By half past nine the sextet was comfortably established on the mosquito-proofed veranda, where Mr. Bangs had set out cold beverages, cigars and bonbons.

"Now what I propose," said Mr. Bangs forcefully, "is to beat these Bolsheviki at their own game. So far the game has been both ends against the middle; capital and labor are the two ends, and all the people like us are in the middle. The trouble's always been that everybody's organized but us. We're the prize suckers of the universe—the consumers. No matter which of the two ends wins all these strikes and things, we pay the bills. And I'm absolutely convinced that if we stick together we can get pretty nearly everything we want. Of course we'll have to go at it gradually. And there can't be anything very extreme at first. Slow, steady, resistless plugging. The question right now isn't whether we're going to do anything, because we know we are—but it's what we're going to do first."

Mr. Everson, who could always be counted upon to skip blithely over the major topic and land with both feet on a trifling detail, lifted up his majestic voice:

"One of the most vital necessities in any cause, in any progressive movement ——"

He paused for effect; the five others gazed at him, attentive. He wasn't a particularly successful real-estate broker, but he had the presence and the delivery of a great orator.

"Yes?" asked Mr. Bangs, hanging on his words.

"—— is a good slogan," said Mr. Everson; and having pronounced judgment, he sat back and blew smoke through the wire screen.

There was a little silence.

"That's a very good idea," said Mr. Bangs finally; "but it comes in a little later. The question is, What special problem do we want to attack first?"

It was Sylvia who answered.

"Servants," she said promptly. "Ruth and I both say so. Here we are, three families in a row, without a cook or a maid or a nurse or anything. And wages are awful, and they won't do any work, anyway, and there's no use trying to get away from it. So here's an idea: Why don't we make a beginning among ourselves? Suppose Monday, for example, all of us eat at our house. Ruth helps me get breakfast and lunch and dinner, and helps me round the house for part of the morning, and I go over and help her with hers. And she helps me after dinner too. Helen doesn't do a thing; she has a vacation. Ruth and I look after Dickie for her, so all the children play together, and they're the same age, so that'll be all right; and they'll have the same things to eat. And I'll have done the buying for all of us for that day, and there won't be nearly so much waste, and probably it wouldn't cost quite so much either, divided up.

"And Tuesday, it's at Ruth's house, and they use up left-overs for lunch, and all; and Helen helps her and I have a vacation. And Wednesday, it's at Helen's house, and I help her, and Ruth has a vacation. I simply can't see any sense in our duplicating all our housework for nothing when we might just as well combine and get it over with quicker, and let one of us have a rest. And then on Thursday we start all over again."

Henry Kellogg laughed aloud. He took life less seriously than any of the others, and was content to let his companions do most of his thinking for him.

"Well," he said, "if you could get a whole neighborhood to split up into groups of three like that you'd solve your servant problem. Not just for yourselves but for everybody. You wouldn't need any servants, and you'd all have more time off than you do now. I think it's a corking good idea."

"What would the servant class find to do?" asked Mr. Everson.

Mr. Bangs was tapping his foot restlessly.

"Rupert, you remind me of the story about the old Scotch lady who heard about kerosene for the first time. Years ago, of course. They'd always used whale oil in lamps. And when they told her how fine kerosene was, and how much cheaper, all she said was: 'Then what's to become of the puir whales?' . . . Sylvia, that's not half bad! There's the germ of coöperation in it, and that's what we're after. And Henry's on the trail too. Suppose, for instance, we could interest thirty people. Suppose we hired some bright girl who'd graduated from a domestic-science school to do the buying for the whole crowd. Have the orders ready for her at a certain time, and she'd consolidate them and then go shopping. By George, there's a purchasing power for you! Think what a cudgel it would be on the retailer! Thirty people's business at once! And that gives the high cost of living and the servant question one wallop apiece at the same time!"

His eyes were brilliant, and he was galvanizing the others to an approximation of his own mood. Furthermore, the conception of a series of cowed and respectful butchers and grocers was fundamentally absorbing.

"Think of it!" said Sylvia. "Twenty cents for a head of lettuce that used to be five."

"My dear! Do you remember when bacon was twenty cents a pound?"

(Continued on Page 93)

Monel metal

Copper, iron, tin, lead, nickel, aluminum—and now MONEL

MONEL is a metal comparatively new to the commercial field, yet with uses as wide and varied as steel itself. It is as strong as steel, non-corrodible as copper, bright as nickel. Equal advantages are not obtainable with any other metal or alloy.

MONEL Metal is a white alloy—a natural combination of 67 percent nickel, 28 percent copper, and 5 percent other metals, chiefly iron and manganese. It contains no zinc. The nickel and copper bear the same relation to each other in the ingot of refined metal as in the ore when taken from the mine.

MONEL Metal withstands acids, alkalies, high temperatures, and erosive action of hot gases and superheated steam. Can be cast, forged, rolled, drawn, machined, brazed, soldered, and welded by electric or oxy-acetylene method. Takes and retains a perfect nickel finish.

MONEL Metal is manufactured in the form of rods, castings, forgings, wire, sheets, strip stock, etc. Some of its common uses are valve trim, pump rods and liners, turbine blading, mine screens, filter cloth, gasoline still plugs, spark plug electrodes, propellers, ornamental trim, roofing, golf club heads, table cutlery, and window screens.

(Continued from Page 91)

"ggs!" said Ruth Kellogg mournfully. Hiry and I love eggs. Oh, how we do veggs! And ——"

"ananas!" said Sylvia, her eyes shining. A ent apiece when we were married, and fcents a dozen now. Oh, dear!"

"ut, personally," said Mr. Everson, eing his throat with abandon, "I think e ught to take up another equally im- rtant subject at the same time. Speak- g f the high cost of living reminded me j That's the tipping nuisance."

Mr. Bangs hesitated, approved, and niked his hand down on the wicker table. "Vell, we will! We'll go at the whole tution. One thing at a time. But the a premises are these: Cut out the serv- nt cut out the middleman, cut down ris and do something about these in- rd strikes."

"Ve might start an antistrike strike," di Helen Everson cheerfully. "Only I cn exactly see how we could do it. Does nody else?"

Nobody did, but no one cared to admit . ecause the expression was so fascinat- g It rested for an instant on five appre- a ve tongues.

"hat's something to take up later," i Mr. Bangs cordially. "Now the next e is to get people interested, and there's o se in wasting time trying to catch them ody one. We want a lot of representa- v people talking at once about this ig. Don't you girls have a reading club r mething? How many are there in it?"

Twelve."

That's a good nucleus. One of you can g it at your next meeting? And isn't e a current-events class?"

"With forty members," said Ruth Kel- g complacently. "And I'm president of ; nd if the servant question and the food u tion aren't current events, then I ot know what are. If I ever do bring he up there won't be much discussion but the Archangel reds that day."

There may be about the Rhode Island ec though," murmured her husband, but one paid any attention to him.

Bully! And Sylvia, isn't there a bridge li you ——"

Oh, no," said Sylvia hastily. "You're hking of the reading club. Won't some- nhave some more ginger ale? Ruth?"

er tone was casual enough, but it had a ai echo of warning in it, and Mr. Bangs nw from experience that when Sylvia icstepped she had a reason, and wasn't o e pursued. He was puzzled, and though ieropped the subject he stored it away in hibrain for future reference.

Well, you can reach fifty or sixty vuen, then, in two meetings; and I'll sp k to all the men I know. Oh, I forgot to ll you that Sam Bowker's interested in h with me. I spoke to him on the way puto-night, and he's keen about it."

Three women displayed much anima- ti, and two men were interested.

And—and Mrs. Bowker?"

Well," said Mr. Bangs, "you've got to remember that we're setting out with a lot of retty novel and pretty different ideas. I n't say the Bowkers would want to fire hr servants, and all that; but the point s iat we're a league of—of ——"

—— notions," said Mr. Everson. "A Lgue of Notions. There's your slogan."

We're a reform club in the most general sese. Anybody can belong, and go as far as e likes, swallow the whole plan or nibble att whenever he wants to. The principle ofne thing is to cut down the cost of living. Al from time to time we'll go out after bievils like these strikes. But the job now iso get people excited about it, and have a eneral meeting, say, a week from to- nit, in the Y. M. C. A. auditorium, and pfect an organization. And Sam Bow- ke'll like some of it if he doesn't like all of it nd he said that if I got it up he'd join."

Henry Kellogg grinned to himself. "ood politics! Catch Bowker passing up a nance to run a crowd like us. He'll eat it live."

Yes," said Rupert. "I hear he thinks hs going to be mayor some day."

And in the meantime," said Sylvia, "if yi girls will give me lists of what Henry an Rupert don't like to eat we'll begin co- orating to-morrow morning—that is, if a of you want to try it. I'll start. I've got enough eggs and fruit and things anyway; o you can bring some over."

As long as I never take any breakfast bt one cup of coffee and a slice of bread," bran Mr. Everson, "it seems to me that wought to take into account my ——"

"Sh-h! Rupert!" Helen Everson silenced him, and beamed upon the company. "There surely can't be any harm in trying it for a week or two, and it certainly will save work for all of us, whether it saves money or not. I'll come if Helen will."

"I'll come," said Helen promptly. "And Henry'd love to. Don't bother to ask him—I dare him to say he wouldn't."

"It's agreed, then," asked Mr. Bangs, "that we'll make a serious effort to put this over? You'll all promise to help?"

The consent was unanimous and enthusiastic, except that Ruth reserved the privilege of hiring a nurse if she could find one.

"Only I suppose," said Rupert Everson, rising to depart, "that if we're going to be a regular organization we'll have to get some stationery printed, won't we? . . . Well, I suppose of course that will come later."

After they had gone, all four of them thoughtful and optimistic, which Mr. Bangs took as a very great compliment and augury, he turned perplexedly to Sylvia.

"What's queer about that bridge club of yours?" he demanded. "You told me day before yesterday, when you were elected, it was a great honor to be in it. Is it a secret sorority or what?"

Sylvia was a highly admired wife, but there were moments when Mr. Bangs was impelled to take his brain into a corner and tell it that all women were illogical, but that Sylvia held the championship trophy.

"Why, Bruno! Haven't you any tact? I'm the only woman on Elm Street who's in it. It's only three tables, and it's supposed to be quite the thing. Don't you know if you go and talk about it like that you'll spoil this whole new plan of yours? Ruth and Helen don't know it yet. I've been trying to think of the most tactful way to let them know."

Mr. Bangs might corrugate his brows indefinitely without coming any closer to a solution.

"I know I'm a poor half-witted imbecile, but I'm hanged if I can see what you're driving at, Sylvia."

"Why, just this: Ruth and Helen and some of the others won't be jealous, exactly, when they find out, and I've been ever so careful not to say anything for fear it would seem like—well, like crowing, or something; but after all it's Mrs. Bowker's own bridge club, and you know where Mrs. Bowker stands in Wellington. And I can't afford to have them think we're letting them bring in the reading club and the current-events class while I bring in the Bowker crowd. Not unless I were actually asked to do it. Don't you see?"

Mr. Bangs shook his head weakly.

"Well, I asked you, didn't I?"

"That isn't what I mean. The girls would have had to ask me, and they couldn't very well do it because they don't know that Mrs. Bowker's sort of—well, taken me up just recently. We can't start out with any cliques in this new club of ours, or it'll go all to pieces in no time. It's got to be absolutely democratic. Can't you understand my position, Bruno? If anybody ever thought we're climbers the whole plan's doomed."

"Oh!" said Mr. Bangs. "You're afraid they'll think the reform club's our private scaling ladder? I don't see how anybody could think that."

"Well, I don't want anybody to have the chance. That's why I didn't want you to drag in the bridge club. And the way things are going now we don't need any ladder at all. And it was all right for you to mention Mr. Bowker, because you're all men, and that's different. In fact, it was probably a good thing you did. But there's one thing certain, Bruno—you and I can offer as many suggestions as we like and do as much work as we like, but as long as the Bowkers are coming in neither one of us can be an officer of this thing, not even so much as chairman of a committee. That's positive."

Mr. Bangs' jaw dropped. "No credit for starting it, either?"

"Not a bit. We don't want it. And there are always people who do, and we'd better let them have it."

Mr. Bangs surveyed her with melancholy, for a beloved child of his brain was in process of being abducted.

"Well, who does get it then?"

Sylvia pondered briefly, and looked up with a bubbling laugh. "Why not Mrs. Bowker? Then none of us will look like climbers."

"It's darned funny," said Mr. Bangs helplessly; "you all say you don't like her, and yet ——"

"And you men all say Mr. Bowker's an old hypocrite—and yet ——"

"But business is business."

"And society's society. Why, Bruno—if the Bowkers run it and we don't like the way they run it we can get out, can't we? But if we run it and don't like the way they act we can't put them out; and we wouldn't want to resign, either. Don't you see that—silly?"

Mr. Bangs was unable to bestow upon her any order of merit more thoroughly convincing than his kiss. And it wasn't the customary embrace by any means; it was a solemn investiture, and Mr. Bangs held his breath while he was doing it. For the moment he was almost afraid of Sylvia.

"But how," he said, "are you going to manage to get to that bridge club, anyway, if there's nobody in the house to take care of the baby?"

"It meets Fridays," said Sylvia; and two minutes later Mr. Bangs saw the point and laughed.

IV

IT WAS a cheerful and inspiring breakfast which the six conspirators shared together the next morning—so cheerful, in fact, that nobody minded the pitched battle in oatmeal which the Bangs baby and the Everson brat and the two Kellogg brats—the terminology being that of Mr. Bangs—waged with abandon at their separate table; and it was a dynamic Mr. Bangs who waved to Sylvia from the oak tree, the hydrant and the letter box, and hurried downtown to dictate the preliminary draft of the constitution. Fortunately for the embryo league, his law practice was based upon the management of two large estates, which left him plenty of time to conceive and execute a Magna Charta.

Almost immediately, however, his horizon dipped out of sight. He had just dictated: "The purpose of this organization shall be ——" when it came spontaneously to him that a list of all the various purposes was impracticable, because so many of them hadn't yet been envisioned, even in his dreams. There was Henry Kellogg's ultimatum of this morning against the robber barons of the garages, and there was Rupert Everson's antitipping campaign, and there was the matter of the servants and the foodstuffs, and vaguely there was something to be done about strikes; but these were merely the avenues to some vast and as yet unfathomed ideal.

Mr. Bangs couldn't define that ideal nor did he know that what his imagination was reaching toward was a world in which the law of economics would be repealed in a body; but he was dazzled, nevertheless. It seemed to him as though he were charged with responsibility which might put him later upon a pedestal with those geniuses who wrote the Constitution of the United States. Indeed, his present occupation was due entirely to the failure of that mouth-filling guaranty concerning the pursuit of happiness. The reform club of Wellington might rise to power that would alter first the cosmogony of Wellington, then of the county, then of the state, then ——

Mr. Bangs caught himself as he was about to step, mentally, off the Atlantic seaboard.

"The purpose of this organization," he said carefully to the stenographer, "shall be to insure to each member thereof that individual liberty of action which can exist only in a community free from labor agitations, food and fuel speculations, inflation of the value of personal services, and all other impediments to a sane and continuous civic progress."

It was done! And Mr. Bangs hearkening to the roar of the syllables in his own ears was almost awed by their tremendous purport. "There!" he said to himself. "That's history!"

While he was thus exalted he went on with the minutiæ of administration. He provided for the usual number of officers, all without salary. Then he thought unexpectedly of a young and practical consultant in New York who specialized in the organization of all sorts of enterprises, and who, if given rope enough, would surely make a whirlwind success of this venture; so that he added to the project a managing director, with salary. A directorate of eight men and seven women would be about right; and there could also be an advisory council of thirteen men and twelve women. Might as well remember that sometimes there would probably be a vote on strictly sex lines.

When it was finished, it was a thoroughly exhaustive document, and Mr. Bangs was

"It can't go off by accident"

People don't deliberately throw revolvers on the floor—but occasionally they drop them accidentally. If it is an Iver Johnson there is no danger; it can't go off—no matter what you do—unless you pull the trigger *all* the way back.

IVER JOHNSON SAFETY AUTOMATIC REVOLVER

You can "Hammer the Hammer" of an Iver Johnson with perfect safety.

Simple, strong, straight-shooting and *safe*—an Iver Johnson is pre-eminently the *home protection* firearm. Choice of three grips: Regular, Perfect Rubber, Western Walnut. At all hardware and sporting-goods stores.

BEACON

THERE ARE NO BETTER

SHOES

FOR FIT FOR STYLE FOR WEAR

F. M. Hoyt Shoe Company, Makers, Manchester, New Hampshire

proud of it; so proud that he never even lost color when a parade of the striking members of Lunch Room Workers' Union No. 146 went past the Bowker Building. The day would come when a strike in Wellington would be as rare as a day without a strike now. And he, John Huntington Bangs, a youthful lawyer in a twelve-by-twelve room on the top floor, had dictated the covenants which would free his city from the octopus—and so on.

On impulse he telephoned to New York, and was fortunate enough to locate the organizer within the hour. Mr. Sugden was resting from the exertion of raising, in two weeks, a fund of $50,000 to build a Y. W. C. A. in Sheldrake, Ohio, and though he was frankly interested in the possibility of fat commissions, he said that coöperative enterprises were his hobby, and that he wasn't so much concerned about the pay as about the principle.

"You'd better come out and talk it over, then," said Mr. Bangs seductively. "If you can sell your personality to this outfit—why, I shouldn't wonder if you could write your own ticket, and then you'll have your fun and your fortune both. I think it's going to be a hummer."

"When can I come?" inquired Mr. Sugden, whose mind sparked readily.

Following instructions he caught the 4:20 train, and arrived in ample time for dinner. He was a most presentable person, with good features and an engaging manner, and he took by storm the five pioneers who hadn't previously met him. And he was quickly impressed by what they had done already, and what they had planned.

"Of course it's feasible!" he said to them. "It's sound and sensible, and if your friends support it it's sure to go through, but don't make these coöperative dining arrangements a part of your formal set-up. I doubt if they'll serve their purpose for very long. It's a pleasant novelty, but you'll get tired of it. Let people do it if they want to. Encourage it, possibly, but leave it out of your constitution, because there's too many chances of friction in it. And make all these other plans side issues. Begin with straight coöperative buying; and then build up your other creeds one by one. The whole platform's a little too heavy just now. Pick up one idea at a time."

"How would we buy our things, then?" inquired Sylvia.

"Exactly as you yourself suggested, only on a larger scale. You speak of forty or fifty members—you ought to have two or three hundred. If I put this club on its feet, I'll work out a system that'll satisfy you, only you'll have to anticipate your wants by a day or two. No system of coöperation is any good unless you really coöperate. If you're willing to plan out your menus and your household requirements so that you could order in quantities, and give me more leeway, I'll save you so much more money." He smiled warmly at Sylvia. "Any kind of economy takes a little effort."

"Suppose we made it. What could we save?"

"Oh, fifteen or twenty per cent."

The women looked at each other and mechanically estimated what they would do with the savings. Sylvia saw a beautiful picture of the runabout she had always craved. She had had the baby instead.

"I have a question," said Mr. Everson blandly.

"Yes, sir?"

"Would the orders have to be mailed to you; or telephoned?"

"That'll come later," said Mr. Bangs with a shade of asperity. "By the way, has anybody spoken to Mrs. Bowker yet? Well, why wouldn't it be a good idea for me to take Mr. Sugden right up to talk to her?"

Sylvia gave him a glance which was a marvel of compact and interrelated instructions. It told him, among other things, that it was a brilliant inspiration, but that he wasn't to advance one inch toward Mrs. Bowker until there had been a private consultation.

"Why, would Mrs. Bowker be interested?" said Sylvia innocently.

Two feminine voices in concert assured her that Mrs. Bowker would be crazy about it, and that it wasn't worth doing except under Mrs. Bowker's patronage. Her name alone would bring in all her friends, all those who wanted to be her friends, and all those who weren't willing to admit that they didn't want to be her friends.

"She's the very one for president!" exclaimed Ruth. "The very one!"

"No—Mr. Bowker," said Sylvia gent "Mrs. Bowker ought to be chairman of board of directors. And Rupert and He have simply got to be directors the selves—haven't they, Bruno? And R and Helen councilors. It was their idea— so much of it was. Go ahead up th Bruno, if you want to. I'll get your h You left it upstairs."

Mr. Bangs, instinctively trailing, fo her in their own room, with the hat in hand. She had picked it off the hall tabl she passed.

"Now, listen, Bruno. I like your yo man a lot, and I think he's all right. W be lucky if he'll come and run this for But this is a wonderful chance to get at Bowkers, and you know how we need th Now don't say a word of what we've d already. Tell it to her as though yo come to her first. Because if she sponso everybody who is anybody will have to long, and that'll mean it'll go. And if doesn't come in, it'll be a lot harder to members. Let Mr. Sugden tell the st only be sure he says he wants Mr. Bow to be president, and Mrs. Bowker for ch man. And then ask her who'd she sug for the other officers. And then you vol teer to do a constitution; don't say yo done most of it already. Understand?"

Mr. Bangs nodded slowly. "Yes, b don't see why on earth we should go ab this as though it had so much politics mi up in it. It strikes me that if we went i in a perfectly simple and straightforw manner we'd accomplish the same th wouldn't we?"

Sylvia gave him a little push, intende imply an affectionate sorrow for his c sity. "Well, the more support we have stronger we're going to be, aren't we? the more members we have the m money we'll save. Don't stop to ar Bruno; just run along and mind moth

v

THE social supremacy of the Bowl was one of those mysterious puz which tax the hardiest imagination. Nei of them was personally appealing, neither was equipped with social at butes; indeed, the most frequent charac izations of them were to the general ef that Mr. Bowker was a tightwad and M Bowker was a cat. They entertained little, and were still less entertaining. T were several families in Wellington w had more money, and dozens of fam that spent more, whether they had i not. Yet somehow, by one of those p doxes that flourish in small cities as we in the metropolis, the Bowkers had sumed and maintained the status of sc arbiters; they considered themselves r by divine right, and the marvel was that populace believed them.

The living room into which Mr. B and Mr. Sugden were presently ush had about it some of the largeness of mosphere found in a wholesale furni department. Topheavy standing la with spreading shades guarded the fl of massive upholstered divans; the ch were of the heavy-artillery type, with thin skirmish line of light gilt inutil round the wall. The thickest of deep portières hung at the doors and wind and made an admirable foil for a few pieces of carved black walnut, heav lead and not much more invigorating the beholder. And the smaller the pic the larger the frame. Gilt frames. Not could have conveyed a greater impres of solid respectability and utter lack of agination.

In the midst of all this sober gran Mr. and Mrs. Bowker had reluct risen to greet their visitors.

"We've come," said Mr. Bangs with erential formality, "to ask you to ac the two principal offices in that organ tion I mentioned to you the other af noon, Mr. Bowker."

For an instant Mr. Bowker was stum "Oh! So you're out for blood, are y That's very interesting. Sit down, sit do What's this gentleman got to do with

According to Mr. Bangs' advice en r Mr. Sugden promptly took up the tas ingratiating himself with Mrs. Bowker, in ten minutes he had discovered tha could make as thick a paste of flattery a liked. She could digest it as fast as it c and faster.

"What we want to do is to find a wa make the dog stop chasing his tail," he winningly to the lady.

"Dog? Dog? What dog?" she deman

(Continued on Page 97)

(Continued from Page 94)

'Vhy, high prices make the workingman
t r high wages. Then the high wages
e ices another boost, and so on, in a
io circle. It's a rare dog that'll keep it
fo ver, and we propose to begin calling
t . There's practically no use in start-
t s thing unless you and Mr. Bowker
g ng to support it. And since I'm sure
' ll—because it's a real duty you owe
th commonwealth—while I'm here I
nt o get your views about the other
ce. It'll be a good idea to have a ticket
m d before the public meeting next
s ay. We can probably handle the
a on all right, but as it wouldn't be
y diplomatic for either you or Mr.
w r to seem to be controlling the meet-
a which we're going to ask you to be
e ecutives, I think it's only fair for you
t us who you'd like to work with."

M. Bowker smiled regally. "Anyone at
a —I am quite accustomed to chairman-
p I can work with anyone."

M Sugden smote her squarely between
t es with the sharp edge of a compli-
m "I can believe that too. I've heard
g l deal about your executive ability."

In the meantime Mr. Bowker was al-
d saving money for the club. "I don't
s se you'd charge for drawing up the
pa s, then, John, would you?"

"Ot a cent," said Mr. Bangs heartily.
"'a private contribution I'm only too
p to make."

T two Bowkers exchanged glances. By
t of Mr. Bowker's directorships in in-
st al concerns, they were morally op-
se to strikes of every description. They
re aptivated by the prospect of reduc-
c sts, although, as Mr. Bowker naïvely
m d out, he had conducted a personal
st pping crusade for years. They per-
vi simultaneously the value of high
ic n an association which was inevitably
st ed to enhance their own prestige.
nd Mr. Bowker had a devastating ambi-
n not yet disclosed except to his wife.
k nany another citizen who is great but
p ular, he craved the signs of popular-
y. He wanted to be mayor. And he saw
th reform club the nucleus of a powerful
w arty, which should be nonpartisan,
ce t as to Mr. Bowker himself.

"'e shall be charmed to accept," said
Mr. Bowker indulgently.

It was with deep satisfaction, then, that
e mbassadors turned homeward with
e ledge of the two Bowkers a matter of
re d.

"ow," said Mr. Sugden, "I want to
ta a look at your papers. What's the
st t time you can rush through an in-
co poration?"

"Vhy, if I ran over to the capital I could
g t by Monday."

"etter make all the speed you can.
te porary stockholders. Put in dummy
d tors so as to get in motion. I want to
s e our constitution. All members have
g to be shareholders—a share costs
tw nty-five dollars, and every adult mem-
be f a family has to hold a share. That's
w orking capital. And every family has
to maintain a constant balance of deposit
o ne hundred dollars, against which
e charge off the price of everything
he buy. You can't bother with collect-
in gills against your members, and we've
al ys got to have cash enough on hand
to mp at quick bargains. Now for the
ma aging director's profit—he gets ten dol-
ar bonus for every member, and he also
ge a commission figured like this: When a
ne ber buys anything he's charged for it
th e current market price. Every quarter
we ay a dividend, or a rebate to each mem-
be of the proportionate share of what the
Th e club has saved—figuring in the over-
he d of course. We'll pay up to twenty per
ce if we earn it, and then everything over
wi ty per cent is my commission. I won't
ra e much, I promise you. I'll get mine out of a membership campaign—and the more members I get the more business we'll do, and the more you'll save. And I want a contract. Is that fair?"

"For how long?"

"Oh, six months. I'm not a manager; I'm an organizer. And—oh, one very important item: If we're going to do this thing right every member ought to agree not to buy one solitary thing, from an onion to a touring car, except through the club, unless it's something the club can't get any cheaper or doesn't care to handle. That's vital.

"It'll take only a tiny bit more time after I've got the system going, and it's the crux of the whole thing. That's what'll give us the leverage on the dealers."

"I'll put that in the constitution," said Mr. Bangs approvingly.

It was Sylvia, however, Sylvia who struggled desperately over the household bookkeeping, who saw a magnificent relief in prospect.

"Would we buy even ice and milk and coal that way, too, Mr. Sugden?"

"The easiest thing in the world," he assured her. "Take ice, for instance. There must be four or five ice companies within ten miles of here. Don't you suppose any one of them would be overjoyed to make one blanket contract to supply so many different families? They deliver as usual, but instead of running a couple of hundred small accounts and fussing about collections they get one check from us every month, on the nail. Why, that's worth a tremendous discount right there."

Heaven was reflected on her countenance.

"But, Bruno! Don't you see what that means to us too? We won't have to mess round with all those horrid little household bills? Ice or anything else. We'll send one check a month to the club, and get back all our receipts, and it's finished! Isn't it wonderful!"

"By George," said Mr. Bangs, "I hadn't thought of it! It's a community clearing house, sure enough. It'll save you three evenings a month trying to check up your bills, and it'll save me having to balance your check book for you. Sugden, you're another Napoleon! And that gives me an idea on the strike situation too. It's a negative sort of thing, and it's strictly local, but it might do. We might allow nonmembers to buy stuff through the club at a flat discount of, say, ten per cent from market prices, and the rest of the rebate goes to the club. But strikers' families lose the privilege. Well, when you remember that mighty few strikes are for wage increases of more than ten per cent, do you see the point? And I'll take a small bet that after three months we're doing more buying for nonmembers than we are for members. And we active members will have a profit on that."

Sylvia blinked thoughtfully. "But why won't everybody join as active members?"

"Because there'll be so many people who can't afford to buy stock and maintain that constant balance, Sylvia, and so many who wouldn't be willing to back up our other schemes. And those are the very people who need to save their ten per cent more than you want to save twenty. They'll be glad to buy from us, but they won't want to join. And in the long run it's their men folks who do the striking. All right—what's the use of striking for a wage increase of ten per cent when it means losing the privilege of buying through the club? It's a stand-off."

Sugden shook his head. "I'm not sold on that, John."

"But it's the backbone of the whole thing. I insist on it. There's no argument."

Sugden shrugged his shoulders. All right. You're the doctor. Only I hope you know what you're stirring up, old man."

THE GREAT ACCIDENT

(Continued from Page 27)

warned Wint what to expect. But in spite of that warning Wint had looked for no more than a polite and friendly rivalry; a congenial conflict; a good-natured tussle between friends.

He was to find that Routt had meant exactly what he said; that Routt as a political opponent and Routt as a friend were two very different personalities. On the heels of his open announcement that he was a candidate Jack began a canvass of the town and a direct and virulent assault upon Wint.

Wint heard what Routt was doing first through his father.

The elder Chase came home to supper one evening in a fuming rage; and he said while they were eating, "Wint, this Routt is a fine friend of yours!"

Wint looked at his father in some surprise. "Why, Jack's all right," he declared.

"All right?" Chase demanded. "Do you know what he's doing?"

"I know he's out for mayor. That's all right. I've no string on the job. I want to be reëlected, just as a sort of a—testimonial that I've made good. And I intend to be reëlected. But at the same time, anyone has a right to run against me."

"Nobody denies that," his father exclaimed. "But no one has a right to hark back ten months for mud to throw at you."

Wint said, "Pshaw! There's always mud throwing in politics."

Chase challenged: "Do you mean to say you think Routt has a right to do as he is doing?"

"Well, just what is he doing?" Wint asked good-naturedly.

"What is he doing? He's saying you're a common drunkard; that you always have been; that you are still, in secret."

Wint flushed with slow anger. "Well," he said, "if anyone believes that, he's welcome to."

"But damn it, son, you're not!" Chase exclaimed; and there was such a fierce rush of pride in his father's voice that Wint was startled; and he was suddenly very happy about nothing.

He said: "I'm glad you know it, anyway, dad."

"Damn it!" Chase repeated. "Don't you suppose I can see? Don't you suppose I have a right to be proud of my own son when he does something to be proud of? Your mother and I have—well, Wint, we're—we're a good deal happier than we were a year ago."

Wint said gently: "I'm only sorry I didn't make you happy a year ago."

"That's all right," his father declared. "You were a headstrong youngster; and I didn't know how to control you. An unruly colt takes careful handling. I'm not a—tactful man. But I'll be damned if I can see how you can take this from the man you call your friend."

Wint smiled slowly, and he said: "That's three times in two minutes you've said 'damn,' dad. Cut it out. Don't get profane in your excitement. Routt's all right, really. Don't swear at him."

"Do you realize that he's saying you're drinking as regularly as ever, while you pretend to keep this a dry town?"

"Well, no one will believe him."

"You can find men to believe anything; and there are plenty in Hardiston that want to believe anything against you."

"Let them," said Wint confidently. "There are plenty who will stand back of me."

"But what are you going to do about it?"

"I'm not going to call names," Wint told him cheerfully. "I'll fight it out quietly and decently; and I'll win. That's what I mean to do."

"You act as though you had expected this."

"Well, as a matter of fact, Jack came to me and told me, before he told anyone else, that he was going to run; and he warned me he was going to make it a real fight."

"A real fight? This is assassination!"

Wint laughed. "You're taking it too hard. I know it's just because you're—proud of me. Are you going to back me in this?"

Chase frowned. "As a matter of fact, Wint, I'm in a hard position. I want to back you—of course. But I can't stomach Caretall. If you weren't tied up with him."

"He's been a pretty good friend to me. Can't you take him on that ground?"

"If I tied up with him I'd be called a bootlicker; and justly. After what he did to me I can't cater to him and keep my self-respect."

"Pshaw, dad! The world has a short memory. That's all forgotten."

"I've not forgotten."

"Everyone else has."

"I'm not talking about everyone else. I'm talking about my own self-respect."

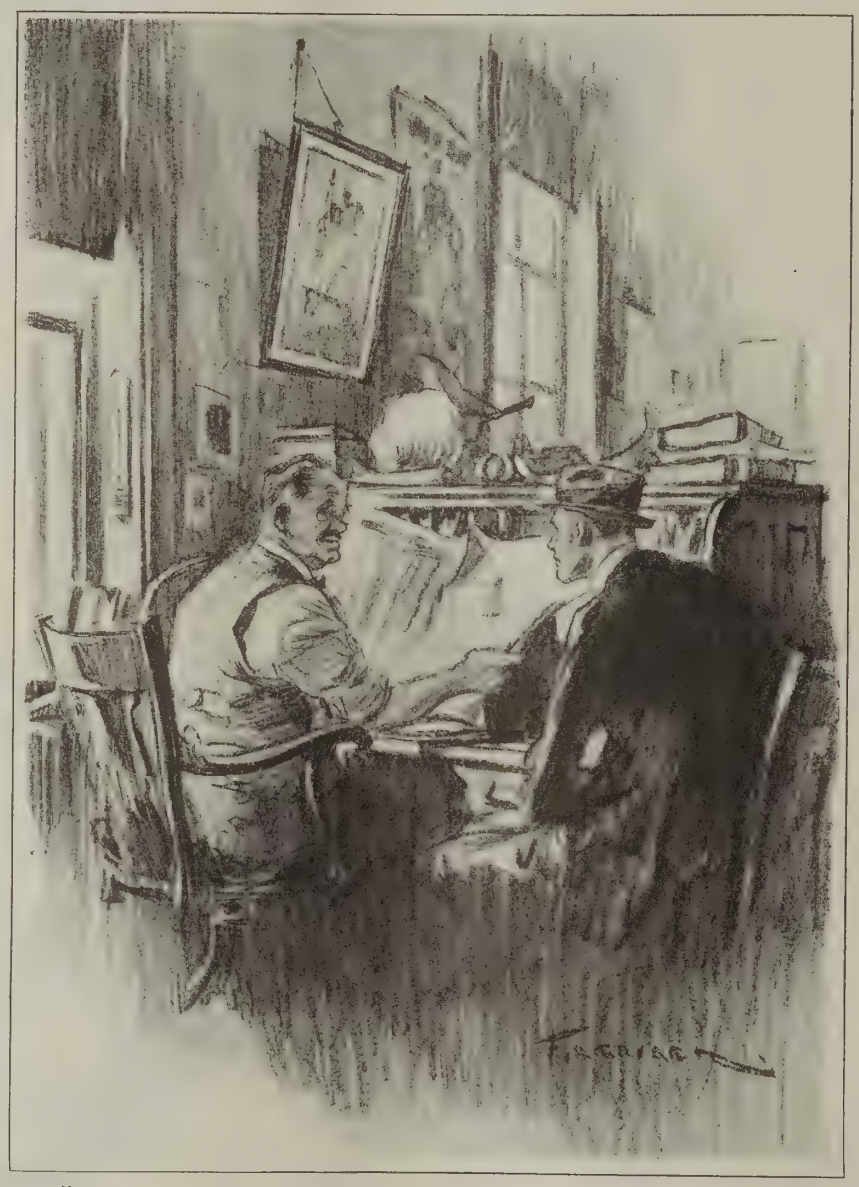
They had finished supper; and they got up and went into the other room. Mrs. Chase—she was doing her own work since Hetty left her—began to clear away the dishes.

Nevertheless, Wint could not deny to himself that Routt's move troubled him; not for its effect on his candidacy but for the light in which it showed Routt himself. For all his loyalty, Wint thought it was unworthy, thought Routt was hurting himself and sullying himself. He met Jack uptown that night, and told him so in a friendly way.

"Do as you like," he said. "But I think it hurts you more than it does me," he suggested.

Routt laughed and asked: "It's not getting under your skin, is it? I told you I'd give you a run."

"Pshaw, no! Say anything you like about me. But it doesn't get you any votes."



"Start Something. Keep Telling Them to Elect You; Tell Them Louder and Longer and Oftener Than Routt Does, and They Will"

In the sitting room Wint said, "I've been counting on you, dad."

Chase said: "I'll do what I can—quietly. But I cannot come out in the open and side with Amos. If he'd turn against you ——"

Wint laughed. "I might kick up a row with him."

"You'll never regret breaking with Caretall. He's a crooked politician of the worst type, without honor. A traitor to his own friends. He'll be a traitor to you when it pleases ——"

His son said quickly: "Don't. Please don't talk against him to me. Let's just not talk about him. After all, he's been square to me."

Chase flung up his hand. "All right. But how about Routt? Are you going to sit still and take the mud he's throwing?"

"Jack will be too busy to throw mud, pretty soon," Wint promised cheerfully. "Mud is trimmings. I'll bring him down to brass tacks."

"You ought to shut his lying ——"

"Come, dad, don't take it so seriously."

"Well, then, you take it more seriously."

Wint laughed. "All right. You wait and see."

"You'll know better than that on the tenth of November," Jack told him; and Wint smiled and let it go at that. After all, it was Routt's own concern.

But if Wint took Routt's tactics equably Hardiston did not. Hardiston folks love politics. The great American game is the breath in their nostrils. They have an expert's appreciation of the tactical value of this move and that; and they are keen spectators at such a battle as Routt and Wint were staging.

Wint would have liked to consult with Amos at this time; but it happened that Amos was out of town. He had gone to Columbus for a day or two. In lieu of Amos, Wint went to Peter Gergue and asked him how things looked to him. Gergue fumbled in his back hair in the thoughtful way he had and said he guessed Routt was making a lively fight of it anyway.

"Do you think he's making votes?" Wint asked.

"We-ell," said Peter, "you can't always tell what folks will do? I'd say he's persuading every enemy you've got to vote against you."

Wint said, "They would, anyway."

"Sure."

"The question is: Is he persuading y of my friends?"

"I'd say not."

"Then I don't need to worry."

Gergue spat at the curb. "Can't y You see, Wint, there's about sixty per of this town—or any town—that's nei enemy nor friend. Just neutral. The the votes you got to get."

"I don't believe Routt will get man those votes by lies."

"Not if they're knowed to be lies."

"Everyone knows they are lies."

"It's a funny thing," Gergue rumina "but lots of folks take a kind of plea out of believing lies about other fol knowing they're lies all the time."

Wint shook his head. "I don't bel Routt is accomplishing a thing."

"We-ell," said Gergue, "matter of I'm thinking you may be right. Thin he's laying a foundation, like."

"What do you mean?"

"I mean he's laying the tracks. doing a lot of talk that won't be beli much now; but he might bring on sc thing later along that would make f say: 'Well, maybe that other was too.'"

"What can he bring?" Wint challen

"Has he got anything on you?"

"Everyone knows all there is to k about me, I suppose."

Gergue scratched his head. "We-e dunno," he said. "Anyway, that's w I was kind of thinking."

Wint met V. R. Kite one day, and little man spoke to him so affably that W asked, "Well, how are things, Mr. Kit

"Excellent. First-class, young man

"I suppose you'll vote for me for mayo Wint asked, grinning good-naturedly; Kite chuckled and said he guessed not.

"Routt's more my style," he said.

"Don't waste your vote on a los Wint told him; but Kite said Routt m be a loser and might not. He left Wint an unpleasant feeling that there had be secretly triumphant note in the little buzzard's voice.

Jim Radabaugh met James T. Hollo the post office one morning and said ch fully: "Well, James T., how's it hap you're not out for mayor again?"

"I try to do what is right," Hollow earnestly. "But I really don't know w to do, Mister Marshal. I have thoug coming out, but Congressman Car gives me very little encouragement. you think ——"

"Don't encourage you, eh?"

"No. In fact, I might say he disc aged ——"

"Well now," said Radabaugh, "ma you'd best just lie low."

Hollow looked doubtful and said didn't know.

Thus all Hardiston talked, each after his fashion. Ed Skinner, of the maintained a strict neutrality. He closely allied with Wint's father; and elder Chase held his hand. B. B. Beec seldom let the Journal take an active in local politics, except on broad p lines, and Wint—since he had the pat age of Amos Caretall—was of the s party as Routt, who had been Amos' B.B. carried the announcement cards of men and let it go at that. But he wen far as to say to Wint and to those dropped in at the Journal office Routt's methods were not likely to be pr able.

"It never pays to open up old sores,' said. "And it's never a good plan to anything that will unjustly hurt ano man's feelings. He may be in a positio resent it some day."

Sam O'Brien, the restaurant man, Wint that Routt would never get his v "I like nerve," he said; "and you've go You've made me laugh sometimes, W Lord, I've thought you'd be the deat me. But you've took your nerve in y hands. You've got me, boy. More po to your elbow."

The first two weeks of October swiftly by. Wint heard Routt was p ning for a rally or two; and he begar make his own arrangements to a sim end. But in mid-October word came him which put the mayoralty race ou his mind.

The word came through Ote Runns, t hopeless drunkard whose cheerful serv

(Continued on Page 103)

(Continued from Page 98)

ve in such demand by Hardiston house-
vis at rug-beating time. Wint met Ote
ne evening on his way home, and Ote was
ib ously cheerful. He greeted Wint
ilarously and told him in triumphant
ons that Hardiston was itself again.
Wint, with a suspicion of what was com-
g asked Ote what he meant; and Ote
ded: "'S a good ol' town. Good ol' wet
ow! Plenny o' booze again."
Wint asked Ote where he got it, but the
a put his finger to his nose and shook his
ea. Wint left him and went on his way.
When he got home he telephoned Rada-
augh. "They're selling again, Jim," he
id.
The marshal asked: "Who?"
"Don't know," said Wint. "I met Ote
Runs with a load aboard. I want you to
get after them right away."
"I'm started now," said Jim Radabaugh.
"I on my way."

XLII

WINT was rather pleased than other-
wise to learn that Kite or others of his
ilk had resumed their illicit traffic in Har-
diston. It gave him something to do. He
had none of the instincts of a political cam-
paigner; he could not for the life of him
have made a really rousing speech. And it
was next to impossible for him to ask a man
for his vote. The old pride, the stubborn
pride that had done him so much harm, was
still alive in Wint; and this pride made him
uncomfortable when he found himself ask-
ing favors.
He hated campaigning. If there had
been no opposition for him to fight, if the
race had been made easy before him it is
not unlikely that he would have quit the
race. But there was opposition, and strenu-
ous opposition. Jack Routt had kept his
word; he was making a real fight out of it.
When he encountered Wint he was
friendly—profusely so—and affable enough;
but when he was canvassing he made no
secret of attacking Wint unmercifully, strik-
ing below the belt or above it as the mo-
ment might inspire him. He had dragged up
Wint's old drunken record and aired it
until people were beginning to ask them-
selves if there wasn't something in what he
said, after all.
Against this, up till the middle of Octo-
ber Wint had made a very poor fight in-
deed. He would not denounce Routt as
Routt denounced him. As a matter of fact
there was no particular charge he could
bring against Routt. Jack was no hypo-
crite, at least; he took an honest and
straightforward stand. The liquor issue,
for example. He was a drinker; he believed
in it. And he said so. At the same time, he
stated that Wint was a drinker but pre-
ferred not to be. He said Wint was a
hypocrite.
The viciousness of Routt's campaign
stunned Wint at first; he was half incredu-
lous. The thing didn't seem possible. When
he was forced to understand that it was not
only possible but true he was left at a loss.
It was in the midst of his floundering at-
tempts to find some means to advocate his
case that he got through Ote Runns the
first word that the lawbreakers were at
work again.
He grasped at that as though it were an
opportunity. He telephoned Jim Rada-
baugh that night; and he sent for Jim the
first thing in the morning and asked the
marshal what he had discovered. Rada-
baugh shifted the knob in his cheek, and
spat, and said he had discovered nothing.
"Did you find Ote?" Wint asked.
"Sure. I just listened, and then went
where he was. He was singing, some."
"Question him?"
"Oh, yes."
"What did he say? Where did he get it?"
"He wouldn't say," Radabaugh ex-
plained.
Wint nodded. "I suppose not. What
then?"
"We-ell, I scouted round."
"Find out anything?"
"Skinny Marsh had a skinful too. And
there was a drunk in the Weaver House
when I drifted over there."
"Is it Mrs. Moody that's selling?"
Radabaugh shook his head. "I guess
not."
Wint banged his desk. "Damn it, Jim!
Who is it, then?"
"I couldn't say."
"Well, I want you to find out."
Radabaugh spat and considered. "They's
one thing," he suggested mildly. "You
might not have thought of it."
Wint grinned. "You talk like B. B. Beecham. What is it, Jim?"
"I mean to say," said Radabaugh, "this didn't just happen. What I mean is, it didn't just happen to happen. It was meant."
Wint studied him. "What's in your mind?"
"They'd have held off till after election, maybe," Jim suggested. "Looks to me like they're starting this to hit the election somehow. But I can't say just how. Don't know, but it looks to me it was meant ——"
"You mean they're trying to discredit me, say I don't enforce the laws?"
"Maybe that. Maybe something else. Just struck me it was something."
Wint got up abruptly. "I don't give a hoot. This campaign business bores me anyhow. But I'm not going to stand for this. You get busy, Jim. If you need help say so. I'll bring a man in from outside if necessary. But I want to grab the man that's selling. You understand?"
"It's your funeral," said Radabaugh cheerfully, shifting the bulge in his cheek. "I'll do my do."
"Go to it," Wint told him. "I'm leaving it to you."
But nothing happened. A week dragged past; a week in which it was reasonably clear that Wint was losing ground to Routt. Wint himself saw this as quickly as any man, and it troubled him. He asked Peter Gergue for advice—Amos was still out of town—and Peter told him to get up on his hind legs and rear and tear, but Wint shook his head.
"I can't do that. It isn't in me. The whole thing makes me sick."
"You've naturally got to do it," Gergue assured him. "Routt's telling 'em to vote for him; and he's telling them the same thing over and over, till they know their lesson like a parrot. That's advertising, Wint. Keep a-telling them the same thing till they know what they're to do. You got to. Might as well come to it first as last."
"I can't ask a man to vote for me."
"Why not?"
Wint grinned, and flushed, and gave it up. And Gergue told him again that he would have to make a noise if he wanted to be heard in Hardiston, and left Wint to think it over.
B. B. Beecham a day or two later gave Wint the same advice, but to more purpose. Wint had dropped in at the Journal office casually enough and talked with two or three others who were there before him, till they drifted away and left him with B. B.
Wint asked, "Well, how do things look to you, B. B.?"
B. B. looked doubtful. "You're not making a very strong campaign," he said.
Wint nodded. "I know it. It goes against the grain."
The editor was surprised. "Is that so? Just how do you mean?"
"Oh, I hate to ask a man to vote for me. I hate to ask favors."
B. B. smiled. "Who are you going to vote for?"
"Why, Routt, of course. I can't vote for myself."
The editor looked blandly interested and commented: "Well, if that's the case, of course you can't ask anyone else to vote for you."
"Why not?" Wint was puzzled.
"You know yourself better than they do. If you can't vote for yourself ——"
"Oh, it isn't—why, you naturally vote for the other fellow."
"This isn't a class election at college, you know," B. B. reminded him. "It's more serious. Not play. You want to remember that. But if you don't think enough of yourself to vote for yourself ——"
Wint laughed. "All right," he said. "I'll vote for myself. You've persuaded me."
B. B. nodded. "Who do you think will make the best mayor; you or Routt?" he asked.
"I don't ——" Wint flushed. "Why ——"
"Routt?"
"No!" Wint exclaimed angrily. "I've done a good job; and I'd do another. He'd open the town up; let things go."
"Do you want to be mayor? For your own sake?"
"Why, yes."
"Like the job so well?"
"No, not particularly. But I want—well, it would show that people think I've made good."
"If you're going to make a better mayor than Routt your election is best for the town, isn't it?"
"I suppose so."
"Then it's best for every man in Hardiston, isn't it?"
"In a way."
B. B. tilted back in his chair and lifted his hand in a gesture of confirmation: "That's what I was getting at. The fact of the matter is, when you ask a man to vote for you you're not asking him to do you a favor. You're asking him to do himself a favor. I don't suppose you ever thought of that."
Wint grinned. "Well, no."
"It's true?"
"I guess it is."
B. B. leaned forward. "Then go out and say so. Start something. Keep telling them to elect you; tell them louder and longer and oftener than Routt does, and they will."
This was so like what Gergue had said that Wint told B. B. so; and the editor nodded and said Gergue was a wise man.
"But I can't do it," Wint protested. "I don't know. I'll never make a speaker."
B. B. considered that for a while; and then he said: "You know, printed advertising was invented by the first tongue-tied man."
"I don't get it," Wint confessed.
"He had something to sell, but he couldn't tell people about it, so he put an ad in the papers; and after that everyone got the habit."
"You mean I ought to advertise?"
B. B. said that was exactly what he meant. And Wint was interested; he asked some questions. He had heard of advertising rates as things of astounding proportions; and so he was surprised to find that a full-page advertisement in the Journal would cost him only ten dollars. He laughed and said he could stand half a dozen of those. B. B. told him to put an ad in each Hardiston paper, and let them appear in every issue till the election.
"Say the same thing, over and over, in different ways," he advised. "Try it. You'll be surprised."
In the end Wint decided to do just this. B. B. helped him write the advertisements. In them Wint recited what he had done and what he meant to do, but briefly. In each full black-lettered page the burden of his song was just three words, repeated over and over:
"Vote for Chase; vote for Chase; vote for Chase."
Amos came home toward the end of October; and when Wint heard he was in town he telephoned and made arrangements to see him at his home that night. When he got there Amos was upstairs. He called to Wint to go into the sitting room and wait, and Wint went in there and sat down. After a moment Agnes came in to restore a book to its place on the shelves, and Wint got up and stood talking with her. He thought she seemed uneasy, on edge. Her eyes went now and then through the open door toward the stairs down which Amos would come. She fumbled with her hair, and a lock became disarranged and fell down beside her face.
She said abruptly that there was something in her shoe; and she held to his arm with one hand and stood on one foot and pulled off her slipper and shook it, upside down. Then she seemed to lose her balance and toppled toward Wint; and he caught her in his arms. She straightened up and pushed him away with what seemed to him unnecessary force; and then turned and went swiftly out into the hall without a word. He looked after her, and saw Amos, halfway down the stairs, watching them with a curiously grave countenance; and Wint, for no reason in the world, was confused and felt his face burning. He looked down and saw Agnes' slipper on the floor where she had dropped it; and he slid it out of sight under the bookcase before Amos came into the room.
He was sorry as soon as he had done this; but Agnes had somehow contrived to make him feel guilty. He could hardly face Amos when the congressman came into the room. He had a miserable feeling that everything was going wrong; all the trifles in the world seemed conspiring to harass him.
But Amos seemed to have seen nothing. He was perfectly amiable, bade Wint sit down, filled his black pipe, squinted at Wint with his head on one side and asked how things were going.
Wint said they were going badly; and Amos smiled.
"Why, now, that's too bad," he declared.
"I wasn't made for a campaigner," Wint said. "I'll never be able to make a speech."
"You write a good ad," Amos told him. Wint asked, "You've read them?"
"I guess everybody's read them."
"Are they all right?"
"First-rate. They'll do."
Wint said impatiently, "I'm sick of the whole thing."
Amos studied him. "Routt getting under your skin?"
"No. He's playing it pretty strong though."
"I'll say he is."
"Of course it's just politics. He and I are as friendly as ever."
"Oh, sure," Amos agreed indolently. "He told you so, didn't he?"
"Yes. He came to me in the beginning."
"I heard so."
"I don't know how to answer him—the line he's taking," Wint explained. "That's all."
"Don't have to answer him, do you? Don't have to answer a lie."
Wint laughed uneasily. "Just the same, he's stirring people up."
"I never heard of anybody being permanently hurt by a lie but the liar," said Amos.
Wint leaned forward. "I tell you, Amos, I want to be elected. I've gone into this; and I want to win. Routt and I are friendly enough; but he started this fight and I want to beat him. I want to beat him to a whisper. I'd like to see him skunked. I don't care if he doesn't get two votes in Hardiston. That's the way I feel." His fierce enthusiasm dropped away from him; he said hopelessly, "But I'm darned if I know how to manage it."
Amos nodded slowly. "Sick of it, eh?"
"Yes."
The congressman puffed for a while in silence, thinking; and Wint waited for the other man to speak. At last Amos looked at him and asked curiously: "Wint, you dead set on being mayor?"
Something in his tone put Wint on guard. "Dead set? Why?" he said.
Amos lifted a hand. "Why, just this," he explained: "I've been talking round, here and there. Far as I hear, they've heard about you in Columbus. The way it strikes me right now, if you was to run for the House, say, you could get it; and you'd have a good start up there. That's all."
Wint laughed uneasily. "That can come later—maybe."
"Thing is," said Amos, "if you was to get licked for mayor it'd hurt you."
"I'm not going to get licked," Wint exclaimed. "I'm going to win."
"Well—maybe," Amos agreed. "Only I just want you to know that if you'd rather try for something else I'd back you to the limit."
"You mean after election? Next year?"
"I couldn't do much if you was licked."
Wint leaned toward him. "Just what do you mean?"
"Just what I say."
"Are you asking me to withdraw?" Wint asked. His heart was in his mouth. "I know you and Routt have always worked together. Do you want me to get out and let him have it?"
"I'm not asking you to do a thing. I'm offering you a good excuse to—maybe—dodge a licking."
"I'm not going to get licked," Wint insisted. "And if there's a licking waiting for me I won't dodge!"
Amos looked at him curiously. "Well, that's all right. I just put the thing up to you."
"But I owe you enough," said Wint, "so that if you asked me to quit—I'd do it."
"I'm not asking you."
"Then," Wint declared, "I stick; and I win."
Amos moved a little in his chair; and he sighed. "Well," he drawled, "I'm watching you."
Wint left Amos a little later; and he walked home with a weight on his shoulders. He had counted on the congressman; but—this was half-hearted support at best that Amos was offering. Wint was puzzled, he could not understand; and he was depressed and worried and unhappy. He had an impulse to get out, throw the whole matter to one side, forget it all; but on the heels of the thought his jaw hardened and he shook his head.
"No," he said. "No; I'll stick it out to the end."
He would have been more concerned and he would have been thoroughly angry if he could have heard Agnes Caretall talk to

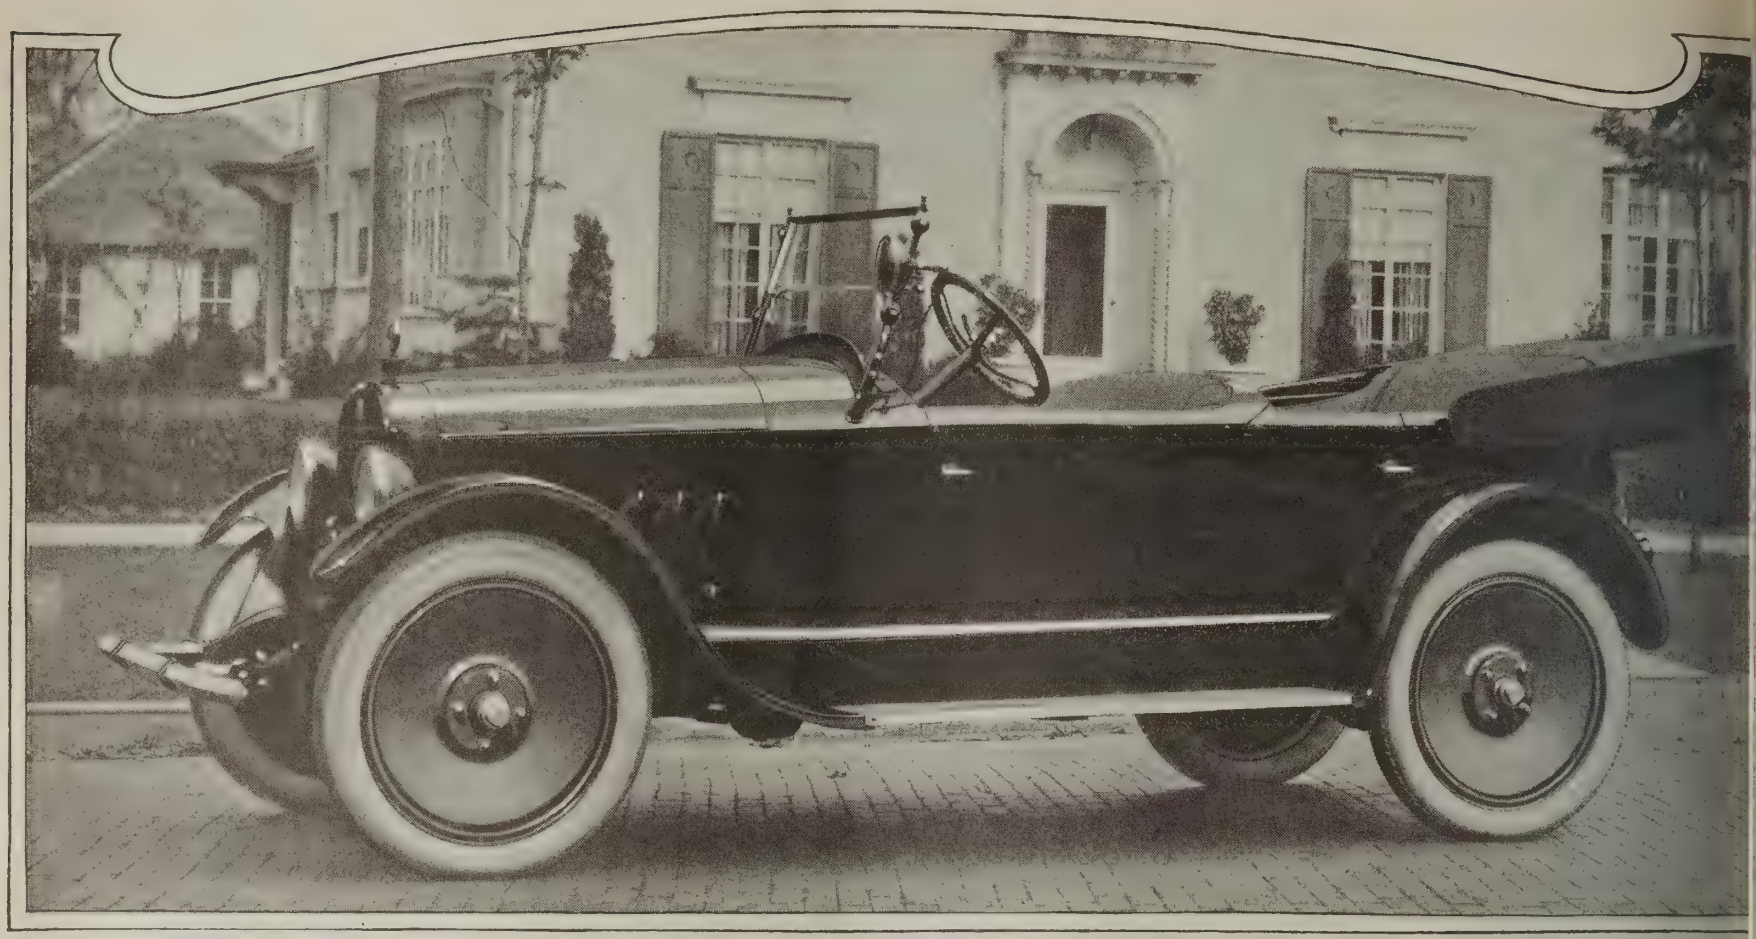
CORD TIRES



The Latest Motor Car to Adopt Disteel Wheels

Columbia Six

Is Equipped With

DISTEEL WHEELS

The Wheels That Complete The Car

In making this decision—in officially adopting Disteel Wheels as equipment for the Columbia Six—still another group of motor car engineers have recognized the advisability of giving their patrons the maximum of motoring comfort, safety and convenience; in short, of bringing Science to the Wheels of the Motor Car.

The indisputable fact that Disteel Wheels add greatly to the Beauty and Distinctiveness of the finely designed car has, of course, been a potent factor in their world-wide adoption. However, it is to the prompt acceptance of the obvious mechanical superiorities of Disteel Wheels in the judgment of discriminating motorists that we ascribe their instantaneous popularity.

The Disteel Wheel is a single, concave, tapered disc of sheet steel. It is lighter and stronger. It saves tires, gasoline and the mechanism of the car.

Disteel Wheels are noiseless. They make tire-changing easy. They are easily cleaned. They are, literally, Science brought to the Wheels of the Motor Car. That is why the Motor Car Industry and the Motoring Public have adopted Disteel Wheels.

mc when he had left. She came in to re-iev her lost slipper; and she was fuming dignantly. Old Maria Hale, setting the bld for breakfast as she always did, the sting at night, overheard a word or two thir talk.

SH heard Agnes exclaim: "I don't see w ou can be so calm. Just because you ctl him. But that doesn't give him any hto think he can do a thing like that thne."

A l she heard Amos' slow even voice pl "No; it doesn't give him any right."

' should think you could say some-n" Agnes cried. "Your own daughter!"

Mria heard Amos say something about dg.

A l Agnes retorted: "It wasn't fooling! w s plain insulting!"

"ell, we can't let him do that," Amos cd drawlingly.

Pn Maria departed to the kitchen and a no more. She had paid no particular cion. The old darky lived in a world of r wn—a quiet world, a world that was t ir from coming to its end. She was old.

Aer Agnes left him and went upstairs n sat for a long time, very still, before e e. His eyes were weary and his calm evas troubled.

Cce he lifted his glance from the fire and w picture of Agnes on the mantel; and t up and took it in his big hands. It deen taken two or three years ago; and vs very beautiful. A gay happy face; eace of a child without cares. A good cAmos thought. An honest one.

I compared it in his thoughts with gs as she was now; and the trouble in s ountenance deepened. After a little he ito himself as he had said once before: I ish her mother hadn't 've died."

F put the picture slowly back on the nael, and sat down and once more be-ar motionless, staring into the fire. To nevatching him it would have seemed in amoment that Amos, too, was very old.

XLIII

CNGRESSMAN AMOS CARETALL taged, next morning in the post office, nof the those dramatic incidents which acheckered his career and done a good e to make him what he was. These ces were meat and drink to Amos. He kl to hark back to them and chuckle at hmemory. In Washington last winter, rxample, he had told over and over the tcy of his speech at the rally of Winthrop Ctse, Senior; his pledge to vote for a Ctse, and the sequel to that pledge. The hg appealed to his sense of humor.

his morning he met Wint in the post ffe and snubbed him. And within half an ho all Hardiston knew about it and was aling about it. The way of the thing was h: Wint had met Jack Routt on the s uptown; and they came up Broad Street o ther, and down Main to the post office. Wt was thoughtful and a little silent; Rtt expansively amiable in the fashion h had become habitual with him since h campaign opened. He asked Wint o larly whether he was downhearted, and Wit said he was not. Routt told him he v ld be.

You'll be ready to quit before I'm hugh with you, old man," he warned Wit. "You'll be ready to crawl into your ne. Oh, I'm laying for you."

Go ahead," Wint told him quietly. All your ads in the papers won't do you a it of good, either. That's good money w ted. You have to get out and talk to h voters, Wint. Take a tip from me. It's h word of mouth that does the trick."

Vint said if this were so Routt would s ely come out on top. "You've used w d-of-mouth pretty freely," he remarked.

Getting into the quick, am I?"

Why, no. I just commented on the fact tlt ——"

Routt asked solicitously: "Look here, yu're not sore, are you? You know the u lerstanding was that this was to be a real fht."

Of course," Wint agreed. "And I'm not se. Go as far as you like."

A moment later Routt said: "I heard Aos was going to throw you down. Any-t ng in that? If he does you haven't got a c nce."

Nothing in it," Wint told him. "I had a lk with Amos last night."

Routt laughed and said Amos' promises d n't amount to anything. "Is he backing yu or is he holding off?" he asked. "I h ven't heard that he's doing much."

"You'll hear in due time," Wint told him.

He thought afterward that it was a curious coincidence that Routt should have said this about Amos on this particular morning. It was almost as though Routt had really had some foreknowledge. But at the time the question made no great impression on him.

When they turned into the post office the mail had not yet been distributed, and the windows were closed. There were perhaps a dozen men there waiting before their boxes, talking, smoking, spitting on the floor. Routt and Wint took their places among these men; and Routt stuck near Wint. There was some good-natured chaffing. After a little Amos and Peter Gergue came in together. Everyone had a word for Amos. It was a minute or two after he came in the door before he worked back through the groups to where Routt and Wint stood.

He looked at the two, head on one side, and Wint said "Good morning, Amos."

Amos squinted a little; then without replying to Wint he turned to Jack Routt, at Wint's side, and thrust out his hand: "Morning, Routt."

He and Routt shook hands, and Wint went a little white with surprise, still not fully understanding.

Routt said cheerfully: "Back in time to see the election, Amos."

Amos nodded cordially. "And back in time to shake hands with the next mayor, Routt," he said. "You're making a first-rate campaign. If you need any help ——"

Routt took it all as a matter of course. Wint had stepped back a little; he was leaning his shoulders against the wall, and it seemed to him the world was swimming.

"I'll surely call on you," Routt said.

Amos turned toward his mail box and unlocked it. Gergue shook Routt by the hand. "Morning, Mister Mayor," he said; and then to the other, "H'lo, Wint."

Everyone had seen; no one had a word to say. The windows opened as sign that the mail was all distributed. The waiting men moved forward to open their boxes; and they went out, ripping open letters and papers, talking in low voices, glancing sidewise at Wint. Routt had gone out with Amos and Peter. Wint pulled himself together, got his mail, and went out into the street by himself. Hardiston seemed like a new town; it was changed—terribly changed—by a word or two from Amos.

Everyone seemed to know what had happened almost as soon as it had happened. The people who spoke to him on his way to Hoover's office—he was planning a day with the law books—seemed to Wint to be grinning maliciously. He was still dazed, unable to think clearly. When he was settled in the back room with the leather-bound books Wint tried to put his mind on them; but he could not. He was groping for understanding. He felt as a child feels when it has received a blow it cannot understand. He was incredulous. The thing could not have happened; but it had happened. The ground was cut from under his feet. Cut from under his feet. He was lost, helpless. He had been supported for so long by Amos; he had felt the congressman's substantial strength upholding him for so many months that it had come to seem to him as an inevitable feature of his very life. He did not see how he could go on without it.

Yet in the end he had to believe, had to accept the new condition. He remembered Amos' attitude the night before. Amos had suggested his withdrawing from the fight; the congressman had almost asked him to withdraw. He had refused; now Amos would force him—would beat him to his knees. At least Amos would try to do that. A slow anger began to grow in Wint; a slow determination not to be beaten. Or if he was to be beaten he would not be beaten without a fight. In simple words, Wint got mad; and he always fought best when he was mad. His resolution hardened; a certain fire of inspiration came to light within him. He began to make plans to meet this new contingency. He would go to the people of Hardiston with the facts, appeal to them, prove to them that he deserved their good will, and that he deserved their votes.

An hour after the scene in the post office Wint was more determined to win than he had ever been before. Even Amos was not invincible. The man could be beaten; not only in this fight but in others. Wint began to cast forward into the future and plan what he would do.

Dick Hoover came in after a while and gripped him by the shoulder. "I say," he exclaimed excitedly, "they tell me Amos has thrown you down. Is it true?"

Wint nodded. "Yes, it is," he answered crisply.

Hoover swore. "The dirty double-crossing hound! What are you going to do?"

"Lick him," Wint replied.

Hoover looked doubtful. "Lick him? You can't, Wint."

Wint said nothing.

"Can you?" Dick Hoover asked.

"I'm going to," said Wint.

Hoover banged his fist on the book that lay open before Wint. "You'll find some that are willing to help!"

"I know it," Wint agreed.

"My father and I—whatever we can do."

"Thanks."

"Get after him, Wint," Hoover urged. "Show him up. No one has ever gone after Caretall the right way. Start something. The people are always looking for fun, for a change. I believe you can do it."

"I told you I was going to," Wint repeated.

That night his father spoke to him of the matter. The elder Chase had heard it during the day, had heard what Amos had done. And there was fire in his eye. He had no sooner come into the house before supper than he called: "Oh, Wint!"

Wint was upstairs getting ready for supper. He answered, "Hello, dad."

"Coming down?"

"Right away."

"Well, hurry."

Wint was surprisingly cheerful. The elation of battle was on him. He chuckled at the impatience in his father's tone; but he did make haste, and a moment later joined the other man in the sitting room. The elder Chase was standing, stirring about, his face hot and angry.

"Look here, Wint," he exclaimed without parley, "I hear Amos Caretall turned you down to-day."

"Yes."

"In the post office."

"Yes, this morning."

"Told Routt he was going to win."

"Just that, dad."

Chase threw up his hand furiously. "Wint, I told you he'd cut your throat! The dirty ——"

Wint put his hand up to his neck. "Cut my throat?" he repeated. "I seem to be all here."

"You wouldn't believe me, Wint, but I warned you."

"Yes, you did."

"What do you say now to this fine friend of yours? Damn the man!"

"I say he's started trouble for himself."

"What do you mean?"

"I mean I'm going to prove that when he said Routt would be elected he was either a fool or a liar."

Chase banged his hand on the table beside him till the lamp jumped in its place and the shade tilted to one side. Mrs. Chase came bustling in just then, and straightened it, and protested anxiously: "I declare, Winthrop, you're the hardest man round the house. You do disturb things so. I don't see ——"

"Caretall has turned against Wint," Chase told her.

She nodded wisely. "Well, didn't you always say he would?"

"Of course I did. Wint wouldn't believe me. Now he's done it."

"He ought to be ashamed of himself," Mrs. Chase declared. "But I always did think you were wrong, Wint, to be so friendly with a man who had treated your father as he did. He ——"

"I know you did, mother."

Chase cried: "You take it almighty calmly, Wint. Isn't there any blood in you, son? Don't you ever get mad? Damn it, the man ought to be kicked out of town."

Wint laughed good-naturedly: "Oh, I don't know. He has a right to support Jack if he wants to."

"A right? What have his rights to do with it? I'd have more respect for you if you could get good and mad."

Wint chuckled. "I'll try to work up a fever if you like. I always want your respect, dad."

Chase said in a softer tone: "You always have it, Wint. You've earned it. But it makes my blood boil to see Caretall do this to you—to my son."

"It's terrible," Wint agreed whimsically.

Chase protested: "I believe you're laughing at me."

Wint shook his head anxiously. "No. But I don't see that it does any good to get excited. I'm aiming to keep my head—and my job."

"You're going to fight?"

"Fight?" Wint echoed. "Why, dad, you won't be able to see me for dust."

"You've waked up at last? You're not going to sit back and let Routt lie about you and let Amos trick you?"

"I'm going to fight," said Wint. "Also, I'm going to win."

Chase exclaimed: "I believe you can, if you try."

"You know," said Wint, "in a way I'm glad this has happened."

"Glad?" Chase asked. "Why should you be glad?"

Wint touched his arm in a comradely way. "Because now you and I can line up together; fight side by side. I'd rather have you with me than Amos."

Chase said with a sudden humility: "Amos might be able to help you more than I can."

"I'd rather have your personal vote than all the votes Amos can swing."

"You'd have had that anyway."

"Well, isn't that worth being crossed by Amos?"

Chase said: "But don't fool yourself, Wint. Don't imagine this is going to be easy. Caretall is powerful."

Wint said with a slow energy: "I've done some thinking, dad. Amos is powerful. But—I don't know just how to say it, but what I mean is this: I think I've been a good mayor. I've tried to be a good one anyway. And if a fellow tries to do the right thing it seems to me the world has a habit of turning his way. I've done my share, straight, out and out. And I'm going to the voters on that record. If there's anything in—democracy—then I can beat Amos. He's cleverer; he's better at tricks and contraptions. But he can't beat the right thing, dad. And—I've a hunch that the right is on my side. On our side, in this."

"Right or wrong," Chase declared, "we'll lick him if there's any way in the world it can be done." His eyes lighted. "I believe I can get Kite to line up with you."

Wint shook his head. "No."

"I think I can," Chase urged. "He hates Amos."

"I don't want him," said Wint. "This is a clean fight."

"You want all the help you can get."

"All the decent help. There are enough decent folks in town to put this thing through."

"You can't be too squeamish, Wint."

"I'm too squeamish to take help from Kite," said Wint. "That's flat, dad. Put it out of your head."

Mrs. Chase was still doing her own work. She called them to supper just then; and while they ate she told them how tired she was.

"I declare," she said, "I wish Hetty would come back here. I saw her uptown yesterday; and I asked her to. But she wouldn't. Said she had a better job. I told Mrs. Hullis last night that the girl ——"

"Hetty never cooked a better supper than this," her husband told her; and the little woman smiled happily and bridled like a girl, and said: "Now, Winthrop, you're always telling me things like that, when you know they're not true. I'm just a ——"

Wint laughed. "Quit apologizing for yourself, mother. It's a darned bad habit. Tell people you're a wonder, and they'll believe you. I've found that out. That's the way I'm going to be reëlected."

"You can tell them that, but you have to back it up," his father reminded him. "Brag's not so bad if there's something to base it on."

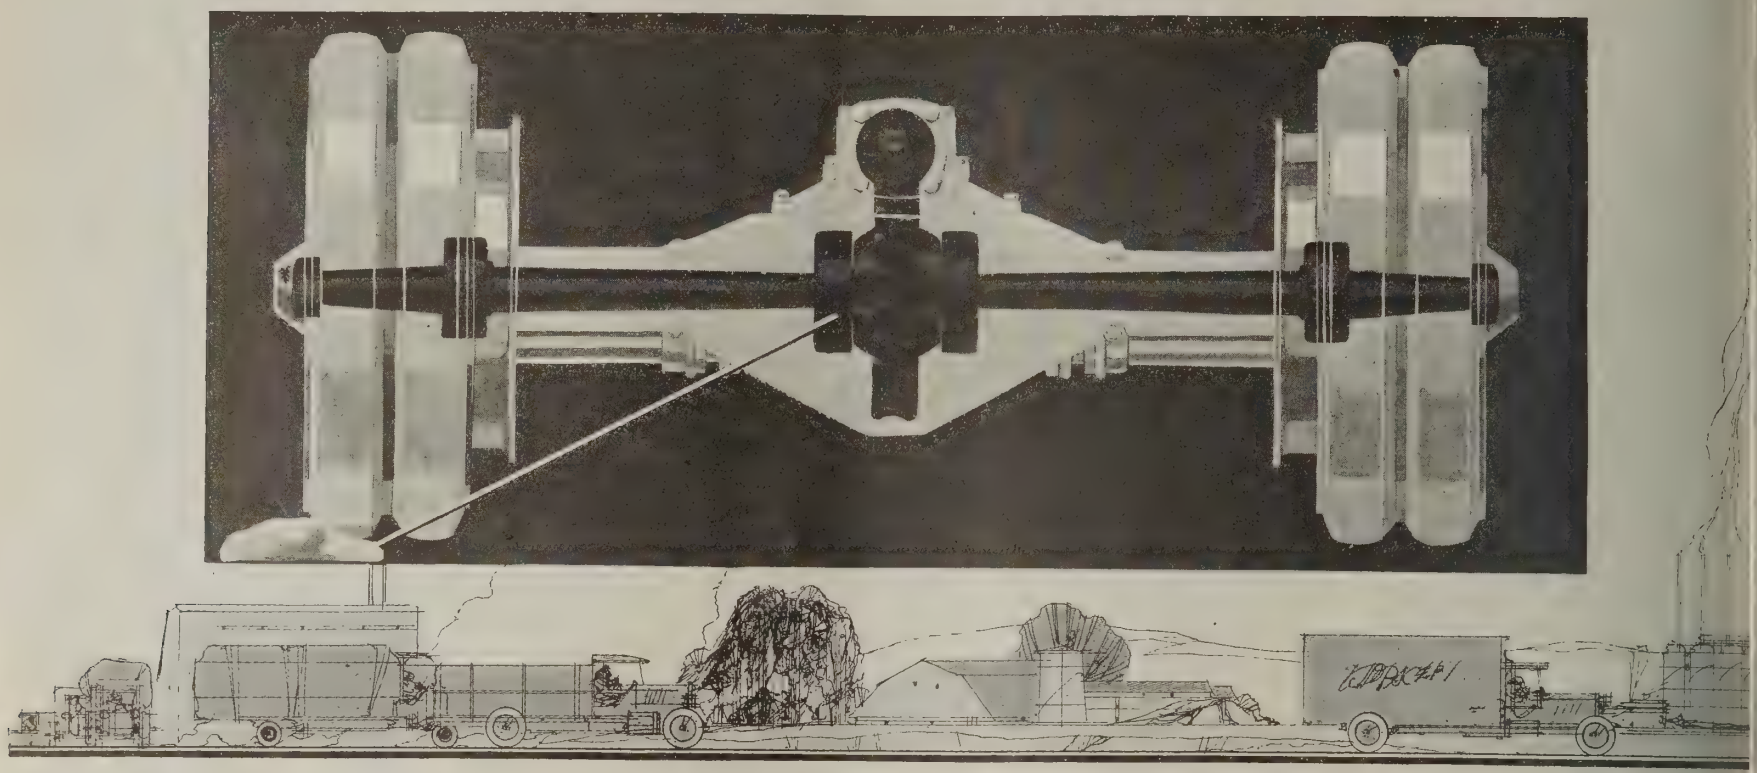
"Well, isn't there?" Wint asked quietly. His father's eyes lighted, and he cried: "Yes, son! By Heaven, there is!"

Wint made no move during the next day or two; but he laid his plans. He intended to do a great many things in the last week before election. He would concentrate his effort in those last days so that the effect should not have time to disappear. He talked with Dick Hoover and Dick's father; he talked with others. And he was surprised to find that such loyal supporters of Amos as Sam O'Brien and Ed Howe and even James T. Hollow were inclined to support him; support him in spite of Amos. Sam told him as much.

He met Sam at the moving-picture show that night; that is to say, he met Sam just

(Continued on Page 111)

SHELDON AXLE EMPLOYS THE



The Greatest Investment Feature of a Truck—THE AXLE

"GIVE me a place to stand and I will move the earth," said Archimedes, speaking of the unlimited power of the lever.

Leverage is a principle of mechanics that everyone understands.

Now apply that knowledge to truck axles.

Every truck buyer would be glad to know that the rear axle of his truck is strengthened to resist side strains by the greatest possible leverage. The greatest side strains on axles are encountered by locomotives and freight cars rounding curves at high speed under heavy loads.

Be sure your truck has the same factor of safety as the locomotive.

The rear axle of any truck is the most expensive and most important unit, and should therefore be studied and understood by every truck buyer.

Truck axles are easily explained by the principle of leverage.

There are only two kinds of axles, when you get right down to first principles, and the truck buyer has only to decide which will give him the greater service.

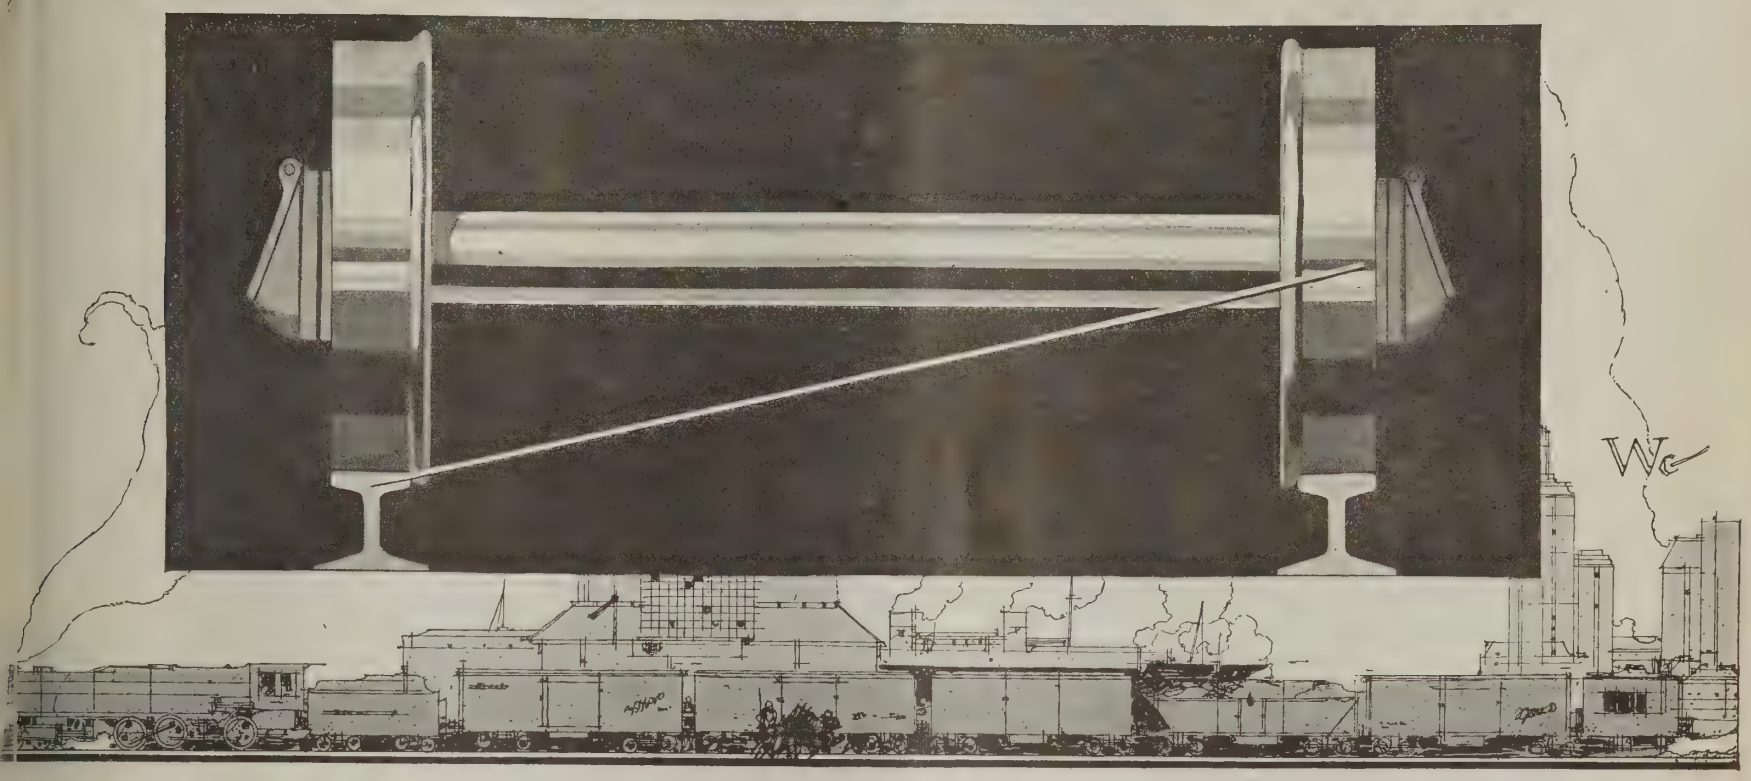
First—Dead Axles—typified in the axles of horse-drawn vehicles and often used in motor truck construction.

Second—Live Axles—adopted by railroads as the most reliable type to carry the Freight Tonnage of the World.

Look for this Sheldon trade-mark cast on the housing at the rear end of the worm gear. It identifies a Sheldon Axle and is your assurance of strength, long life, safety, and economy of upkeep.

Sheldon

LOCOMOTIVE AXLE PRINCIPLE



Select the Axle built on the Locomotive Axle Principle

Dead Axles are the floating type — that is, the wheels revolve and the axle is stationary.

Live Axles are the locomotive type. The wheels are firmly fixed to the axle, which revolves with the wheels as a single unit.

On this type of axle there is a bearing at the hub and another at the opposite end of the axle shaft, giving the longest possible leverage against side strain.

Sheldon Axles Are Built on the Locomotive Axle Principle

Your truck will be subjected to side strains many times a day. When you consider that a skidding strain is often five times that of the load strain you will see the importance of the Locomotive Principle as a factor in the life of your truck.

Your drivers hit curbs every day—they swing in and out of car tracks, they turn out to the edge of crowned roads — the long levers of steel shafts keep the wheels and axles firm and true.

The Sheldon Principle is the simple principle of leverage, easy to understand and so convincing that you will surely select the truck equipped with the Sheldon Worm Gear Axle.

Write for the Sheldon Book, which clearly explains the construction and its adaptation of the Locomotive Axle Principle.

SHELDON AXLE & SPRING CO., Wilkes-Barre, Pa.

EUREKA

ELECTRIC VACUUM CLEANER

The Eureka is an *Air* Cleaner. It depends for its tru remarkable efficiency upon the great volume of air th rushes through the nozzle, and the velocity at which th air travels.

The brush with which it is equipped simply gathers up the surfa dirt, the threads and hair. The air rushing through the fabric ge the dirt embedded in the carpet,—the deep down dirt that broor and carpet sweepers cannot reach.

And air of course cannot possibly injure the carpet in any wa It simply cleans and purifies.

For nine years the Eureka has been proving its efficiency in eve civilized country in the world.

Today it is lightening the burdens of housekeeping in over 275,0 homes.

The Eureka book gives some interesting facts about cleanliness and sanitation that you ought to have. May we send it to you?

Volume and Velocity

The remarkable cleaning efficiency of the Eureka is the result of its ability to move a great VOLUME of air through all fabrics at a tremendous VELOCITY. Only bonafide electric vacuum cleaners derive their efficiency from this principle. The brush attached to or inserted in the nozzle of this type of cleaner has only one purpose, and that, to remove surface lint, hair, and threads—the air gets the dirt, the dirty dirt embedded in the rug or fabric.

GETS THE DIRT—NOT THE CARPE

(Continued from Page 107)

ou ide. And Sam and Hetty Morfee were to ther. That surprised Wint; he had not ev known that they were friends. But it wa obvious that they were very good ri ds indeed. When he stopped to speak o em Hetty looked at him with an ap- e ng defiance. He wondered if Sam nv. He did not think it would matter. Sa was the sort who could, if he chose, or ve.

e spoke to Sam of the coming election, n Sam said: "Sure, I'm for you. Amos 's ll ight in Congress. But he'd make a mi ty poor mayor. I'm for you, Wint, n oy. You've got nerve; and you're ur y sometimes. Lord, but I've thought he was times when I'd die laughing at ro But you're there, Wint. You can a me."

e and Hetty went away together, and Wi watched them, forgetting what Sam sa said in wondering about Sam and Hetty.

e got further comfort the next day, ro a man as close to Amos as Peter Re ue. Peter told him it looked as hi gh Routt would win. "But there's a fi that'll vote for you," he added. "It in hurt you much, Amos quitting." He pe ed all round furtively, fumbled in his sa hair, and said: "Amos didn't do you ne a bad turn—even if he meant to. I mi t give you a vote myself, Wint. I don't kn but I might."

XLIV

WINT laid plans for rallies on Friday and Saturday nights of the week be- or election. On Monday and Tuesday f at week he worked all day, preparing he words he meant to say at those rallies. t as tough work; it was hard for him o it his own determination into words.

Tuesday night, the third of November, he came a diversion. Jim Radabaugh el honed to him at midnight, summon- ng im out of bed.

When Wint answered the phone the rshal asked, "That you, Wint?"

"Yes."

"You r'member you told me to get ft the bootleggers?"

"Of course."

"Well, I've done that little thing."

Wint exclaimed: "First rate. You mean ove arrested someone?"

"I should say I had."

"Who?" Wint asked.

"You know Lutcher?"

"Of course."

"Him," said Radabaugh.

That Radabaugh should have arrested Lutcher was almost as though he had arrested Kite himself; and Wint knew it. It brought matters to an issue, direct and unavoidable. Lutcher, for all practical purposes, was Kite. His arrest meant an open defiance to the head and front of the opposition. Wint, characteristically, leaped at the chance. He might have been more lenient with a lesser man.

He asked the marshal: "Where is he?"

"Locked up," said Radabaugh.

"In the calaboose?"

"Yeah. Him and the fire horses are all the pals together."

"You've got the evidence?"

"Sure."

"No doubt about it?"

"Not a bit. I'll tell you ——"

"What does he say?"

"Acts like he wasn't surprised. Acts like he expected it. Matter of fact, he very near invited me to pinch him."

Wint nodded to himself. "That means he're looking for trouble."

"I'd say so."

"Haven't seen Kite, have you?"

"Hear he's out of town. Be back Thurs- ay."

"All right. We'll hold Lutcher till then nd have it out."

Wint heard a gulp that told him Rada- augh was shifting that bulge in his cheek. "He wants to furnish bail," the marshal ai

"Nothing doing," Wint told him.

"Well—he's got a right to want to."

"We're sound sleepers here. You ouldn't raise me with the telephone," Wint suggested.

"Well, Lutcher's all dressed up in a ellow vest and everything; and he didn't ven his jail pajamas with him."

"He can sleep in the yellow vest."

"It's your funeral," Radabaugh decided philosophically. "Whatever you say."

"That's right." And Wint added: "I'm glad you got him, Jim. Good work."

"Oh, he weren't so much to get. I told you he put himself in the way of it."

"Just the same, you have good nerve."

"We-ell—maybe so."

Wint went back to bed; but he didn't go to sleep. He was tingling with the pleasurable excitement of combat; and he was immensely pleased at this chance to give evidence of the sincerity of his fight for a clean Hardiston.

Those orders to Radabaugh which had become something like a proverb in Hardiston—this was their test. He meant that they should meet the test.

He could not decide whether the incident would help him or hurt him at the polls; it was impossible to tell. But—he did not care. Hurt or help, his course would be the same; unchangeable. Lutcher should get the limit; whatever the evidence justified. The rest was in the lap of the gods; let them take care of it.

It may have been an hour or two before he was asleep again; and he woke in the morning a little tired for the sleep he had lost. But the cold tub revived him; he was cheerful enough when he came down to breakfast; and when his father appeared Wint told him the news.

"Something doing, dad," he said.

Chase looked at him in quick and surprised interest; and he asked: "What? What do you mean, Wint?"

"Did you hear the telephone last night, about midnight?"

"No."

"I did," said Mrs. Chase. "I thought I heard the bell; but your father was asleep, and I wasn't sure. I came to the head of the stairs, but you were already down."

"I answered as quickly as I could. The bell only rang once or twice."

"Who was it?" Chase asked quickly.

"Radabaugh. Jim. The marshal. He's arrested Lutcher."

"Lutcher! What for?"

"Bootlegging!"

Chase uttered an involuntary exclamation. "Lutcher? He's Kite's right-hand man."

"Absolutely."

"Radabaugh arrested him?"

"Yes."

"Has he got a case?"

"Jim always has a case when he makes an arrest."

"But Lutcher—he's shrewd. Knows how to cover his tracks."

"He didn't cover well enough this time." Wint's elation was singing in his voice.

"But he ——"

"As a matter of fact," said Wint, "Radabaugh thinks Lutcher allowed himself to be caught. Thinks he wanted to get arrested."

"That doesn't sound reasonable."

"He'll be sorry."

"They've got something up their sleeves, Wint."

"So have I."

"You? What?"

"My arms," said Wint cheerfully. "With a fist on each one, and a punch in each fist."

Chase looked uncertain. "They'll try some trick."

Wint touched the other's arm. "Don't worry. They've got to fight in the open now. The time's short. And I'm not afraid of them in the open."

"They're treacherous. They'll strike behind your back."

"I'm not worried."

But the older man was worried. He said little more; nevertheless his concern was plain. Wint was sorry, a little disappointed. His father's uneasiness did not affect his own confidence. He was as sure of himself as before. But he had expected his father to be as confident as himself, as sure. To him the matter of Lutcher simply offered an opportunity for a telling blow; but it was evident that to his father the incident was rather a threat than an opportunity.

He and his father walked uptown together; they separated when Wint turned aside toward the fire-engine house, where his office was. The older man gave him a word of warning there.

"Go carefully, Wint," heurged. "Watch yourself."

"Don't worry."

"Be sure of the law, Wint. Don't make a mistake. They would jump on it."

"That's Foster's job. And I'm no—I've studied up a bit."

"Take care."

"Right, dad."

They separated, and Wint went on to his office. Radabaugh was not there, but he appeared a little later.

"I've just had Lutcher up to Sam O'Brien's for breakfast," he explained. "He wanted to go to the hotel; but I told him Sam had the contract to victual the city prisoners."

Wint chuckled. "Where is he now?"

"Down in the calaboose."

"Does he still want to furnish bail?"

"Says he does."

"Kite comes home to-morrow?"

"Yeah."

"Well, we'll let Lutcher out on bail till then. I'm curious to hear what Kite will have to say."

Radabaugh shifted the plug in his cheek. "Think he'll have anything to say?"

"Don't you?"

"We-ell, he might."

"Bring Lutcher up and we'll turn him loose."

Lutcher came. Wint chuckled inwardly at sight of what Radabaugh had called a yellow vest. It was an ornate affair; no doubt of it. He was inclined to expect an outbreak from Lutcher, but the big bald man was cheerfully amiable.

Wint said: "Sorry we had to hold you in jail. The marshal tried to get me, but I'm a sound sleeper."

"Well, the bed wasn't soft," Lutcher admitted. "But I can stand it."

"I'm going to hold you till to-morrow," Wint said. "Unless you want to plead guilty and accept sentence now."

"Guilty? No, sir! You can't pin anything on me, Wint. You ought to know that."

"We'll see," Wint told him. "Want to stay in jail or furnish bail?"

"Bail, of course. I can get anyone ——"

"I'd rather have money."

"Check any good?"

"I'll cash it before you leave here."

Lutcher said amiably that that was all right, and asked the amount. Wint said: "Four hundred," and Lutcher whistled and protested: "That's pretty hard."

"Harder than the bed in the calaboose?"

Lutcher grinned and wrote and, when Wint came back after cashing the check and told him he was free to go, Lutcher, contriving to look dapper and well-dressed in spite of his night, took himself away. Then Wint turned to the marshal.

"Now, Jim, how about it?" he asked. "What's the case against him?"

Radabaugh shifted the knob in his cheek to clear the way for speech; and he sat down, hitched his trousers up, opened his coat and put his thumbs in his armholes. "We-ell," he said. "It was like this."

He had been scouting round for a week, he said, according to Wint's orders, without discovering anything. But the afternoon before, an automobile had come into town with some boxes in the tonneau and a stranger driving. It made some stir on Main Street; and then it drove openly enough to Lutcher's place, on the alley. He had seen the boxes carried up Lutcher's stairs.

"First off," he explained, "I figured it couldn't be what it looked like. Didn't seem as if they'd be so open about it. Lutcher had been lying low. I figured they might be aiming to get me excited, just to make a fool of me. So I held off a spell.

"But the thing stuck in my head. They might be trying a game, and they might not. I decided to keep an eye on Lutcher's place, and I did. All that afternoon."

Wint said, "They were brazen, eh?"

"I'd say so," Radabaugh agreed; and he shifted his plug and went on.

"Nothing happened, particular, all afternoon. I et my supper; and after it was dark I took another walk down that way. Met Jack Routt coming out of the alley; and he stopped me and talked to me. It was on his breath plain enough. He must have knowed that; must have meant me to smell it. He was so darned open I suspicioned there was a trick, so I still held off.

"But I took a walk through the alley about nine o'clock. All quiet. A light in Lutcher's place, that was all. Some men up there. I wondered. I walked through again after a while. Sounded like they was having a game. Finally, about a quarter past eleven, I come along through and someone yelled. Sounded boozy. So I says to myself, 'Jim, you're the goat. You got to bite, if it's only to see the joke.' So I went up the stairs. Quiet."

"No search warrant?" Wint asked.

"Why, no," said Radabaugh innocently. "I was just dropping in for a drink, like I'd done before. Some time back."

Wint grinned. "Of course. Go ahead."

"We-ell, the door wasn't locked," said Radabaugh. "So I knew I was meant to come in. And I went in; on in where they were. Four of them—Tuttle and Harley and Gates and this Lutcher. I went in; and Tuttle throws a five-dollar bill to Lutcher and says, 'Here's for that last bottle, Lutch.'

"Lutcher took it. And he'd seen me before he took it. Then he got up and says: 'Hello, Jim. Have a drink?' So I told him to come along."

He stopped; it was evident that his story was done. Wint nodded. "Well, that's plain enough," he agreed.

"It's my evidence against theirs," Radabaugh reminded him. "But that's the way it's got to be."

"Your evidence is good enough for me."

"Sure. But he'll fight."

"We can't help that," Wint reminded him. "All we can do is—soak him."

There was a sudden heat in his voice; and Radabaugh eyed him curiously and asked: "In earnest, ain't you?"

"Absolutely," said Wint.

"Well, it never hurt any to be in earnest. Go to it, boss."

Hardiston talked it over that day and wondered what Wint would do. Most people thought he would sentence Lutcher; some declared he would wait till after election for fear of influencing the vote. Sam O'Brien laughed at this view.

"Wint wasn't ever afraid of anything," he declared. "Why, man, you make me laugh. He'll soak Lutcher so hard Lutcher'll need to be wrung out like a sponge."

There were others who were loyal to Wint; and there were some few—not very vociferous except among those of like views—who were loyal to Lutcher. But for the most part people waited; waited for Kite to come home. This was his fight; that was understood. Lutcher was his man.

He came on the early morning train next day; and his coming was marked. Lutcher met him at the train. They came up the hill from the station together and went to the bazaar, and were alone there for a little while. Routt joined them presently. Routt would represent Lutcher in court, he said. But Kite laughed at that.

"It will never come to court, man," he told Routt. "You know that."

"I'm not so sure," Jack objected.

"Then we'll smash that young rip flat as an egg," said Kite harshly, with a gesture of his clenched fist. "But he'll crawl, I say."

Lutcher got up. "I'm willing to see that," he declared amiably. "Come along and stage the show."

So they went down to the fire-engine house together, and they found the council room where Wint held court crowded with Hardiston folks who wanted to see what was going to happen. Radabaugh was there; and he told them Wint was in his office in the rear. Kite bade Routt and Lutcher sit down.

"I want to see the mayor," he told Radabaugh in a peremptory tone. "Take me in."

Radabaugh shifted the bulge in his cheek and told Kite to stay where he was. "I'll see if he wants to see you," he said, and went into Wint's office.

A moment later he appeared at the door and beckoned to Kite, and there was an instant's hush in the big room as everyone watched Kite go in. Then they began to whisper and talk together; and instantly were still again, trying to hear what Wint and Kite were saying. Radabaugh had shut the door behind Kite and stood with his back against it, indolently studying the crowd.

They tried to hear; but they did not hear anything except a murmur of voices now and then. They could only guess at what had been said from what happened when Kite had been with Wint five minutes or perhaps ten. At the end of that period the door opened so suddenly that Radabaugh was thrown off balance. He stumbled to one side, and Wint came out and sat down at his desk.

Kite was on Wint's heels; he whispered to Wint fiercely, but Wint, without heeding Kite, said to the clerk, "Call Lutcher's case."

And at that Kite looked at Wint for a moment with a red and furious face, and then he turned and bolted for the stairs and was gone.

Wint's countenance was steady, his lips were white. He heard Radabaugh's story of the arrest of Lutcher; and when it was

PRINCE ALBERT

the national joy smoke

COME on down to Red Gap and pick-a-pipe that fits your face and makes you look and feel like ninety-miles-an-hour-standing still! Or, dig up that old pal *you "lost" and tried to forget* a spell ago! Then, nail a tidy red tin of Prince Albert, fill that joy'us jimmy brim-top-full and let'er flicker like you've got her wide open on the new smokespeedway!

For, that's all there is to breaking into the pipe game *since Prince Albert blew out of the bushes!* Just puts pipe-pleasure on the merry-map; lets men with tenderest tongues get in with both feet; has made three men smoke pipes where one was smoked before! To slide it across quick:—*P. A. is a regular dempsey!*

And, say, what a powerful bunch of fun will be cut loose around your smokespot when you realize that no matter how you put the smokespurs to Prince Albert *it will not bite your tongue or parch your throat!* Our exclusive patented process cuts out bite and parch! Talk about indoor and outdoor fourace sport! Prince Albert will put you on the sunny side of smokestreet so speedy—*and keep you there* so happy-like with its generous goodness—you'll vote for two Sundays in every week to devote to smokeservice!

Wherever you pass a place that sells tobacco—big burgs or back bays—there you'll find P. A. awaiting your signal! Toppy red bags; tidy red tins; handsome pound and half pound tin humidors—and—that classy, practical pound crystal glass humidor with sponge-moistener top that keeps the tobacco in such perfect condition.

THOSE minutes—five or ten—which
V R. Kite spent with Wint in the lat-
's office behind the council chamber
fo he sentenced Lutcher, left Wint de-
ss d, shaken by foreboding. He was like
e eset in the darkness by enemies he
ul not see. He felt the imminence of dis-
te without being able to avert it. The
rl was all wrong. Life had turned her
ur s down. There could be only destruc-
n head.
He felt this, without being able to put a
m to the peril. It was intangible; Kite
d nly hinted at it. But the little buzz-
rof a man had been in deadly earnest.
Inwas sure of that. So—there was noth-
g do but wait for the blow to fall; and
itg is the hardest thing in the world
d
Ke had come into Wint's office that
rng with a smile in his dry eyes. It was
ne that had triumph in it; and it held
o certain mean magnanimity to a fallen
. it was as though Kite knew Wint was
ath, and expected him to surrender, and
s illing to accept the surrender though
sp ing Wint for yielding. Wint had ex-
ct d the little man to come in anger,
th protestations and open threats and a
sp rate sort of defiance. He was pre-
re for these things; he was not prepared
fe confidence in Kite's bearing. And
ist glimpse of it disturbed him, made
mneasy.
Ke had sat down without being in-
vi had put his hat on Wint's desk and
d aid in an amiably triumphant way:
Vll, young man?"
H seemed to expect Wint to speak; but
ir had nothing to say to Kite. He re-
ei "You wanted to speak to me?"
"ot exactly," said Kite. "I wanted to
a what you have to say."
"I" said Wint. "I have nothing to
y except what I shall say to Lutcher in
u presently."
"h, yes. Lutcher," Kite murmured.
Lcher, to be sure." And he nodded as
ogh Lutcher were scarce worth consid-
n, and kept silent, to force Wint into
eh.
This trick of keeping silent, forcing the
h man to make the advances, was a
vite with Amos Caretall. Amos had beaten V. R. Kite at the game more than once; but Wint had beaten Amos. He beat Kite now. The older man was driven to speak first.

He said in a quick rush of words: "You know you're done for. Done! Skinned! Licked! Down! What have you got to say?"

Before a direct attack Wint recovered himself. He laughed. "I should say you were wide of the mark, Kite," he said cheerfully. "That is, if I know what you're talking about. The mayoralty?"

"Of course. Your hide is on the fence."

Wint shook his head. "I haven't felt it being removed; and they say the process is painful. So I would have felt it go."

"Don't joke, young man. You know what I mean."

"I know," said Wint, "that I'm going to be elected mayor. I know Routt is licked—if that's what you mean."

Kite laughed—a harsh, short, mirthless laugh. "What's the use of bluffing? I tell you I know."

Wint said a little impatiently: "You're talking in a mysterious way, Kite. I don't see your object. If you've no plain words in your system we're wasting time."

"I've a plain word for you. Hardiston will have a plain word for you." There was a deadly menace in the little man's tone, and Wint felt it and was a little impressed. But he managed a smile.

"I've a plain word for Lutcher too," he said. "You're keeping Lutcher waiting."

"Oh, Lutcher," said Kite again. "You'll let him go."

"Hardly," said Wint. And Kite cried: "I say you will! Don't be a fool. I tell you I know!"

"You may know some things," said Wint slowly, "but you are wrong about Lutcher. He gets the limit."

Kite leaned forward and his voice was almost kind. "Young man," he said, "you've good nerve. You're a good fighter. You're a vote getter, too, in an awkward way. If I didn't have the winning hand I should be worried about what you can do. But I have; from the person who knows. You're beaten. You might as well accept it."

"If I'm beaten," said Wint, "I'll know it by midnight of the tenth. Not by your telling."

Kite lost his temper for an instant; and he cried: "You miserable little dog! With not even the grace to know you're whipped!"

Wint said coldly: "Just what are you talking about, Kite? You wanted to see me. Well, here I am. What have you got to say? I'll give you about thirty seconds more."

"Thirty seconds?" Kite echoed. "You'll give me all the time I want. I tell you you're done!"

"What have you got to say?"

"Go out there. No, first write out for me a notice of your withdrawal from the mayoralty fight. Then go out there and turn Lutcher loose. If you do these two things they'll save you—for a while. And nothing else in the world can save ——"

Wint—there could be no question of this—was frightened. He was afraid of the certainty in Kite's manner, afraid of the mystery behind the other's confidence. But it is braver to appear brave when you are frightened than when there is no fright in you; and Wint, frightened though he might be, was yet brave. He got up.

"Time's up, Kite," he said.

Kite exclaimed: "Don't be a fool! I don't want to ruin you. Save yourself, boy!"

Then Wint had opened the door and stepped out into the other room.

That day was Thursday, five days before election; a fair fine day of the sort you will see in Hardiston in the fall. The sun was warm, the air was crisp and dry. It was a day when simply living was pleasant; when to draw breath was a joy. Ordinarily Wint would have drunk this day to the full. But there was abroad in Hardiston a whispered word; men looked at him curiously as he passed them. No one seemed to know exactly what was coming; yet they looked upon Wint as one looks upon a man about to die. Kite had said nothing. From the fire-engine house he had gone direct to his bazaar and stayed there. One or two of his lieutenants visited him there during the morning.

Kite said nothing; no one had any definite word. Yet Hardiston was whispering its guesses. Somehow the rumor had gone abroad that Wint was done, that Kite was about to strike. There was a lively and eager anticipation in the air. It is always easy to anticipate the misfortunes of others; and there will always be those to rejoice in the imminent downfall of one who has held himself high. Wint had enemies enough; even some of those whom he had counted his friends looked askance at him this day.

When he went to the post office for the noon mail he encountered Hetty on the street. Because he was thoughtful and abstracted he spoke to her curtly. Hetty did not speak to him at all. She turned away her head. But Wint, already passing by, did not mark this.

He met B. B. Beecham in the post office and stopped in with B. B. at the Journal office afterward. B. B. talked pleasantly of a number of things, till Wint could be still no longer.

He asked abruptly:

"B. B., have you heard anything?"

The editor looked surprised. "How do you mean?" he asked.

"What's Kite up to?"

B. B. said: "I don't know. Is he up to something?"

"He came to me before court this morning and demanded that I withdraw from this fight and let Lutcher go."

"Demanded it?"

"Yes."

"On what ground?"

"He made some covert threat. He was not specific."

B. B. shook his head. "I hadn't heard."

"Oh, no one knows this," Wint told him. "I refused of course; and fined Lutcher. Now everyone in town seems to know that something is going to drop on me."

"What is there that he can bring against you?"

"Not a thing. Except the old stuff. What everybody knows."

B. B. nodded. "I should not worry if I were you. If there's nothing."

"There isn't anything, I tell you!" Wint exclaimed impatiently.

"Then what can he do?"

Wint got up, a little weary. "All right," he said. "I thought you might have heard."

B. B. shook his head. "Not a thing."

Wint went to Sam O'Brien's restaurant for dinner. It was a little after his usual hour, and there were only two or three others on the stools before the high scrubbed counter. O'Brien waited on Wint himself, and Wint ate in silence under the other's sympathetic eye.

When he paid for his dinner O'Brien asked heartily: "Well, Wint, m'boy, how's tricks?"

Wint looked up at the other and smiled wearily. "Rotten, Sam," he said.

O'Brien protested. "Lord, now, I'd not say that. As fine a day as it is."

"I wasn't talking about the weather," Wint told him. "It's just—I guess I'm in the dumps, Sam. I've got a hunch. I've got a hunch something's going to drop on me like a ton of bricks."

"A hunch like that is bum company," O'Brien commented. "Where did you get it, Wint?"

Wint shook his head. "I don't know."

"Lord, boy! You act like you'd lost your nerve, Wint."

Wint said: "Maybe I have." He was terribly depressed, almost ready to drop out and surrender.

"You'd nerve enough when you soaked Lutcher this morning," Sam reminded him. "I was proud of you, m'son. You've give me many a laugh, Wint, but I was proud o' your cool nerve this day."

"Oh, I'm not worried about Lutcher."

"I'd not be. Him nor his. The old buzzard of a Kite neither."

Wint said: "I don't know. Kite's got something up his sleeve."

"That's as much as to say that he's tricky. It's these magicians that has things up their sleeves. Full of tricks. You stick to the middle of the road, Wint, and never mind their tricks. They'll trick their own selves."

Wint shook his head. "That's all right. But what can I do?"

"Do?" Sam echoed. "Why, fight 'em like that dog of yours fit Mrs. Moody's Jim!"

He nodded toward Muldoon, curled as always near Wint's feet; and Wint dropped his hand to Muldoon's grizzled head. He was apt to turn to Muldoon in trouble. The dog was his shadow, always with him; but it was when he was troubled that Wint gave most heed to the terrier. At Wint's caress Muldoon rolled his eyes up without moving his head. Sam said: "Look at him grin; the nervy pup! He's telling you to take a brace, m'son. You can't scare the dog."

"I'm not scared."

"You act damn like it," said Sam frankly.

And Wint protested: "It's only that I'm sick of it all—sick of the fight, and the mud throwing. And getting no thanks."

"Hell's bells!" Sam exclaimed. "You talk like a woman."

Wint looked at him curiously. "What's Kite up to, Sam? Have you heard?"

"Heard some rats say he would rip you up. And I told them you'd be doing some ripping about that time. You're not going to make me out a liar, Wint. Are you now?"

"Oh, I suppose I'll fight."

He left the restaurant and walked down to Hoover's office and secluded himself in the back room; but his studies could not hold him. There was a curiously passive despair upon the boy. He could not shake it off. The whole thing seemed so little worth while. If there had been a chance to

fight. But the peril was intangible. He could not come to grips with it. He could not even be sure there was peril. He could not be sure of anything—not even of himself. He asked himself despairingly: "Are you going to be a quitter, Wint?" And then he thought hopelessly: "Oh, what's the use?"

In midafternoon Dick Hoover looked in and said Gergue wanted to see Wint. Wint was surprised.

"What does he want?" he asked. "Gergue?" He got up and went to the door and saw Peter waiting; and he called: "Come along in here."

Gergue came at the invitation. His hat was off; he was fumbling in the tangle of hair at the back of his neck. There was a curiously furtive uncertainty about the man. Wint thrust a chair toward Peter with his foot and said, "Sit down."

When Gergue was seated and slicing a fill for his pipe Wint asked: "What's on your mind?"

Gergue looked at him sidewise, stuffing the crumbled tobacco into the black bowl. And he asked: "Wint, where do you figure I stand?"

Wint was surprised. "You mean—in this business between Routt and me?"

Gergue nodded. "Yeah."

"Why, with Routt, I suppose," Wint told him.

"Why d'you figure that?"

"You're tied up with Amos."

Gergue scratched a match. "Wint," he said, "Amos is a fine man. He does things his own way; but in the end he pretty near always turns out pretty near right."

"Well, that's his record," Wint agreed. "He's usually on the winning side."

"Don't let that get away from you," said Gergue. "Don't you forget that, Wint!"

Wint laughed harshly and said: "I'm not likely to. I counted on him in this, you know."

Gergue leaned toward him. "Thing is, Wint, I'm wondering what you'd think if I told you something."

"That would depend on what you told me."

"Something for your own good. Help you some."

Wint said amiably enough: "I want to win this fight, Peter. But—after Amos' stand—I don't particularly want any help from him. I'd mistrust it."

"Say this come from me, personal?"

"You're linked with Amos."

Gergue nodded resignedly. "Have it so," he agreed. "Anyways, I'm going to tell you."

Wint said: "All right. What do you want to tell?"

Gergue hesitated for a while, choosing his words. At last he asked:

"You wondering what Kite aims to do to trim you?"

"Yes."

"Got any ideas?"

"No."

Gergue looked at him shrewdly. "Know any way he could hit at you?"

"No. Not with the truth."

Gergue hesitated; then he asked slowly: "Know any way he could hit at you with Hetty?"

"Hetty?" Wint echoed. "Hetty Morfee?"

"Yes. Her."

Wint was stupefied with surprise. "Good Lord, no!"

"She got any reason to be against you?"

"No. I—she's friendly, I think. Ought to be."

Gergue puffed at his pipe. Then he got up. "Wint," he said, "take it for what it's worth. I hear he's going to hit you with her."

Wint exclaimed angrily, "You're crazy, Peter! Or you're —— Look here, did Amos send you?"

"No."

"Is this some damned trick of his?"

"No."

"Well, what are you talking about?"

Gergue said thoughtfully: "I've said all I know. Think it over, Wint."

He went out with a surprising quickness, and was gone before Wint could frame other questions. The young man was left to consider the thing.

When Wint went home for supper he was still mystified but he was beginning to grow angry; angry at the mere suggestion that lay behind Peter's words; angry at Gergue for saying them. And this anger was a more hopeful sign than his depression of the morning had been.

He was fiercely resentful at Hardiston, at the whole world.

He met Joan halfway home. That is to say, he overtook her on her way and they walked home together. He was so absorbed in his own thoughts that he did not see there was something troubling the girl until she spoke of it.

She said: "Wint, I met Agnes Caretall uptown."

He nodded, scarce hearing; and Joan said: "She's a good deal of a gossip, you know."

There was something in her tone which caught his attention and he looked at her sharply and asked, "What do you mean? What did she say?"

"She said Mr. Kite was going to ruin you," Joan told him.

Wint laughed shortly. "Well, that's no secret. At least it's no secret that he wants to."

"She said he was going to," Joan sisted.

Wint asked: "How? Since she knew much, did she know how?"

Joan touched his arm. "Don't be ang Wint."

But Wint was angry, even with Jo He exclaimed harshly, after the fashion angry men: "I'm not mad. What did say?"

Joan told him. "She said they were go to link you up with Hetty."

Wint exclaimed, "Lord! You too? sick of that tale. Hetty!"

Joan begged: "But there isn't anythin is there?"

Wint faced her hotly. "If you do know without being told —— Can' even count on you, Joan?"

"I only asked ——"

They were at her gate, and Wint lif his hat abruptly.

"Think what you like," he told sharply. "Good afternoon."

He left her there; left her, and J looked after him with troubled sympa in her eyes, and something more. Th was a mist of tears in them when she w in toward the house.

While the Chases were at supper t night the telephone rang, and Wi father answered. After a moment he ca back into the dining room.

"Wint," he said. "It's Kite."

"Kite?" Wint demanded, pushing b his chair. "What does he want?"

"He wants to see you—and me. He s he'll be out here at eight."

Wint's face turned black with an then he threw up one hand. "All right," cried. "Tell Kite we'll be here."

(TO BE CONCLUDED)

SELF-SERVE KNOCKS THE H OUT OF H. C. L.

(Continued from Page 19)

of sympathy and advice, told his guest something of his business troubles.

The next morning, down at the store, in a pause between customers, the city man and Todd resumed their conversation of the night before.

"Have you ever been in one of these new self-serve groceries?" his friend inquired. "They seem to be a success in the city and I was thinking after I went to bed that I didn't see any reason why they wouldn't pay here, nor why your store couldn't be made into one."

"What's the difference between one of them and my kind of grocery?" asked Todd. "They're new since my day."

"Well," said the city man, "the main differences are that their customers wait on themselves, and they don't give any credit or make any deliveries. I judge Oletha doesn't number many who are above waiting on themselves if they can save money by doing so. All your farm customers attend to their own delivery anyway, and few of your town ones can afford to pay for the accommodation. As for the credit, it looks as if that was the rock which had ripped the biggest hole in your boat. I believe you could build up a good trade with a grocery of the self-serve kind, because you could sell cheaper than those who give credit, delivery and clerk service. When you sell for cash you buy for cash, consequently you are allowed big discounts."

Though protesting at the time that Oletha didn't take to innovations, the next week saw Stephen Todd in the nearest city that possessed a self-serve store. After watching for a while the steady stream of customers that poured in and out he sought the manager. That young man being a good-natured soul, when he found that Todd ran a store one hundred and fifty miles away was willing enough to initiate him into self-serve store management. Todd stayed for a week and until he had satisfied himself that he knew enough to start his own on that basis. After a conference with his wholesaler, who approved and gave some valuable suggestions, he went home and closed his store.

Inside of a week things were doing. The delivery truck was sold. Two partitions were put into the store, which divided it into three rooms, two small ones and a large one where the stock was to be displayed. The store was painted white inside and out. One of the clerks and the delivery boy had been discharged when the

Exit, Showing Cashier and Checker Stands

store was closed. Todd planned that he and the other man could handle the trade in its new quarters, and they did.

After several days' advertising, in which small-town curiosity was stirred, the store opened. They came, they saw, they bought; and they continued to come even after the novelty wore off.

For the first time in his grocery experience Todd saw a real profit at the end of the month. The prices he could quote were lower than those at the other stores and people flocked to the new one, though no credit was given to its patrons. Todd had collected what he could on his outstanding bills and had charged the rest up to experience before he opened the new store. The women liked having a chance to examine the stock without a clerk at their elbow. Every article had a plain price tag on it. There was no urging to buy, but people seemed to buy more than before, perhaps because to see was to create a want for the article. The self-serve stores are strong for displaying all their wares.

By December Todd found that he was doing five times the business he had before. In the six months since his store had been changed into a self-serve he had turned over his stock four times. His cost of operating had been cut to less than half of what it had been previously. Meanwhile two of the other grocers had gone out of business, and apparently it is only a matter of time before one of the others will go into some other line of work. MacGregor, though not doing the volume of business he did before the opening of the self-serve, still has a thriving trade. The majority of his customers want and are willing to pay for the service he gives at his store. Lower prices don't attract them.

One of the other stores is operated by a Swede, and the Swedish farmers, of whom there are many in that locality, feel more at home in his store than in one where their broken English makes them conspicuous. In place of the seven located there a year ago it looks now as if Larsen the Swede, MacGregor and Todd in no very far future will divide the grocery trade of Oletha among them. Three grocery stores in that size town will be sufficient. One of the things America has in too great abundance to-day is grocery stores. Experts on distribution declare there are at least twice too many, and that one reason for high-pri groceries is this very condition. The rea ninety out of one hundred fail over a year period is due both to the oversup and to poor management.

Mister Corner Grocer whether his bo show he can afford it or not has contin to give all kinds of expensive service cause he thought housewives in this cou demanded it and that he couldn't do b ness unless he gave it. He heard on ev hand that American women wanted th made as easy as possible for them in life even if it cost them money, and believed it. He knew his cost of ope ing was higher than it should be, bu didn't dare cut out any service no ma how expensive it was, because he was af if he did he would lose custom. The stick which has kept him in a track couldn't afford has been the fear of offe ing his finicky women customers if refused service favors.

High-browed lecturers have rehea the extravagance and indolence of American women until even the wo themselves have commenced to think men would die rich if some humane wa disposing of the feminine sex could found. An article on why the cost existing is going up that contains no at the laziness and wastefulness of M Average Housekeeper of U. S. A. is incomplete as a gingerbread without gin

Assertions of this kind made by those wield a pen or grace a Chautauqua platf are far from true. This has been proved hundred different ways, but one of the bits of evidence for the defendant is instantaneous welcome she has given self-serve grocery store.

Mrs. Average Housekeeper, who is lu enough to live in a town that possesses of these stores likes them and has put stamp of her approval on them, because finds that there she can get the same qua of groceries cheaper than anywhere She doesn't get the service of the co grocery, but she can save money—so thing almost everyone is trying to do t days—so she cheerfully carries home supplies for her family.

Cafeteria or self-serve groceries are last word in economical grocery-st management. Low operating costs m for low-priced commodities and the s serve variety at present leads in the re tion of running expenses. The self-s is able to undersell the corner grocery

(Concluded on Page 119)

(Concluded from Page 116)

n he cash-and-carry. Its underlying ncle is that its customers must wait themselves. So to the economies of the h-nd-carry the big one of dispensing h erk hire is added.

'h new type of grocery store has dis- absolutely that shibboleth to hold o which merchants in recent years inned their faith, the giving of all of service to their customers. The ervice does not give any service what- to those who patronize it. Never- e, the patronage of these stores in- by jumps and bounds, because wners can afford to sell their goods heaply than can the merchant who ervice.

'h r success smashes the claim made by ular merchant that the American buy- blic is spoiled and demands all kinds of modations from its merchants. The vice merchant says the people have all this service because they thought offered to them free and because they e grocer as much whether they got ot. When the public realized that it r these extra favors in higher-priced odities it decided quickly it could se with them.

'h corner-grocery store is the type common in this country. As a class harge the most and make the least 'h The mortality in grocery stores is rely high. In a ten-year period the per cent which fail are practically o the corner-store variety. Most of 'ailures are due to poor management. ently anybody and everybody thinks o matter what else he may have in he can run a grocery store. So are ex-hodcarriers, ex-farmers, ex- naids, and every other kind of an 'attempting to sell groceries. With ural bent, training or experience for siness it is little wonder that so many ler annually.

elling Expenses Cut Down

'h two big factors in nearly all these es are lack of management and too costly favors to patrons. Figures led from every part of the country in ct survey show that the average gross on sales made by the corner-grocery —and this includes the large down- grocery stores as well—range round with the actual costs at 16 to 18%. ed, the expenses are as follows: Sell- st—clerk salaries, advertising, wrap- and so on—7%; delivery, 3%; man- nt, not quite 2%; fixed charges— nsurance, taxes—2%; interest, 1%; g, ½%; bad debts, % miscellaneous— ang, watchman, ice, io on—½%. The iting expenses are so e that commodities arily must be priced to allow the grocer ake even, without the a 3 to 5% profit that tes.

In spite of this each as seen the already se-burdened corner or adding service to e, to equal or exceed given by his com- rs. Credit has been n, frequent and pt deliveries have made, orders have taken at the con- r's door, and goods ut on approval. All are much appre- l favors, but the pa- must pay for them e long run. Tele- ing and having the ie charged and sent reat savings of time effort to the house- r, but it is a costly to buy unless her n and strength are d and valuable.

'hen a grocery adver- that it will deliver a of bread or a yeast promptly to any part e city it is probable many customers of shop are grumbling e high cost of liv- Because it has been sary to make the patrons of the store feel that they were gifts, credit and long deliveries could not be charged directly, so they have been spread over the retail price of the commodities sold. Higher and still higher have gone prices to cover these services.

A few grocers broke away from this established method of giving the customer credit and all kinds of service free of charge, and started a few years ago what is known as the four-square plan. By this method four different prices are put on each article. One is for cash-and-carry; another when credit is given and the customer carries home his purchases; a third when credit is given and the delivery is attended to by the customer; and the fourth when the customer is given both credit and delivery. The delivery charge under this plan is a flat one of ten cents whether the sale is a loaf of bread or a half barrel of flour. This plan has proved successful in many places and the merchants who have adopted it apparently feel that they have found a way out of their financial troubles.

About ten years ago a number of grocers discarded the orthodox method of conducting a grocery store and launched grocery stores whose patrons must pay cash and make their own deliveries. Some of these stores are still independent concerns, but more of them are chain stores. At the outset the cash-and-carry got rid of the 3% delivery charges, the bad debts, which range from ½% to 2½%, some bookkeeping and the cost of soliciting at the door. By not giving credit the grocers had the cash to buy from the wholesaler at a discount. This discount usually amounts to considerable.

The grocer who must buy on credit can afford only costly small deliveries. This means frequent calls from the wholesaler's salesmen and much bookkeeping and close watching on the part of the wholesaler's credit department. The credit grocer is the poorest kind of a customer the wholesaler has, and quotations to him must necessarily include pay for the trouble he causes. The grocer who extends credit may by so doing extend his business, but he is likely to lose money by doing it. That credit is not necessary to obtain patronage is shown by the patronage given mail-order houses and the chain and independent stores which do a strictly cash business.

The backbone of the retail trade is the cash customer. The credit system has been an unmitigated curse. The average grocer cannot afford to assume the functions of a free bank with his customers. When the woman who has been demanding that her dollar be given full purchasing power accepts credit at the grocery it is the same as if she borrowed a dollar from the grocer's working capital to buy commodities in his own store. When she accepts credit she destroys the cash purchasing power of both her own and her grocer's dollars. Free delivery has never been an asset, but always a liability.

Because the cash stores, especially the chain ones, usually do a larger business than the kind which gives credit, they are able to make quicker turnovers of their stock and to take a smaller profit on each individual sale. An investigation recently showed that a group of efficient grocers made twelve turnovers of stock in a year. Substantial reductions are also made to the chain stores by the wholesalers because they buy in large quantities. Many of the chain stores have their own factories and cut out the middleman's profit. The cash-and-carry store can do business on a gross profit of fifteen per cent against the twenty-one per cent of the average corner grocery.

Time and Money Saved

The last step in the economical development of the grocery business is the self-serve or cafeteria. About fifteen years ago purveyors of food discovered that there were thousands of people who were willing to save time and money by waiting on themselves at a restaurant. The self-serve restaurants have become increasingly popular. Applying the same idea to groceries a store of this kind—probably the first organized one of the type—was started on the Pacific Coast a decade ago. It was run in a rather haphazard way, but the idea proved a sound one and stores of the self-serve variety have multiplied until now well-regulated stores of this type are to be found in every part of the country. It goes without saying that the expense of operating one is far below that of the stereotyped grocery. Possessing all the advantages of the cash-and-carry they add the additional economy which saves clerk hire. Even in a large one a few people to handle the stock, replenish the shelves, clean the building, check and wrap bundles and receive the cash are all that are required.

The principle is the same in all the cafeteria groceries. The store is usually divided into three parts—a lobby, a retail room and a supply room—where customers are not allowed. All patrons pass through the lobby and enter at the entrance turnstile. Inside the retail room the customer picks up a basket and starts on his selecting tour.

The goods in some of these stores are arranged on shelves and in others on tables, but in all the price tags are in plain sight. Commodities not in their original cartons, bottles or tins are weighed, and bags holding one, two or five pounds, are plainly marked with the contents, price a pound and gross amount.

Where the contents are not visible and there is a question of grades a glass-covered sample box is attached to the table or shelf so the customer may see exactly what he is buying.

One of the rules of the self-serve store is to keep the various commodities always in the same locations. After becoming familiar with the position of the different articles the customer requires very little time for marketing. So far no feasible plan to handle fresh meat in these stores has been devised, but butter, cheese, milk and perishable delicatessen products are placed in refrigerators which form part of the shelving space. Fruits and vegetables are sold by weight in an endeavor to prevent the early comer from having the advantage, but the early comer still has it with that class of food which for appearance and age cannot be impartially classified.

There is no urging to buy goods in a self-serve store. No telephone or mail orders are accepted, no physical service in assembling the goods and no delivery are given, no checks are cashed and no parcels are held for later call.

The selection made, the customer passes out the exit turnstile. His groceries are checked and neatly wrapped, he is given an itemized bill, which he pays at the cashier's window, and the transaction is finished.

With customers permitted access to the shelves the mind immediately leaps to the conclusion that theft of the goods must increase under these conditions. The percentage of shrinkage—which includes theft—in the self-serve stores, however, is only a trifle more than that on the books of the ordinary corner grocer. There is no opportunity whatsoever to take bulky articles and the small ones are placed near the cage of the cashier. Putting the small articles on the high shelves also helps reduce the number of articles taken, as people with kleptomaniac traits prefer taking articles that are on a near level with their pockets. With no clerks there is no loss by their appropriating commodities, and this about balances the little loss through dishonest customers.

The idea of the self-serve store is to sell groceries and nothing but groceries, and to reduce in every way possible the expense of selling. To-day the housewife is willing to dispense with extra favors if she can get food at a lower cost. Cheaper food is the important thing, and these stores seem to be providing it.

The average self-serve, by curtailing the service it gives, is able to keep operation costs as low as 7 or 8% against the 12% costs of the chain stores, and the 16% of the corner groceries. Some of these cafeteria groceries claim to have gone below 5%. The total gross profits in a well-conducted self-serve store can easily be kept under 10%.

Nearly all the large cities and many of the small ones now have stores of this type. Memphis has fifteen or twenty, Chicago more than two dozen, St. Louis six or eight, and Washington is to have a chain of seventy-five in the near future.

The no-delivery store will never entirely supersede the corner grocery with the pleasant personal interest which the proprietor takes in his customers, but as an experiment in distribution it is regarded as worth encouraging. Perhaps the corner grocery can and will incorporate into its management some of the best of the self-serve methods. It looks as if both proprietor and patron will profit if it does.

"Every Man—Every Need"

Meeting the needs of all glove wearers in every field of activity has been the work of the Hansen organization for more than a quarter of a century.

Hansen builders not only fill each dominant need with the right design but they anticipate new requirements, and this pioneering service is a big factor in Hansen popularity.

As a gift, nothing reaches deeper into the appreciation than a pair of Hansen's, whether for dress, for sport, for motoring, or for the daily task.

Write for new glove book. In it is a type and style that meets your needs. Select your favorites, then see your dealer.

ALL'S SWELL THAT ENDS SWELL

(Continued from Page 13)

Florian was faced, however, with the necessity for raising five hundred dollars with which to purchase The Weekly Epoch. The thing appeared impossible, but the impossible had in the past been child's play for Florian and he went cheerily about his task.

But he met with a cool reception. The money was to be had all right, but some collateral besides prestige was demanded—and Florian had none. He went to call upon Editor Crispus Breech.

Editor Breech was in a responsive mood. He admitted dolorously that the town jes' wa'n't big enough fo' two cullud papers liken to his an' Vanguard Collins' and that The Weekly Epoch had shot its bolt and found the door locked against itself. Therefore Editor Crispus Breech was willing to accept five hundred dollars in payment for his property—lock, stock and barrel.

"Five hund'ed?"

"I said it, Mistuh Slappey."

"What terms?"

"Cash."

"How much down?"

"Five hund'ed dollars."

"Not no less?"

"Nary nickel."

There was no budging Crispus. That fiery little individual was grimly determined to go down fighting or pull out with five hundred good hard dollars to soothe his defeated feelings and set him up in another business; and at that his newspaper was a better value than the shattered tottering Sponsor. The two papers had played frenziedly at a gentle game of mutual throat-cutting for the past eight months. Result: Both were on the toboggan, each unaware of the other's plight and each willing to concede victory if it could honorably be done or to pull out from under, provided someone could be found with little enough sense to hold the financial bag.

That afternoon Florian rode southward on the Highlands car, alighted at Fifteenth Avenue and walked to the crest of Milner Heights. Once there, he struck out into the woods, located a bowlder and climbed upon it.

The panorama of Jones Valley was spread magnificently before him—the city with its ring of industrial fire, its tall chimneys spurting clouds of smoke and soot into the air, its beautiful residential section nestling along the mountain at his feet safely away from the grime of the downtown section; its myriad suburbs ——

Somewhere in that city was someone with five hundred dollars which was procurable—and by Florian. There was the Pool and Ginuwine lottery of course. But the drawings had been running against Florian of late and he had rather lost faith in his ability to pick winning combinations. Professional money lenders such as was Semore Mashby, who roomed with the Shoots—they were out of the question too. They demanded too much security.

But somewhere down there was his five hundred dollars. Some man or woman ——

And suddenly Florian chuckled. He threw back his head and laughed aloud. The most obvious of all solutions had occurred to him last, perhaps because it was the most obvious. He slapped one well-manicured hand against a light-gray trousers leg.

"Lorelie Shoots," he chuckled, "I an' you is gwine split five hund'ed dollars' profit."

Lorelie Shoots it was—Lorelie, the pretty young wife of Mr. Christopher P. S. Shoots, who was known as a master hand at shaving a bearded face or massaging an unbearded one; whose timidity and lack of social ambition had forced his wife in beyond their depth in the matter of assuming a year's lease on a seven-room house and who was foolish enough to place all of his savings in the First National Bank subject to a joint account of himself and Mrs. Shoots.

It was decided. The die was cast. Lorelie Shoots was to furnish the necessary five hundred dollars. She didn't know it, but she was the chosen one. And Florian intended that there should be no getaway.

He worked carefully and single-mindedly. His performance of that morning was repeated the following morning and the next and the next. He reveled in her financial misery resulting from his own defection in the matter of lodgings bill and the ditto reluctance of Mr. Spokane G. Washington. He was insistent in declaring that there was only one way out for her—a quick outside investment with the family capital which was certain of adequate and prompt profit.

"But," she wailed, "they ain't no such of a thing."

"Yes they is."

"Tell which?"

"I cain't tell you nothin' yet," he said mysteriously. "But I is got ev'y cent of my available cash capital tied up in a quick an' suttin propersition which is gwine net me between five hund'ed dollars' profit."

"What I is got to do with that?"

"I dunno. You is been a mighty good frien' to me, Missis Shoots, in givin' me breakfases an' such, an' mebbe ——"

"Oh, Mistuh Slappey, you don' mean you is gwine 'low me to put some money in an' make some fo' my ownse'f?"

"Mebbe, Missis Shoots. Mebbe so I is. But I is gwine be sho' befo' I does—be sho' that you can lemme have the money one day an' I c'n give you it back 'long with the profits in a day, or so later."

And beyond that he refused to speak. Lorelie was quite convinced—it had really been too easy.

It was all a question now of when he chose to borrow the five hundred. The world had taken on a bright and roseate appearance for Mr. Slappey. His heart jazzed within him.

But if in his intensive business absorption Florian had paid no heed to the personal element the same could not be said for Sis Callie Flukers, champion gossip of Darktown.

The scene in the Shoots kitchen on the event of her first memorable visit rankled in the inquiring mind of Sis Callie and she was quite determined to discover what was what and why. Thereupon she became an expert snooper and did most of her snooping round the Shoots homestead and those of the immediate neighbors. What she discovered satisfied even her scandal-loving soul. She saw that Florian Slappey, a roomer at the Shoots home, was eating his breakfasts there daily; she saw a partnership of matutinal domestic duties and inferred many things which were as natural as they were unjust. And finally she cornered Mr. Christopher P. S. Shoots one evening as he was leaving the barber shop where he labored daily and told him the whole colorful story.

Christopher was impressed. He was naturally of a jealous disposition and Florian Slappey was one to bring a visit of the green-eyed monster to any man with a pretty wife. He was easy-going, polished, a sartorial epic—and he did no work. But even while jealousy was boiling within him Christopher was too just to go off half-cocked.

"Is you positive shuah, Sis Callie?"

"Not no surer than what I am that t'-morry is We'nesday."

"But proof?"

"He ain't on'y rentin' a room from you, ain't he?"

"Yeh."

"Then how come her to give him his breakfas' ev'y mawnin'? An' how come him to wash dishes fo' her? B'lieve me, Mistuh Shoots, when a man washes dishes fo' a ma'ied woman they's sumthin' mo' to it than just lovin' the way the hot water feels. An' with Florian Slappey 'specially—it'll jes' plumb ruint the look of them sof' han's of his'n."

Christopher frowned sadly.

"An' what else?"

"They talks t'gether all the time—mawnin's when you is away. An' what does a man an' woman usuamly talk about?"

"Don' ast me that, Sis Callie. I is a upright gen'leman."

"See?" she proclaimed triumphantly. "You hates even to think about it. Now you take a frien's advice, Brother Shoots, an' watch out yo' wife don' 'lope with Florian Slappey. Tha's all I is got to say."

It was aplenty and then some. Mr. Christopher P. S. Shoots meandered mournfully homeward with his heart pumping jealousy and his mind filled with dark and dire suspicion. It was not that Mr. Shoots believed his attractive young wife loved him less. It was that she must love Florian more. And while he didn't exactly blame her—knowing that he was no prize winner in a beauty show—he felt that it was a rather mean trick that Florian was attempting.

Seated on the veranda with his wife after a solemn evening meal, he broached the subject with extreme tact.

"Wha's all this fumadiddles been gwine on betwix' you an' Flo'ian Slappey?"

"Tell which?" she queried, surprised.

"I is expostulated once a'ready," he returned with great dignity. "You is been givin' his breakfases an' he is been he'pin' you wash dishes."

"They ain't no harm in that, is they?"

"Not in that—no."

"Then what you is astin' 'bout?"

"'Bout what it means an' whither it's gittin' you."

"Don' mean nothin' an' ain't gittin' me no whithers."

"Then I adwise as yo' husban'—lawfully wedded an' ma'ied with you—that you cease an' tumminate this unseemin' intimacy which has sprang up betwix' you an' Mistuh Slappey."

She transfixed him with a belligerent glare.

"Does you mean to 'sinuate, Mistuh Shoots ——"

"I ain't 'sinuatin' nothin'. I says that enough is too much—an' you is a'ready done enough."

"Mistuh Slappey is a gen'leman."

"So was Adam ontil he et the apple. I requests theyfo' that you cease givin' Mistuh Slappey breakfases."

"You fo'gits that it loands tone to our house to have him stayin' with us heah."

"They is a limit to the price we c'n pay fo' that tone," he answered stiffly. "An' besides, I ain't so shuah ——"

"An' to prove it," she flared, "he was tellin' me on'y to-day that he was gwine buy a set of ginuwine mahogamy fu'niture fo' his room, with a dressin' table an' ev'ything. If'n that ain't swell, what is?"

There was patently no answer to such an argument, so Mr. Christopher P. S. Shoots rose and made a more or less graceful exit. Doubt still rankled in his breast, albeit it was not so insistent as it had been. Still there was danger.

And the following morning Florian struck. He explained to Lorelie that as a very special personal favor he was allowing her to invest five hundred dollars for three or four days and that in return therefor she was to receive a net profit of two hundred and fifty dollars, same being one half of the total profit certain to be made. The plan, especially as he presented it, was flawless. She was to go to the First National Bank and draw therefrom five hundred dollars, which she was to turn over to him. He then would buy The Weekly Epoch for that sum and sell it to Editor Vanguard Collins of The Weekly Sponsor for one thousand dollars spot cash and split the profits.

She was enthusiastic but a trifle frightened.

"You—you is shuah Editor Collins is gwine buy?"

"I is got his faithful promise. What mo' c'n a man ask?"

Florian's persistent press agentry won an almost too easy victory. He accompanied her to the bank, where she withdrew five hundred dollars which she turned over to him.

"And now," said he lightly, "now that you is sho' to git this heah back again an' two hund'ed an' fifty mo' in a couple of days, le's us go down to the fu'niture sto' an' buy the mahogamy set of fu'niture."

It was done, and out of the tiny surplus Lorelie had left from her housekeeping money she shelled out a ten-dollar advance payment and three weekly installments of five dollars each, making her safe from the collector for four weeks.

That afternoon the furniture was delivered. Also on that afternoon Editor Crispus Breech's Weekly Epoch passed into the hands of one Florian Slappey for a cash consideration of five hundred dollars and under an agreement whereby Editor Breech was to continue on duty until such time as Florian succeeded in disposing of it to a third person, as to the identity of whom Editor Breech was kept in ignorance.

With the title deed to The Weekly Epoch in his coat pocket Florian strode blithely to the offices of Editor Vanguard Collins. Editor Collins, explained a dusky typist, had gone for the day and was not scheduled to return until the morrow. Florian made an appointment for eleven in the morning and departed.

He did not see Lorelie until seven o'cl that night. She eyed him eagerly and spoke sibilantly.

"Yo' husban' home?"

"No, not yit."

"Semo' Mashby?"

"He's in his room."

"An' Spokane Washin'ton?"

"He's home too. An' mo', he jes' l me the ten dollars he owes me."

Florian grinned cheerfully.

"Tol' you things would break our quick." He guided her to a little lou which nestled in the shadows under stairway. "Set you down heah. I w to make talk with you."

She seated herself beside him while he ported satisfactory progress in their d And it was while they had their he close together and their conspiring vo reduced to mere whispers that Christop P. S. Shoots, husband to Lorelie by r riage, oozed into the hallway and c upon them.

Christopher froze up.

"Ah!" he said icily. "I is caught yo

Florian rose. So did Lorelie. Innoc as the situation was, it was embarrass

"Caught which?"

"You an' my wife."

The conclusion struck Florian as so and he nodded violent agreement.

"So you did—so you did."

"An'," questioned Mr. Shoots dar "what explination is you got?"

"Yeh." Florian smiled foolishly. T he turned to Lorelie. "What explina we is got, huh?"

Lorelie shook her head.

"You is the snoopinest man, Chri pher!"

"If'n a man cain't snoop roun' his home, whose home can he snoop roun

"You said it!" agreed Florian. "Wh home can he?"

Christopher turned away. His pride been sadly injured.

"I says fo' the lastest time, Missis Sho that you an' Florian is got to quit th fumadiddles! Tha's all!"

He retreated to the kitchen. Lor turned a troubled face to Florian.

"Mistuh Slappey," she pleaded, "yo got to do sumthin' quick bouten sellin' t newspaper an' returnin' back the mone

"Why so?"

"I is gittin' comprimised."

"Huh! You cain't git comprimised comprimiser than what you is comprim a'ready."

"Yes, I c'n," she wailed. "S'po Christopher should fin' out I drawed hund'ed dollars of his money an' give i you—what would he think then?"

"They is some men," returned Flo sagely, "which don' do nothin' but th things which they ain't got no right think If'n yo' husban' is that soht of a man deserves all the bad thoughts he c'n g

And Christopher was gittin' them. was gittin' them wholesale and he con ued to git them even after he had drop off into a nightmarish slumber that ni He was acutely conscious of the fact t somebody was doing him a plumb di trick, and he didn't like it. More, thought of the free breakfasts which rian was getting at his expense rather kled. It seemed like piling a chocolate Pe on an ebony Ossa. Whereupon Christop P. S. Shoots schemed a scheme.

He was disarmingly bright and chee at breakfast. He departed for the bar shop whistling gayly—and two hours l he returned. Florian, his immacul serge suit camouflaged by an apron, soapsudsing the dishwater for the b galow-aproned Lorelie. Christopher pau in the doorway and flung a vicious ulti tum at the guilty couple.

"One mo' time like'n to this," he flar "an' you is gwine make me plumb ma

Then he turned and went back to his fice. Florian doffed his apron and star for the door. He was worried and so Lorelie.

"Where you is goin', Mistuh Slappey

"Ise gwine down to sell that paper Editor Collins an' end all this foolishmen he snapped. "I hates men which th' 'sinuations at me when I is tryin' to m them some money."

She stared at him as he went to the tree and snatched his floppy Panama h At the front door he turned.

Lunch Tongue—
A Council Delicacy

Appetizing Suggestions

Most good grocers carry Council Meats in the following variety:

Vienna Style Sausage — Corned Beef Hash — Sliced Dried Beef
Corned Beef — Hamburger Steak and Onions — Veal Loaf
Lunch Tongues — Potted Meat-Products — Sausage Meat
Roast Beef — Ol' Mammy Hash — Ox Tongues
Genuine Potted Ham — Tripe — Genuine Deviled Tongue

FRESH from the sunshine and pure air of ideal surroundings, Council Meats can be included in many delightful dishes with many other good things to eat. It is impossible to tell about them all, except in "Appetizing Suggestions"—The Free Guide to Good Living—pictured on the opposite page and freely postpaid to you for the asking.

MEATS

(Continued from Page 122)

"Missis Shoots," he said, "you husban' is shuah got a 'propriate middle name."

"Wha's that?"

"P. S."

Florian made haste and speed to the office of Editor Vanguard Collins. He came to a sudden halt before the door, for backed up against it was a dray and into the dray was being piled a mass of one-time office equipment. And while Florian gazed spellbound a sad and solemncholy Editor Vanguard Collins stumped heavily down the stairway and stood upon the sidewalk. His eyes brightened momentarily at sight of Florian.

"Mawnin', Brother Slappey."

"M-m-mawnin,' Editor Collins. Wh-wh-what you is doin'?"

"Don' matter what I is doin'. I asts you now fo' a quick answer. Does you want to buy The Sponsor fo' two hund'ed an' fifty dollars cash?"

Florian staggered. Something was radically wrong and Florian had more than a suspicion that he was the wrongee. "I—I thought you was wantin' to buy The Weekly Epoch fo' a thousan' dollars," he gasped.

Vanguard laughed with harsh pessimism.

"If I ever seen a thousan' dollars all to wunst, Brother Slappey, I'd drop dead."

"But—but you said ——"

"I thought you was plannin' to buy The Sponsor an' I was showin' you what a good thing it was."

"Y-you thought I was gwine buy yo' paper offen you?"

"Now you is tootin'."

"Gosh, gol' fish! I is stang sho' nuff!"

"You is which?"

"I'll sell you The Weekly Epoch fo' five hund'ed dollars cash!"

Editor Collins stared at Florian for a few moments, then he threw back his head and laughed raucously.

"My Gawd," he roared, "does you mean that you went an' bought that imytation newspaper to sell to me fo' a thousan' dollars?"

"Y-y-yeh."

Vanguard's hand clapped on Florian's shoulder.

"They's one good thing bouten it, Brother Slappey. You think you is in hard luck a'ready. Well, what you is now ain't nothin' to what you is gwine be if'n you owns The Weekly Epoch. It's wuss'n a death sentence."

It was a sad and shaken Florian who turned lethargic steps from the home of the now silent Sponsor. He was now seized and possessed of a property which impressed him as a strong liability. More, he had enlisted the financial aid of a lady friend who happened to be married to another man, and he dreaded that gentleman's ire when he discovered that his bank account had been heavily tapped under circumstances which placed Florian in no very favorable light.

"Always," muttered Florian to himself, "when I thinks I is in bad I fin's out afterwards that the way I was ain't nothin' to the way I gits."

He rambled homeward, his feet leaden and his mind cowardly. Even the thought of the mahogany bedroom suite, which now decorated his room, lent no ray of happiness. The world was a dark and gloomy place and Florian the darkest and gloomiest inhabitant thereof.

He broke the news gently.

"Missis Shoots," he proclaimed, "I an' you is done played hell!"

For a minute she stared at his lugubrious countenance and she sensed catastrophe. All the insouciance had departed. It was a new Florian Slappey who stood before her—a man crushed and defeated.

"Tell which?" she gasped.

"The Sponsor ain't an' we is."

"Is what?"

"In bad. Vanguard Collins was lyin' to me when he said he'd pay a thousan' dollars for The Epoch, 'countin' he thought I was wantin' to buy me a newspaper fo' my ownse'f an' he wanted to sell me his'n."

"An' he ain't gwine buy ourn offen us?"

"He ain't gwine buy nothin' from nobody. He's flat busted an' gone out of business."

"O-o-o-oh!" In a second Mrs. Lorelie Shoots' cosmic scheme had gone flooie. She whirled on Florian: "You—you—you"—she struggled, seeking for a fitting expletive—"you—you—buzzard!"

She turned and flew upstairs. Florian listened mournfully to her footsteps in the room overhead. And finally she came down again, hatted for the street.

"Where you is gwine, Missis Shoots?" he inquired meekly.

"Ise gwine seek the adwices of a feller which is got real brains."

"Name' which?"

"Lawyer Evans Chew!"

Florian watched her as she descended the porch steps to the gate and then flung angrily up the street. The idea of bringing a lawyer into the mess was not at all consoling—and Lawyer Chew, of all attorneys. Florian Slappey looked upon him as omniscient.

It was patently Florian's cue to do something definitely and promptly. But what? What was there to do? What could—there was but one possible course and that was to unload on some unwary person with journalistic ambitions. The trouble lay in finding such a one who possessed—along with the literary afflatus—sufficient cash to swing the deal.

Nor was Florian overly anxious to hold the spotlight in this particular deal for one second longer than was absolutely necessary. If only he could find a middleman with influence, business acumen, wide acquaintance!

Something bumped into Florian, disturbing the smoothness of his red and white striped silk shirt. He whirled and stared into the eyes of Semore Mashby, fellow roomer. Semore was nothing in particular to stare at. He had drawn from the dispenser of human dimensions more height than was his due and less girth. He was lantern-jawed and pop-eyed and his too-shiny clothes and sadly patched shirt and hose belied the fact that he was by all odds the wealthiest negro in Birmingham.

By profession Semore Mashby was a loan shark. He dubbed himself broker and he handled anything from a secondhand wedding dress to a financing proposition. He drove bargains which were hard—for the other fellow—and was hated accordingly by his dusky brethren, who nevertheless turned to him in their hours of direst need when every pawnable article was already at work as security for funds borrowed. There was nothing upon which Semore would not lend something—from a job to a baby.

And Florian gazed upon the unhandsome shape of Semore Mashby and knew that Semore was his man. Whereupon he collared that gentleman, shoved him into his room, jammed a good cigar between his teeth and fired a disconcerting question:

"Brother Mashby, how'd you like to make some money easy?"

Semore gulped and blinked.

"How'd you like to make some money easy?"

"They ain't no such of a thing," came the guttural response.

"Yes they is."

"How much I is got to put up?"

"Nothin'."

"Not a dollar?"

"No, n'r neither even two bits."

Semore leaned forward. Florian had begun to talk in Semore's very best language.

"Splain yo'se'f, Brother Slappey. You talks like a man of sense."

Florian explained—explained that he had purchased the Epoch from Editor Crispus Breech for five hundred dollars and that he was anxious to get out from under promptly; and as he talked a new idea came to him.

He argued with Semore that now Vanguard Collins had suspended the publication of The Sponsor, deadliest and onliest rival to The Weekly Epoch, there was no reason why The Epoch should be other than a sound business venture. And what Florian wanted Semore to do was to sell his paper for him.

"What I git out of it?" queried Semore cannily.

"You gits this, Brother Mashby: Fo' ev'y dollar you gits over five hund'ed dollars I divides with you equal an' fifty-fifty."

"Not on the fust five hund'ed?"

"Nossuh! I done shelt out good ha'd cash fo' that. I is willin' to sell fo' five hund'ed an' as my agent I 'powers you to do same. But you don' git nothin' on it. But if'n you sells fo' a thousan' dollars you gits two hund'ed an' fifty an' don' risk a penny. It's jes' like a lawyer's extinction fee. Is you with me?"

Semore sparred for time. "I ain't hahdly know."

"Is you is or is you ain't?"

"Hm!" Semore eyed his companion. It was patent that Florian was not in a dickering mood. "I is!"

"Good!"

"You ac's like I had took a load offen yo' mind."

"Yeh, an' I wants you to ac' like you is took a newspaper offen my han's—at a profit."

Meanwhile in the spacious private sanctum of Lawyer Evans Chew a semihysterical woman, Lorelie Shoots by name, was pouring forth her woes in adjectival monologue. Through it all Lawyer Chew sat imperturbably blinking at her from behind enormous tortoise-shell-rimmed spectacles. And finally the whole story came to an end—a sobby and tearful end.

"An' what I wants back," wailed Mrs. Shoots, "is me 'n' my husban's five hund'ed dollars."

Chew cogitated. He was the champion cogitator of the world.

"A-hem! Florian Slappey is got it from offen you?"

"He is, an' I is done bought the ginuwine mahogamy fu'niture, which I cain't pay fo', an' a'ready my husban' is so' at me an' ain't spoke a word at me sence the las' time an'—I wants my five hund'ed dollars back."

Chew tapped on the table with a silver pencil.

"Yo' five hund'ed dollars which you give Florian ——"

"I never give him nothin'. He induced me out of it."

"Jes' the same, the fac's of the case as presinted to a jury ——"

"But I don' want no jury. I want my five hund ——"

"Jes a minute, Missis Shoots. You derails my train of thought. What I was reemahkin' was that if the fac's of the case was presinted to a jury, which they won't be, 'countin' the best traditions of the bench an' bar is against litigation when they is any way of gittin' a fee fo' a settlin'ment, which is easier than a trial an' which I favors most hearty—if'n they was to heah the fac's they ain't hahdly a doubt they would decide unanimous that you is overstepped the boun's of discretion an' that you knowingly an' with aforethought give him this heah money of yo' own free will an' accord, thereby establishin' a statute quo ante which would hol' an' maintain that he done right, an' ——"

Mrs. Lorelie Shoots gasped and sank for the third time in the sea of words. She extended a helpless pleading hand.

"Jes' a minute, Lawyer Chew. I ain't hahdly gotten mo' than nothin' of what you done said."

"Summed up brief an' pointed," went on the attorney and counselor placidly, "Florian ain't done nothin' you c'n sue him for n'r yet put him in jail."

"But what is I to do? What c'n I do? With my husban' a'ready not speakin' to me on account he is jealous there is sumthin' betwix me an' Florian—which same they ain't an' never will be—an' me havin' took five hund'ed dollars ——"

"You is a'ready done the right thing, Missis Shoots."

"Which?"

"You is consulted the best cullud lawyer in this heah noble an' sov'eign state."

"Then you think you c'n git my five hund'ed back? Does you think that?"

"I ain't said I can."

"N'r neither you ain't said you cain't."

"Missis Shoots, I ain't never gwine say that. They ain't no sech of a word as 'cain't' in my lexicography."

"But if'n you promises, Lawyer Chew ——"

"I is on'y gwine promise that I will take the case in question an' now befo' me under grave an' d'lib'rate adwisement an' 'praise you of my c'nclusions in jue co'se. My adwice at this moment is to sit stiddy in the boat an' talk not to no one whichsoever—least of all yo' husban'—an' my fee is twen'y-five dollars."

Lorelie left the Penny Prudential Bank Building, which housed the legal activities of Lawyer Evans Chew, with a feeling of safety in her heart. She didn't know just what Lawyer Chew would do, but in common with her cullud brethren and sistern she had implicit faith in his power to make order where chaos existed. And she was determined that she would heed both of his adwices. She would sit steady in the boat and she would not tell—no, not even mention one single, solitary, teeny word to her husband.

And in the meantime Semore Mashby had retired to the privacy of his room in the Shoots manse to reflect upon the task he had undertaken for Florian Slappey. That Florian's name was to be kept out of the transaction he fully understood. He understood exactly that unless he sell the newspaper for more than five hundred dollars he was to receive Therefore it devolved upon him to get than the five hundred—a great deal

He checked over on the fingers of hands the names of acquaintances were possessed of five hundred or more lars in cash: Simeon Broughton, Marble, Dr. Vivian Simmons, R' Plato Tubb, Professor Alec Cham Truman Chinners, Bud Peaglar, R' Wesley Luther Thigpen, Acey U Dr. Brutus Herring, Cleophus Keefe Gaines, Hammond Bias, Chris P. S. Shoots ——

Semore Mashby ceased to thi chuckle agitated his cheeks. Chris Shoots of course. Who else?

By profession Christopher was a but he was temperamentally ag'in fession. For many long and bitte he had aspired to literary fame a vitriolic pieces in the paper dealin every imaginable topic from a def lodge treasurer to international po the whole array garnished with m pian tongue-twisters—had become locally.

Christopher had money—witne year's lease on this big seven-room his recent purchase of a one-quarter est in the handsome shop where he dis daily his tonsorial skill, the hornless graph in the parlor and the enormous collection consisting of seventeen di

Semore cornered Christopher tha and into the ears of the barber wit nalistic aspirations he dripped h words having to do with literary ment. Now that The Sponsor w funct, argued Semore, there was on earth which could prevent The Epoch from returning something neighborhood of a thousand per cent investment. It was in the field alo competitorless, a law unto itself, a i-noor among newspapers of its clas

"But if'n it's all what you say queried Christopher wisely, "whaff the owner wish to sell?"

Semore hesitated, but only for a

"It's thisaway," he explained "He's done decided to leave the cit

"Leave?"

"Uh-huh! He's gwine Nawth health."

"How much he wants fo' it?"

"Fifteen hund'ed dollars."

Christopher shook his head pos

"I woul'n't pay no fifteen hund lars if'n you was to offer me ev'y new in N'Yawk."

Semore lowered his voice confide

"Fifteen hund'ed dollars is wh wants, Brother Shoots, but I is telli that they is a heap of things which wants which we don' git. Fifteen h dollars fo' The Weekly Epoch is one though I is tellin' you as a sincere that it is wuth two thousan' easy. is sayin' is that I b'lieve I c'n git it fo' a thousan' dollars."

"One thousan'?"

"Cash."

"Hm! All what is to it—circulat goodwill an' ev'ythin'?"

"Even the two typewriters."

Christopher hesitated. A thousa lars was a good deal of money, but tentialities were limitless.

"Is you willin' I should cumsider a while?"

"We-ell, if'n you must. C'n you g a positive shuah answer by t'-morry in'?"

"Yeh, by t'-morry mawnin'."

"Because the reason bein' this as f You is got to tell me definite an' p so's I c'n go to the owner, which wa teen hund'ed dollars, an' say: 'He man, I c'n git you a thousan' dolla to-day befo' night.' An' I think make him sell."

"I'll let you know in the mawnin peated Christopher, and retired room.

It was a mournful night for Mr. an Shoots. The specter of Florian S and broiled bacon sealed the lips Shoots and he was fairly racked with to discuss with her the move he wa templating. She on her part lon confide in her husband the story of h on their joint bank account and dar while his anger was still a-seethe him. And so they lay beside each through all the night, awake for the

'istopher made his way to the barber p. Semore returned to his room and k nce more into a slough of thought. rearded The Weekly Epoch as sold to b ber with whom he lived. The very ist of the ambitious Christopher had n spirational. He would sell for one usad dollars, pocket two hundred and y id turn the other two hundred and y ofit over to Florian Slappey.

Hewas well pleased with the idea of his n ofit, but somehow he didn't like the a the two hundred and fifty which s t become Florian's by dint of his mas- ility as a newspaper sales agent. rin was willing to take five hundred la. Semore fancied he would be roghly satisfied with it in cash and t mediately. Therefore ——

Flian was roused from a deep and ar ess sleep by the entrance of Semore sly. That tattered individual seated sf in the one chair which the room sid, rested an arm on the ginuwine hcamy dressing table and surveyed pik-pajama-clad young man who lay unously between the sheets of the new r-oster bed.

'Is come to tell you, Brother Slappey, t ey ain't nothin' doin'."

'Nthin' doin' which?"

'Ilks don' seem to want to buy no vspers. I reckon I an' you had better l r deal off."

Flian sat up suddenly, thoroughly rsd.

'Cll off you sellin' The Weekly Epoch n?"

'Ta's it. You wants action too quick."

'ain't a case of want—it's a case of got gi That paper is got to be sol' right v.

'Cin't be done. On'y one way, that —"

'Ue way?"

'Ah. 'Countin' I is a warm an' firm ssial frien' of your'n I might be willin' gable on the thing by payin' you five ned dollars cash money right now an' ri The Weekly Epoch. Then if'n I sells o'no' than that in the future I is to keep t profits, 'countin' I is takin' a big ar fo' the pu'pose of he'pin' you out."

Flian reflected hastily. There was ic sound logic in Semore's argument d was worth at least five hundred dol- s'onsideration. And just at that par- ul moment five hundred dollars cash kl as large to Florian as five millions. tended his hand.

"Imme the five hund'ed."

Semore bent his head to conceal any fa- l vidence of the surge of exaltation th him. He extracted a check book mn inner pocket of the frayed coat and ot busily with an indelible pencil. Fi- li he handed the check and a crude cet over to Florian. Mr. Slappey re- rd the check reverently, signed the et and extended his hand.

"one with you, Brother Mashby."

"ou is reemahked sumthin', Brother arey. The Weekly Epoch is mine now— rne?"

"ll yourn—thank the Lawd!"

Semore descended the front steps and ard blithely down the street in search Christopher P. S. Shoots, proprietor- hof The Weekly Epoch, sole surviving lod weekly newspaper. His heart car- ed within his skinny breast and his wallet p with almost human expectancy of e ve-hundred-dollar profit which was onto swell it.

Semore found the barber shop, but he dx locate Mr. Shoots. Mr. Shoots had n out for a couple of hours and no one te shop could inform Mr. Mashby of s hereabouts. As a matter of fact Mr. Nts had gone to the First National Bank. He carried with him his savings-account book, never noticing that his cash balance was nine hundred dollars, where it should have been fourteen hundred. He wrote a check for a thousand, shoved it across the counter casually and ——

"You have only nine hundred in the bank, Shoots."

"Huh?" And then Christopher smiled tolerantly. "You is read the figgers wrong, white folks. They is fo'teen hund'ed there."

The teller shook his head.

"No, there was until the other day when your wife withdrew five hundred dollars."

A trip hammer seemed to descend from the ceiling and smite Christopher P. S. Shoots a mighty smite. Forgotten was The Weekly Epoch, forgotten the purpose of his visit, forgotten everything save the perfidy of his wife, to whom he had intrusted a joint savings account.

"S-s-s-s-s-says which?" he stammered.

"Why, yes," explained the little bank clerk. "Your wife drew out five hundred dollars just the other day."

The cream-colored walls of the big bank whirled before Christopher's eyes. He grabbed for his bank book and stared dazedly upon the written proof.

"Sh-sh-she was alone?"

The bank man frowned.

"No."

"They—they di'n't happen to be a sporty li'l light-tan uppity cullud man with her, did they?"

"Ye-e-es, I believe there was."

"Oh, my gosh!"

Christopher slapped the bank book in his pocket, clapped one hand to his head, darted across the bank and out through the revolving doors onto Twentieth Street. By some miracle he avoided a sudden demise beneath the wheels of a traffic-law-busting jitney as he crossed the busy thoroughfare and started at top speed down Second Avenue. He traveled in high with the accelerator depressed to the limit, shot across Nineteenth, rounded the post-office corner at an angle and catapulted into the elevator of the Penny Prudential Bank Building.

Lawyer Evans Chew was just leaving his office as Christopher arrived. Chew gave ground in the collision. Ten minutes later he had pieced together the hypothetical story which Christopher sobbed at him.

"An' if'n they ever was sech a case as what I is done tol' you, Lawyer Chew, what ought should a husban' do bouten it?"

Chew concealed the grin of elation which was struggling for expression on his lips. Christopher's story was so patently real and not hypothetical that Chew would have spotted it anyway. But when in addition to the Shoots' hysteria, which gave truth to hypotheses, Lawyer Chew had already heard from the lips of Mrs. Shoots the other end of the five-hundred-dollar story he knew that things were coming his way and coming in great luscious gobs.

Therefore he extended a gently consoling hand.

"You is talkin' bouten a frien' of yourn, Brother Shoots?"

"Uh-huh. The ve'y mos' pretickeler frien' which I is got."

"An' you wishes my advices fo' a twenty-five-dollar fee?"

"I does."

Lawyer Chew extended an insinuating palm and into it dropped two ten-dollar bills and a single five.

"An' now," gasped Christopher, "what is you gwine do?"

"I inten's takin' the case under advisement.'"

"Under advisement? Under advisement? With my—er—a—my frien's wife mebbe playin' fumadiddles with his five hund'ed dollars? What soht of law business you calls that?"

"Fu'thermo'," continued Lawyer Chew confidently, "I advises that fo' a day or two you sits stiddy in the boat an' don' 'tempt to rock same. An' least of all, I advises that yo' frien' don' make no hints to his wife that he has 'scovered that anythin' is wrong."

"My gosh! Lawyer Chew, you mus' think my frien' is a regalar simp."

"I does," retorted Chew.

From the office of Lawyer Evans Chew, the triumphant, went Christopher P. S. Shoots, the depressed. And he went straight to the office of The Weekly Epoch, where he found Editor Crispus Breech, the fat fiery little ex-owner of the paper, who was still at work until the new management assumed possession.

"Editor Breech," sizzled Christopher, "I comes heah to ast you a plain, simple, hones' question: Does you still own The Weekly Epoch?"

"Nossuh, I doesn't."

"Who you sol' it to?"

"Florian Slappey," came the prompt answer.

The effect of that gentleman's name upon Mr. Christopher P. S. Shoots was little short of startling. His eyes popped open, his jaw dropped, his figure seemed to sag at the middle. And suddenly he whirled and fled down the narrow flight of steps leading to Fourth Avenue.

Two and two and two were put together to make six hundred million for Christopher—Florian's intimacy with Lorelie, the fact that Lorelie had been accompanied by Florian while drawing out five hundred dollars of his good hard-earned money, Semore's statement that the owner of The Weekly Epoch was willing to sell at a sacrifice because he was leaving the city.

It was plain as the hook of a parrot's nose. Florian Slappey and Mrs. Lorelie Shoots were about to elope. More, he was not only financing the deal with five hundred dollars of his savings but Florian was unloading a newspaper on him for a thousand dollars! The thing was preposterous, unthinkable, outrageous! Christopher was seeing pink and swearing blue. He burst into Lawyer Chew's office like a young tornado and imperiously ordered the stenographer out. Lawyer Chew rose.

"You must clam yo'se'f, Mistuh Shoots—you suttinly must."

"Clam myse'f? Me? My Gawd, Lawyer Chew, you don' know what has happen' to make me unclam!"

"'Tain't nothin' so bad it cain't be wusser, Mistuh Shoots."

"Huh! Is you ever hearn of anythin' worse than yo' wife elopin' with another feller and you payin' fo' the trip?"

Lawyer Chew speculated for a minute.

"Well," he said at length, "mebbe so you is got a li'l cause to be hurt."

But as Christopher went into the details of the affair as he had learned them light again came to Lawyer Chew and he delivered himself unctuously of his opinion:

"I is done gave you the bestes' advice possible a'ready, Mistuh Shoots, same bein' that you reemains stiddy in the boat an' don' rock same, also that you don' cas' no unjus' s'picions on yo' wife, which I am shuah is as pure as lard."

"But, Lawyer Chew ——"

"I is a man of judicial discernment, Mistuh Shoots, an' I sees that in my han's such a difficulty as the one you is in ain't on'y chil's play to straighten out. So I advises you to say nothin' of yo' s'picions to yo' wife n'r neither mos' of all to yo' wife's gen'leman frien'—an' trus' in me an' the Lawd."

Christopher eventually departed from the sanctum, chastened in spirit and gripped by an optimism which he could not understand. It was not plain to him what Chew had done or could do to alleviate the misery of an eloping wife and a ditto five hundred dollars. He was particularly bitter about the five hundred dollars. It was in the nature of insult added to injury. Besides it was playing havoc with his golden opportunity to elevate himself from barberism to journalism.

Lawyer Chew was chuckling as he again summoned his stenographer and picked up the dictation of a verbose legal document where it had been dropped at the moment of Christopher's unceremonious entrance. Things were coming Chewward in one grand and glorious heap. He was very much at peace with himself and with the world—Evans Chew, the domestic mediator, attorney *par excellence*.

There came a knock at the outer door. The dusky stenographer answered and returned with a puzzled expression on her face.

"It's Missis Lorelie Shoots, Lawyer Chew, an' she is smilin'."

She was smiling broadly as she entered the office and was left alone with her legal adviser, for as a matter of fact all that was worrying Lorelie at that moment was the domestic discord. Terror had departed with the speed of a Liberty motor that is willing to mote. She opened her purse, extracted a crisp new five-dollar bill and planked it down before Lawyer Chew.

"Tha's on 'count of my fee to you of twen'y-five dollars," she announced.

"A-a-ah! Sumthin' has happened?"

"Yeh. I is got back my five hund'ed dollars!"

"Where from?"

"Florian Slappey."

"Where did he git five hund'ed dollars at?"

"He sol' The Weekly Epoch fo' that sum an' 'mount."

"So-o-o! Who to?"

"Semore Mashby."

Chew's feet landed flatly on the floor. He was all attention.

"Semore Mashby?"

Lorelie laughed.

"Yeh! He done tol' me how he put one over on Semore. Y'see he'd done made Semore his agent to sell The Epoch an' they was to split fifty-fifty all they got fo' it over five hund'ed dollars. Semore foun' out he coul'n't sell it right off, so he boughten it fo' five hund'ed an' thinks he is gwine make a regalar profit on the deal fo' hisse'f."

"Hm! They ain't no reason why he shoul'n't, Missis Shoots. With The Sponsor ceased an' sispended publication, The Weekly Epoch ought to make money."

"Semore Mashby should worry bouten that. Me, I is got back my five hund'ed dollars an' the rest of my troubles don' look like nothin', or even less'n that."

"An'," persisted Lawyer Chew, "when Semore bought the paper offen Florian he di'n't say nothin' 'ceptin' that he coul'n't sell it an' di'n't know when he could?"

"Tha's it."

"An' what you is done with the five hund'ed dollars Florian gave you back?"

She smiled.

"I is interred it in the Fust National Bank from where it come out of."

"I see!"

"An' now I ain't skeered of my husban' ever findin' out it has been gone."

"No, sholy not you ain't skeered of that," answered the lawyer as he envisioned Christopher's attitude of a few moments since. "They ain't nary single chance of him findin' out."

But scarcely had Lorelie left the office when Chew telephoned the barber shop where Christopher worked and summoned that gentleman to an audience.

"I is got some good news fo' you," was all he said.

It was enough and then some. Christopher negotiated the two and a half blocks in a few seconds less than nothing. Once in the office he stood panting.

"You is got some good news fo' me?"

"I is."

"My wife ——"

"This is mo' importanter than yo' wife. I is tellin' you that yo' five hund'ed dollars is back in the bank from where it was took."

"No!"

"Yeh! Ev'y nickel of it."

"How you know it?"

"Nemmin' how I know it. Us lawyers is got a habit of knowin' things which ordinary folks don' know an' woul'n't on'erstan' if'n they did. Also I knows that you is gwine buy The Weekly Epoch offen Semore Mashby. Is you or ain't you?"

"I—I—was. Does you think it's a good proposition?"

"Mos' excellint. Entirely fine. With The Sponsor out of the way, they ain't no reason why The Weekly Epoch shoul'n't make a lot of money an' impaht to its editor an' owner a social an' cimmunity prestige an' eklat unobtainable by other means. Now as yo' 'torney I asks you how much was you gwine pay fo' it?"

"One thousan' dollars cash. The owner said he woul'n't sell fo' less'n fifteen hund'ed dollars. It's Florian Slappey, drat his hide!"

"An' Semore said that him bein' sech a good frien' of yourn he could wuk the deal fo' a thousan' even?"

"You sho' does know a heap of things, Lawyer Chew."

"Oh, I reckon I is a pretty knowin' man. Fac' is, gittin' to know things is jes' about the ve'y bestes' thing what I does. Now what I is askin' you is this: Is you willin' to make two hund'ed an' fifty dollars?"

"Make it how?"

"Is you willin' to buy that paper fo' seven hund'ed an' fifty stid of one thousan' dollars?"

"You is talkin' foolishment, Lawyer Chew. Co'se Ise willin', 'ceptin' on'y I kinder hates to pay fo' my wife's honeymoon with Florian."

Chew waved an airy hand.

"This heah is business, Mistuh Shoots. You c'n worry bouten yo' wife later. That's my advice."

Christopher expressed his willingness to save two hundred and fifty dollars on the

(Concluded on Page 132)

Burroughs

Adding—Bookkeeping—Calculating Machines

"—for $125.00"

Many a man holds the belief that he can't buy a high grade adding machine for less than $400—or $300 at the very least. Years ago he would have been *right*. Today he is *far from it*.

The Burroughs "Model 301" is built from the same tested materials, and with the same care as all other Burroughs models—like all of them it is backed by thirty years of Burroughs experience in building adding, bookkeeping and calculating machines—yet it sells for $125.00.

In the "Model 301" as in any other variation of Burroughs Adding, Bookkeeping and Calculating Machines the price does not represent the value to a business, but merely what it costs to market a machine of that size and type according to Burroughs standards of quality.

Adding—Bo... Bur...es

THE particular Burroughs Machine shown here (the "Model 301") is one of the handiest, lightest, and simplest —yet it has all the advantages of any other, in the flexibility and complete visibility of the full keyboard, the fine key action, and life-time durability. It is an ideal machine for retailers, small manufacturers and for many departments in large business concerns where straight adding and listing is the prime essential.

(Concluded from Page 129)

deal for The Weekly Epoch, and promised faithfully that he would leave all negotiations in the hands of Lawyer Evans Chew. At the attorney's request he left the Penny Prudential Bank Building in search of Semore Mashby, more than a little dazed at the amazing trend of recent events in his hitherto placid single-track existence.

"Gittin' to be an editor," he soliloquized, "sho' is pretty hellish."

Within twenty minutes he was again in Lawyer Chew's office with a muchly puzzled Semore Mashby in tow. At first Semore had opposed the idea of going to Lawyer Chew's office. In the first place there was no love lost between the men, and in the second place Semore held Chew's abilities in great respect. So it was that he entered Chew's office knowing that he was going to emerge with some loss of contentment.

He was not prepared for the excessive affability with which Chew greeted him, nor was Chew's offer of seven hundred and fifty dollars cash for The Weekly Epoch a shock. He had anticipated something worse than that. Of course he argued for a thousand and offered to split the difference, but Chew was adamant. Christopher P. S. Shoots sat limply in the corner, trying vainly to follow the wordy battle, and finally gave it up in disgust and turned his thoughts to other matters.

In the end Semore Mashby gave in just as Lawyer Chew had known from the first that he must do. And then and there the contract was drawn transferring title in The Weekly Epoch from Semore Mashby to Christopher P. S. Shoots. Semore read the document carefully. He paused part way down page two.

"This heah says, Lawyer Chew, that I owes you ten dollars fo' drawin' the contrac'."

"You is a good reader, Mistuh Mashby."

"You is representin' Mistuh Shoots—not me."

"I is representin' both in this legal labor, Mistuh Mashby. Mistuh Shoots is payin' me a fee of twen'y-five dollars an' you c'n either pay me ten dollars fo' drawin' the contrac', or the whole deal is heahby declared off an' tumminated. Which does you choose?"

Semore chose to pay the ten. But a little farther down he again raised questioning brows.

"You says in heah that the consid'ration is one thousan' dollars."

"I does. One thousan' dollars."

"But he ain't on'y payin' me sevum hund'ed an' fifty dollars."

"Cirrec' the fust time. I is writin' that thousan' dollars c'nsid'ration in to pretec' my client case'n he ever wants to sell it or put a mortgage on it or sumthin'. In that case then an' in such event he c'n prove that he paid a thousan' dollars for the newspaper."

"But he di'n't."

"Ain't nobody gwine know that, Mistuh Mashby. Co'se if'n you ain't willin' to let the thousan' dollars stand as 'tis, why, we c'n call the deal off."

Semore Mashby signed the conveyance, paid his ten dollars to Lawyer Chew and departed the office feeling a mingled sense of elation and depression. He was two hundred and forty dollars to the good, but more than a trifle apprehensive. Lawyer Chew had been too sure of his ground. Semore felt that there was something in the wind and that he had not heard the last of The Weekly Epoch deal. However, two hundred and forty dollars was two hundred and forty dollars.

Lawyer Chew handed to Christopher Shoots the original transfer deed.

"An' now, Editor Shoots, lemme be the fust one to comgratulate you on yo' new occurrence and enterprise. I wishes you luck."

Editor Shoots! Christopher P. S. left the Penny Prudential Bank Building with his head in the skies and his fingers itching to clutch a pencil for the first editorial which was to be hurled forth to the world under his signature. Editor Shoots! In the glory of such a title even Lorelie was temporarily forgotten.

But if Lawyer Chew had effected that which caused Editor Shoots to daydream of dithyrambic editorials the attorney himself was by no means idle in affairs concerning the Shoots family and its misadventures. He telephoned Bud Peaglar's Barbecue Lunch Room and Billiard Parlor and interrupted a hectic game of Kelly pool in which Mr. Slappey was a signal and unenthusiastic loser. Florian bade the game farewell and journeyed to the lawyer's office. He graciously accepted a gold-banded cigar, drew down his glorious cuffs so that they showed large below the coat sleeves and invited Lawyer Chew to shoot. Lawyer Chew shot.

"If'n I was in the way of puttin' you onto makin' a hund'ed an' twen'y-five dollars fo' yo'se'f an' ditto fo' a frien' of yourn 'thout doin' no wuk, Mistuh Slappey, would it be wuth a ten puh cent commission to you?"

Florian's eyes narrowed.

"Easy money?"

"Easy as eatin' pork chops on a col' night."

Florian rose and started for the door.

"Nothin' doin', Lawyer Chew. I is had recent experience with shuah things an' easy money an' I'm off 'em fo' life an' a few days after that."

"But the money is a'ready yourn, Mistuh Slappey, an' ——"

Florian Slappey seated himself. And if at the outset his attitude was one of tolerant indulgence it rapidly veered to an intense interest.

Lawyer Chew's diagnosis of the case was simple and to the point, once stripped of its glittering verbiage. He explained that at the time Semore Mashby negotiated the deal with Christopher P. S. Shoots he was still agent for Florian Slappey and that his immediately subsequent purchase of the paper for himself in view of a deal made while his status of agent still existed was *per se* fraudulent an' not wuth nothin' a-tall. He explained further that Semore had since sold The Weekly Epoch.

"Sol' it?" interrupted Florian.

"Yeh."

"Who to?"

"Christopher P. S. Shoots."

Florian's jaw dropped. Then his head went back and his teeth showed white. Florian laughed deliriously.

"My gosh!" roared he. "If that ain't the funnies' ever, then I never th'owed no Li'l' Phoebe in a crap game!"

Lawyer Chew continued with his story. The deed of conveyance, he explained, from Semore to Christopher showed that one thousand dollars was paid for the newspaper, even though only seven hundred and fifty dollars actually changed hands.

"But s'posin'," interjected Florian, "he gits balky an' won't stan' fo' no writin's which is wrong."

"Then all you has to do, Mistuh Slappey, is to siggest to him real clam an' gentle that he c'n let it stan' that way, but that you will hafter staht proceedin's ag'in him fo' fraud, obtaining money under false pretenses, breach of trus' while actin' fo' you in a feeduciary capacity an' cetera an' so fo'th."

"I see," nodded Florian. "Go ahead, Lawyer Chew; ev'y time you opens yo' mouth I heahs a dollar clink."

"All else you is got to do, Brother Slappey, is to show him that you c'n prove in a co't of law that he got an' received The Weekly Epoch as yo' agent an' that he sol' it fo' one thousan' dollars cash. Tain't true that he did, but you c'n prove it easy. An' mo'over he is gwine be skeered to make you do same. An' as them is the fac's he owes you half of all what he got over five hund'ed, which is two hund'ed an' fifty, so he will pay you that, which will be profit fo' you an' yo' lady frien'. He won't lose nothin' an' ev'ybody will be happy."

Florian chuckled.

"Mebbe so ev'ybody won't, Lawyer Chew. But I know one man which will."

Mr. Slappey skidded from Lawyer Chew's office to the second floor below and into the musty dusty room occupied by Semore Mashby. The dialogue between the two gentlemen was brief, pointed and very, very personal. Florian followed the line of campaign laid down by Lawyer Chew and Semore followed his sense of discretion.

When Florian emerged a few minutes later he held in his hand Semore's check for two hundred and fifty dollars.

The bank was still open when Florian arrived. He cashed his check and hurried back to Lawyer Chew's office, where he paid that superenthusiastic and hard-working attorney twenty-five dollars in cash as a fee well earned. Then he went to Lorelie Shoots and placed in her hand one hundred and twenty-five dollars, which represented her share of the profits. Florian had sufficient grace not to tax her with fifty per cent of the lawyer's fee. He sensed that she had legal troubles of her own. But with the money tucked safely in her stocking Lorelie detained her star roomer.

"Jes' one minute, Mistuh Slappey! Jes' one li'l' teeny minute. I wishes to speak with you."

"Tell which?"

"You owes me twen'y dollars back room rent."

"My Gawd, woman, ain't you never satisfied?"

"Sometimes, but not yit. I is took my one chance an' I ain't never gwine take another."

Florian handed over the twenty. That joined her share of their profits. But even yet she was not finished with him.

"You also promised me six months' room rent in adwance, Mistuh Slappey."

"Promises ain't cash."

"This one is gwine be."

She appeared determined, and Florian reflected unenthusiastically upon his dire need of the immediate past. With room rent paid six months in advance one of his chiefest worries would have been banished from his mind. He shelled out the sixty dollars.

"What else?" he inquired grimly.

"Nothin'," came the sweet retort, "'ceptin' on'y that yo' soot of mahogamy fu'niture gits removed into my room this evenin'."

Then Lorelie got busy settling the accounts which had so recently bidden fair to swamp her. She gave to the furniture dealer eighty-five dollars and procured in exchange a release in full on her bedroom suite. From there she made a smiling way to the office of Lawyer Chew, where she handed to that gentleman the twenty dollars remaining unpaid on his account. And with him she made an engagement for four o'clock.

"Yo' husban' an' Mistuh Slappey is gwine be heah," said Chew significantly, "an' they is gwine be a-plenty explanationin' done an' much happiness resultin', or I don' know less'n nothin'."

And in his office they assembled at four o'clock—Christopher and Lorelie casting covertly affectionate glances at one another, each eager for the word which would permit of mutual forgiveness; Florian a trifle uncertain and Lawyer Evans (... radiant in the spotlight of achievemen...

Lawyer Chew called the meetin... order and started at the beginning. ... explained that in the first place E... Christopher P. S. Shoots, "my colleag... prefessional life," had been a trifle ... hasty in suspecting his wife.

"Yassuh, she is, Editor Shoots, or ... the mos' puffectest ladies I knows."

He made it clear that all of the s... conferences between Florian and L... had the betterment of Editor Shoo... their objective.

"Yassuh, Editor Shoots, as a feller ... fessional man, I rises to tell you that ... whole thing was a plan to git you to ... the paper so's you would improve yo's... standin' from bein' a common ba... Ain't it so, Missis Shoots?"

"You is tootin', Lawyer Chew. Yo... Christopher, honey, I was riskin' ev'y... so's you'd be better off in the end. ... look what I is done all by myse'f wit... he'p of Lawyer Chew an' Brother Sla... I is got one hund'ed dollars cash m... clear, that bein' the balince of twenty ... lars on the hund'ed an' twen'y-five d... which Florian Slappey jes' give me a ... ago, an' eight months' room rent whi... done paid. I is paid fo' an' owns a hun... an'-ten-dollar soot of mahogamy fu'n... which goes into our bedroom t'-night. ... makes two hund'ed an' ten dollars. ... is bought fo' sevum hund'ed an' fifty ... lars sumthin' you was gwine pay one t... san' dollars fo', which gives you two hur... an' fifty dollars clear profit.

"Lawyer Chew is got in fees as fo'... Twen'y-five dollars each from me an'... an' Brother Slappey an' ten dollars ... Semore Mashby, makin' eighty-five d... clear fo' him.

"Brother Slappey is got six mo... room rent paid in adwance, which is ... same as sixty dollars in the bank, an... twen'y dollars lef' after payin' La... Chew's fee, so he wins eighty dollars.

"So you see, Christopher, darlin', ... twix' us which is in this heah room ... made six hun'ed an' twenty-five dollar... they ain't no one los' anythin' 'ceptin' ... Semore Mashby an' he on'y los' the ... dollars which he paid to Lawyer Che... drawin' up the contrac'! What you t... of that, Christopher?"

Christopher didn't think. He coul... From the maze of good fortune and ... gering figures he had derived the title ... steaming editorial: The Age of Mir... Ain't Gone Yet. But though he d... understand any of his wife's hectic ... counting he was constitutionally unwi... to be left entirely in the cold while ind... ual glories were being passed round, an... he smiled in a very superior fashion.

"Huh!" said he. "Tha's jes' prec... the way I had it figgered out all the tin..."

"You what?"

"Why shuah, Lorelie—deares'. If ... hadn't of knowed jes' what you was t... to do"—Christopher had the grace to a... the amused stare of Lawyer Chew—"i... hadn't of knowed jes' what you was u... don' you reckon I would of said sumt... when you drawed five hund'ed dollars ... of our 'count?" He paused impressiv... "Jes' answer me that!"

And then Florian Slappey broke in. ... did so smilingly, confidently.

"Huh!" he said, waving a compre... sive hand. "I reckon each of you foll... done yo' best, but I is the one which is ... the mos'. Not on'y was the fust-off ... mine, but is you-all ever stopped to t... 'bout one thing—jes' one thing?"

"Which is that?"

"Is you ever stopped to think tha... fixed it so that the same five hund'ed ... lars went an' bought that newspa... twice?"

If a Sponge Could Talk

THE DOOR TO FREEDOM

(Continued from Page 25)

what I'll do: If you'll take a thousand dollars' worth of advice from me I'll give you a hundred-and-sixty-dollar suit and no questions asked."

"What do you mean, no questions asked?" inquired the girl.

"I mean no strings attached," said Blurt frankly; "not a single little payment on demand."

"It sounds phony," commented Miss Mallowe. "Let's hear the advice."

"Here goes," complied Mr. Blurt. "Scrap all that trailing-arbutus done-in-wax stuff you're wearing, forget the hat that is like the bowl of heaven on a dark night, give your own hair and a stiff brush a chance, scrub off every last sign of stoveblack, penciling, lip paint and rouge, and walk all the way down to Fifty-seventh Street bright and early every morning."

Miss Mallowe's face fell by tragic bounds; the light died from her eyes.

"None of that, now!" cried Mr. Blurt. "Why, do you know what will happen? By the great codfish, you'd think I was asking you to turn tacky when I'm just trying to show you a smart woman.

"After a month of two miles a day in a tailor-made that will let your shoulders forget that hothouse droop and give your legs a chance do you know what will happen?"

"No," said Miss Mallowe, faintly curious.

"Why, you distorted glory, some man will come along that knows real peaches and cream without sugar and he'll eat you alive!"

An exquisite and homemade blush tried valiantly to glow through the applied color on Miss Mallowe's cheeks. After a thoughtful moment she asked almost shyly, "When I'm like that will you give me the once over?"

"No," said Blurt promptly.

"Then keep your old suit!" cried the girl with a quick flash of her eyes that in itself was a transformation, and rising she made for the door.

"I wouldn't dare," murmured Blurt, but quite audibly, striving to plant a parting shot where it would do the most good.

As Miss Mallowe's form disappeared Sutey's hair and beard took its place in the open door for a brief instant.

"Sixteen waiting," he announced in a reverberating rumble that was supposed to be confidential.

"Sixteen!" groaned Blurt as he glanced at his watch; then he remembered the hungry girl.

"Come on," he called to Miss Livingston, and plunged through the boudoir and bedroom into the kitchen.

Miss Alice Branner was sitting on a high scullery stool with her heels caught on its rounds, elbows on knees, face in her cupped hands and tears crawling down her cheeks. Her eyes were opened and fastened in a sort of pained wonder on the extensive larder under glass, on the dazzling white paint of the woodwork, the spotlessness of the deal tables and chairs and of the tiled floor, to say nothing of the glistening high lights of the electric range.

"My dear young lady," exclaimed Blurt, "how will you ever forgive me?"

Without a further glance at her he snatched off his coat, opened the sideboard and the china cupboard each with a separate hand, took out a bowl, six eggs and some grated cheese, detached the glass from the automatic eggbeater and rapidly broke into it the whites only of the eggs, dropping the yellows into the bowl. He set the beater to work and almost in the same movement switched on the heat, put a lump of creamery butter to warm in a copper skillet and shoved a large platter into the oven.

Without changing her position Miss Branner stared at him with ever-increasing interest as he stirred three pinches of salt, two of sugar and one of pepper into the yolks, added a gill of cream and dumped the lot into the stiff foam of the whites for just a second's revolution of the beater, immediately thereafter transferring to the sizzling skillet the amber-streaked mass. It rose and rose under his intent eye and careful nursing until at the appearance of dimples and craters in its mountainous surface he reached for the grated cheese and spread it lavishly with one hand while with the other he drew out the warmed platter. Then followed the gesture of a master: with one clean sweep of a limber knife and a quick turn of his wrist he doubled the mighty omelet and laid it neatly on the dish. It was a noble sight; incredibly high and light, brown shading to gold at the edges, which in turn were embellished with a fine imitation of snowy lingerie.

"*Omelette au fromage*," he murmured.

Miss Branner laughed aloud, but with a catch in her throat as though hunger were threatening to choke her for her levity.

"I always liked to watch lightning," she gasped.

Blurt wasted no time in answering; he placed the platter in the center of the clean deal table, drew up two chairs, seized and cut a crisp loaf of bread, fished out butter pats and a bottle of milk from the ice chest, knives, forks, glasses and napkins from the sideboard, and sat down.

"Come on," he ordered; "it's only perfect while you can hear it. Eat from that end; I'll race you to the middle."

The girl gulped, wiped away her tears, scrambled from the stool to the chair and obeyed; she also won. "There," she said after a long drink of milk, "I've made a pig of myself."

"If you hadn't," said Blurt clumsily, but with the best of intentions, "I should have despised you for a hypocrite. How do you like my cooking?"

"Divine," said Miss Branner, "but——"

"But what?" demanded Blurt.

"Anybody could cook in this dream of a kitchen," explained Miss Branner. "And to think that I left home because I didn't like to!"

"Can you?" asked Blurt.

The girl smiled slowly, and nodded.

"I doubt it," said Blurt, "but I'm going to give you a chance to prove up on your claim. I want lunch for four here at half past one."

The girl glanced at the shining kitchen clock and started to take off her hat. Blurt rose, snatched up his coat, hurried into the bedroom and almost knocked over Miss Livingston in his haste to reach the periscope. He stared and stared again. The hall, excepting Sutey's beard and hair, was empty but for one serene individual who at the moment of inspection was covering a small bored yawn with an exquisitely gloved hand.

Blurt rang for Sutey.

"Well," he asked, "what about it? I thought you told me there were sixteen."

"So there were," said Sutey dispassionately, "until this one came along; then they each took a fair look at her and faded away."

"That will do," said Blurt, and once more approached the periscope.

Miss Trenton Stared at Her Wrinkled and Gaping Spats as Though She Had Not Really Noticed Them for a Long Time

"Codfish!" he murmured a moment later. "No wonder they beat it!"

The woman outside either was or had borrowed from perfection; to put it more clearly, from the top of her modish hat to the tips of her shoes she was a fully completed work of either God or man. That was the trouble; for the life of him Blurt couldn't quite determine which. He studied her as a whole and in detail, he watched long for one of those intimate betrayals of the woman who thinks she isn't observed; but all in vain. Turning he directed Miss Livingston to occupy the observation post in the next room, and thereafter resumed his own study for five long minutes.

The admirably turned-out lady, who was as beautiful as she was well-dressed, resorted to no vanity box, kept her knees in easy but unrevealing position and, most baffling of all, displayed no signs of vulgar impatience beyond an occasional small yawn automatically covered even before an unseen world. Blurt withdrew and called Miss Livingston into consultation.

"What do you think of her?" he asked.

Miss Livingston's ordinarily smooth and placid brow was drawn to a tiny corrugation just above her nose, which, thus brought to his attention as by a pointer, was revealed to Blurt as being an individually adorable feature. "How lucky a woman is to have so lovely a something that she can't possibly hide," he thought, only to be brought sharply back to the matter in hand by the girl's disheartening verdict.

"Really, I don't know what to say," spoke Miss Livingston, "except that she is perfect of her kind. It's simply maddening to see a woman at such close range and not be able to tell you at once whether she is young or old, genuine or false, a work of art or a rare bloom. Mr. Blurt, the worst thing against her is that one should wonder at all. You will have to discover her through her eyes or give up."

"Do you mean," asked Blurt excite "that there is even a bare chance that is the one?"

Miss Livingston's frown deepened. can't see any reason why she shouldn't I can only feel it. Oh, how horrid sounds—cattish! Where will you re her?"

"In the living room," replied promptly.

"And will you excuse me if I don't li this time? You can see at least that would never go in for blackmail."

"You will please take down every that is said," answered Blurt.

A moment later he received from Sutey the lady's card, glanced at it and ceived that it contained a name well kn even to his long exile, a name that here be Nameless. He passed into lounge with such feelings of palpitatio he had not known for many and ma day.

Presently the lady entered, took in surroundings with one swift glance, with a faint smile on her lips that was readable pulled off her gloves, raised arms, unfastened her veil, removed it her hat and tossed the carded articles on the t Then with both hands eased her hair boldly sudden softness, walke the great lounge that f the fireplace and sat d

"One doesn't wear a in a room like this," sh plained to Blurt in a v that was like the m tone of a Japanese gon

"No," he murmured, starin her. "You're right—dead rig

"Won't you sit down?" a Miss Nameless, and added that but unmistakable skirt gesture with w a lady indicates to a man that he ma close, but not too close.

"Thanks," said Blurt dryly, "I w He suited action to the words, frankly tinuing to stare at his cool guest. "I your pardon," he added after a mom "but are you sitting on your foot?"

"Yes," said the lady. "Why?"

"Now," said Blurt in the phrase of c hood, "I know that you're really and t at home."

"Of course I am, you dear man," laug Miss Nameless. "Why shouldn't I Everything in this room is genuine," added, her face sobering to a look for w Blurt tried in vain to find an adjecti "even you."

With all his staring Blurt had not ceeded in fairly meeting her eyes; nov leaned forward tensely and asked bol "And what about you? Are you genuir

The woman slowly turned her small h and met his gaze squarely; she gave her eyes with a deliberation that in it held an indefinable element of challe putting him more than ever on his me As he stared into them they grew and g until they absorbed the field of vis blotting her passive and enigmatical from his sight. He was conscious of a ing he had read about but never before perienced, a sensation of drowning in pellucid depths of a woman's too translucent orbs.

A vague sense of resentment against Livingston rose within him; it was who had thrown him into this unfath able sea, she who had told him that he lay the key to the feminine soul. Inst tively he realized that he was engaged battle where he must win at least someth or lose all, tumbling from a throne of i pendent action and free will to the estate of an allegiance debasing becaus would be blind. li. They were beautiful hands, indily smooth, pale, yet long-fingered l song.

Keeing his gaze fixed upon them he rn red, "I saw a prisoner."

'A risoner!" whispered the girl.

le knuckles slowly whitened; Blurt rechis eyes to her face. It was withw vacant, as though she herself were e, leaving behind an illumined but ot shell. Presently she rose, gathered hi veil and gloves, put them on meiully, turned and held out her hand, e s eluding his.

'In't go," pleaded Blurt, against his te judgment and surrendering to us to probe the mind that could so ly seize the full significance of a farchi but poignant metaphor.

Mi Nameless suddenly regained all her se "I am tired," she said evenly. "If .e curious you may call or phone, as y ay in more businesslike advertisent than yours."

Af r she had gone Blurt stood for some mits, hands in pockets, staring moodily o e dying fire. Why had she come and y id she gone? In what lay the motive f le object of this transient apparition? re as a contact that had reached him, fil him, and in the end left him noth- lt a vague craving for more of somenge couldn't name. He raised his head impatient revolt as Sutey opened the or but when he heard that worthy's ffig announcement his face cleared to a icipatory smile.

'Inch for four is served," said Sutey, n le kitchen."

IV

DISCOURAGED eavesdropper is re- onsible for the statement that in the e oms of the Manhattan branch office tl Bureau of Injustice there is more ec spoken to-day than in any other ur floor space on the face of the globe. is asty chronicle has no time to submit nations in parallel columns of the apnd excerpts of words occurring in those ec cts on the morning of the début of r. lurt's studio for the reception of char- e models, but the inquiring reader is e o appeal to the telephone and the ic on duty for elucidating remarks.

O the occasion under review Mr. Ferrer erd the ball in his well-known soft-pedal new with the following query: "Kid, did u mp the come-on in the agonies this or n'?"

"re, Ferry," replied Mr. Slam Blott, or commonly called Slimy, "an' it's got e ressin' two ways to the river. I've rndexed all the cadets in the game, d here ain't one on 'em knows that ngage. Did you pipe it, Tim?"

"e?" answered Tim. "D'you know aI think?"

"hink! Stop your kiddin'; tell us what s andered into your block by itself."

"think," continued Tim, undisturbed, t'a booze bloom. Some lush coughed it om soup to nuts, and is achin' sorry o it this mornin'. Any guy can see it n make sense."

A this juncture entered Mr. Laskar, npin of the outside force. "What are uads lookin' so gloomed about?" he qred of the assembly.

"his here," said Mr. Blott, proffering a ldl and already greasy morning paper.

"seen it," remarked Mr. Laskar gruffly, tt evertheless, he took the sheet and with rilled brows once more read the offendg ivertisement headed "Heroines Please e!"

"ero-ines!" he exploded. "What do ou know about that? Well, boys, all I n y is that it looks to me like some hopa had hit the white stuff once too many ' one an' spilled his insides to the tune a housand bucks."

"ou're wrong, Lassy," said Slimy oily. "I ain't pretendin' to be the only where that c'n see daylight through a ey but I say no hop-head had nothin' to ith that ad. If you ask me, it's old ct's new. Just like we had a flurry of nemen yeggs, this here has all the markg of a highbrow goin' into the cadet siness. Ain't nobody give the place the over?"

"What do you think?" asked Mr. Lasrityingly. "Mike cracked the ground before the milk train had pulled out it the papers. By this time he's got splant running, two operators and a thing-in machine to each of six rooms. o can call it anything you like, but it n no tinhorn joint."

There was a moment of ponderous silence, broken finally by Mr. Ferrer.

"Mabe's over there," he remarked in his well-modulated voice. "I flagged her just as she was making for the Subway hutch an' waved the paper at her. She said she couldn't wait unless it was to-morrow's edition. She was on her way."

"Well, that's something," said Mr. Laskar. "I come down here lookin' for a falldame to get a spot on 'em. A machine ain't always any good if all the dope is goin' to be in a foreign language, but Mabe'll make 'em come across with enough New York to give us a lead. There ain't nothin' to do but wait."

The words were no sooner spoken than the door flew open admitting a hurried and very distressed young lady. She was dabbing at her eyes with a cream-colored, blue-edged pocket handkerchief, and ignoring the startled grunts of the assembled men she plunged through the bull pen into the quiet solitude of the squeal room and slammed the door after her.

"Well, what do you know?" murmured Mr. Ferrer, first to recover from the general consternation.

"Mabe, a sob sister!" ejaculated Slimy. "I can't believe it, not even with the hand shown!"

"Go on," growled Tim. "She wasn't really leakin' from the upper story; she was biting her teeth. I guess she's mad 'bout something they done to her."

Mr. Laskar stepped to the closed door and tapped on it softly. "Mabe," he said, "we're all waiting on this an' you'll have to give us the dope. What is it?"

"There isn't any, you boobs!" replied Mabel. "Leave me alone."

"Look here, girlie," said Mr. Laskar, "never mind whether we've got anything on 'em or not. If they've hurt your feelin's we'll stick a plaster on 'em and a stretch and a five-spot on top o' that if you say so. You leave it to us boys. What did they do? Take you for a rag?"

"A rag!" cried Miss Mabel hysterically. "No, they didn't; I wish they had! Oh, leave me alone. I didn't come in here to squeal on myself. Get it from the dics."

"She's mad about something," repeated Tim sapiently as he took out the makings for a cigarette.

An empty and disgruntled hour dragged itself away before Mr. Laskar was notified that one of the operators on the Blank Building job wanted him on the wire. He hurried to the soundproof booth and took up the receiver.

"That you, chief?"

"It's me all right. Shoot. What've you got?"

"I don't know exactly," responded the operator, "but it's sure Queer Street. I'm kinda dizzy. Can you send Tommy round to spell me?"

"Looka here!" roared Mr. Laskar. "What do you boys think this is—a Y hut? We ain't got no nurse squad hanging round to help two ops take half a dozen machines. What's the matter? Are they all talkin' to once?"

"No, chief," answered a resigned voice, "it ain't the amount of stuff; it's the kind and the way they say it."

"Got your book on you?" asked Lassy.

"Sure," replied the operator.

"Then read me some of it," ordered the chief.

"Well, here's a sample they handed Mabe," complied the operator: "'Unfortunately for you you have an individual foot with its own intimate character and charm, visible at present only through distortion.'"

"Hold on a minute!" interrupted Laskar excitedly. "Did they say that to our Mabe?"

"They sure did," replied the operator. "Why, ain't she told you?"

"Never you mind what she told us," replied Mr. Laskar. "Was there any more like that?"

"More!" cried the operator. "Why, it's all in them high signs, and that's why I'm dizzy. Bob can stand it better, he says, because he says it's old stuff to him. He says it's just Lord What's-his-name, only dolled up a bit."

"I get you!" cried Mr. Laskar. "Wasn't he the simp that got a stretch from that soft London bunch?"

"You've guessed it, chief," confirmed the operator, "only it was a double plaster, not a stretch."

"Even so," murmured Mr. Laskar, "two years for loose morals from that mushy Scotland Yard crowd would make a lifer over here, and then some. Tell me just one thing, lad. Did any kale pass hands?"

"Well, yes, in a way. But look here, chief, what's happened to Mabe? Has her tongue froze? She took an order off 'em for a pair of spats."

"A pair of spats!" groaned Mr. Laskar, puzzled and disgusted. "Two dollars fifty! Where do we get off with that?"

"Wait a bit," said the rebuked operator. "Let me read you somethin' else he said to the next one. He said: 'If you'll take a thousand dollars' worth of advice from me I'll give you a hundred-and-sixty-dollar suit and no questions asked.'"

"That's more like it," commented Mr. Laskar, licking his lips. "Did she take it?"

"Let me see," replied the operator. "No, she didn't. The last thing she says before the long silence is: 'Then keep your old suit!'"

"Are you sure she said 'then'?" inquired Mr. Laskar's eagle mind.

"Sure."

"Well, give us the next-before-thing she said."

"I got you. Here goes. She said: 'When I'm like that will you give me the once over?'"

"Like what, lad? Like what?"

"Wait a minute. Here you are. He says: 'Why, you distorted glory, some man will come along that knows real peaches and cream without sugar and he'll eat you alive!'"

"Eat 'em alive!" bellowed Mr. Laskar exultantly. "That's the tune, is it? Well, there is sure goin' to be some eatin', but it won't be peaches an' cream. Stand by to crash with the bulls in about one little hour."

Simultaneously with this ominous remark, though many blocks away, Mr. Blurt was ordering Sutey to put up the "Closed for lunch" sign and lock the outer door. Five minutes later a strangely assorted quartet gathered at the kitchen table. Miss Livingston sat at Blurt's right, the hungry girl, transformed into an excited, flushed and altogether bewitching cook, at his left, where she was within easy reach of the range and all it contained. The two men were whole-stomachedly intent on the thought of food; the girls shy and nervous.

"Forget dull care," murmured Blurt, rubbing his hands together. "Bring on the mush."

Brought to a sense of responsibility and to action by this informal grace the hungry girl, whose real name was Alice, produced a small platter containing four lovely caviar-on-toast patties garnished with evergreen parsley and set it in the middle of the table. The right hands of both Sutey and Mr. Blurt moved spasmodically toward the dish, only to fall back into their laps under the harsh dictates of the old rule of *politesse oblige*. They waited for the ladies, and for a moment it looked as though they would wait in vain.

Blurt's quick eye roved over the assembled faces and settled unerringly on that of his stenographer as the iceberg which was inducing severe atmospheric pressure.

"Miss Livingston," he asked, "are you cursed with a New England conscience?"

The girl upon whom attention was thus drawn had been nervously crumbling the bread placed beside her plate. She raised rebellious eyes to Blurt's face.

"Yes," she answered without embellishment.

"Do you feel a stranger here?"

"Oh, how can I help it?" cried Phyllis. "How can we all help it? Isn't it just what we all are?"

Blurt's face turned downcast for a moment, then gradually it lit to the full effulgence of his disarming smile.

"Let me introduce Alice in a New Wonderland and the King of Moss," he said, indicating the now anxiously worried cook and the disgustedly impatient Sutey. "As for myself, call me the Seeker in Haste; and as for yourself, I name you Hostess. There are no cocktails, but don't you think we might pledge each other just this once in the milk of human kindness?"

A sudden moisture gathered in Miss Livingston's eyes, melting their severity to pools of gracious light; her cheeks flushed and her full lips trembled to a smile.

"Of course we can," she said, speaking a little haltingly as though the words came from deep down within her. "You must all forgive me. I feel so—it's so hard—so hard to lay aside the mask."

She passed the patties, and from the moment they were devoured the meal swept on without a hitch in a steadily growing crescendo of kindliness and mirth not unmixed with unstinted praise for the cook. From the soup, which was as velvety as milk fresh from a red-hot cow, to the coffee, black, fragrant and as alluring as an unknown sin, the repast was declared to carry on its intrinsic merit a *cordon bleu*, a diploma *magna cum laude*.

While the girls washed up the dishes and raved with low ecstatic cries over the complete perfection of the kitchen, its linen and its larder, Blurt drew thoughtfully on his cigar and stared unseeingly at Sutey as though for vicarious inspiration.

"What a sensation," he said finally, half to himself, "could one see the whole world unmasked—everybody you meet shaved clean of subterfuge, protective coloring and the death that's eternally in life."

At the mere mention of shaving Sutey raised nervous fingers to his vast and silken beard as though to enter a vacillating but prompt protest against any innovations of a physical nature. The whole trend of Mr. Blurt's remarks seemed directed against the very foundations of the timid giant's ambush against the rough edges of life, and it was almost with a sigh of relief that he rose to investigate a loud knocking at the outer door, which under any other circumstances would have paralyzed his movements. In a moment he came back, lacking this unwonted calm.

His small and shifty pale eyes were watering with frightened tears, his lips and cheeks were atremble, transmitting to the vast sea of hair about his face rapid undulations which made him look like a startled hen terrified and bereft of wits.

"The police!" he rumbled with an absurd quaver in his mighty voice.

A look of terror sprang to the face of Alice in a New Wonderland; the semi-transparent white-porcelain plate she was drying slipped from her hands and crashed into bits in the enameled sink.

"Oh!" she gasped, and burst into tears.

Miss Livingston turned to face the door, very erect, a flare of white anger in her eyes.

"I knew it!" she breathed tensely. "Oh, I knew it!"

She did not look at Blurt; her wrath was directed solely at one Phyllis Joy Livingston, gifted by God with strong guiding impulses, but who had on this day of all days failed weakly to follow the heaven-sent hunch.

"Open the door at once," said Blurt to Sutey. He seemed quite calm and intent on nursing the ash on his cigar to as long a life as possible.

The command came too late; with a scraping snap the brass lock surrendered to a mighty knee that would not be denied, and the cohorts of the law streamed into the hall and dispersed rapidly through the luxurious rooms of the vacant studio, two of the company finally arriving at the kitchen, whence they passed back in hoarse grunts the information that the quarry had been run to earth.

In the meantime Mr. Blurt commanded his companions to resume their seats and was obeyed, though Alice continued her frightened crying. It did not prevent her, however, from keeping her fascinated gaze on the kitchen door, as if she were awaiting the appearance of a monster she had read about but never met in the busy flesh. Miss Livingston, her face gone quite white, returned to her nervous occupation of crumbling bread, and Sutey, intent on reducing his enormous proportions to a minimum, sank lower and lower in his chair until he sat on the middle of his back and could almost observe his large feet protruding from the other side of the table.

To the casual onlooker Blurt presented an exterior of abnormal calm, but when Miss Livingston raised her eyes to his face, half in the hope that she might read there salvation, half out of curiosity as to how the man in him which she had seen fully extended against a varied feminine background would meet men, she found indubitable signs of an inner commotion that made her tremble for the outcome. Blurt was seething and fighting mad. His nostrils and his lips showed a thin white line, and in his gray eyes was the cold glitter of fresh-water ice.

"Which of you guys is the boss?" demanded a voice of the law.

Blurt carefully deposited the long ash of his cigar in a saucer and turned to face the

How Our Experience Helps You

WHEN you use Star Blades you get the benefit of our 35 years' skill in making hack saws. When you use Star Service you benefit from our 35 years' experience in metal cutting.

In most plants, hack sawing has had the least attention of any operation. That is why our exhaustive hack saw engineering knowledge shows remarkable results in so many plants where our service men go.

We have reduced sawing costs 25% or more in many plants that have not realized that their own results were below standard. Regardless of

STAR HACK

the blades used, we will gladly go over the sawing methods of any plant which cares to take advantage of our service.

STAR HACK SAW BLADES

made of Tungsten Steel

Machine and Hand *Flexible and All Hard*

Star Hack Saw Blades differ from other blades in the acute cutting angle and undercut clearance of the teeth so they are standardized to saw a wider range of work and do it at a lower cutting cost.

Our special way of heat treating our high percentage tungsten steel gives the Star Blade remarkable toughness without loss of cutting power. That is why they will stand up under fast sawing and heavy sawing beyond the endurance of other blades.

Star Service Men in all chief cities are at your call. Address our office at Millers Falls, Mass.

Star Hack Saws are sold by leading supply houses, hardware jobbers and retailers everywhere.

Write for our free book "Hack Saw Efficiency." A valuable hand-book for everyone who saws metal.

SAW BLADES

(Continued from Page 137)

invaders. For a long moment of silence he stared not at their countenances but at their heavy regulation boots, thus displaying a knowledge at least of the A B C of psychology.

"Did you wipe your feet?" he suddenly demanded, and the two bulls, long accustomed to answering that special query, though from feminine voices, with promptitude and meekness, were actually on the point of making excuses when Mr. Laskar pushed his way to the front.

"Never you mind whether they cleaned their dogs or not," he growled in his most intimidating manner. "Never you mind about that; but remember that everything you say will be used against you."

"Dogs?" remarked Blurt, unimpressed. "Is that what you call them in your bulldozing lingo?"

"Did you call me a dog?" exploded Mr. Laskar, his rubicund face blazing with uncontrolled wrath.

"Oh, no," replied Mr. Blurt with an edged smile. "I'm fond of dogs. By the way, it's usual to have a search warrant, isn't it?"

"Yes, it's usual," snarled Mr. Laskar; "an' we got it, see?"

He waved a document in Blurt's face truculently, uneasily conscious that the forces of the law crowding behind him were by now on the broad grin. You couldn't arrest a man on a charge of resisting authority while he was sitting down and calmly smoking a cigar, but there was such a thing as baiting the most lethargic of worms to the point of turning to bite.

The trouble in this instance was that Blurt was not a worm, but a man of long experience in handling labor at its roughest; he belonged also to the old school of no compromise and was a master of the lingual goad. He now rose slowly and examined Mr. Laskar and his supports with smiling curiosity.

"Talk about silly mermaids on land," he mused aloud—"why, if the lot of you had hods on your shoulders you'd only begin to feel at home. What do you think you're doing here, anyway?" His face and eyes suddenly hardened. "What do you want?" he demanded with the snap of a whip.

The light of unholy joy came into Mr. Laskar's countenance; he restrained his itching fists.

"None of that, now!" he murmured. "Slip the hardware on him, boys. Run the bunch down into the wagon for a free ride to Centre Street."

At this verdict Alice in a Spoiled Wonderland sobbed aloud, Sutey groaned, and Miss Livingston caught her breath in a tearing gasp. The last of those three sounds moved Blurt's intelligence to Herculean efforts. He looked ahead to the ignominious pilgrimage to police headquarters and a semipublic investigation by misunderstanding minds, and realized that Sutey could stand it, Alice would soon recover, but that there was something in and about Miss Livingston, something as real and at the same time as illusive as the memory of a song, that would die for ever and a day.

"Just one minute, officer," he said. "If by any chance you hail from the Fourteenth Ward ——"

He paused long enough to give Mr. Laskar an opportunity to betray himself.

"Well," complied that official, "what if I do?"

"God help you," continued Blurt, "that's all. Why, man, I've carried a thousand of you fellows on my pay roll for months at a time. If I decide to chip in to the election kitty at all this year it will be twenty thousand bucks. If I don't I'll see that the top knows why; and then, as I said before, God help you!"

Throughout this speech Mr. Laskar's face underwent a series of changing expressions; his eyes narrowed with cunning, widened in wonder, grew dim with doubt and round in the fear that there might be something in the slush after all.

"What are you givin' us?" he asked out of a daze.

"You?" cried Blurt, pouncing on the chance like a vulture on carrion. "Not a cent! I'm surprised at your suggesting it. I may be rotten with money, but I haven't a cent to buy off all the grafters in the state! What else do you want?"

For a moment it looked as though victory were about to perch upon his shoulder, to the definite discomfiture of Mr. Laskar, whose mind was toppling under the strain of trying to decide whether or not he had really opened himself to the accusation of having suggested in the presence of a dozen witnesses that he was disposed to hear money talk. At this crucial juncture, however, Mr. Ferrer pushed his way to the front and tapped Mr. Laskar on the shoulder.

"Don't swallow that, Lassy," he said in his sonorous voice. "The name of Blurt never come through with anything yet. I c'n recite the list o' milch cows for'ards and backwards standin' on me head. At the same time, I say don't show 'em into the wagon until we knows where we stand. There's three newspaper hounds standin' on the stairs right now, with their tongues out to their knees watering like umbrellas on a rainy day. There's also a perfectly good office up front with a strong door an' lock an' key."

Mr. Laskar was not beyond taking a hint; in five minutes he was installed behind Mr. Blurt's mahogany desk, flanked on one side by Mike and the two shorthand operators, and on the other by the supposedly criminal four: Blurt, Sutey and the two girls. Before him ranged Ferrer, Slimy, Tim and two members of the uniformed force. The well-equipped office furnished seats for all.

"Now," said Mr. Laskar to Mr. Blurt, "spill your insides. What is this anyway?"

"Well, what is it?" countered Blurt promptly. "If you don't know, what are you doing here? Housebreaking to kill time?"

"If we don't know, eh?" replied Mr. Laskar cannily. "So there is somethin' to know? Well, don't worry; we'll get it all, Clarence." He paused weightily.

"My name isn't Clarence," said Blurt, finding that for some occult reason he was expected to react. "It's Blurt to my friends, Mr. Blurt to roughnecks. Take your choice."

Mr. Laskar dodged the two-horned dilemma. "Bob," he ordered, "read some of the worst of it."

The operator addressed, an oldish man with thin hair, thin lips and a thin evil smile, complied.

"Here's a bit: 'Girlie, you don't belong in this room at all. It's meant to evoke memories of an age that was artificial to the gills, an epoch of hair pompadoured and powdered, of beauty spots and penciled brows, of wasped waists above billows of foam, of the screening fan and the wicked tongue.'"

"He was dead right," interjected Mr. Laskar as the reader paused for breath. "No girlie has a call to be with them words. Read some more, Bob. A thick bit like that one."

"'They were not unmoral, my dear,'" continued Bob, "'but deliberately immoral to the tips of their pink fingers, and in a world where license has no limits the tongue has an unfenced field. In other words, wit is the one bright flower that springs from any society on the road to the dungheap.'"

"And, boys," declared Mr. Laskar in his most impressive tones, and staring solemnly at the assembly, "did she fall for it? No! 'Keep your old suit!' she says. Didn't she, Bob, further along, where he tries to pin a hundred and sixty bucks' worth o' clothes on her?"

"That's the last thing she does," confirmed Bob.

"Well, lads," continued Mr. Laskar, his eyes protruding far from his face, which had assumed the solemn expression of a judge about to put on the black cap, "I don't know what more we want. I say take 'em round to the cooler-can. I say let the newspaper Johnnies right in on this."

He rose, drew the jewelry from his hip pocket and advanced stealthily on Mr. Blurt.

"One moment!"

The speaker was Miss Livingston. She had risen with a swift movement from her seat, and stood with fists clenched and head upthrown. One glance at her was enough to arrest the heart and movements of every man present, for contrary to the opinion of the general public there is a soft sentimental spot about the size of a calf's liver buried deep within the bulk of every true-to-form officer of the law, which accounts in large measure for the universal corpulence of policemen and bulls.

"Gee!" murmured Mr. Blott with a deep-drawn sigh of sudden well-being that reminded one of the purr of a monster cat; "pipe the sad lamps."

It is true that at the moment Miss Livingston's eyes were extraordinarily large and moist with excitement. Mr. Blurt stared at them unbelievingly. Whence had they come, these two blue pools of iridescent light, to spring upon his vision with the breathless wonder of mountain lakes under snow and sunshine suddenly disclosed to view! Nor were they all the story. The light within them seemed to glimmer in a protecting aura about the girl's entire person; it gleamed in her soft hair as though tugging to free its strands for the impending battle, it shone upon her pale brow, it was the fire in the flaming glow of her cheeks, the divine pigment that incarnadined her tremulous lips. It radiated from her tense and erect body in waves that with an astounding suddenness assumed heat and burned with the scorching touch of blazing anger.

"Sad lamps, nothing!" ejaculated Tim, first to regain the power of speech after the transformation. "Call the police! Flag her! Take her number for not dimming them headlights within the city limits!"

"Silence!" commanded Mr. Laskar as he sank back into his seat. "What do you think you got to say, miss?"

During the excitement Miss Mabel Trenton arrived via the kitchen, the bedroom, drawing-room and lounge, having quietly closed and locked all the doors behind her. She was just in time to imbibe the following speech from Miss Phyllis Joy Livingston:

"If you hulking brutes dare to drag Mr. Blurt to the police station I'll make New York laugh all the top stories off its skyscrapers, and every brick will fall on one of you numskulls with a dull, thudding sound that will ring the death knell on your reputations and future employment. Editors, reporters and even newsboys will jeer at you; your superiors will have to explain that you were drunk at the time."

Miss Livingston paused to catch her breath, and Mr. Laskar seized upon the occasion to signal weakly to Miss Trenton.

"Tell us what she said, Mabe," he begged. "I ain't done nothing to her, honest. None of us has."

"She says that if you boobs run and tell Centre Street," paraphrased Mabel, "she'll slip the true dope to the newsies and a great laugh will go up, and whatever goes up is sure to come down, and when it does it will fall on your blocks and people will say, 'Ha, ha! Why go to Africa for ivory?' She says you'll all feel the tapping of hammers on wood ringing twenty-three on the clock as you draw your last pay slip and listen to the big chief telling the crowd you was lushed to the lids or you wouldn't never have done it."

"Did she say all that?" asked Mr. Laskar unbelievingly.

"I did!" cried Miss Livingston. "Oh, what chance have such brains as yours to grasp the fact that Mr. Blurt is an idealist, an overgrown boy trying desperately to dream himself away from those very sordid, vile and demeaning associations which you are trying to fasten on him simply because they are the accustomed air in which you move and have your being? Just becau he believes that in a world where one mu be counterfeit through and through or we a mask there must be some person as ge uine as himself and tries to find her, ju because he measures every woman he mee down to the kernel of truth she still possess and tries to bring it to life, you think must be criminal or mad. Oh, I know y can't see it, but you're on the way to maki yourselves eternally ridiculous!"

"Mabe?" appealed Mr. Laskar in hoarse whisper.

"She says," complied Mabel readi "that nothing but a boll weevil on its w to cotton could get through to your bra pads with the information that the blo of this Mr. Blurt runs thick with the do of mother songs. She says that he's doi his best to make a getaway from the r and doll district where you got to be pho or wear a frozen face, into the country all used to believe in where folks is ju folks. Just because he thinks there's s some of the true old sister stuff hid aw somewhere in every skirt you want to p him on the rattler with a through ticket Bloomingdale. She says that when t true dope gets out there'll be nothing left you but a bone yard where baby Mutt-an Jeff artists will come to cut their teeth."

Cowed and bewildered, the represent tives of law and order stared at each oth their eyes gradually returning to cent upon Mabel's face in a silent cry for hel "What do you think, Mabe?" asked M Laskar.

"Think!" cried Miss Trenton. "Y got no right to think here; you don't o the lease. Open that door, beat it back the bull pen and lock yourselves in. Co on, now; I mean it!"

Like an irate mother hen in charge of h a dozen monstrous ugly ducklings she mu tered the bulls and marched them out b fore her. Descending the stairs in a phala they cleared it thoroughly of reporters a a curious and disappointed throng. Th exodus from Mr. Blurt's office had be highly tinged with the ridiculous, but f some occult reason it had not awaken laughter. Sutey merely sighed and pr ceeded to fetch Miss Livingston's hat a coat at her curt command, Alice dabb her eyes and cheeks with the lugubrious of a kitten lately intercepted by a pail water, and Blurt himself sat staring at animated and still angry vision which b now he had thought of only in terms stenography and typedriving.

The object of his gaze suddenly whirl upon him, but before the lips, as white they had recently been red, could say wh ever they were going to say he did t fastest thinking of his rapid life and spok

"Miss Livingston," he said, "you a discharged."

The girl gulped down the words from t tip of her tongue, her eyes wavered, h throat moved in that adorable contracti which never fails to squeeze the heart man, her bosom rose, and she gaspe "Discharged!"

"Yes," said Blurt dryly. "In lieu notice and explanations you will take week's pay." He held out three crisp ba notes—two twenties and a ten.

Miss Livingston merely glanced at t money and raised her eyes to Blurt's stea and compelling gaze. What she read the of sincerity, of pleading for the clean moti against self-defense by rule of thumb a of ingenious subterfuge, acted upon her face like some master solvent. One by o her features shed the tense mask of lon hard years; the frown cleared from h brow, laughter and tears brimmed in h eyes, her lips trembled and softened, s smiled.

"Mr. Blurt," she said in a quite ne throaty voice, "that was quick thinkin You couldn't imagine my taking the mon for services rendered, could you?"

"Services rendered!" cried Blurt. I snatched out his bulging wallet, laid it top of the fifty dollars and reached for l check book.

"No, no!" laughed Phyllis Joy; a she caught up the three bank notes and w gone.

A long, dead silence supervened, brok finally by Mr. Blurt.

"Sutey," he asked, "did the papers me tion a total eclipse of the sun this aft noon?"

There was no answer. He looked u Sutey was not there; neither was Ali He was alone.

(TO BE CONCLUDED)

THE GOLDEN NAME

Ryal Bengal Jungle, where the bare-
eOriental dancing girls leaped in and
dncing.
t smed to young Chris Vandalaer then
hwould never see enough of the golden
l. It seemed impossible that he him-
ws there—to live. It reminded him
e ian ever—for after all he was little
e ian a boy—of a child's story of a
sa. changed suddenly to a prince and
ic n in a palace—the palace of a mod-
fiy tale; a strictly modern palace,
cite with all modern improvements—
il ectric chandeliers, and ducal silver
tin dishes and gold-and-marble baths—
h said—in the high-priced suites of
aresses. A palace where anybody at
:od be a prince to-day, so long as he
d ay the price for it.
nso it seemed to him that night that
:od never tire of it. The cries of the
inand the sight of the silver and white
n, nd the smell of flowers and smoke
fid and the perfumes of the women;
ir dious perfumes of the lithe women
ie red lips, sitting at the white-and-
ta tables or outside, watching or chat-
ngor waiting for someone who was to
e i the corridors.
T it's right," said Mr. Grabstein, with
chckling laugh; and he winked again.
as right, Chris, my boy, enjoy your-
"
nlater still at night—when he had
e r upstairs to his great fine room—
ngVandalaer leaned out the high win-
id looked out across the city, an
ie plain full of lights; the yellow
ei of the night, which lighted for un-
w miles the desires and hopes and ex-
mts of millions of happy people—all
gether, all without the loneliness or
u or ennui of country life. And far
ereath, the tiny lights of the late auto-
bili passed like mere fireflies down the
sreet.
nas he leaned and looked he heard, as
nl as from his own full lips, the voice
M Grabstein saying: "That's right,
is ny boy, enjoy yourself!"
I vill," young Chris Vandalaer an-
re him above the city; and going back
t ist undressed reluctantly, and slept
th first night in his great princely bed.

oisome days then, and even weeks,
nChris Vandalaer was engaged in that
t ng that he was required to do before
:od be useful—in learning the ropes
g ting acquainted with men and ways
ngreat city. Sometimes he would go
h office where his name appeared in
e letters on the door; sometimes he
eisome few papers that they brought
in or some individual letters, written
th stationery of the great hotel. But
tl he remained in the hotel itself, see-
lif and tasting it.
n he could see now for himself that it
cite true what they had told him—
te first thing in business in New York
it acquainted, and to talk with other
. And this was especially true, it
ne to him, of presidents. For he saw
e many other presidents there in the
t otel—of railroads and mines and oil
pnies, and even land companies in the
nin Americas. And all that he could
e them do was talk—talk and talk
ter men, especially while they were
nand drinking, till they were all red
hface.
hr were older men, these presidents,
tl, whose eyes were dull and whose
ing loosely to their bones; and, in
, ere was little doubt that of all the
ients there young Chris Vandalaer
ie youngest and handsomest and
n t-eyed.
tlrs noted this too as time went on;
te lithe women with red lips who sat
th afternoons in the frescoed corridor,
ir and waiting for someone to come,
lo often turn and look at him when he
fne by. And finally he became ac-
rad—was introduced to one or two of
nl The place, however, was enormous;
occupants usually interested in one an-
er or their own thoughts or some ex-
e telephone call—so that after all
e ere few who noticed or were particu-
r iendly with young Chris Vandalaer,
d the few women with the red smiles
me now slightly knew. And he might
e een lonely if he had been older and
fl of life.

There was one other person after a while, however, who he began to think took a special interest in him—a lean-faced, hard-chinned man whose eyes—at least he thought so—followed him from the high-backed chair he sat in, among the others passing by, as steadily as a black-eyed portrait's in an empty house. He wondered more and more at this—for he had never seen the man before, and no one seemed to know him—till finally one late afternoon of his own accord the stranger rose and stood before him.

"Are you the fellow that calls himself Vandalaer?" the lean-faced man inquired, speaking unexpectedly, in a voice still harder than his eyes.

"What of it?" said young Vandalaer. For he was a boy of high spirits, and he liked neither the man's attitude nor the voice he spoke in.

"Come on over here and sit down a minute. I want to talk with you," the other said to him; and threw back his head and chin in a peremptory invitation toward two adjoining chairs.

And young Vandalaer—though he was inclined not to do so at first—at last followed. For he was now more than curious to understand what this man was after him for.

"I've had my eye on you for some time," the hard gray-faced man asserted when they had sat down together.

"I see you have," said young Chris tersely.

"Now, what is your real name?" the other man asked him with a quick passing shadow of a grim smile.

"My name is Christian Vandalaer," the young man answered a little hotly—"if you want to know. Why?"

"So you stick to that?" said the other man, with his glassy gray eyes fixed on his. "Well, I guess maybe it is," he continued when young Chris Vandalaer's eyes neither turned nor flinched away from them, "from what we hear."

"All right," said Chris, still angry. "Now what do you want?"

"Now listen," said the other, and placed his cold hand on the other's knee. "You're just a kid. And I'm going to give you a chance. I'm going to give you a tip."

"A tip?" echoed young Chris—for the man's voice now, though cold, was not unfriendly.

"Yes, a tip," the other answered, in his warning voice. "Drop it!" he said. "Get away!"

"Get away?" Chris again repeated.

"Yes," said the other, still staring meaningly. "Before it's too late! For let me tell you something—on the side," said the other, now taking the whole conversation to himself. "You know and I know this thing's not on the square. You may think you can get away with it, and maybe you could—under the usual circumstances. For they're running wild everywhere with these wildcats. But you can't now, with this! You picked a bad one."

"A bad one?" echoed young Chris, now more mystified than angry.

"You can't do it. You nor any other living man—in one thousand years!" the other went along, with an odd note of seriousness now in his voice. "Not with old Chris Vandalaer after you."

"After me!" repeated young Chris.

"What were they thinking of—bringing him into this thing—anyhow?" inquired the other, as if speaking to himself. "They must be mad with the heat—getting gay with old man Vandalaer's name. You'd think they'd just landed on the island. You'd think they'd never heard of old Christian—and what he can do to them he don't fancy here in New York."

Then he gave him some entirely new side lights upon New York and the persons in it—and such unrecorded influences as his great namesake had.

"Whether your name really is the same or not," he said, growing almost communicative now, "don't be a fool. Don't cross Christian Vandalaer—and his hitch-up with the Central Power House in this town. I'm givin' you this extra on the side, my boy! For he's got all the politicians and all the money and all the influence in this town to fight with, when he wants it. And when he gets after you, God help you! He'll get you. Don't fret. He's half Dutch and half Indian. The best hater in New York. I've been here thirty years, and if anybody got away from him—when he started after him—I never heard it yet. He's got a private graveyard full of the fellows he got after—down below here—where the tall buildings grow—that makes Trinity churchyard look like a pocket handkerchief! I'm giving you this for your information."

"Look here," exclaimed young Chris Vandalaer, suddenly getting up, "what do you think I am?"

"Wait a minute, boy," said the lean-faced man; "just a minute. Then you can talk all you want to. I'm here on the quiet to give you warning. I've been told to warn you that if you get out and draw your name out of this thing here they might forget it and let you go. Now I've told you that. But now I'm stepping out—over what I ought to. I'm talking to you now a little for myself, like I would to my own son. For you're a young fellow—and you're green at the game—I know that. And in a way I took a fancy to you. There's something about you, to tell the truth," said the hard-faced man, staring now rather hard at the opposite wall, "that reminded me just a little bit at first of my boy I buried across in France here last year. But anyhow, my boy," he said very earnestly, "you take it from me: Pick up and get out while you've got the chance—before this old devil, this old gray-hearted relative of yours, gets after you—and gets you!"

"Who are you anyhow?" demanded young Chris Vandalaer, growing restive under this.

"Maybe this will show you something," replied the stranger. And he displayed the corner of a badge beneath his coat, which to young Chris—not yet entirely familiar with the insignia of New York office—meant no more than that he was probably an officer of some kind. At any rate it certainly did not scare him any; for he was not that kind.

"You go back," he said, "to where you came from; and tell that old devil I've got as good right to my name as he has. And I intend to use it as I see fit." And he told him to tell the great Vandalaer where he could go—to a destination where his ancestors in that branch of the family had all preceded him, in his opinion.

For he was a boy of spirit; and if there was anything he would not stand it was being dictated to.

"All right," said the officer in plain clothes, getting up, his manner cold and crisp again. "Have it your own way. I slipped you your chance. And you'll keep what I told you personally to yourself."

"I will. And I'm much obliged to you personally," said young Chris Vandalaer, for he saw the fellow really meant it and was trying to do him a good turn. "But I'm not afraid of him, and don't you forget it!"

"Good-by!" said the other briefly, and left him without further comment.

But all that evening young Chris Vandalaer could not help but think of him—even when he was talking and laughing and eating with the woman—the particular woman with red lips he knew so well now. He thought of him even when late at night he looked down from his high chamber windows upon the great golden garden of the city night, laid out round his palace à la carte. It seemed endless sometimes; a boundless plain of lights, full no doubt of lurking mysteries and dangers, which as yet he only partly knew.

"What did he say to you?" asked Abe Grabstein of young Chris very quickly when he recounted to the two others this last development that next morning—going downtown to do so into the former's private office in The Great Vandalaer Exploration Syndicate headquarters. And he related then all the circumstances as he remembered them.

"What did he look like?" inquired Mr. Grabstein—and listened with his full lips slightly apart.

And Chris told him—how tall and lean and gray he was.

"With a little scar under his left eye?" asked Mr. Poco, breaking into the talk for the first time.

"Well—I guess so," replied young Chris, remembering it. "Why? Who was it?" he asked, for he thought then, from his tone, that maybe he might know him.

"I don't know," said Mr. Poco, giving a quick glance at Mr. Grabstein. "Some private detective he's got, maybe."

"Sure—he's got a thousand of them," asserted Mr. Grabstein heartily, "looking round, shadowing other people. Crooks, all of them—all of them—private detectives, all over," he said, waving his hand.

"Well," went on young Chris, asking a question now more and more in his mind anyhow—"what about our using his name all the time?"

"Well—what about it?" answered Mr. Poco quickly.

"It's your name too, ain't it, just the same as his?" inquired Mr. Grabstein.

"That's all right," said young Chris Vandalaer. "I'm not quitting. I just wanted to know."

And he told them in more detail then the answer that he sent to his great kinsman by the detective. And his fellow partner, Abe Grabstein, approved more and more as he related it.

"Good! Good! That's the boy. They can't scare you, Chrissy!"

"Not much," said young Chris.

But Mr. Poco sat dark and uncommunicative.

"And when he talks about using his name," said Mr. Grabstein, "for anything, I have to go and laugh! It would be a pity about that." And he named several of the more notable and notorious great affairs with which the older Vandalaer's name had been associated—the Draw Iron Bar Trust, for example; and the great Susquehanna Bridge and Coal Company deal.

"It would be a shame to get any grease spots on his name!" said Mr. Grabstein facetiously.

"That's all right. I can stand that!" said young Chris. For he had been in New York long enough to understand that you needed all the tools you had to keep going and making your living. "To hell with him! What do I care for him? But what I want to know is, is this thing going to make good, the way you say it is—for all these people we're selling it to—on the strength of the name?"

And then he asked them some more about those letters they got up and had signed for him, with stamps that reproduced his signature, and sent out by the thousands through the mails—all ending with the signature of Christian Vandalaer and saying how much he thought of the stock of this company he was president of as an investment. "That's all I care about now," stated Chris Vandalaer. "Is it all right?"

For he knew now from the way the mail went out and letters came back that there must be thousands and thousands of people putting in their money with them every month.

"Positively. Sure!" Mr. Grabstein reassured him. "It's better and better every day."

"And the money is right here in the treasury, where you said it was?"

"Sure! Sure!" repeated Mr. Grabstein. "That's what it's for—this form of company. Ready money—till when we get it started—putting it in sure mines and oil lands. We can't get started yet putting it out—we ain't had time. But it's all here safe—all ready money!"

"Where else would it be, besides there?" asked Mr. Poco in a rather cold and hostile voice.

"All right," said young Chris. "That's what I wanted to know."

But he asked them a little more before he dropped it, about those other letters—those answers he had sent out on the stationery of the great hotel to special people who had more than the usual amount of money to invest; and now also to the others, who now and then wrote in criticizing The Great Vandalaer Exploration Syndicate for its policy in not getting started and paying the big dividends it had promised.

These letters, he found, grew more and more frequent after that, till finally he was busier and busier answering them. There was something in the newspapers soon after that also—an attack upon the general methods of stock promoters in New York; and for some mysterious reason The Great Vandalaer Exploration Syndicate was picked out, among the thousands of others, for criticism and abuse. It was because—so Mr. Grabstein and Mr. Poco thought—that old gray devil, his great namesake, the

at andalaer, was getting busy with the erand the politicians.

Yı ain't afraid of him, are you, iss, boy?" said Mr. Grabstein ad- iny. "That's good. That's good. We 't ther."

L him come on!" said Mr. Poco :l: But he grew blacker and curter ry lay, and smoked more black and r t cigars.

nevery day, more and more—started pbably by the newspapers—these ea, as his partners called them, kept in in for young Chris to answer above signature, telling what he thought about sick, and to be patient, for everything a right. It got on the raw with him ll reading the answers The Great daer Exploration Syndicate sent back ir for his signature, forever promising e ividends right away, but never giv- tim. And sometimes now, since the spers started talking about him and me, the letter writers would not be sfl, when he himself refused to send n ll their money back personally!

he was one letter especially which he ivd that from the first kept coming k to his memory, a letter written in a ge hand—by an old Irishwoman, ap- eny, about her savings, and the lux- irwhich he lived and the riches that he d the wrong he had done her. This ercuriously enough, out of all that he ivd kept going in his head after he had pered it, as if he had heard the n's voice in his own ears. For it had hring of an old curse; and at the end os into a shriek that almost haunted

My the curse of God," it said, "fall n ie meat you eat and the mouths you d the bed you lie on! and may you vh the blood on your lips—where sicked it out from such as me!"

t most seemed as if the thing brought l ck with it from the first. For that y ight young Chris Vandalaer had a n out, not unlike a final quarrel, with lie girl with the red lips—who indeed hend called him that most terrible of nmes in the great city—a poor farmer. n that night he went up early and sat la, looking out from his high window hi palace à la carte upon his great ckund-gold garden underneath—think- alut himself, and what he had done, and erhe was going. For in spite of all they d m he liked Mr. Grabstein and Mr. coss and less; and placed less and less rance in their promises. And he cared, v e stopped to think of it—as he had llowed himself to do much lately, stg more and more to luck—he cared leor the idea of these letters and those uestions they were making now in the pe. It was one thing to use his own neven if he were forbidden by its other ng the great Vandalaer—that old gray- rld crook! But he had small appetite sealing pennies from washerwomen. ty what you want, he never was a y neak thief.

"I hell with it!" he said, moving finally. ove been hitting it up too much," he d o himself. For he had been going he hard of late. And he got up—from kig there below. "It will come true all it"

Fo he wouldn't believe otherwise. He dnot. He could not face the idea of it. e iss of his princely life—his palace à la te and his rich food and clothing and at bedchamber—and the sight of his e oman waiting for him in the corridor. Bu all that night, alone in his wide bed, hs filthy, ugly dreams of washerwomen l ancers, and of looking down from his h indow over the city, with blood on lis.

Yng Chris Vandalaer was growing edf this; in fact it was getting on his v. That and the pace he was going o bright and early on the succeeding rng he was up and down, as soon as rwas any use in it, in the section of the ildings, at the offices which still had nne in gold upon the door. And he sat rtelling them what he wanted them to a out this thing.

"hat difference does it make any- v $125?" he said, arguing to Mr. Poco d Mr. Grabstein in Mr. Grabstein's vte office once again.

Bt it almost seemed as if the devil were th thing, for no sooner had he got the rd out of his mouth than Dave Poco, ohad been bitterer and blacker and uglier with him every day, jumped to his feet with a black look and still blacker oath, inquiring of him who he thought he was; and then going on to tell him.

"Listen. Listen, Davy!" cried Mr. Grabstein, much disturbed. "Shut up! Wait!" he said, and rose and closed the transom into the main office.

"I won't. I'm sick!" returned Mr. Poco, going straight on. "I've heard enough!"

Young Chris Vandalaer sat, surprised and quiet, listening. It must certainly have been that he was under a spell of something—that cursed letter or the dreams or happenings of the night before—for in any ordinary time he would have reached out for Mr. Poco's collar, and wiped him up and down the floor for what he now started saying. And yet he kept on talking as he pleased; and not a word from young Chris Vandalaer.

"Oh, piff!" said Mr. Poco. "Give it back to them. Yes. All of it. To keep you looking pleasant, so you won't be superstitious and lose your sleep!"

"So as not to be a damned dirty thief!" said young Chris Vandalaer. "That's what I begin to think it looks like."

"Boys, boys!" said the warning Mr. Grabstein. "Shut it up!"

"Begin to think! Oh, piff!" said Mr. Poco, shaking him away. And he called young Chris—the second person in that twenty-four hours to do so—that most cursed of all names in a great city—a farmer!

"You farmer! What did you think we were doing here? And you getting our money for? You make me sick! You knew as well as we did, in the back of your head!"

"Davy, Davy!" said Mr. Grabstein; for Mr. Poco was talking very loud indeed.

"Oh, kill him; or I will!" said Mr. Poco, growing more and more violent every minute now. "I'm sick of having him coming in here bleating. We're sitting fighting for our lives, using all the cash and all the pull and all the friends we've got to keep us out of state's prison, and this thing comes wandering in again, with our clothes on its back and our food in its belly, and starts squealing about what we're to do, so as not to hurt its little feelings."

And he told young Chris Vandalaer much about himself and The Great Vandalaer Exploration Syndicate which he had only conjectured in his ugliest dreams. And still young Vandalaer sat there and heard him, without a murmur, abuse him with unopposed and increasing venom.

"Luck! Superstitious! What luck was it that sent us out into the wood to find this here and bring it back and set it loose? Till it comes back on us—wandering round like a bedamned bull calf in a show window, and knocks everything to bits.

"If it had shut its mouth when the fly cop goes to it, and faded and got away when it gets the word to go we'd have been out of this. And that old wolf-hearted son of hell wouldn't be after us to-day! But no; nothing would do this, but it must show old Christian Vandalaer himself how tough they raise them in Podunk! He's got to start the whole town after us."

"We all made our mistakes in this, Davy, you know that!" interjected Mr. Grabstein's soothing voice, but without avail.

"Now, I'll tell you something—if you stop and listen. If you hold up one ear with both hands and try to listen, I'll tell you where you get off!" Mr. Poco went along, addressing young Chris Vandalaer more and more severely.

And he told him a number of things about finance, and his kinsman, the great Vandalaer, and what happened when he wanted it in the great city; and a great number of other things—about politicians and financiers, and policemen and district attorneys' offices and judges, and their interrelations in a great city—strange things that young Chris Vandalaer had never dreamed about.

He talked on then, young Chris listening, until he went, hoarse and silent, with a final curse; and Mr. Grabstein, still furthering peace, spoke up again.

"It was our fault, too, Davy," he said, "starting it! You've got to admit that too. We made our big mistake ourselves here also."

"All right—say we did!" responded Mr. Poco, no longer talkative.

And young Chris still sat motionless, turning it all over in his mind.

"We've got to get out of it, that's all, the best way we can," said Mr. Grabstein hopefully. "We always have before."

"All right. All right," said Mr. Poco impatiently. "But the first thing—like I told you—is to hit this thing over the head and keep it quiet."

But young Chris Vandalaer still sat speechless, disregarding him—hunched up and wrinkling all his fine tailor-made clothes that looked so well upon him. He was not thinking at that moment of what Mr. Poco said so much as of a number of other things—patching one thing and another together finally in his mind; reflecting on all the letters he had had and answered; and curiously, and almost superstitiously perhaps, reverting to that old woman's misspelled letter with the curse in it.

"If we ever do get out!" said Mr. Poco, still pessimistic. "But we can try, I suppose."

"Sure! Sure! We'll fight for it!" said Mr. Grabstein in his most hopeful tone. "And we'll win out too. But now you made a mistake, Davy. You made a mistake, kicking up a row," he went on, "and getting after Chris here just now. We all made mistakes in this. And now you go and make the worst of all—you lose your head and your temper. It won't do no good to him or you. But since you done it—you better give it all to him now!"

"All?" asked Mr. Poco.

"About him and the old man specially."

"Oh, yes," said Mr. Poco, starting up; and an apparent gleam of satisfaction came into his eye as he turned again to young Chris Vandalaer.

"There's one thing, don't forget!" he told him. "He may get us. But it ain't us he's after first. Not since you told him to go to hell! For us—we get something if he can give it to us! For you—it's the chair—for murder, if he can fix it! He'll get you for the worst thing he can cook up. For one good long term! And he'll get you too, believe me! We know that. You can take it from me straight, he's turned the whole town loose on you!"

But now young Chris Vandalaer looked up and looked at him, apparently not fully understanding him—like a man awakening from sleep.

"Yeah?" he said with a catch of his old native recklessness in his voice. For he saw now a number of things very clearly that he had never seen or let himself see before. He saw the worst. "Now what do you think you want me to do? Draw out? Quit?"

"Quit!" cried Mr. Grabstein, with the suspicion of a shriek in his rich oily voice. "Quit, and bring the whole thing down on us, without no warning!"

And the black Mr. Poco said something black again under his breath.

"Well, then, what is it? What do you want? Do you know?" young Chris demanded, disregarding Mr. Poco for the present.

"Sure we know," said Mr. Grabstein promptly. "You've got to stay there, right there where you are! We've got to all put up a front and show them we are all right."

"All right, eh?" said young Vandalaer with a bitter smile. "How much is there left—of what we've got in—from the suckers?"

"Oh, plenty. Plenty!" Mr. Grabstein answered him at once.

"Not so damned much, either," dissented Mr. Poco from far down in his chair, "after what's gone out for this."

"Enough. Enough," reiterated Mr. Grabstein most earnestly, "for all of us."

"And you want me to stay right there where I am?" asked Chris Vandalaer. "And you'll see I'm taken care of anyhow? Is that it?"

"Sure. Sure, we will, Chris! Ain't we always?" asked M. Grabstein with reassuring fondness.

"All right," said young Mr. Vandalaer, getting up. "You see you do." And he went over now and stood in front of the dark Mr. Poco.

"And you!" he said. "Now you listen! You've told me quite a few things," he informed him. "Now I'll tell you one or two. You try and trim me or slip me or give me the double cross—and I'll take you in my hands and crack you open, and spill that black stuff you're filled with all over the ground! Understand?"

And he put his right forefinger under Mr. Poco's chin, and lifted his face and eyes up so he could look into them easily. For he was a strong young devil.

And when Mr. Poco—though he now sat silent—seemed to understand, young Chris went out, telling them he would be back again at the office the next day—and right along now, so as to keep his hand on things.

Remove Corns with Freezone

A few applications of Freezone loosen corns or calluses so they peel off

Apply a few drops of Freezone upon a tender, aching corn or a callus for a few nights. The soreness stops and shortly the entire corn or callus loosens and can be lifted off without a twinge of pain.

Freezone removes hard corns, soft corns, also corns between the toes and hardened calluses. Freezone does not irritate the surrounding skin. You feel no pain when applying it or afterward.

Women! Keep a tiny bottle of Freezone on your dresser and never let a corn ache twice.

Small bottles can be had at any drug store in the United States or Canada.

The Edward Wesley Co., Cincinnati, O.

Keeps Your Bed Warm

$2.25 All Night

20 Hours of Heat

It can't roll over — It won't leak

Filled with 3 qts. of Boiling Water

For Sleeping Porches, Baby Carriages, Sick Rooms, People with Poor Circulation; also Automobiles

Made by hand of specially prepared clay, and glazed. Doctors, hospitals and many families throughout the country using them; all recommend them to their friends. Easy to fill and handle. Pat. screw top—guaranteed not to leak. Will not burst nor corrode—is practical, sanitary and lasts a lifetime. Price $2.25 delivered. Canada $2.50.

Then he went out and up again to his golden hotel—his now temporary headquarters.

In the corridor he came face to face almost with the particular girl with red lips who had once been so fond of him; and she passed him by with slightly lifted eyebrows and the air of delicate aloofness which had come upon her since he had that curse upon him—the bad luck from that old woman—and newspapers had so prominently advertised his company. And he flushed and swore under his breath—for he was still quite young—and went upstairs into his room and lay down. For he had been taking a little bracer—several in fact—on the way from downtown, this being still possible for one who knew New York as thoroughly as he did now. And when he was like that now, that curse of that old hag upon the golden name came back—till he could scarcely shut the damned thing from his mind.

So he lay down in his princely bed and slept, and shut it out; and when he woke again it was night. He got up then and sat at his high window, overlooking the black city sprinkled with its lights—the great night flower garden below him. And beyond that, miles and miles, he saw in his mind the lights of other smaller cities; and then more miles and miles of solitary farmhouses, each with its lonely yellow light of kerosene. And under them all—those lights at night—men worrying, feverish or tortured by desire or hunger or necessity which kept them sleepless, as he was evidently to be the remainder of that night. And hundreds, no doubt; no doubt, thousands among them out there who would be stung or hurt or crippled by this swindle of his—this lure of his golden name! And at that he groaned and held his head in his hand. For no matter what they had said of him, that was one thing he never thought that he would be—a slimy, swindling, sneaking thief. Yet that was what he amounted to—for these people.

And on his own side he was in scarcely better position than they were. He had come high for a moment—a few months—through this name of his. But his feet were upon slippery places; he stood now perhaps upon the verge of prison. He had earned the unenviable distinction—for he saw that this much was probably true—of the special deadly hatred of one of the strongest and bitterest and most vindictive enemies in all the world; the personal hatred of the great Vandalaer himself—with all his great machinery for vengeance. And on the other hand he had no illusion about the men who were with him. Quicksilver was stable beside the faith of those two; and at the slightest possibility he knew that they would jettison him at once and be off together with their booty.

So he sat long and lonely, and cursed the golden name and what it had done to him and others; and tried to think what he should do next. His illusions, in fact, were all gone now—the gilt was off the golden name and the golden city and the golden night, and his palace à la carte; and, almost, off the lithe woman with the red lips, who had seemed to care so much. Yet one thing never left him; all the time now, when he stopped and thought like this, the curse of that old woman kept beating to get back into his brain.

"To hell with it!" he said finally—for he didn't know what else to say. "I'll stay with them anyhow until I know the next jump! And you know always what you can do," he told himself, "if worse comes to worse."

For after all—though he was scarcely more than a boy—he had been in France and seen life and death in the great war.

So he went to bed and at last to sleep; and after the girl with the red lips that hideous old hag of an Irishwoman came back again, as usual, to curse him, for her few dirty dollars, with ruin and hunger and death with blood on his lips.

It was a mistake, it seems, his quarreling with his partners, as he did—though probably after all it only hastened the inevitable a day or two. At any rate that next afternoon, when young Vandalaer finally appeared again at the office with his name in gold upon the door, he found all was confusion there—the anarchy of a headless office, with the stenographers turning here and there for orders. For both Mr. Poco and Mr. Grabstein had gone, unexpectedly to all. And after inquiry from the excited cashier of the enterprise he found reason to believe they had taken everything with them; in fact, for some time had been gathering in large sums—as due to them for special and unusual and peculiar services.

Guarded questioning at the bank through the cashier confirmed this; and after a long stay at the office after hours with the now quite confidential cashier he saw there was no possible doubt of what had happened, except of the present whereabouts of Messrs. Poco and Grabstein, which was doubtful in the extreme.

So at last, wearied out, young Chris Vandalaer went out with the confidential cashier and closed for the last time the door with the golden name; and then dragged himself to his hotel—his former palace à la carte—not knowing in fact what else to do.

And there in the corridor the plain-clothes man who had watched him when he had first arrived came out behind him and spoke across his shoulder.

"They want you," he told him, "at headquarters."

"Just a minute," said young Chris Vandalaer; "let me sit down." For he felt strangely weak.

And as they sat there, by an ugly chance the woman, the particular lithe woman with red lips, walked by, looking straight ahead, with ostentatious unconsciousness, apparently not seeing them.

And with that, for just a second, young Mr. Vandalaer put his head in his hands—for he was really not very old, in spite of all that he had seen.

"What'd I tell you," said the plain-clothes man, whose son, now dead in France, had somewhat resembled young Chris Vandalaer, "about breaking in and fooling with the Central Power House?"

"How much—how much will there be in it, probably, do you think, for me?" asked young Chris, his voice shaking just a trifle toward the end.

"Oh, say from five to twenty years," replied the other. "We've got you right. We're going to have you for an example; the public demands it."

"You mean old man Vandalaer—my dear old namesake," said young Chris.

"I didn't say so," replied the gray detective reprovingly.

Young Christian Vandalaer sat silent then until the other at last nudged him, saying: "Come! Come!" abruptly—not unkindly.

"Will you do this?" asked Chris Vandalaer, now straightening up with the air of a man who has made a decision: "Will you let me go upstairs to the room just a minute? I'll promise to come right down again," he pleaded. "And the minute I do down you can have me."

"No. No," said the older man. "I'll stay up with you, I guess, and let you get what you want. But I'll make it as easy for you as I can. I won't hitch on to you when you come down, if you'll promise not to run."

"I'll promise that all right," said young Chris in an even voice.

So they strolled up together by the doors opening on the white-and-silver dinner tables and the flowers and the music of violins; and the lithe women with red lips in the corridor—all the richly appointed tenances of the fine and pleasant restaurant he was leaving; and took the golden elevator—mirrored and gilded like a little shimmering antechamber to Paradise.

And young Chris Vandalaer with his pale and bloodshot eyes—for he had been drinking heavily—passed for the last time regardless, through the many pleasant things his great palace à la carte, seeing nothing that was bright; hearing only, apparently, the cracked voice of an old woman crying for vengeance and sudden death upon the owner of the celebrated but defunct golden name.

And so the key clacked again for the time in the door in the sumptuous chamber of the young prince pro tempore and his attendant entered it and snapped on the light.

It was dark outside now—night again. And beyond the open window, as so many times before, young Chris Vandalaer looked out and down upon his golden city—the yellow flower garden of night. And below—a dizzy way—he saw the lights of the taxis upon the tiny street slip like fireflies still—reminding him, curiously enough, of his earlier home in the country, and its empty days and its nights, and the first visit of Mr. Poco bringing him the splendid offer of the golden name.

And he thought of what had happened since, to him and others. And once more it seemed to him he heard the curse of the old woman for the last time.

"What's this?" cried the shaky frightened voice of the gray detective from the other corner of the room.

"To hell with it!" called young Chris Vandalaer loudly before the other could really make a move. "Hell with nothing!"

And whirling end over end he fell from his high lighted chamber—down, down into the great night garden of the city with its golden flowers, underneath.

And not one in ten of the thousands all the country who still curse the golden name continually has ever heard to this day but that its younger owner is still living happily ever afterward upon the proceeds of their distress; or will ever learn otherwise if they may read this, that now, months after they picked him from the pavement before his palace à la carte, crushed and broken with blood upon what were once his lips where he had fallen and died miserably, filling to the very letter the curse of the illiterate woman whom he had so wronged.

STORIES OF THE OLD WEST

(Continued from Page 15)

e lside him sent a tenuous smoke column
to ne glaring sky.
H kept his malignant little eyes upon a
tu in the Dragoon Mountains twenty
le away, scowling against the sun's
ig flood. Across the far-flung interval
g wing mesas and dark mesquite flats
e ark granite ramparts frowned back at
m And now a hair line of pallid smoke
ir l upward from the point he watched.
H sank down, crouching beside his fire.
: ept his hand over it, sprinkling bits of
w ered rosin into the wisp of flame The
no turned black.
H waited for some moments, scanning
: sing fumes, then swerved his lean
ov torso toward a mesquite bush. He
ir ed the leaves from a twig and scat-
re them upon the blaze. A white puff
m d into the sky.
Fm time to time he moved, now drop-
ng on his belly to blow the coals, now
d g them with rosin, now with leaves.
ne lender column crawled on upward,
id; alternate complexion, white and
ic
Were the bare summits of the Dragoon
ng broke into a multitude of ragged pin-
el against the eastern horizon another
a ny warrior stood, remote as a roosting
gl on the heights. Beneath his feet—the
ov as so sheer that he could have kicked
pe le to the bottom without its touching
e ce of the cliff in its fall—the shadows
th mountain lay black on the mesquite
t.He gazed across that wide plain and
e esas climbing heavenward beyond it
a eries of glowing steps. His face as-
ml a peculiar intentness as he watched
e istant smoke column. It was the
ze ness of a man who is reading under
fi lties. In dot and dash he spelled it as
re—the tidings of those two prospec-
rs ho traveled up the wash.
Wile the last puff was fading away he
d down from pinnacle to narrow shelf,
on shelf to cliff, and made his way to-
ar the rocks below to tell the news to the
st f his band.
Tir camp lay at the head of a steep
rg. Several low wikiups had been fash-
ne by binding the tops of bushes together
d hrowing skins or tattered blankets
en he arched stems. Offal and carrion
re trewn all about the place. It swarmed
th flies. Nesting vultures would have
il more carefully and been fully as fas-
tics.
Wen the warrior reached the spot the
ck became alive with naked forms. They
po red from all sides as suddenly and
er y as quail.
H told the tidings to the men. An un-
a vermin-ridden group, they squatted
ur him while he repeated the smoke mes-
ge word for word. There was no particu-
: low of enthusiasm among them, no
mf haste. They started to prepare for
is business as other men begin getting
ac for a day's work when they see good
ag ahead of them and the task is very
ac to their taste. Prospectors were
co ning an old story in that summer of
7' A pair of them meant nice pickings—
co , coffee, sugar and firearms—and
er was the fun of killing with the chance
th turing thrown in.
Sne of the band departed leisurely to
tc up the ponies. The victims would be
sp for a long time in the wash. They
ou l not travel far to make their camp.
no wherever they went they must leave
ac s. The day was far advanced when
e arty rode forth upon the flat, their
rt turbans bobbing up and down above
e nesquite bushes as they came along.
va l of them carried lances; there was a
ri ling of bows and arrows; a number
re ifles across their saddles, wearing the
rt dge belts athwart their naked bodies.
l f them moved their thin brown legs
as essly; their moccasined shanks kept
a constant drumming against the po-
ss sides.
Te afternoon was old when they reached
e ry wash. They left two or three of
ei number behind in charge of the
ni s. The others came on afoot. Two
ad s went well in advance, one of them
e her bank, creeping from rock to tufted
c and from yucca to mesquite clump,
th ing the sun-flayed land before them
f me sign of their game. A squad of
ri ers slipped in and out among the
gr r plants and bowlders in the bottom
th wash.

One of the trackers held up his hand and moved it swiftly. To the signal the others gathered about him. He pointed to the outcropping of high-grade ore. They saw the traces left by a prospector's pick. For some minutes their voices mingled in low gutturals. Then they scattered to pick up the trail, found it and resumed their progress down the arroyo.

Evening came down on them when they reached the river bottom, and with the deepening shadows fear. Night with the Apache was the time of the dead. They made their camp. But when the sun was coloring the eastern sky the next morning they were crawling through the bear grass on the first low mesa above the stream, silent as snakes about to strike.

The prospectors awoke with the growing light. They crept forth from their blankets. Two or three rifles cracked and then the stillness came again.

The Apaches stripped the clothing from the dead men and left them to the Arizona sun. They took away with them what loot they found. They never noticed the little heap of specimens from the outcropping, or if they noticed it they thought it of no importance. A few handfuls of rock fragments meant nothing to them. And so the ore remained there near the bodies of the prospectors.

The old-timers go on to tell how Jim Shea came riding down the dry wash one day late in the summer with his rifle across his saddle horn and a little troop of grim horsemen about him. Of that incident few details remain in the verbal chronicle which has come down through four decades. It is like a picture whose background has been blurred by age.

Somewhere ahead of these dusty sunburned riders a band of Apaches were urging their wearied ponies onward under the hot sun. They herded a bunch of stolen horses before them as they fled.

The chase had begun with the beginning of the day at Dragoon Pass. What bloodshed had preceded it is not known. But Shea and his companions were following a hot trail, eager for reprisals, cautious against ambush. As they rode on down the wash the leader scanned the stony bed, reading the freshening signs left by the fugitives, while two who kept on either side of him watched every rock and shrub and gully which might give cover to lurking enemies.

Now as they clattered along the arroyo's bed Shea suddenly drew rein. Leaning far to one side and low, after the lithe fashion of the cowboy, he swept his hand earthward, picked up a little fragment of dark rock, straightened his body in the saddle once more and glancing sharply at the bit of ore dropped it into his pocket. He repeated the movement two or three times in the next hundred yards.

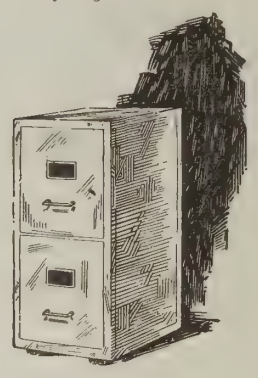
Chasing Apaches and being chased by them were almost as much a part of life's routine in those days as sleeping without sheets, and no one remembers how this particular affair ended. But Jim Shea kept those bits of silver ore. Later he showed them to an assayer somewhere up on the Gila and learned their richness. Then he determined to go back and locate the ledge from which the elements had carried them away. But that project demanded a substantial grubstake, and other matters of moment were taking his attention at the time. He postponed the expedition until it was too late.

In Tucson they tell of a prospector by the name of Lewis who wandered into those foothills during that year, found some high-grade float and traced it to a larger outcropping than the one down by the dry wash. But he had hardly made the marvelous discovery when he caught sight of a turbaned head above a rocky ridge some fifty yards away. He abandoned his search to seek the nearest cover. By the time he had gained the shelter a dozen Apaches were firing at him.

He made a good fight of it with his rifle, and the luck which had caused him to look up before the savages had their sights trained on him had put a wide space of open ground about his natural fort. No Apache ever relished taking chances, and Lewis was able to hold the band off until darkness came. Then he crept forth and wormed his way through the gullies to the San Pedro Valley. Dawn found him miles from the spot.

Making your bookkeeper more valuable

You'll be interested in our line of superior steel filing cabinets.



Your bookkeeper will do more for you if you let him. When your methods and equipment make his work cumbersome, it is almost impossible for him to give you vital data about your business. Baker-Vawter representatives may bring you some very valuable suggestions for greater efficiency.

A distinguishing feature of high-grade cars

A MOTOR car never looks better than its top. In these days of advanced motor car designing, the top is fashioned to harmonize with body lines and is one of the most conspicuous features of the car.

If the top be shabby, faded or sagging, the whole car suffers in appearance. If the top is of Neverleek with the lustre, richness and style which this material retains so well, it adds to the smartness and beauty of the entire car.

Perhaps the top on your automobile suggests that renewal would be an improvement. Then it is time to see a top-maker and have the work done before fall rains and winter snow. With a Neverleek Top, plate glass windows and curtains that open and close with the doors, your touring car or roadster is a comfortable closed car for winter motoring.

Your top-maker will be glad to use Neverleek because it adds credit to good workmanship and gives lasting satisfaction. Neverleek is thoroughly guaranteed. It withstands any weather, in any climate.

Neverleek is preferred for custom top work for the same reasons that it is chosen by an overwhelming majority of manufacturers of fine motor cars as regular equipment. Note the accompanying list of high-grade cars on which Neverleek is used.

Neverleek is made in both pebble and long grains. The trade mark appears on every other yard of the lining. Samples and booklet mailed free on request.

F. S. CARR COMPANY
31 Beach St., Boston 969 Woodward Ave., Detroit

He came back to Tucson with his specimens. Marcus Katz and A. M. Franklin, who were working for the wholesale firm of L. M. Jacobs & Co., heard his story, saw the ore and grubstaked him for another trip.

But when he reached the foothills of the Mule Mountains Lewis found that the long afternoon of battle and the ensuing night of flight had left him utterly at sea as to the location of that ledge. He had to begin his hunt all over again. He used up his grubstake, got a second from his backers and subsequently a third.

And now while Lewis was coming down the gullies between those broken ridges for the ore body—he slew himself from disappointment later on—and while Jim Shea was meditating an expedition after the riches which he had got trace of down in the dry wash, Ed Schiefflin came to the Bruncknow house to embark on the adventure which was to give the town of Tombstone its name.

The Bronco house men call it now, but Bruncknow was the man who built it and the new term is a corruption. Its ruins still stand on the sidehill a few miles from the dry wash, a rifle shot or so from the spot where the two prospectors met their death. In those days it was a lonely outpost of the white man in the Apache's land. The summer of 1877 was drawing to a close. Its showers were already a distant memory and all Southeastern Arizona was glowing under the white-hot sun rays when Schiefflin rode his mule up from the San Pedro to seek the protection of its thick adobe walls.

The flat lands of the valley stretched away and away behind him to the foot of the Huachucas in the west. They unfolded their long reaches to the southward until they melted into the hot sky between spectral mountain ranges down in Mexico. He came up out of that wide landscape, a tall wild figure, lonesome as the setting sun.

His long beard and the steady patience in his eyes—the patience which comes to the prospector during his solitary wanderings in search of rich ore—gave him the appearance of a man past middle age, though he had not seen his thirtieth year. His curling hair reached his broad shoulders; wind and sun had tanned his features so deeply that his blue eyes stood out in strange contrast to the dark skin. His garments were sadly worn and he had patched them in many places with buckskin. Such men still come and go in the remote places among the mountain ranges and deserts of the West. They were almost the first to penetrate the wilderness and they will roam over it so long as any patch of it remains.

Schiefflin had left his father's house in Oregon ten years before. He searched the Cœur d'Alenes for riches and finding none struck out from Idaho for Nevada. There he remained through two blazing summers, traveling afoot from the sagebrush hills in the north across the silent deserts east of Death Valley. He wandered on to Colorado, where he toiled in the new mining camps between prospecting trips into the great plateaus along the western slope of the Rockies. From Colorado he went southward into New Mexico, thence westward to Arizona. He accompanied a troop of cavalry from Prescott down to the foot of the Huachucas, where they established a new post. During the last leg of that journey he saw these foothills of the Mule Mountains in passing and, in spite of warnings from the soldiers, he was now returning to prospect the district.

He had spent some days at the Herrick ranch down in the valley and the men about the place had strongly advised him against traveling into the hills. They cited various gruesome examples of the fate which overtook solitary wanderers in this savage land. They might as well have saved their breath. Schiefflin had seen some mineral stains on a rock outcropping when he had passed through the country earlier in the season. So now he came on toward the Bruncknow house where he could make his camp closer to the hills upon whose exploration his mind was set.

There were several men lounging about the adobe house when he reached it. Even in those days, when the most peaceable border dweller carried his rifle almost everywhere excepting to his meals and was as likely as not to have slain one or two fellow creatures, days when the leading citizens of that isolated region presented a sinister front with their long-barreled revolvers slung beside their thighs, the members of the group showed up hard.

A lean and seasoned crew, dust sta from many a wild ride, burned by the der sun, they watched the newcomer eyes half curtained—like the eyes of pe eagles—by straight lids. They welco him with a few terse questions as to w he had come from and what the troops doing over at the new post. Of themse they said nothing nor offered any info tion of their business in this lonely sp

But when Schiefflin had made his close to the shelter of those thick a walls he learned more of the men and place. There was a mine hard by—at it went by the name of a mine and a sort of common understanding tha owners were doing assessment work. fragments on the dump, however, were country rock. In later years gorgeous of rich ore at the bottom of the sha shaft resulted in a series of claim jump which in their turn netted no less eleven murders, but the slayers only w their powder, for the ground here yielded anything more interesting dead men's bones. And at the time Schiefflin was abiding at the Brunc house the inmates were letting their m tools rust the while they kept their fire well oiled. For the mine was nothing nor less than a blind, and the adobe was simply a rendezvous for Me smugglers.

In that era, when a man practiced shooting from the hip—as a man prac his morning calisthenics in this pea age—for the sake of his body's health written statutes were one thing and local conceptions of proper conduct other. Here where the San Pedro V came straight northward across the b dary, affording a good route for pack t smuggling American wares into the s ern republic was pretty nearly a recog industry. As long as a man could brin contraband to market past marau Apaches and the bands of renegade w who had drifted to the border, he wa titled to the profit he made—and no tions asked.

So the men at the Bruncknow hous cepted Schiefflin's presence without an of ill consequences. Even had their c been more stealthy they would not worried about him. Prospectors wen questioned among all sorts of lawbre then, owning something of the same munity which simple-minded person ways got from the Indians. He came evening and rolled up in his blankets cooking his supper; and in the mornin went forth again into the hills. No noticed him.

Now and again a cavalcade came o the flaming deserts to the south, appe first as a thin dust cloud down on the as it drew nearer resolving itself into burros and men on muleback; then jin and clattering up the stony slope and the corral. When they had dismounte swarthy riders in their serapes and s crowned sombreros, trooped into the a house, their enormous spurs tinkling faint chorus upon the hard earthen flo

Then the men of the house got ou calicoes and hardware they had bro over the hot hills and through the fore giant cactuses from Tucson. The smug spread blankets, unbuckled broad m belts from their waists and stripped ou dobie dollars, letting them fall in clin heaps upon the cloth. The barga began. And when the last wares had disposed of and the last huge silver coi been stowed away by the hard-eyed chants, the Mexicans opened little ke mescal, the fiery liquor which is dis from the juice of the cactus plant. gambled at monte, quien con and games of chance. They drank toge The night came on. Sometimes p flamed under those adobe walls and k gleamed in the shadows.

Then when the hot dawn was pa the burros were packed and the whole t filed down the hill, the seraped Mex riding along the flanks of the train, rifles athwart their saddles. The dust about them, enwrapped them and hid from sight. Finally it vanished wher flat lands reached away into the south.

But Schiefflin was indifferent to wild goings on. To him the Brunc house meant shelter from the Apac that was all. He could roll up in his b kets here at night knowing that he w waken in the morning without any hood of looking up into the grinning of savages who had tracked him to his c

(Continued on Page 153)

(Continued from Page 150)

He minded his own business. As a matter of fact his own business was the only thing he deemed worth minding; it was the one affair of importance in the whole world. The more he saw of those hills the more he became that they were mineralized. Somewhere among them—he fervently believed—an ore body of great richness lay hidden and he had been devoting the years of manhood to seeking just such a secret. Those years of constant search a longing stronger than the lust for riches had grown within him. Explorers know that longing, great scientists. Once it owns a man it becomes oblivious to all else.

Every day Schiefflin set forth on his mule from the adobe house. He rode out into the hills. All day he hunted through the windings and gullies for bits of float which would betray the presence of an outcropping on the hillsides levels. Once he cut the fresh trail of a band of Apaches and once he caught sight of mounted savages riding along a slope miles away. Several times he picked up specimens of rock which bore traces of silver but he found no ore worth assaying. The men at the Bruncknow house saw him departing every morning and shook their heads. They had seen other men ride alone into those hills and they had afterwards found some of those travelers—what the Apaches had left of them. It was none of their affair, but they fell into the habit of watching the tawny slopes every afternoon when the shadows began to lengthen and speculating among themselves as to whether the bearded rider was going to return at this time, which was as close to solicitous as they could come.

None of their number—he had lost two of the small bets by Schiefflin's appearing and sound on various evenings—took it upon himself to give their visitor a bit of advice.

"What for," he asked, "do yo'-all go foolin' them pasears thataway?"

Schiefflin smiled good-naturedly at the questioner.

"Just looking for stones," he said.

"Well," the other told him, "all I got to say is this: Yo'-all keep on and yo'll sure find yo'r tombstone out there some day."

He never dreamed that he had named a fact. Nor did Schiefflin think much of it at the moment. He had received other warnings just as strong before. But none of them had been put as neatly as this. So the words abided in his memory, though they did not affect his comings and goings in the least.

Only a few days later he left the Bruncknow house for a longer trip than usual. He rode his mule down the San Pedro toward the south of the dry wash where the two prospectors had found that silver ore the year before they died. And the luck that had a man's steps to good or ill as the years seizes it saw to it that he came into the old camp where the Apaches had carried their morning murder months before.

Someone had buried both bodies, but whether had done this—possibly it was one of the self-styled miners at the Bruncknow house—had not enough interest in minerals to disturb the little heap of specimens. It was there near the graves just as the Apaches had left it, just as its original owners had expect up before they sought their blankets to dream perhaps of their big strike while death waited for the coming of the year to cheat them out of their discovery. The story was as plain as printed words on a page. The nameless graves among the mounds of bear grass proclaimed the penalty for venturing into this neighborhood. The little handful of dark-colored metal betrayed the secret of the riches in the hills.

The dry wash came down between the ridges half a mile ahead to show the way of a flood. Never float like this. It was as though even the years of long and constant search would find himself faced by a grim challenge—to attain the consummation of his purpose on pain of death.

When he had examined the bits of rock he remounted his mule and struck out for the mouth of the dry wash. After he had ridden for some distance up the stony bed of the arroyo he dismounted and came on foot, leading the patient animal. He searched the rocks for fragments of float. At times he left the mule and crept to the summit of a near-by ridge, where he remained for some minutes looking out over the country for some sign of Indians.

The day wore on and as he went farther the hill to the south became loftier; the banks drew closer in on either side of him; the bowlders in the arid bed were larger. Cactus and Spanish bayonet harassed him like malignant creatures; skeleton ocotillos and bristling yuccas imposed thorny barriers before him. The sun poured its full flood of white-hot rays upon him. He wound his way in and out among the obstacles, keeping his intent eyes upon the glaring rocks save only when he lifted them to look for lurking savages. The shadows of noonday lengthened into the shades of afternoon; they crept up the hillsides until only the higher peaks remained ashine; evening came.

Schiefflin picked up a sharp fragment of blackish rock—horn silver. In those days when the great Comstock lode was lessening its yield and the metal was at a premium such ore as this which he held meant millions—if one could but find the main ledge. He scanned the specimen closely, looked round for others, and then as his eyes roved up the hillside the exultation born of that discovery passed from him.

Dusk was creeping up from the valley. The time had passed when he could return by daylight to the Bruncknow house. He must make the most of the scant interval which remained before darkness if he would find a hiding place where he could camp. He glanced about him to fix the landmarks in his memory that he might find this spot again on the morrow. Then he led the mule away into the hills and picketed it behind a ridge where it would be out of sight from passing Apaches.

He found his own hiding place a mile away from where he had tethered the animal. Here three huge bare knolls of granite bowlders rose beside the wash. From the summit of any one of them a man could survey the whole country. Between its ragged rocks he would be invisible to one below. He chose the highest one and crept to its summit. No Apache could look down upon him here.

The gray twilight was spreading over the land when he raised his head above one of the bowlders. In that instant he dropped to earth as if he had been shot. An Indian was riding up to the bottom of the knoll.

The Apache's rifle lay across his lean bare thighs; his gaunt dark body bent forward as he scanned the rocks above him. He had been heading for the hill from this side while Schiefflin was climbing up the opposite slope. Evidently he was coming to the summit to look over the country for enemies. There must be others of the band close by.

Schiefflin found a narrow crack between two bowlders and peeped out.

Another savage appeared at that moment on the summit of the next knoll. He was afoot and now he stood there motionless, searching the wide landscape for any moving form. He was so near that the smear of war paint across his ugly face was visible in this waning light.

Schiefflin crooked his thumb over the hammer of his rifle and raised it slowly to the full cock, pressing the trigger with his finger to prevent the click.

The first Apache had dismounted and was climbing the hill. As he drew closer the clink of ponies' hoofs sounded down in the dry wash. A number of dirty turbans came into sight above the bank. More followed them and more until thirty-odd were bobbing up and down to the movement of the horses.

A moment passed—one of those mighty moments when a man's life appears before him as a period with which he has finished, when a man's thoughts rove swiftly over what portions of that period they choose. And Schiefflin's mind went to that talk with the man at the Bruncknow house.

"Yo'-all keep on and yo'll sure find yo'r tombstone out there some day."

He could hear the old-timer saying the words now. And as he listened to the grim warning again he felt—as perhaps those two prospectors felt in the moment of their wakening down by the river—that Fate had sadly swindled him. He was stiffening his trigger finger for the pull, peering across the sights at the Indian who had climbed to within a few yards of the weapon's muzzle, when ——

The warrior on the summit of the next knoll waved his hand. The nearest Apache halted at the gesture and Schiefflin followed his gaze in time to see the lean brown arm of the sentinel sweep forward. Both of the savages turned and descended the knolls. They caught up their ponies and rode on, following the course of the wash below them. The band down in the arroyo's bed were

Every Traveler Will Want A

"FITALL" ADJUSTABLE TOILET KIT

when once familiarized with the great advantages of this ideal traveling convenience. Think of being able to obtain a small, neat, compact traveling Kit, which will **hold all of your own toilet articles,** including razors, as if made to order for your individual requirements.

And it's as simple as can be—just put your fittings in—pull the adjustable straps tight, and the patented NO-METAL locks hold them securely in place; once arranged no further regulations necessary.

Don't bother carrying cumbersome luggage into crowded Pullman washrooms and searching through it for your toilet articles.

Your FITALL holds all the things you want to use.

FITALLS are for both men and women, and can be had in flexible leathers and attractive waterproofed fabrics at $1.50 and up.

Slip a FITALL in your grip and enjoy greater traveling comfort. ***But you must look for the FITALL label*** in every Kit if you want to be sure of getting the genuine FITALL with all its exclusive and satisfaction giving features.

Your dealer will supply you with these unequaled traveling Kits; if not, write for free descriptive booklet.

EISEMAN, KAYE CO., Mfrs.
CHICAGO *NEW YORK*

Mfrs. EKCO Make Leather Goods *FITALL Patented U. S. and Foreign Countries*

Let it *look* like rain—when you have a Koupet Top!

Go anyhow! Go anywhere, in your Ford—regardless of rain, wind, dust, snow, sleet or cold.

You'll be snug, warm, and comfortable in your Ford with Koupet Top—whatever the weather.

And you'll **enjoy** the ride—see out all around you, through the wide, clear glass panels of your Koupet Top. You'll get all the air you want. For the Koupet Top is perfectly ventilated.

For Touring Ford $75.00
For Ford Roadster $55.00
F. O. B. Belleville, Ill.

With complete, plain Chart Diagram—for setting up and mounting Koupet Top on your Ford.

See the Koupet Top Dealer in your town. He will quote you prices delivered and installed. Then you will realize that Koupet Top is a **tops-them-all** value at a **rock-bottom** price.

See Koupet Top—today. If you do not know of your local Koupet Top dealer, write us for his name—and for Koupet Top Booklet.

Koupet Auto Top Co.

Grocers, Bakers, Hotels, Railroads, Restaurants and Institutions

WHEN you buy jams, jellies, apple butter, etc., that are packed in pails, be sure that they have not lost much of their goodness. Pails which absorb the fruit juices or the oils of peanut butter or lard, mean a dried-up, inferior product. The dry rind that forms next to the sides of the pail is practically unusable and represents a big loss, often several pounds to a pail.

Purchase Food Products in "Fibrotta" PAILS

Made in one piece, from wood pulp, under tremendous hydraulic pressure, "Fibrotta" pails are finished with a hard, glasslike mahogany surface that will not absorb any of the good fruit juices or communicate a taste to the product. Their contents come to you as fresh and good as when they were first put up.

"Fibrotta" packing pails can be quickly washed as good as new when emptied, and used or sold for seventy-five cents to a dollar each. Many packers are using these "Fibrotta" pails. It will pay you to buy products put up in them.

We also make the "XXth Century" Water Cooler with "Fibrotta" body, very sanitary and ice saving.

receding. The rattle of hoofs grew fainter. Schiefflin lowered the hammer of his rifle and took his first full breath.

A low outcry down the wash stopped his breathing again. The band had reined in their ponies; some of them were dismounting. He could see them gathering about the place where he had led his mule up the bank. Two of them were pointing along the course he had taken with the animal. Several others were creeping up the slope on their bellies, following the fresh trail. The murmur of their voices reached Schiefflin where he lay watching them.

Then as he was giving up hope for the second time a mounted warrior—evidently he was their chief—called to the trackers. They rose, looked about and scurried back to their ponies like frightened quail. The whole band were hammering their heels against the flanks of their little mounts. The coming of the night had frightened them away.

The shadows deepened; stillness returned upon the land; the stars grew larger in the velvet sky. Schiefflin crouched among the bowlders at the summit of the knoll and fought off sleep while the great constellations wheeled in their long courses, for the dawn was coming in its proper time and it seemed as certain as that fact that the Indians would return to hunt him out. He dared not leave the place, for he knew that the Apache never traveled at night and he feared to stumble on them in the darkness, or he might stray into some locality where they would find him without shelter when the day revealed his trail. He waited for the sunrise and the beginning of the attack.

The color deepened in the east. The rocks below his hiding place stood out more clearly. He could see no sign among them of creeping savages. The sun rose and still nothing moved down there. He came forth finally in the full blaze of the hot morning and found the mule where he had picketed it behind the ridge. When he returned to the dry wash he saw the tracks where the band had passed during the evening before. For some reason of their own they had found it best to keep on their course instead of coming back to murder him. He resumed his search for float where he had left off. It showed more frequently as he went on. He followed the bits of ore to the outcropping. It was a narrow stringer of blackish rock. He dug into it with his prospector's pick, chipped off specimens and carefully covered up the hole with fragments of country rock. The danger of Apaches had passed, but a new fear had come upon him—the dread that some rival prospector might stumble on his discovery before he could establish possession, for his provisions were running low. He had no money and he needed a good grubstake—and companions to help him hold down the claim against jumpers—before he could begin development work.

He hurried back to the Bruncknow house. An attack of chills and fever brought on by his night among the rocks gave him a good excuse to leave the place. The climate, he said in concern, did not agree with him.

While he was trying to think of one with whom to share the secret of the rich ore, one whom he could trust to take his full portion of the dangers which would attend the claim's development, he remembered his brother Al, who was working at the Signal Mine, way over in Mohave County. There was the man.

Schiefflin made his way across the state of Arizona in the next two months. During the journey he stopped more than once to earn money for food to carry him through. Some time in December he reached the Signal Mine.

Al Schiefflin had a friend, Dick Gird, who was an assayer. Gird saw the specimens, tested them and was on fire at once. He joined forces with the brothers, helped them procure a grubstake and in January, 1878, the three men set forth from the Williams Fork of the Colorado River in a light wagon drawn by two mules. Spring was well on its way when they reached Tucson and made their camp in Bob Leatherwood's corral. The Apaches were raiding throughout the southeastern part of the territory and the little town of adobes was getting new reports of murders from that section every day.

They drove their mules on eastward up the long mesas leading to the San Pedro divide. At the Pantano stage station they saw the fresh scars of Apache bullets on the adobe walls. The men here had held the place against a large band of Geroni warriors only a few days before.

Now as they drove on they kept cons lookout and their rifles were nearly al in their hands. Every morning they long before the dawn and two of t would climb the ridges near the cam watch the country as the light came it while the other caught up the mules harnessed them.

They turned southward up the San P avoiding the stage station at the cro of the river lest some other party of pectors might follow them. They ma circuit round the Mormon settlemer St. David and came on to the Brunc house—to find two more fresh grav Apache victims under the adobe wall

They made their permanent camp and Schiefflin took his two companio the dry wash. They reached the out ping—it was undisturbed. Gird an Schiefflin dug away at the dark rock their prospectors' picks. Less than feet below the surface the stringer pin out. The claim was not worth stakin

Beside the little strip of ore whose promises of riches had lured them int land of death they held a conference. hills opened to a low swale which le between them toward the loftier sum in the south.

They decided to follow that depre in search of another ledge.

They made their daily journeys alo course, returning with evening to Bruncknow house, whose inmates away at the time on some expedition of own. Sometimes they saw the smo signal fires over in the Dragoons, some the slender columns rose from the sum the Whetstone Mountains in the n One morning—they had spent the pre night out here in the hills—they wo find a fresh trail in the bear grass w one hundred yards of where they had sleeping, and in the middle of the Dick Gird picked up one of the ra wristlets which Apaches wore to p their arms from their bowstrings.

That day Ed Schiefflin discovered outcropping. Gird assayed the speci in a rude furnace which he had fash from the fireplace at the Bruncknow h Some of them showed as high as $2200 ton. They returned to the ledge. Ex tion showed every evidence of a gre body, and two or three of the frag which they chipped from it below th face assayed $9000 a ton. They had their big strike. They staked the clai when they came to fixing on a nam Schiefflin remembered once more words of the old-timer at the Brunc house.

"We'll call it the Tombstone," he and told the story.

It was recorded in Tucson as the T stone. And when the rush came into hills Ed Schiefflin, then a figure of i tance in the new camp, recited the t some of the men who had risked thei in traveling to the place. They in turn retold the tale. That is the wa town got its name.

In after years when men had learne fullness of that secret which the Ap had guarded so well from the world— Bisbee and Nacosari and Cananea yielding their enormous stores of met Tombstone's mines had given forth millions of dollars in silver Ed Schieff mained a wealthy man. But the ha prospecting abided with him and he u spend long months alone in the wild searching for the pure love of search.

Just before one of these expeditio was driving out of Tombstone wit Barron, another old-timer and a close and as they went down the Fairban they reached the spot where the three bowlder knolls rise beside the dry Schiefflin drew rein.

"This," he said to Barron, "is the where I camped that night whe Apaches almost got me, the night be found the stringer on the hill. And I die I want to be buried here with m teen and my prospector's pick beside

So when he died up in Cañon City gon, just about twenty years after h made his discovery, they brought his back and buried it on the summit knoll and they erected a great pyra granite bowlders on the spot for his ment.

And within sight of that lonely tom town stands out on the sky line, comm rating by its name the steadfastness Schiefflin, prospector.

EVERYBODY'S BUSINESS

(Concluded from Page 42)

Three Enemies

started and now the average for doctors' lss one in three days. The efficiency employees in the mills at the present nes normal, and the whole work cost s ian $2 a head. Dozens of other cases a milar nature might be cited.

Ctrol of malaria is both feasible and ofible. The disease can be eliminated g ting rid of the Anopheles mosquitoes. t this we must destroy their breeding ot and shelters. If pools and marshes e drained and filled the insects will have places to breed. If ponds are oiled this oes forms a film on the surface of the t which prevents the larvæ from getting t breathe, and consequently they die.

Now come to the rat, and the reader ll e surprised to know that a recent ry places our rat population at 100,000,000. The annual upkeep per rodent is imated at $1.80, so that the rat portion o population costs us in the neighborhood of $180,000,000 yearly. This is similar t cost of rats in Great Britain. In nark the annual cost per rat is $1.20, d France only $1. These costs do not ude mice.

Most every parasite has some compensating feature. The rat has none. The black used to be the scourge. The brown, or gray, rat, being larger and more ferocious, s usted the black rodent and now holds a. The average litter of the brown rat eight, and the female has been known to a young monthly throughout the year. Sun-dried brick wall held together by sand lime mortar is no barrier to a rat. To stop them the mortar must be composed cement. The English Plague Commission stated that the Norway rat can gnaw ay through concrete, but it is safe to say that the concrete in question was not ill-made.

Our farmers suffer most from rats. A ng rodent will consume 50 pounds of ain a year. One Middle West farmer at that he lost 500 bushels of corn in one ar through the depredations of rats; another lost 350 chicks. A merchant tells of rats that gnawed a hole in a tub containing 100 dozen eggs, and within a period of two weeks carried away 71 dozen, without leaving either shell or stain.

Rats have been the sole agents in transmitting the bubonic plague. This disease has destroyed millions of lives and now exists in the rats of certain seaports in England, Southern Europe, Africa, the Orient and South America. It is estimated that every cargo ship that sails carries on an average 200 rats. These same rodents also are infected with intestinal parasites and are frequently responsible for tapeworm. They transmit trichinæ to hogs, from which animals the infection is spread to human beings.

About the only way that rats can be eliminated is through rat-proofing our buildings. All measures of prevention and destruction should be communal in nature—spasmodic individual efforts get nowhere. Rat trapping is never effective. Dogs and cats are but feeble helps. Rats must be excluded from food supplies or there will be no material reduction in our rodent population. Here again we see the need of vermin-proof food receptacles and covered metal garbage cans.

Our enemy the rat will not be on his way to oblivion until each town enacts a really effective rat-proofing law. Such legislation would have to provide a minimum standard of concrete. It would have to specify the thickness of floors and walls and the depth and style of construction of foundations. The first town that enters on this kind of work will be building not only against vermin but against fires and disease. Such a community will be a happy place in which to live, and yet the town will be doing only those things that should have been done decades ago.

So much for man's chief enemies. It will be a blessing when we no longer accept these pests as matters of fact. It is foolish to say we know all about them and realize their danger, for if we did they wouldn't be here.

MATTERS OF OPINION

(Concluded from Page 44)

A Voice From the Tropics

For the past twenty-five years our consular agents have been making precisely the same sort of observations—though the secretarial style most favored by the Department of State deprives us of the pleasure of reading their opinions in the breezy particular style of the correspondent just quoted.

Some day we shall learn; and learn we must, for American exporters will surely remain a cropper if they count on the luck of "Old" Timothy Dexter.

This eccentric merchant threw his Newburyport neighbors into spasms of delight by shipping to the West Indies a consignment of brass bed warmers. Their laughter gave place to stupefaction when they learned that the Dexter warming pans found a ready market, at a high price, among the Cuban sugar planters, who used them to skim off the dirts that fell into their molasses vats and met a sweet but sticky fate. The average reporter cannot afford to take a chance on following Dexter's luck.

Capital Levies

NOMINALLY, at least, the government of Germany is a socialist government. Years ago it announced an intention to levy ruthless hands on capital by a levy that would produce seventy billion marks, or on such sum, the tax to be steeply graded so as to fall heaviest on the largest fortune. That sounded formidable. Later the details of the levy have reached this country. Corporations, it appears, are to be taxed ten per cent of their capital. Individuals must pay ten per cent of the first fifty thousand marks of their possessions above the exemption of five thousand marks, twelve per cent on the next fifty thousand, thirteen per cent on the next hundred thousand, and so on up to sixty-five per cent on the top slice of the largest fortunes.

But the tax is payable in equal annual installments spread over thirty years. As a considerable part of the very largest fortune would be taxed under the lower schedules, the tax of the richest man in Germany would hardly be more than sixty per cent, and that, spread over thirty years, would amount to two per cent a year. As the return on capital can hardly be taken as less than six per cent a year it would obviously amount to an income tax of not more than thirty-three and one-third per cent, while our capitalistic government levies a tax of more than seventy per cent on the largest income.

There may be other features of the German tax plan; but this formidable socialistic capital levy in itself amounts to about half our capitalistic income tax—or considerably less than half, in fact. It is practically impossible to levy a big capital tax that is anything else in fact than a mere income tax. Confiscation itself is only a hundred per cent income tax, for all the government can get out of the property is its income.

In Germany and England and even to some slight extent in America it amuses the so-called proletariat to talk of a capital levy, but in practical effect our American income tax is the heaviest impost laid on capital except where outright confiscation has been practiced.

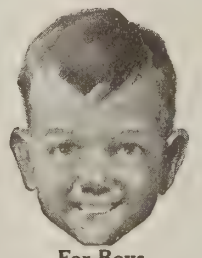
Already 3-Hour Cooked

The Quick Dish

That Millions Wanted

For Women
who have wanted an instant hot oat dish.

For Men
who want quick breakfasts, yet want oats.



For Boys
who want an extra-flavory oat dish.

For Doctors
who urge that oats be super-cooked.

We have now found a way to supply ready-cooked oats—a hot, flavory dish in two minutes.

The Way is This

We cook the oats for three hours by live steam under pressure at higher than boiling heat.

Then we evaporate them. That removal of all water keeps them ever-fresh.

The oats come to you ready-cooked, in dry form and condensed.

To Serve Hot

Stir one cup Two-Minute Oat Food in four cups boiling water. Within two minutes it absorbs the water. Then you have about 8 dishes of hot, flavory oats, seemingly just cooked.

The Advantages

This oat dish is ready long before the coffee.

It is super-cooked, so every granule is fitted for easy digestion.

You can serve oats regardless of your hurry. And everybody, young or old, should eat oats every day.

Then this high-heat cooking gives a new, delightful flavor. It makes the oat dish doubly inviting, especially to children.

Two-Minute Oat Food is entirely new in form and flavor. The product is controlled by patent exclusively by the Quaker Oats Company, as is the process.

We have sought 25 years to find a way for supplying a dish like this. Now that we have it we urge you to enjoy it.

The Quaker Oats Company

Today

This new dish is too good to miss. Get from your grocer a 15-cent package. Or send the coupon—and today—for a six-dish package free.

Your Dealer Can Supply You

The Chain Drill That Feeds Itself

The "YANKEE" Chain Drill has exactly the same Automatic Friction and Ratchet Feed as its big brother in efficiency, the "YANKEE" Bench Drill.

The "YANKEE" Chain Drill is really more than a tool; it is actually a highly efficient machine of beautiful precision that automatically relieves the user of effort and responsibility.

In operation, the drill is quickly run up to the work by the "YANKEE" Friction Feed; then, at the touch of a lever, the "YANKEE" Ratchet Feed takes hold and feeds the drill through the cut without further attention from the operator than turning the brace. Saves hand-feeding; saves time; saves drills.

Other conditions being equal, no man, using ordinary tools, can successfully compete with the user of "YANKEE" Tools.

"YANKEE" Chain Drill

Made in two styles. One holds round-shank drills; the other holds square shanks. They are alike except for the chucks, and are the same in price.

No. 1500. 3-jaw chuck for round-shank drills up to ½ in. Length 9¼ in. Weight 3½ lbs.

No. 500. 2-jaw chuck for square-shank drills up to ½ in. Length 10¾ in. Weight 3½ lbs.

Price $5.20. Your dealer can supply you.

Write for free "YANKEE" Tool Book showing "YANKEE" Tools in action; illustrations of better ways of drilling, boring, tapping and driving screws.

THE ANTHOLOGY OF ANOTHER TOWN

(Continued from Page 14)

and there is little he doesn't know. Indeed we sometimes think that, like the editors, he invents things on dull days, to interest his customers.

And what wonderful experiences Joe Stevens has had! He must have forty customers, but nothing ever happens to any of them he can't beat. Ez Hawkins caught two mice in a little dead-fall trap intended for one, and thought it very wonderful; but when Mr. Stevens came round with the milk he didn't pay much attention to the incident; he said he had caught two mice repeatedly. So Ez started in to find something Mr. Stevens had never heard of.

Mr. Stevens moved to town from the country, to retire, but didn't like idleness so well as he thought he would, and began selling milk. At first he sold to only a few, and packed it round, but after a while he was compelled to get a horse and wagon, and a boy to help him.

But his wife liked idleness. Her ambition while on the farm had been to move to town and buy a surrey; and when she attained these two ambitions she wouldn't go back to work; she said she had slaved enough.

And the longer she was in retirement the stouter she became; people noticed, when she was out driving on Sunday, with the milk-wagon horse attached to the surrey, that she completely filled the back seat. Mr. Stevens drove, but was so small that many people didn't notice him and thought he was busy with the cows.

Ez knew Mrs. Stevens wouldn't help with the cows, saying she had done her share; so after that when Mr. Stevens came with the milk Ez began telling about a wonderful woman who lived over on Mule Creek. She made nearly five hundred dollars a year, Ez said, with her chickens and cows, and turned it over to her husband; in fact, was glad to do it, as she wanted to help.

Ez noticed that Mr. Stevens took an interest in the Mule Creek woman, so he quit talking about trifling things like catching two mice in one trap, and told about the woman who worked hard but always looked well in spite of it, and was cheerful and content. Mr. Stevens was a great talker, but was silent when Ez talked about the wonderful Mule Creek woman; it was almost indelicate, the interest Mr. Stevens took in the other woman. The neighbors knew about Ez's stories, and complained that he kept Mr. Stevens so long hearing them that they were compelled to wait for milk, and made breakfast or supper late.

The men in the neighborhood were amused over Ez Hawkins' joke on Mr. Stevens; they, too, had heard him brag of having had more wonderful experiences in everything, so some of them used to go over to Ez's house Sunday morning and wait round until Mr. Stevens appeared at the kitchen door, when Ez would go out and tell him more about the Mule Creek woman. In fact, three of the men in the neighborhood were in Ez's kitchen listening when Mr. Stevens finally confessed defeat.

Ez told Mr. Stevens that the Mule Creek woman's husband went to town the day before to attend a lodge gathering, and that his wife told him to have a good time; not to worry in the least about affairs at the farm. Then she took the team and her two boys, Ez said, and put up four tons of hay. When the Mule Creek woman's husband returned home at night his wife had all the chores done and was dressed up to welcome her husband. She expressed the hope that he had enjoyed himself in town, and had an appetizing lunch ready for him.

This story greatly impressed Mr. Stevens and as he moved away from the kitchen door he said to Ez, in hearing of the three men in the kitchen: "Well, that beats my time."

Davis Straight

WHEN I was ten years old my Uncle Joe came to our house on his wedding journey, driving a pair of little mules to a farm wagon; and it was arranged that I should accompany him home and visit my grandmother, who lived five miles from his house, in the Grand River hills.

Uncle Joe's bride didn't like me very well, and I didn't stay long at their house; Uncle Joe soon took me over to my grandmother's, who had a son only a li e older than I was; a boy named Nat a noted hunter, for he had killed wild turk

Nate never did do much but hunt, b was kept pretty busy at home and gre enjoyed the vacation. We went hun every day, but Nate said I had bro him bad luck, for we didn't find any keys; nor much else except a few squir We were the idlest pair of vagabond that entire section, and a certain boy li in the same neighborhood caused us a g deal of annoyance. He was a famous g boy named Davis Straight, and some of a distant relation of ours; but we di like him, he was so industrious and behaved. We were always being told industrious and worthy Davis Stra was, and wherever we went we met hi the road driving a wagon loaded with w and every time we met him he had a tur or wild goose on the wagon. He had into the game accidentally, while at w we couldn't do it, hunt as hard as we wo

But one day we sneaked up to a li lake in the Grand River bottom, and t sat a wild goose with its head under w poking round for wild celery. I wa anxious to get a goose that I let Nate sh though it was my turn. He had an old s gun, and was a noted shot with it, while he was taking aim I thought as idly as they say a drowning man doe made up my mind to tell the other b when I returned home, that there were geese, and that I got them both.

Just then there was a muffled report Nate fell over on the ground with his fin in his mouth; the gun had burst, and goose flew away.

Nate wasn't much hurt, and we sta home, carrying the heavy gun, th there weren't enough gunsmiths in world to do anything with it; it had b at the breach. We had put in a goose- turkey load, and put in too much.

Of course we met Davis Straight on way home with a load of wood. He h wild turkey, which he had run into dentally and shot without any delay; ot wise he wouldn't have stopped. He such a good boy that he always retu home when expected—or earlier—r to be at something else, and shame and me. Davis Straight was my Beckie's stepson, and I never could un stand how she tolerated him.

Having no gun, time didn't pass rapidly, and Nate and I became qua some; indeed we came near having a one day. So grandmother said it was for me to go home.

It was forty miles to where I through an almost unbroken country, I was mad at Nate, so I struck out to home, without bidding Nate good Grandmother said it was a shame the we acted, but Nate started it; I remen that.

I left in the afternoon, intendin spend the night at Uncle Joe's, who five miles on the way. Aunt Mary w very glad to see me, though she was a but I told her she needn't worry; th intended leaving at daylight next mor Uncle Joe talked of taking me part wa the wagon, saying that it was a sham me to walk home after coming so far them, but Aunt Mary soon put a sto that talk; she seemed to run things r that house. Aunt Mary was a Brass and the Brassfields thought a good of themselves; I think they opposed marrying Uncle Joe in the first place.

I liked the way she talked so little t got up at daylight and started without ing any breakfast. Uncle Joe was a deal exercised about my starting ou foot; he always was the best one in family. But he couldn't help himself was afraid of Aunt Mary, who di like me.

I intended stopping that night at Ge Meek's, a neighbor of ours before we m to town. That left thirty miles for m walk from daylight to dark; but I di think much of it—before I started when I was mad at Nate. There were a few houses on the way, and the road mostly through prairie.

About noon I passed a house and in, asking for a drink of water, but r

(Continued on Page 161)

(Continued from Page 158)

pig they would give me something to t. They were just sitting down to the bl and the man asked me to eat with en

I ought I must be polite a while, and id "No, thank you."

Unfortunately the man took me at my or and said: "Well, of course, if you don' want anything, all right, but you're welcome to it."

I sat and watched them eat a while, and even went out to the bars and cried because was such a fool. But I had to make it to Meek's before dark, as there were bears in the woods round his place, the boys said; so I started on my weary way again.

In the middle of the afternoon I passed through a little town called Bancroft, a collection of half a dozen houses and a store. There I went into the store the proprietor was eating candied cherries out of a jar. I was hungry but had no money, and would not beg. The man dropped one of the cherries, and I was just about to dart after it when he mashed it with his foot. He was the surliest ruffian I ever saw.

The walk nearly killed me, and I dragged myself into George Meek's house about dark. They knew me well, and were surprised when I told them how far I had walked. They offered me food but I couldn't eat much, and went to bed, sick.

The next day I had a high fever, and my father was sent for. He came the second day with a horse and buggy, to take me home. I lay down in the bottom of the buggy on a quilt, and father was disposed to grumble because I had made myself sick. But when we reached home mother was waiting at the front gate.

"Where's Ed?" she asked anxiously. For some reason father replied: "He was to stop to bring home."

Mother turned toward the house hurriedly, to get her bonnet and shawl, and said: "You needn't put up the horse; I am going right back after him."

There had never been much affection in the family, father was so stern and busy, and mother saying that made me cry. She heard me sobbing, and she came back and took me into the house, where I told her tearfully how Nate and Aunt Mary and grandmother had treated me.

Gladys Hart

UNTIL six months ago there lived in our neighborhood a beautiful creature we all called The Princess behind her back. Though apparently the daughter of George Hart and his wife Margaret, The Princess was very superior to her surroundings. The Hart boys worked, and were of considerable cash value to their father, but were never clothed in fine raiment as was the sister Gladys, who was also sent away to school one term, and spent her time when at home mainly in practicing music lessons.

Everyone seemed to take pleasure in doing something for Gladys Hart; I confess I did, and was ashamed of my ugliness and worldly habits when in her presence.

We never knew much of the man she married, except that he came from a fine family and was an unusually capable business man, considering his age; and I think he became from The Princess. But we never considered that he fell in love with Gladys Hart; she was really beautiful and witty and superior.

Everybody was expected to give a social function of some kind for The Princess, and we all did our duty promptly; we were as double as George Hart himself when it came to giving her a proper send-off; the whole neighborhood was disturbed during the busy season.

And what a fuss was made when she was finally married! George Hart couldn't afford the wedding he gave her, but there was no other way out; such a beautiful creature just naturally demanded a big wedding, and George submitted. It cost George and the boys a year's work at least, as the caterers and dressmakers came from the city; nothing came from our local paper except the society reporters from the papers, who gave a rich flavor to everything they wrote of the affair.

And how the women and girls worked decorating the church! Busy, hard-working men were neglected, and frequently prepared their own meals.

The guests marveled a little at the bridegroom's kin; they didn't live up to the advertising, but the wedding was finally over and The Princess departed for her new home, accompanied by the usual foolishness at the depot.

But the manner in which The Princess dropped out of sight and mind after her marriage was the strangest thing I have ever heard of. I had supposed Mrs. Hart at least enjoyed the preparation for the wedding of her daughter, but a perfectly reliable woman informs me she heard Mrs. Hart express weariness and say, "Never again!"

Another perfectly reliable witness testifies that the Hart boys—John, Silas and William—said in the presence of their father that they were grateful to the bridegroom for taking The Princess off their hands; and they were not reproved. I myself heard George Hart say the day after the wedding, in presence of his wife, "What a relief!"

For weeks before the wedding we heard of nothing but The Princess; after it we heard almost nothing at all of her. Her parents and neighbors washed their hands of her, as the Hindus do.

I often think it is a shame we do not all miss The Princess, and are almost glad to be rid of her; but she is not entirely blameless; she overloaded us when we couldn't help ourselves.

Mary Mason

THE best women have a streak of stubbornness. I know a gentle woman who has a daughter as gentle as herself. I greatly admire both of them, as they are the sort of women I believe others should accept as models. But John Mason, husband of the one and father of the other, lately told a story about them which amused me.

Every morning this family has fried eggs for breakfast; they prefer eggs cooked in that way rather than soft boiled or scrambled. The gentle mother believes fried eggs should be salted as soon as broken into the pan, while the gentle daughter believes they should be salted when ready for the table.

Mary, the gentle daughter, always fried the eggs, and the husband and father says that every morning for years his gentle wife said to his gentle daughter as soon as she broke the eggs into the frying pan: "Mary, did you salt the eggs?"

And Mary, being truthful, replied that she had not; and being obedient, proceeded to salt them according to her mother's notions rather than according to her own; at the same time getting that sullen look in her eyes which should never disfigure the face of a gentle woman.

The husband and father says he and his wife lately spent the night at the home of his daughter, now married, and at breakfast the daughter salted the eggs when she brought them to the table.

"And," he added, "they were just as good; though I could see my wife was aching to say something."

Lige Banta

WHEN I was a boy, a noted character in our village was an old bachelor named Lige Banta.

There had long been jokes about Lige Banta's bachelorhood, as he kept bachelor's hall; and he seemed to do pretty well at it, for he was a fat and good-natured man of about forty. He ran a butcher shop, and it rarely happened that anyone bought meat of him without mentioning the marrying joke. Lige rather liked the banter of the people, and always said he didn't marry because no one would have him.

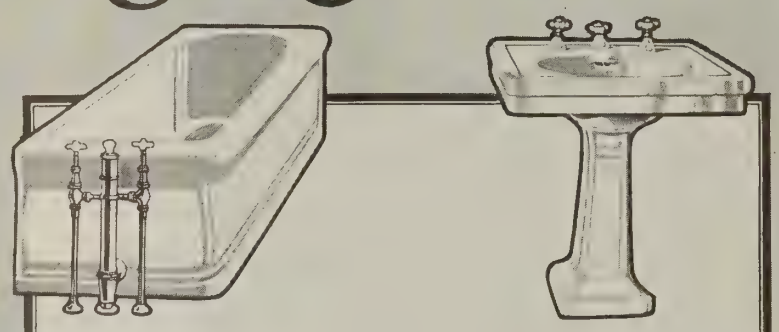
But it was reported one day that Lige was actually to be married, and the rumor attracted much attention. Finally the name of the woman came out. Lige, to the surprise of everybody, admitted that this time the story was true, after many false alarms, and that he would be married early on a certain Thursday morning, and take the stage for Chillicothe on his wedding trip.

I had a consuming desire to witness the marriage, never having seen one. I wondered what the ceremony was like, and had a notion that it was something wonderful. Lige Banta was a friend of mine, and I often put myself in his way, but he didn't invite me. Finally I made up my mind that I must see that wedding ceremony or die of curiosity.

The morning the wedding was to take place I overslept, and was not able to put on my Sunday suit; I only had time to slip on my everyday clothes, which consisted of

THE TRENTON POTTERIES COMPANY
TEPECO
TRENTON, N.J. U.S.A.
GRADE MARK REG.

A Small Mark with a Big Significance

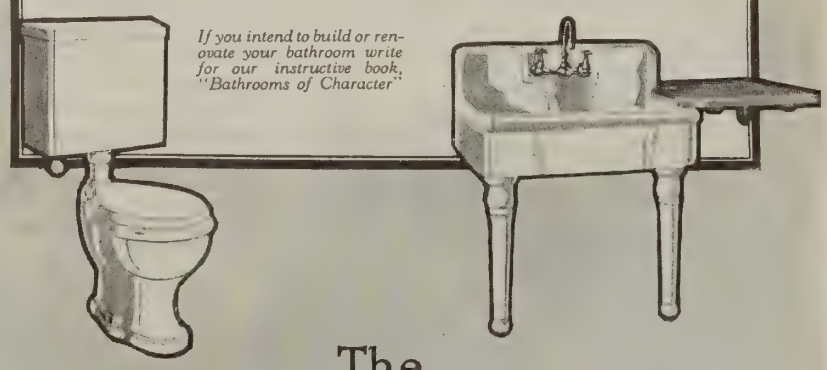


PLUMBING fixtures are of only two kinds—the permanent and that of limited usefulness. The former is the all-clay product; the latter—that which looks like china, and for a time fulfils its functions. Such people as are careful to investigate thoroughly the bathroom, kitchen and laundry fixtures that go into their homes invariably select the true product. Others, sometimes misled by the similarity in appearance, fail to obtain that which would insure them plumbing permanency.

THE TRENTON POTTERIES COMPANY "TEPECO" ALL-CLAY PLUMBING

is most sanitary, beautiful, practical and permanent. Permanency is not denoted by a white surface, but by what material is beneath that surface. With time, inferior materials will lose their sanitary value, dirt will adhere, the appearance becoming uninviting—the piece lose its usefulness. "Tepeco" Plumbing is china or porcelain, solid and substantial. Dirt does not readily cling to its glistening white surface, nor will that surface be worn away by scouring. A wise investment—a beautiful one.

Because it is not always easy for the layman to differentiate in the selection of such material, we place the "Star within the Circle" trademark upon the fixtures we manufacture. It is a small mark with a Big Significance.



If you intend to build or renovate your bathroom write for our instructive book, "Bathrooms of Character"

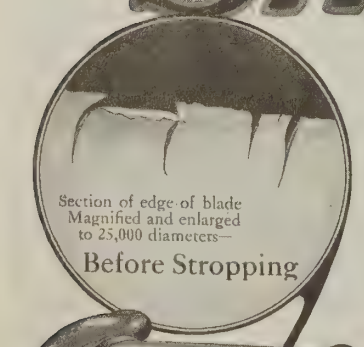
Strop your *new* safety blade

and strop before each shave—
makes a keen edge, *keeps* it keen

The finely tempered steel of your safety blade is so sensitive that its keen edge is dulled even by slight changes in temperature. That is why a *new* blade, just out of the package, is improved 100% by stropping. And to keep your safety blade *fit*—so it glides through the stubble on your face with clean, light, easy strokes—*daily* stropping is *necessary.*

Twinplex Stropper



for double-edged safety blades

You just insert the blade and turn the crank. Strops both edges at once, reverses the blade and strops the other side. Every shave turns the edge of your blade to tiny saw-teeth, like this ⌐¬⌐¬⌐¬. Stropping smoothes them back, like this ⌐⌐⌐⌐, into a keen cutting edge that glides over your face. However wiry your beard, however tender your skin your face will always be shaved clean and close, delightfully cool and comfortable, when you strop your safety blades with Twinplex Stropper.

Get Your Twinplex on 30 Days' Trial

from any cutlery, hardware, drug or department store—*with 10-year service guarantee.* Price $5—in satin-lined, nickel or leather case. Also a variety of outfits, including Twinplex Stropper and Shaving Sets.

More than half a million men now use Twinplex Stropper. It is indispensable to *delightful* shaving with double-edged safety blades. Make *your* trial of Twinplex *now*—full 30 days' use in your own home, without obligation.

Write for Free Booklet.

591 St. Catherine Street, Montreal

Get 100 Velvet Shaves from One Blade

a pair of pants, a hickory shirt and a straw hat. Hurrying into this costume I ran all the way to the part of town where the marriage was to take place, without knowing exactly how I was to get in. Arriving in front of the house I saw people entering, and gradually worked up to the door. At last, when I thought it must be time for the ceremony, a belated guest hurried up, and when he went in I went in with him.

There were ten or fifteen men and women sitting round, and my appearance amused them. It was summertime, and my pantaloons were rolled up at the bottom, showing brown legs and bare feet. I had on galluses, and my hat was an old straw affair that was very decidedly out of place at a wedding. The guests though greatly amused didn't know I hadn't been invited, and didn't put me out.

Fortunately attention was soon drawn from me; a side door opened and Lige came out with his bride. I can't recall her name; she probably belonged to a family I didn't know very well. The man I came in with turned out to be the preacher, and he stepped up to read the ceremony.

I was greatly disappointed; it didn't amount to anything, and I half regretted coming. After the ceremony the guests went up and congratulated Mr. and Mrs. Banta, and I followed their example. By this time I was attracting more attention than the bride and groom, the preacher and the bride's kin. Lige didn't seem to care, and I thought I might find opportunity to take him off to one side and explain matters.

The bride's kin had prepared a wedding breakfast, and when it was ready they invited me out with the others. They had lots of fun with me, and heaped my plate with things to eat, but as I had a ravenous appetite they didn't have any more fun with me than I had with them. It happened that there was a vacant seat next to the bride, and I was assigned to that. I always did talk too much, and it wasn't long before I was impatient when interrupted by the bride or groom, the preacher or any of the guests.

Soon after the breakfast was over the stage came along, and Lige and his bride left for Chillicothe. I swung on behind, and rode uptown.

When my mother heard about my attending the wedding she cried, but she didn't whip me; she never whipped her children, but my father whipped hard. But fortunately he never heard of it, though everyone else did. The story of my attending the wedding uninvited, in my bare feet, got round—stories on me always get round somehow—and I never heard the last of it.

I went back to the town forty years later, and though I had been away a good many years Jim Hamilton threw up the story to me. Jim Hamilton was the man who had always predicted that I would be hanged.

I recalled that prediction to him, but he didn't mind it; indeed he replied quite coolly: "Well, you're not dead yet."

Kate Howell

WHEN I was a little boy living on a farm it happened that on a certain Fourth of July I was the only member of the family left at home. There was a celebration at a village called Kilmer, twelve miles away, but there wasn't room in the wagon for me, and I was left at home to do the chores in the evening.

I wanted to attend the celebration at Kilmer so much that I could scarcely get my breath; when I want to do anything it nearly kills me to be disappointed.

I kicked and screamed for an ho though there was no one round to see hear me, so finally I concluded to go out the main road and see if someone willing take me would not come along. A farm soon appeared on horseback, and agreed let me ride behind him. But the ho jolted me so that I soon had a terrific p in my side. I stood it as long as I cou and was at last compelled to get off. I thought of trying to walk to Kilmer, soon realized that this was foolish, as I not know the way. So I started back ho crying.

On the way I stopped at Kate Howe house. She was alone and I was surpr that she was not at the celebration.

But she said she didn't care to go thought of it as the most wonderful th I had ever heard of.

Here was a country girl who had n seen much, and she didn't care to attend Fourth of July celebration at Kilmer, wh there was to be a band and promi speakers!

I spent most of the day at her house, young as I was her indifference interes me. I was always wanting to do somet I should not do, but Kate Howell was al as well satisfied with one thing as anot Nothing made any difference to her. didn't love or hate anyone very muc care much about anything. While I wa the house a man came riding by and ca me out to the gate. The times were ex ing, as we had heard vague rumors that siege of Vicksburg was going on; but K didn't come out to see what the wanted, and she didn't ask what he wan after I returned to the house. When any came to our house I was always hang round and in the way, and asking "Wh that?" when I didn't understand what said.

Had Kate Howell been transferred Arkansas or California she would h been satisfied with her new surroundi nor would she have greatly missed father or mother or her brothers and sis or neighbors. She was a good girl, capable, but one thing suited her abou well as another, and nothing suited her well. I was always longing for certain th to eat; one sort of food suited Kate al as well as another, and she didn't req much of whatever was set before her. different with me; I always eat too m and when I am not hungry I am suffe from overeating.

I spent the day wondering about K Howell, for I preferred being with he being at home alone. When she prep dinner I ate sparingly, fearing that if I as much as usual Kate would regard m a pig. She didn't seem to care whe I was about the place or not; indeed presence seemed to tire her, and on went out resolved to remain until she lonesome and came out to talk to m stood it nearly an hour, and then went the house to see what had become of I found her in the front room readi good book I could never tolerate. W I began talking to her she was polite, her manner indicated that she wish would go away. Which I did; I w home.

And I learned later that the celebra at Kilmer didn't amount to much. T who attended returned late, with noses in the air. The band didn't come boys didn't behave, and the speaker w local preacher instead of the governo had been promised.

Kate Howell knew how it would be, I didn't; I thought the most wond things in the world were going on that at Kilmer.

DOWN TO CONSTANTINOPLE

(Continued from Page 11)

he have more ready cash than they know
hi to do with and they'll pay any price
or hat they happen to want. What they
re illing to pay is what everybody else is
onelled to pay. So there you are! The
ns are having the time of their lives.
h're getting so much real money all of a
uden that they don't care whether school
es or not. The town is wide open and
verthing is going to the devil."

"hat's a curious situation in a town
nder military control."

"ueerest situation you ever heard of!
ur military control, nothing! There is no
ic thing. Trouble is that everybody is
nterested—all the Allies, that is—and
oody is responsible. The place is a mess.
n as for politics!—well, wait until you
ee ow it's being played and how all our
ieds—the British, the French, the Ital-
nand the Greeks—love each other!"

ne of the things the Germans did was
o ake Constantinople clean. And in con-
econ with this fact I always think of
un Sofia of Greece, who now lives in
wzerland in enforced retirement, but
h in 1915 was still in Athens helping to
ee Greece out of the war. Or trying to
et er in on the side of Germany? She is
heKaiser's sister, you remember.

Royalty Out of a Job

I left Constantinople just as Bulgaria
a oining up on the wrong side and when
a ived in Athens I had an interview with
ie Majesty. It was supposed that she
wa ed to talk with me about the possi-
ili of getting some American philanthro-
is to help her out with some money for
on hospital work she was doing, but she
pet most of the time talking about how
ied the British were in starting such a
erole war and about how the Germans
re going to win hands down and without
nydoubt whatsoever. It was exceedingly
mbarrassing and I had difficulty in keep-
ng p my end of the conversation, because
ou are not permitted to quarrel with a
un, you know—at least not on short
cquaintance.

hen she began to ask questions about
Constantinople. I answered them with all
rer caution and—with secret satisfac-
io but as though I regarded it as a most
egettable circumstance—I emphasized
neact that the Turks were not so fond of
heGermans as they ought to be, and that
rajority of the civil population—Turks,
Gr ks, Jews, Italians, Armenians and
wh not—were praying for the success of
heBritish at Gallipoli and were offering
od that they would take the city within a
nth. She raised her eyebrows and
gged her shapely shoulders.

"But the Germans have made Constan-
nople clean, have they not?" she asked,
s ough that were a very important con-
sideration.

"Constantinople is clean, Your Majesty."

"And it was the dirtiest city on earth!"

"Yes, I know."

"And the Germans cleaned it up! I
nv they would do that. That is what
he will do everywhere. They will control
heworld—mark my word!—and they will
ma e it clean!"

I cannot remember everything she said
o e, but I remember that remark with
a icular clearness because at the moment
nny vision flashed across my mind
wh h my mind has since retained. I saw a
hi tened and obedient world cleaning itself
pwhile spiked-helmeted Germans goose-
ste ped round and bossed the job. I
th ght I would not mind giving them con-
tro in certain countries I know just long
nigh for them to accomplish this one
thig, but I saw at once when I landed in
Constantinople, after they had been gone
six months, that there is nothing permanent
but a clean-up.

The streets are very narrow for the most
pa , and some of those in Pera—the Eu-
pe an section of the city on the European
sid —are almost perpendicular. If they
we just a little steeper the dirt would all
sli to the bottoms of them, where it could
be hoveled away without much difficulty.
Bu they are not quite steep enough for
th . And besides, they are paved with
co lestones and have deep ruts and holes
in hem, in which dirt can lodge and in
wh h it can lie indefinitely.

A good pouring rain will always wash the
str ers clean for the simple reason that
water has a tendency to run downhill, but in Constantinople the rain does its raining by the season and not just semioccasionally. And it doesn't often do it with what might be described as efficient energy. It does it lazily, slothfully; it drips and drizzles; it murks up the atmosphere and turns that which lies in the streets into a thin slimy substance that is splashed upon one by the hoofs of horses and the wheels of passing vehicles.

The public vehicles of Constantinople, incidentally, are rather particularly fine. They lend to the city an air of leisurely opulence that will be lost when mere taxicabs are introduced. They are two-horse victorias as a rule, and their owners seem to take great pride in them. They are usually shiny and bright and many of them are quite splendidly upholstered in blue or plum-colored cloth. And the horses, too, are well kept. One seldom has occasion to feel sorry for a horse. The drivers on their high boxes crack long whips in the air and otherwise annoy a nervous passenger, but they do not lash their horses. What they do do is to trot them down the steep hills and one wonders whether or not they know that this is a very unwise thing to do to a horse.

These drivers used to be very polite and considerate. They were more like private coachmen than public jehus and gave one opportunities to enjoy sensations of dignity and decorum. They were down off their boxes helping one in, tucking in robes and touching their red fezzes in respectful salute as one gave them addresses to drive to. Also they regarded the Turkish equivalent of about fifty cents an hour as ample pay and received a twenty-five-cent baksheesh with a gracious "Merci, madame!"—or monsieur, as the case might be.

By some process known only to themselves they still manage to keep their horses sleek and their carriages in trim, but their conception of values and their manners have undergone a complete change. They have caught the universal grouch. It is universal—one encounters it all over the world. The world has simply lost its kindliness and its courtesy; it has lost its ability to gauge the fitness of things. One may be willing to pay for service ten times what one ever paid before, but why, in addition, should one be growled at and frowned upon? In London if you wish to engage a cabman and avoid violence in the process you must humble yourself and exercise the utmost diplomacy. Why, even in Japan the riksha boys have adopted an aw-get-in-and-stop-your-nonsense attitude toward the public. And I remember Japan—less than ten years ago it was too—when my riksha boy on coming in for his orders of the day dropped on his knees at my feet and touched his forehead to the floor, while he murmured: "*Ohayo O'ku-san!*"—which means: "Good morning, honorable madame." This was customary and therefore it was right. It did not lower his dignity one jot or tittle. He had a dignity all his own and he maintained it quite magnificently. This was merely his way—sanctioned by general acceptance and by age-old habit—of saluting his superior officer. He smiled always and was a happy if benighted man.

No Smile, No Dollar

Not that I believe in benightedness or servility. I do not. But I do believe in an occasional smile and in the old forms of mutual courtesy that hurt nobody and that made life a little pleasanter for us all than it might otherwise have been.

It grieved me to find that the world's ill humor had communicated itself to Turkey. At best the Turk had only one thing to recommend him and that was his outward kindliness. His manners were nearly always charming.

My cabman drove me up from the landing through clouds of unspeakable dirt that was being blown about the streets by big gusts and little whirlwinds, and drew up at the hotel entrance with a sufficient flourish to show himself off to advantage, but without any reference whatsoever to me. I had to unload myself and my belongings, go inside and drag forth a porter, then face the driver's scowling demand for the equivalent in Turkish money of nearly five dollars. In a coaxing but wordless way I indicated that if he would just smile a little I might make it six. He refused, so I put the extra coin back in my bag and did the smiling myself.

FOR every outdoor purpose there is a Lanpher Coat with a style all its own. The Lanpher name has been known for years as a guarantee of fine tailoring and superlative quality in overcoats. The ability to combine an individual smartness with real warmth is the result of Lanpher experience.

Keep comfortable in Lanpher style this winter. There is a leading dealer in your city who will be glad to show you Lanpher coats. If you do not know him, write us and we will send you his name.

COATS

How often do you get a *satisfying* shave?

MANY men get a really enjoyable shave only once or twice a week—whenever they use a new blade. The keen, fresh edge slips easily through the beard, and leaves the face velvet-smooth.

How often do *you* get a shave like this?

With the AutoStrop Razor you can get a shave as smooth and clean as that first shave with a new blade—*every day of the week*. Built right into the frame of the AutoStrop Razor is a simple, efficient stropping device which resharpens the blade in a few seconds—without taking the razor apart or removing the blade.

Five hundred satisfying shaves are *guaranteed* from every dozen blades.

Begin to-morrow to get the comfort of a fresh, keen edge for every shave. Ask your dealer to-day about the AutoStrop Razor free trial plan.

AutoStrop Razor
—*sharpens itself*

AUTOSTROP SAFETY RAZOR CO., *New York, Toronto, London, Paris*

My room was just about what the captain of the Scorpion said it was, and by way of making me feel welcome as he conducted me toward it the clerk assured me that in holding it for me he had made a great sacrifice.

"There have been several persons here," he said, "who would have paid twice as much for it as I am charging you." I paused in the doorway a moment to look it over.

"And do you mean to tell me you would have the nerve to take twice as much for it as I am paying?" I asked.

"We must get all the money we can." He looked guilty when he said this.

"Yes, of course. You remember me, don't you?"

"Yes, madame, very well."

"Well, when I was here last I could have had this room for a medjidie a day and welcome." In normal times a medjidie was about eighty-five cents' worth of Turkish silver.

"Yes, but times have changed."

"And I remember having a fine big room with a private bath for a lira a day." Then about four dollars and a half.

"But times have changed, madame," he repeated.

"Yes, I know times have changed, but not to an extent that justifies you in charging any such exorbitant prices." His eyes narrowed and his lip curled in a most unpleasant smile.

"You Americans have all the money," he replied, "and there's no reason why we shouldn't get all of it away from you that we can."

"Oh, that's the idea, is it? Well, there's nothing like being perfectly frank about it. You Turks are not the only people who have adopted that attitude toward us, but you are the first person I ever heard acknowledge it."

We both laughed and he went away on excellent terms with himself. The porters came in then with my luggage and I had to buy it from them. They had formed a porters' union and instituted a new system. They had decided that it was beneath their dignity to depend on such generosity on the part of hotel patrons as they might be able to evoke by good-natured and efficient service. And they may have been right about that. I am not saying they were not—except that after collecting fixed fees they continued to look for the usual voluntary contributions. I found at once that in order to get any service at all it would be necessary to bribe the heads of departments handsomely and make a preliminary distribution of largess among bell boys, room stewards, waiters, shoe cleaners, door men, elevator men, electricians, plumbers, valets, everybody—including the already overpaid porters. I was told by previously initiated friends that if I overlooked anybody he was likely to appeal to the others and get them to organize a boycott against me. It was a most amusing game for a while, but really it ceased to be funny when at the end of a week I received a staggering bill and found stamped across it: "The patron is expected to add to his account ten per cent of the total for the benefit of the employees."

Russian Refugees

Having already done my full duty as a liberal tipper I protested that. I had to out of mere self-respect. But the little clerk grinned at me again and told me that though I could not be compelled to comply with the request the employees would have to be told—of course!—that I had refused to do so. What action would you take in a case like that when there was not a chance on earth of your going somewhere else, and when giving up your room meant turning yourself out into the cold, cold world?

That Constantinople was crowded to its chimney pots became evident to me at once. There was always a feeling of an awful mob round, and a mixed mob too. There was a blare of music in the hotel lounge from half past twelve until half past two, from half past four until half past five, and from seven until half past ten. Luncheon, tea and dinner! And if there happened to be a lot of people who wanted to dance—and usually there were—they could keep it going until half past any old hour they liked. All they had to do was to pay for it—and keep on buying wine. Talk about your mining camps—no mining camp ever had anything on Constantinople during armistice days.

It seemed to me that mostly there were British officers, but that was only because British officers have a way of filling the observing eye. Two or three British officers in a crowd can turn the crowd into a crow British officers. Their uniforms are jus snappy and they are just so self-eviden themselves that they become the cen figures in any picture they may happen the moment to adorn. There were twe Russian refugees to one British officer, the Russians formed the mob in the b ground. Most of the Russians wore bl and looked kosher—whatever that mean. It means ceremonially clean, it not? If so my comments to myself not without point. Some persons b biennially; others bathe only on dates are written in the Talmud; and again are those who engage all the private b rooms in a hotel before oneself arrives are compelled to be consistently koshe order to get their money's worth.

They were a sleek-looking lot even tho a majority of them were bewhisker women as well as men. Most of them fat and walked as though they had h feet and a habit of going to spas ever often. It is perfectly awful what the has done to some persons. They can't spas for their cures—or anything! simply terrible! They always consu quantities of hors d'œuvres and many glasses of liquid of some sort before came to the simple home dinner that me at least seven ninety-eight without trimmings at all. One wondered where Russian refugees got all their money, I thought to myself: "Well, at this r campaign will have to be started p soon to raise money for them in the U States. We kind-hearted Americans w never let them go without their *apéritif* hors d'œuvres, poor things!"

American Headquarters

There were many French officers in horizon blue, and a fair sprinkling of ians, who seemed all the time to be d the Edwin Booth Hamlet act with thei enveloping and gorgeously graceful green capes. A fine sweep of heroic dra over the left shoulder, the clank of a gling saber, the splendid uplift of a head and *"O Italia, O Morte!"* regis upon the film of your imagination. Italians incidentally are the handso people in Europe. There is no getting from it; they are. We have a kind of wop conception of them that is all w Taken en masse there is nothing about that justifies the nickname we have them. We may get their little-wop ele as immigrants, but as a people they disguise themselves as Americans o highest quality and nobody could te difference—until they got into action.

We Americans were not so much ir dence after all. We were feeding the p and relieving the situation with the kind of relief that amounted to anythi the moment, but we were doing it i offing, so to speak. What had we to do the London Pact, with the partitioni Turkey and with the embroilments of national politics? Nothing at all! was unanimously demanded of us was and food and more food—though it generally supposed that we would sho the Armenian responsibility. The U States would accept a mandate for Arm No such country had yet been create that only made speculation with rega America's attitude the more intere Everybody could study maps and talk delimitations of boundaries, vulne areas, ports, military and economic r sities and all that sort of thing and h beautiful time. And Armenia was just anything the United States want long as what the United States want confined within limits that did not enc in any way on anybody else's clai desires.

American headquarters is located a embassy. We have an embassy in Cor tinople. Oh, yes! And of course e body knows we have because it is s rare thing for us to have anything o own anywhere that we have talked ab a great deal. It and our old wooden mildewed firetrap in Tokio are the embassies we have in the world that I of. In comparison with the British bassy and the Italian and the Germa a good many others it is a poor thing it is our own. And now what is to be of it and of all the grander edifices o grander partners in righteousness? If stantinople is internationalized they used no doubt to house various high missions and society will be almost a

(Continued on Page 169)

(Continued from Page 166)

d rmal as it ever was; the German Em-ss and the Austro-Hungarian continuing r a eneration or so to be mere mute re-nders of days gone by and of crimes that tics may not commit.

Ot embassy is about four blocks from e litish Embassy, on the noisiest street h city—a cobble-paved main artery of ffi about twenty feet wide with a street-r tick down the middle of it. It is a th small and not at all distinguished-lkg building, close to the street and with g den to speak of, whereas the British ssy is the kind of structure that some rs would describe as a noble pile. or ver, the British Embassy stands in e nter of a large compound done in ved walks, attractive gardens, tennis ur and all that sort of thing. Our em-ss has no gates at all, but the British nssy has very proud gates with sentry xeoutside and sentries pacing back and tbefore them night and day. We re-eno go to war with Turkey, so maybe we e t entitled to sentries, but not having enwhen everybody else has them makes Aerican feel that something important ishave been omitted in the American olure. We get along with a Turkish teeper who spends his time inside our tess gate in a little wooden house that hf hidden, fortunately, in some low sls of a ragged and unkempt variety.

Our Bargain-Counter Mistake

Th bright young men we send over to prent us and to superintend our in-res do not mind their humble status as gals environment, however, but they do shnost fervently that we would provide r tem some means of getting a little exer-e. It is not the ambassadors and the gh ommissioners who should be thought is the big staff of secretaries and clerks nolo the work. They work very hard d very steadily, sometimes being con-eno their offices for hours without limit, d they are able to get off for an after-oand happen to want a game of tennis something they must depend on the nssy of the British Embassy or the hos-tay of the Dutch Legation. The Brit-re tremendously generous with the ivages their government provides for er and the kindness of our Dutch friends av nothing to be desired, but it is em-rassing for our boys to have to rely on er for nearly everything—as they do. ne hate to ask, though they are never fud. Or rather they hate to ask because eare never refused. They are afraid all e me that they may be interfering with moody else's plans.

Vy should we not have tennis courts dother sports fields of our own? Why old we not be able occasionally to return e ospitality of our friends? Such con-lations may not sound important; but eare; tremendously important. And yow, taking measures to preserve the an of our trained employees could hardly lled an extravagance. It takes some nand costs quite a lot to teach a recruit e 'urkish language and our minor em-oyes in Constantinople must read, write dpeak both Turkish and French. There a acant lot next to the American Em-s that is now filled with unsightly rub-sh If it is for sale we ought to buy it. eeed it.

Te embassy was a mistake to begin it;—a parsimonious mistake; a bargain-uer mistake—but it is a mistake we are ud to accept. It is neither large enough t fficiently dignified for its original pur-sor for the purpose it will have to serve v become a party to an international rnistration of Turkey's affairs; but it is ir and considering the reluctance of our ornment to do anything for our rep-sttatives abroad we shall probably have t along with it for a good many years me. So any improvements we might a would surely be justified.

Hw do you go about getting Congress to o in a small and inexpensive matter like is Or could the State Department do it itbut consulting Congress? The State epartment should include in its next bud-et million or so for the improvement of ne ving conditions of our representatives ord, and I think if the country knew the c the unanimous verdict would be: God business! Go to it!" We go wal-pg all over the earth giving away hun-res of millions to people who—in many sinces at least—might just as well be arng their own way, while those who represent us do so at their own risk more or less. They are on meager salaries and without perquisites of any kind, and if they are poor men—as most of them are—they cannot take into consideration in their living arrangements the dignity of the service. It is not right. We are like the millionaire who wears shabby clothes, makes his family do likewise, and doesn't give a hang because he is sure everybody knows he is a millionaire. It is the I-am-rich-and-can-do-as-I-please attitude. Some persons think it is smart. Is it?

I found that our representation was made up of four separate and distinct divisions: a food commission, a relief administration, a naval mission and what amounted practically to a consulate. We had not, of course, reëstablished a diplomatic relationship with Turkey, but our consul—called a commissioner in deference to diplomatic form—was on the job, occupying the old ambassadorial office and doing business with a large staff of clerks in the chancery as though nothing had ever happened. The American Chamber of Commerce in Turkey was taking a new lease on life without waiting for the establishment of a League of Nations or the ratification of peace treaties and was going on quite serenely with all kinds of plans and arrangements for future activities

Our naval mission, with Admiral Mark Bristol in command, was conducting its affairs ashore—when it was ashore—in what might be called the front parlor of the embassy, and the food commission occupied the upper floor. There must have been some mistake, by the way, when Admiral Bristol was sent to Constantinople. It is really very curious. He is the right man in the right place. He has taken a special interest in Turkey and Turkish waters since he was a youth in the naval academy, and he could teach Turkish history, geography and economics. To be in line with our usual policy he ought to be cruising up round Kamchatka or somewhere like that. But there he is, right where he belongs. Might this not reasonably be considered a dangerous precedent? First thing you know somebody will be putting a premium on special knowledge.

The relief administration had a house of its own—it had to have because there was no room for it in the embassy—and was busy setting up baby-saving organizations all over Asia Minor, the Caucasus and Armenia, while carrying on at the same time the program of general relief that had been adopted by the Committee For Relief in the Near East in coöperation with Mr. Hoover. A man who would be referred to by a business firm as our Major Arnold—he was that kind of a man—was directing these operations and was just beginning to see a few gleams of light in the darkness of universal disorganization and distress.

Good Work by Mr. Heinz

I have referred to the riotous extravagance of the rich refugees and the foreign element temporarily resident in the city, and to the fact that for them the cost of living was almost beyond belief, but that was only because they could be made to pay for the luxuries they demanded. As a result of the operations of the American food commission the population in general was enjoying greatly improved conditions.

Mr. Howard Heinz, of Pittsburgh, was our food commissioner, and Mr. Heinz is a business man. When he arrived in Constantinople in February he found that bread under government control was being sold to the people for fifty-four piasters a kilo. This normally would be about two dollars and thirty cents. The dollar loaf! The quality of it was awful, but at least it was made of cereal ingredients and had some food value. Not so the bread of the very poor. The fifty-four-piaster kind was quite beyond their reach, of course, so the government had baked what was known as Vesika bread for distribution at a price within everybody's reach. The government was supposed to supply the bakers with cereals for Vesika bread, but an analysis of a piece of it in the American food office disclosed the fact that it consisted largely of straw and other substances not usually eaten by human beings. It had a fearful smell and was like a lump of old dried fertilizer. The lower classes were in a terrible condition physically and what was being done to them was almost equal to Turkey's "white murder" of the Armenians.

The markets were fairly well stocked with all kinds of things and those who had money

Just the Convenience the Ford Owner Enjoys

If there is any one feature more than another that adds to the pleasure of owning a car it is convenience.
Convenience is the one dominant feature of the

USTUS Limousette FOR FORDS
Pat. Appd. For

The busy business man or woman driver particularly enjoys the ease and convenience of converting either a Ford Touring Car or Roadster into a cozy closed car for winter without fussing with curtains.

They also enjoy its spacious entrance and exit because of the convenience provided in getting in and out of the car during cold or rainy weather.

Just a light touch and the roller windows respond instantly—rolling up out of sight.

The USTUS Limousette is used in connection with the standard body and top of your Ford without making alterations.

Let the USTUS Dealer in your town demonstrate these advantages of the USTUS Limousette. If there is not a USTUS Dealer in your town write to your nearest Distributor for further facts.

Price for Touring Car $46.00; for Roadster $30.00

Features of USTUS Limousette

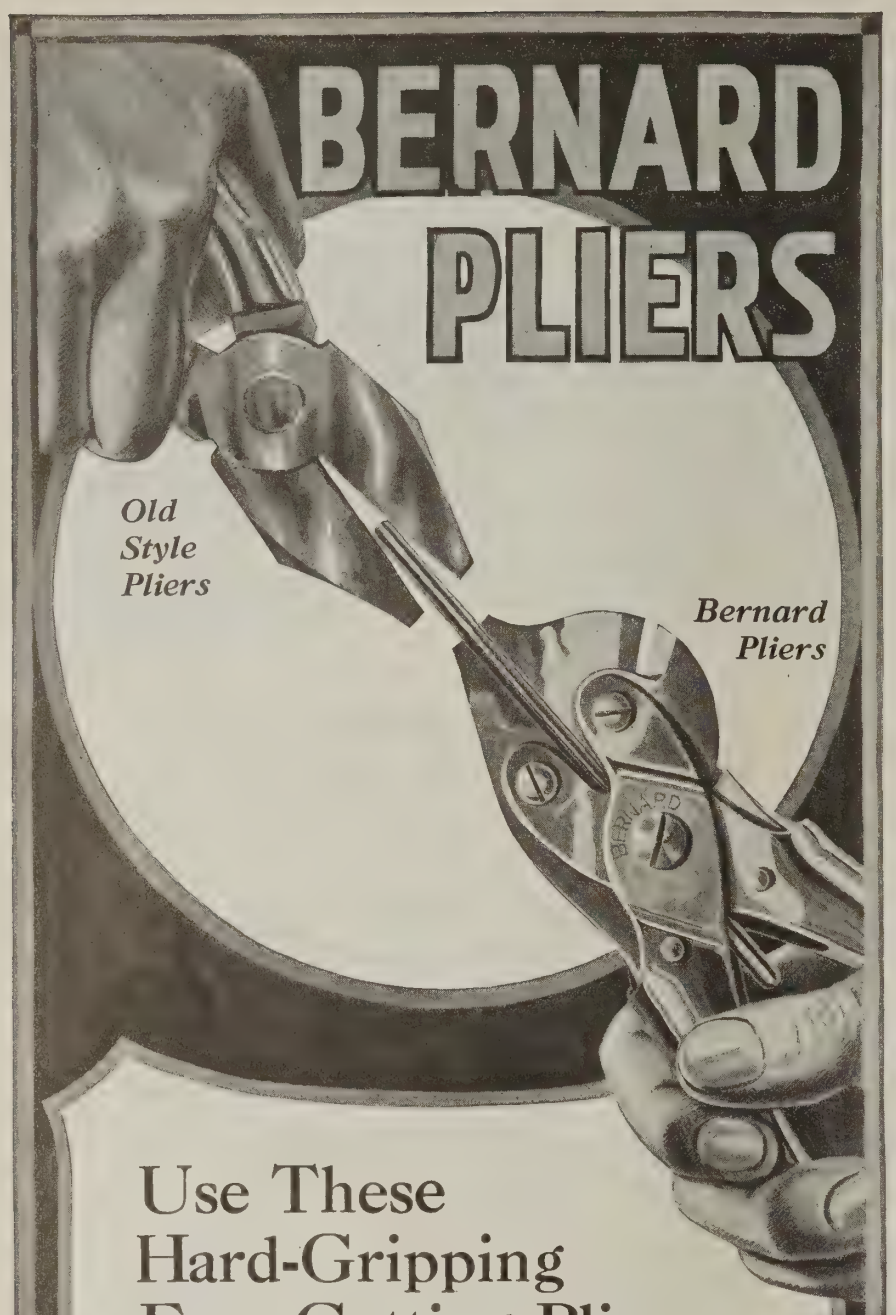
Provides closed car comfort in bad weather.

Is combined with standard Ford body and top without alterations.

Eliminates inconveniences of awkward side curtains.

Instantly converted into open or closed car. Gives clear vision from front or sides.

The Dafoe-Eustice Company, Inc., is also the manufacturer of the USTUS standardized guaranteed line of protective canvas covers. They also make USTUS automotive specialties of canvas and imitation leather. Send for catalog today.



Use These
Hard-Gripping
Easy-Cutting Pliers

Bernard Pliers simply *can't* slip. And they'll never let go until *you* do. You won't use much of your gripping strength with them. For it isn't strength of hand that makes them hang on like a bull-dog or snap heavy wire. It's the simple, patented principle of compound leverage.

No other pliers have this reliable gripping feature. And there aren't any other cutting pliers that cut like Bernards. They cut through metal that ordinary pliers won't do more than mark.

Pick up a pair of Bernards and look them over. You'll like their parallel jaws that grip even the smallest nut like a vise. You'll like their fine workmanship and the nickel finish that keeps out rust.

Bernard Pliers are standard in all industrial countries and have been for many years. For the slipless grip and a real cutter, ask for and get

BERNARD PLIERS

WM. SCHOLLHORN CO. SPECIALISTS IN PLIERS ..NEW HAVEN, CONN.

to buy could live very well, but there was little or no work for the poor and therefore little or no money for them. And prices were outrageous. The Turkish standard of weight is the oka, which is approximately two and three-quarters pounds. In ordinary times an oka of sugar cost two piasters, but in February sugar was selling at three hundred piasters the oka. The normal price of potatoes was a piaster and a half an oka. They went up to twenty-five piasters an oka.

Flour, usually from three to four piasters a kilo, jumped to sixty piasters a kilo, while kerosene, with which a great majority of the Turkish population still light their way through life, soared from ten piasters a gallon to seven hundred piasters!

Mr. Heinz decided at once that he would bring down the price of bread in Turkey if there was any way of doing it. He had to sell flour, he could not give it away; and he had nothing but flour with which to attack the speculative prices. He figured that with a fall in the price of the people's principal article of diet all other prices would fall. He tried a piece of Vesika bread and concluded that it was not fit for human consumption, and he knew that somebody was reaping a vast profit out of the suffering of the people. There was a chain of profiteers, of course, but the difficulty was that the hook from which this chain was suspended was undoubtedly the Sublime Porte. The Sublime Porte, however, could be reached with a threat of economic boycott.

Mr. Heinz opened negotiations with government officials for the sale of his flour and proposed that it be sold direct to the retail bakers under a close agreement that would fix their profits on the sale of bread. One very large and public-spirited firm strongly approved of this proposal and helped to bring the necessary pressure to bear on the authorities. Then the bakers were approached, both individually and collectively through their trade associations, and after a certain amount of explanation most of them were persuaded to fall in line with the to them quaint idea of doing an honest business on an honest basis. The result was an immediate drop in the price of bread of about fifty per cent.

Tackled the Wrong Man

But the trouble for the time being was that there was not enough to go round, so the smaller profiteers began to reap their harvest. Bread has always been sold on the streets from baskets or small carts, and the bread venders saw no reason why they should not go on charging exorbitant prices when there were a sufficient number of buyers willing to pay what they asked. And the bakers began to do a back-door business. They would hold out on the public, close their shops at the hour fixed in the regulations, then receive customers in their houses or by back-stair routes. These practices were defeating the purpose which Mr. Heinz was bent on accomplishing, so he went again to the government and got an order forbidding the sale of bread on the streets and another order which made the private sale of bread by a baker an offense punishable by exclusion from the list of those privileged to buy flour.

These orders solved the problem and by the first of May the cost of living for the people had been reduced enormously. Bread—and bread of excellent quality—was twenty-two piasters a kilo instead of fifty-four piasters; potatoes had dropped from twenty-five to twelve piasters an oka; butter from four hundred and eighty piasters an oka—normally more than twenty dollars—to two hundred piasters; sugar from three hundred piasters to sixty piasters an oka, and so on down the whole list of commodities. Nothing was cheap by any means, but the movement was in the right direction. With flour Mr. Heinz had succeeded in breaking the Constantinople food market. And naturally he broke a good many profiteers in the process.

Just before his plans were complete[d] man came to him—a Turk he was, and [a] plausible—with an idea of halting h[is] his mad career by buying all the flo[ur] had. He pretended to be tremendous[ly] terested in the welfare of the pee-pul, w[ho] to carry out the plans proposed and e[x]press his gratitude to the America[n] taking on his own shoulders the risk a[nd] burden of tedious detail that would [be] volved. Mr. Heinz was anxious to sell [it] of course, and in view of the fact th[at] had to have gold or its equivalent for [e]pound he disposed of the prospect of [go] into the retail business himself was n[ot] ticularly alluring. But after listen[ing] the man's offer he refused to consi[der] Then the man got fearfully excited; [and] he lost his head.

"But," he exclaimed, "you mus[t] come to Constantinople and ruin T[he] citizens with your high-handed [op]tions!"

"Oh, that's it, is it?" said Mr. [Hei]"I thought there was something you [had] come to yet. Just what do you mea[n]"

"I mean you will ruin me. I have [a] lion dollars' worth of flour in stora[ge] have been holding it for a rise in the m[ar]and now you come along and propose [to] direct to the people for less than I pa[y] is too late for me to unload. You wi[ll] me."

"I hope so," said the American; [but] I hope that after you are ruined y[ou] starve to death. You are just the k[ind] hellhound I'm after. Did you ever e[at] Vesika bread? And now, if you plea[se] will get out of my office."

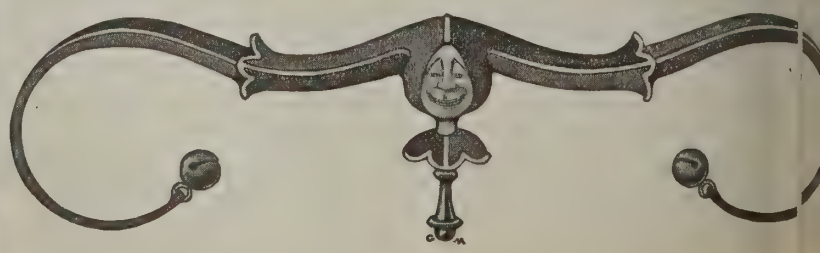
Heinz's Fight Against Profit

That ended the interview, but Mr. [Heinz] discovered at once that he was in for [a] fight with hoarders, speculators, [ex]salers and profiteers of all kinds. [It] was not a very long fight. After hi[s] and his organization were completed [it] only a matter of about twenty-four [hours] before the bottom dropped out for a [few] worthies and he was on the one ha[nd] most cordially hated and on the oth[er] most warmly approved-of man in Co[n]tinople.

The city was very sad really. The [Allied] British soldiers and sailors by the tho[usands] and soldiers and sailors of all other [nations] mingling with the red-fezzed throng[s] ing and going at all hours; one con[stantly] heard the honk of the horns of m[otor] military motors that tore swiftly, rec[kless] through the narrow streets; the [clang] of street-car bells; the rumble and r[attle] wheels on cobblestones; the weird h[ubbub] hawkers crying their wares; all the [color] of a great Eastern city in a cheerfu[l] But there was a sadness alway[s]: merchants, the hotel men, the cab [men] the dealers in curious things in the [bazaars] and personal-service people of all kin[ds] reaping a rich harvest from the h[ands] foreigners, while the foreigners for th[e] part were letting everything go tops[y] and were indulging themselves solel[y] pursuit of gayety.

All this as to mere outward aspect; [but] neath there was something differen[t]. British and their Allies were tangle[d] unpleasant political intrigues and [ar]ments which made it impossible fo[r] to deal with one another or with us [as] and in dignified harmony. It was n[ot] Nobody seemed really to approve [of] was being done to Turkey, yet eac[h] way was compelled to fight for his [own] vantage.

As for the Turks, one could not [help] realize their deep depression, but th[ey] going their ways as usual. The m[uez]zins were climbing the minarets at no[on] calling the faithful to prayer, and th[e] ful were daily filling the mosques [in] tomary unanimous obedience to th[e] mand of the Prophet. In spite of [all] crimes one does not care to think th[at] may be turned out of the city th[at] made so beautiful and the soul of [it] the Eastern soul they have breathed [into]



WHITE-COLLAR MEN

...isi nt clerk	1440	2000
...ecei er payer teller	1440	2100
...ecei er teller	1440	2000

Though this shows an advance of round 0% in these positions over 1914 it must be ...pparent that even the tellers at $2100 a ...ear are having plenty of mental exercise ...out of business hours in figuring on how to ...put the corners of the H. C. of L. In com...ment ing on salaries all bankers emphasize ...the act that a bank's profits depend upon ...int est and that interest rates have not ...increased since 1914 nearly so much as ...wa es have. It might also be observed that ...in he last five years banks have been ...obl ed to do a heavy volume of unpaid ...voi in connection with Liberty Loans and ...oth r war interests—work that has en...aid d expense without income.

No investigator digs far into the myste...ries of the H. C. of L. without finding it ...nec ssary to go to a reference library. There he will find scholarly and well-dressed librarians ready to select for him the latest reports and the best authorities. These pilots in the field of printed knowledge are not only college men and women—most of them entitled to use a choice collection of fragments of the alphabet after their signatures—but they must have passed through a strenuous course of special training in the technic of library work.

To one of these scholarly men who had at a moment's notice placed before me a bewildering array of documents and statistics on the burning question of the hour I put the question: "Have the salaries of men and women in your profession been advanced in proportion to the increased cost of living?"

His serious face showed a momentary smile and his hand moved instinctively to his white collar as he answered: "Well—hardly. This library is considered one of the best of its kind in the country from the viewpoint of its treatment of employees—and I think justly so. On a comparative basis we can have no complaint. However, the bald fact remains that we have had no advance in salary whatever since 1914—excepting by way of a bonus of one month's salary for the year to those receiving not more than $100 a month. And that bonus did not begin until about a year and a half ago. My salary was $150 a month in 1914, and it is still $150."

He laughed rather grimly as he continued: "If you're looking for the real irony of fate in connection with the high-cost-of-living problem you have certainly come to the right place for it. Professionally I'm able to tell you that the best authorities place the increase in living costs since 1914 at about 103%. That appears to be the favorite figure. Some conservatives are sticking for 80%, but they appear to be outvoted. Others declare that it is not under 108½. Personally I can testify that for the white-collar man 108 is not too high. I know it! No man can dress, eat and live like a gentleman and associate with gentlemen and not spend that much more than the same standard of living in 1914 exacted."

"Married?" I questioned.

"Yes," he answered; "but I couldn't be if it were not for the fact that my wife is a teacher in a public school of this city and earns as much as I do. Her salary is the same as my own, precisely. And the requirements of her position are almost as exacting as to appearances as are those of my own. She must not only have good clothes and a rather liberal assortment of them, but she must attend lectures, buy books, follow new lines of study, see a few of the best plays and keep up with the times generally, as the common expression has it. A failure to do this would reflect itself in her work and her standing as a teacher. If a limited amount of amusement is a necessity to anybody it certainly is to a woman who is doing heavy teaching work in a large city school. Also, she must have a moderate amount of social life—or break under the strain. All these things cost money, more money to-day than anyone not familiar with the facts at first hand would believe."

The Pay of Librarians

"Perhaps the work of a reference librarian is not quite so tense and exhausting as that of teaching—but it is certainly more monotonous and just as confining. It whets a hunger for recreation that must be satisfied. You can cover the whole situation by saying that it takes all we can both earn to live as we are obliged to live and carry a reasonable amount of insurance. There is nothing left out of the income and we feel we are fortunate if we play an even game these days. Meantime, we are hoping for an increase in salary. But here comes another man, who is looking after information on family budgets, and I must be excused."

The salary schedule in this library, one of the best of its kind in America, is as follows: Attendants start at $35 a month and may be advanced in the course of a few years of service to $60. Junior assistants get $70 a month at the outset and may ultimately reach $90. Senior assistants receive $75 as a starter and face a maximum of $100 a month. Department heads, the aristocrats of this highly trained corps of white-collar intellectuals, are entered at $1800 and may

Bean Troubles

Which the Van Camp Cooks Corrected

It took four years for our experts to perfect this dish. And it cost $100,000

Ordinary baked beans had the following faults:

The dry beans varied vastly. So we buy beans grown on studied soils, and analyze each lot before baking.

The skins were tough, due to hard water. So we boil beans in water freed from minerals.

Beans were hard to digest. They were underbaked. So we built modern steam ovens, where Van Camp's Beans are baked for hours at 245 degrees.

The New Delights

Van Camp's Beans are baked in sealed containers. Thus none of the flavor escapes.

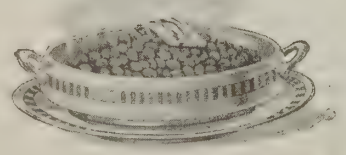
Baked beans were crisped or mushy or broken. With our modern steam ovens, all Van Camp's come out nut-like, mealy and whole.

Baked beans lacked zest. So our culinary experts perfected a sauce by comparing 856 recipes. And that zestful sauce is now baked with the pork and the beans.

Now in countless homes Van Camp's have changed the whole conception of baked beans. They are hygienic, easy to digest. They are whole and mellow. Every atom has a tang. And they are ever-ready.

In millions of meals Van Camp's are used to displace costly meats. And thousands of restaurants buy them, because men like these beans.

Buy a few cans and see what science has accomplished in this dish.



Van Camp's Beans are mealy, tender, whole. And the sauce gives every atom a delicious tang

finally climb to $3400, but those who have made this steep grade can be counted on the fingers of one hand.

From the hushed and bookish atmosphere of a great library to stockyards is rather an abrupt change—but I made it because it seemed to offer a decidedly bizarre study in contrasts. Besides, I had just read in the library certain reports on a hearing, before a famous United States judge acting as referee, of a plea for a wage increase for the packing-industry workers. From the evidence offered by the workers in the hearing it seemed to me that I could smell a story. It was a good hunch, for I fell in with a reporter for an afternoon paper who had been sent out, as he put it, "for a bucket of tears." I trailed along with the sob artist, and as he appeared highly competent I anticipated that a pleasant and profitable time would be had.

He made it quite clear to the superintendent of the packing plant to which he had led the way that he wasn't on an especially friendly mission, and that he was looking "for a whole gob of juicy proletariat grief" that would draw tears from a stone image when properly fried in packers' fat.

"Help yourself," was the superintendent's answer. "If you want to talk with women workers this boy'll lead you to 'em."

We followed the boy to a group of women sewing bags and sacking. The sob artist selected the weariest-looking one in the room who could speak English, and explained that he was there to learn how hard they had to work and how little they got from their toil.

"You don't want to talk with me," she responded with a genial grin; "I'm quitting this week."

"What's that got to do with it?" he persisted.

"Nothing," came the quick answer, "excepting that when I draw my check I'll be able to make the last payment on my second four-flat building."

As the sob artist turned away without another question I asked him: "Are you buying any flat buildings just now out of your white-collar salary?"

"Come to think of it," he answered, "I rather think I am, but there's no contract for a deed involved. My landlord has just jumped the rent of my four rooms from $32.50 to $50. When I told him that as a practical pirate Captain Kidd was a piker he smiled, rested his case on the law of supply and demand and asserted that Chicago was just now short some 50,000 apartments; that I happened to live in a classy neighborhood that was much fancied by West Side munition workers with swollen bank accounts and that if I couldn't compete with them in the rental auction he would be compelled to bid me good-by, much as he disliked to do so. Of course I looked round but I couldn't better myself. I stood the raise and saved the cost of moving."

Money in Tripe-Cleaning

"The only way by which I can meet the rent raise and all the other raises is by rustling a job on the side. There are not three men on our city staff who aren't working two jobs. One does a publicity stunt, another edits a house organ, another writes for a syndicate, and another gets enough stuff into highbrow magazines to about equal his salary. And—you'd never guess it!—one is a preacher. His salary as a staff writer is, like my own, somewhere round $35 a week—rather under than over. As a preacher he pulls down $50 a month. Then he picks up a bit now and then by writing, for he's a postgraduate college man and a keen student of economics and public affairs.

"But what does this double-trick twin-job method of working mean? Overwork for one thing, and shutting someone else out of a job for another. We're nearly all doing it in our office and I don't imagine that you will find many afternoon papers that pay their reporters and city-staff men salaries that will keep their heads above water without doing something on the side to help out. There's a copy reader on our desk who has been there nine years and is still getting thirty-five a week. He's a good man too. But you can bet he's between the millstones these days. So is every married man on the staff excepting the topnotchers."

This disappointed searcher for pathos finally declared his conviction that he was carrying under his own hat and in his own experience a better sob story than could be found in all the stockyards, and that i dared he would go back to the office write it.

When I found the superintendent of of the large plants I asked him: "W are your topnotch wage workers pul down these days in packing-house jo the boys in greasy jumpers?"

"Well, we have one man working machine for cleaning tripe who has ha difficulty in making $175 a week. In other packing company, however, me the same job have run their weekly up to $200. One man, I am reliably formed, pushed his wage up to $210 i week. Naturally the wage workers of class have big powerful cars of their that can hold the road against any mac owned by minor officials of the compa

"At a packing plant out in Oklahoma the Sunday wage of a certain calf ski was $37.25. Of course, like the tripe he was working on a piece basis and at a double rate because of Sunday It is not uncommon for butchers on beef-cutting floors to earn better than a week. At the moment I recall that of these men, a plate boner, recently a score of $120 for a week's work."

Highly Paid Women Worker

"If you are looking for something shows the spread between the salary o white-collar man and the pay check o wage worker I can give you just the ti The other day a foreman who was dra $45 a week came to me and asked for When I suggested that this was a r steep percentage of increase he replied as several of the men under him were p down $100 to $120 a week he would s resign and go on the floor with the r the gang. He made it very clear th did not consider the privilege of wear white collar and exercising a little authority worth $35 a week—not to anyhow!

"Floorsmen, whose work is class cattle cleaning, were paid 50 cents an in 1914 and now get 79½ cents an with time and a half after eight hours the course of a week some of the men c common cattle gangs, whose mini rate is 54½ cents an hour, contrive t in considerable time at other jobs p very much more money. For exa they get an opportunity to put in q bit of time at the 84½-cent rate. Of this boosts their total wage way above basis rate. Our highest-paid women workers are on the hog-trimming They run about $50 a week. Men clean casings earn $40 to $45 a week. told on good authority that in an plant there are men who put their sc to $100 and even $120 a week at this and come and go in their own cars— are not flivvers either. One Polish w on this job, who was accustomed to farm work in the old country, declare she liked this work because it was s and easy.

"We had one little white-collar e ence that almost disrupted our offic kid who was holding down an offic position at $9.50 a week got wise t spread between salaries and wage suddenly quit to take an overall jo in the plant. The instant he had his wages he came up into the offic almost started a riot by showing the there his new pay check. You can s the whole situation out here by sayin common labor holds the heavy end pay roll in the packing industry an this kind of labor has been raised fro cents an hour in 1914 to 46½ cents a at present. A hearing is now on for a raise. The laborers are demanding cents an hour."

In Kenwood, a Chicago suburb, l bookkeeper who has worked in one l for fifteen years and is now drawing $ a month. The squeeze of the shr white collar forced an economic cou this family, culminating in the deci the wife to hire a maid to take care two children and do the housework she took a stockyards job. She foun and comparatively easy employment which brought her a weekly wage a ing $32.50, or better than $22.50 a more than her husband was earning white-collar position.

Even a casual exploration of that tory commonly known as Back of the is bound to develop about as man prises for the visiting stranger as

ex dition into Darkest Africa. For mr, in this densely inhabited territory abt a mile square there is a movie ate of almost unique magnificence, in half a million dollars. The three ng banks of the district show signifi- t osperity. One, in 1912, had 9841 sors, $2,670,022 deposits, averaging 1.8 to the depositor. June 30, 1919, nmber of depositors was 22,043. th started in 1914 with 2447 deposit- $ 7,179 deposits, and an average of 7.7 to the depositor. On June 30, 9, e depositors numbered 4635 and the deposits was $1,900,106.65. The a deposit that comes in this savings as $409.95. Still another savings lso started in 1914, with 2321 de- , $141,381 in deposits and an aver- dosit of $60.91, had June 30, 1919, positors, $676,850.26 in deposits, ag $168.66 to the depositor.

he merchants in this territory, which is e exclusively given over to wage ce, admit that their trade has not only le in volume but has also passed a startling change in character. 9 their aim was to buy cheap goods e old at a cheap price; to-day their bl is to get a sufficient volume of chndise of good quality to meet the a. Once the belles of Back of the ds were proud to display engagement s sting $25; to-day these tokens of rimonial intentions must cost at least) in order to raise a ripple of pride. As merchant puts it: "The young chap s as an engagement ring on the finger is intended that is not set with a real kl puts himself down as a piker. The demand diamonds that are above sus- on-and they get them too!"

Deceptive Appearances

Merchants in the Chicago Loop District, f that matter in virtually every city t vn of industrial character, tell the e tory. The head of the jewelry rment of a famous store on State etChicago, related this incident:

A man whose appearance indicates h belongs to the working class gets a and careful attention when he rshis store. Certainly we know that n wage earner from the yards, the or the steel mills comes into this rment it is with a serious intention ng. The other day a man, plainly h wage-worker kind, came in and rt himself a diamond stickpin costing nt $500. Probably there have been r ecent purchases of this sort much er han this. The fact is, occurrences nikind have become so common that o longer make any particular im- si upon the salesmen and are quickly oen. I happened to remember the I mentioned because the customer in th remarked at the outset of our con- atn that he was either going to buy s another house which he mentioned, t t he was going to look at stones in laces before purchasing. He kept w d and went to the other house. me returned he was boiling with rage i imated that he had been received h other place as an interloper.

A salesman to-day—no matter how lt and exclusive the clientèle of cus- e he is accustomed to serve—who has lerned to pay wholesome respect to wge worker and to receive him with tus attention is making the business a of his life. Possibly I might be i that mistake myself if I had not n my lesson early. The very day I t en on as a salesman in a San Fran- welry store a man, of the roughest eance and who had evidently not ve for a fortnight, entered the place. dly all the salesmen excepting myself n conspicuously busy. In my inex- ere all was grist that came to my mill, I ave this man the best attention of hi was capable. The first article I m was a brooch of diamonds and rals at a price of almost $9000. Before ised with him his purchases amounted $2,000. He had just come out of k with more than a million dollars in . The lesson that this experience th me is applied every day in this rnent in these days of the bloated evelope."

n of the heads of a large Chicago de- nnt store makes this observation:

The old middle-class customer has al- t s completely disappeared as has the American passenger pigeon. Of course this is speaking slightly by way of exaggeration, but it is about the only way in which I can describe the situation with adequate force and clearness. As compared with prewar days we have two classes of customers—the wealthy and the wage workers. The type of employee generally referred to as the white-collar crowd is conspicuously absent, from the counters of this store at least. The families whose heads are drawing small or moderate salaries are buying with great restraint. They are the ones that are shopping round, as the expression has it. The wage workers, generally speaking, are buying what they want, asking few questions, and are not bothering to hunt from store to store for bargains. The commonest mistake made by salesmen to-day in our store, and other places having a high merchandising standard, is that of showing wage workers merchandise of too moderate a price. It is necessary to drill our salesmen constantly that they must not take it for granted that the customer who evidently belongs to the wage-working class does not want to see the best merchandise in the store—and to buy it too! It is safe for the salesman to assume that the wage earner or his wife or daughter is able to buy the most expensive stock and pay for it in cash."

Recently a certain shoe dealer learned a lesson along this line that he will not soon forget. He happened to have quite a stock of shoes of a certain brand which he could afford to sell as a leader at $5 a pair and still make a scant margin of profit. According to his traditions this was good merchandising practice. Therefore he took liberal advertising space in the daily papers of this city, in which he heralded the advantages of this bargain. The reaction from this advertising was almost zero. He puzzled over the matter for several weeks and then decided to try a daring experiment—that of marking the same shoes up to $10 a pair and spending only a fraction of the amount of advertising which he had devoted to them at the $5 price. The result of his experiment in commercial psychology was the immediate sale of every pair of these shoes at twice the price at which they had been offered a few weeks before. You can't convince this merchant that the H. C. of L. is not like heaven—a state of mind.

And speaking of shoe stores, let me give a little direct testimony. Recently I was asked to buy a pair of slipper buckles in Chicago. They should cost, I was told, about a dollar. In response to my inquiry at the buckle counter of a leading State Street shoe store the saleswoman gave me a pitying smile and explained that such buckles were no longer carried in stock, that I would scarcely be able to find them at all and that ladies were now wearing cut-steel buckles. She had something very neat in that line, she informed me, for $36.

Ninety-Dollar Slipper Buckles

After presenting my best imitation of a poker face I asked: "Is that the best you have?"

"Oh, no," was her reassuring answer; "we have a perfect dear for $90."

"If you don't mind," I replied, "just let me hold the perfect dear for a moment. It will be a privilege that I've never enjoyed before."

Just then the manager of the store appeared and smilingly cut into the conversation.

"Yes," he exclaimed, "and the astonishing thing is that we're selling them—scads of them! I stand here day after day and wonder where all the flood of reckless dollars comes from—and also how long before it will begin to ebb. Our sales have increased 50% in numbers of pairs and 70% in volume of dollars in the last year."

A few minutes later I talked with another dealer in high-grade shoes and confessed to him my amazement at the story of the $90 steel buckles.

"He was telling you the truth all right," remarked this merchant, whom I have known personally for about twenty years. "Only a few days ago a woman came into one of our stores and bought two pairs of slippers with cut-steel buckles. They came to more than $200. In spite of the fact that we have a shoe factory of our own we have in the last year literally turned away more money from our counters than we have accepted. We simply could not get the goods to meet the demand. Of course this implies that hundreds of wage earners who used to buy inexpensive shoes—back in

ATHENA
UNDERWEAR
FOR WOMEN AND CHILDREN

TO EXPERIENCE the luxury of perfectly fitting underwear, one must wear ATHENA.

The form-fitting qualities of ATHENA, its beautiful fabrics and dainty, durable trimmings are a delight to the woman of discriminating taste.

The lines of ATHENA underwear conform to the figure.

It clings easily, naturally and gracefully, without being *stretched* to fit.

Ask your local dealer to show you ATHENA'S seven special features

1914—are now buying fine shoes, with comparatively little regard for price."

As public attention is now focused searchingly on footwear the following experience is too illuminating to be spared from the simple annals of the shoe store: Immediately after the outbreak of the European War two thoughtful white-collar men on meager salaries were discussing personal finances and the probable trend of prices.

One of them remarked: "I've managed to save an even hundred dollars and I'm going to chuck it in the savings bank as a sinking fund."

"All right," replied the other, "you deposit your hundred in the form of dollars at the receiving teller's window. I have a hundred saved and I'll deposit that downstairs in the same bank, but in shoes instead of dollars. We'll see who comes out ahead. You know I'm obliged to be on my feet from morning until night. So are my two sons, who have just taken walking jobs. This will mean a lot of shoes in the next few years. The boys have got their growth and therefore their sizes will not change."

This arrangement was carried out. After the signing of the armistice these two white-collar men compared notes on their deposits. The one who deposited dollars found that he had a trifle more than $120 to his credit. The shoes which the other deposited had cost $5 a pair, and his deposit was therefore twenty pairs.

"You see the make of these shoes," he remarked to his friend. "Now go into the store across the street and find how many pairs you can buy to-day for your $120."

"Oh, I've done that already," admitted the man with the bank balance. "My money will not buy ten pairs. As a depositor you are certainly a shark."

In a pleasant little country town of about 3000 inhabitants, a little less than fifty miles from Chicago, the superintendent of schools receives a salary of $3000 a year. In 1914 he drew $1800. He is a careful manager and at the end of that year he had just $200 saved above his expenses for a family of three. In the school year of 1918–19 his living expenses, pared down to the last possible degree, were $2700 and his salary was $2500. Some of the grade teachers under this superintendent were receiving $550. In a foundry in the same town molders are now and have been for some time receiving a regular wage of $40.50. In another manufacturing plant of much the same character in that town skilled workmen are making $45 a week. Quite a number of workmen doing much lighter and pleasanter work in another manufacturing plant of that village are drawing $50 a week, and a still larger number $30 to $40. One lately displayed a weekly pay check for $66.

The Plight of the Teachers

The most highly paid preacher in that community receives $1200 a year and donates at least $100 of it to the church. The city clerk gets $1500, the cashier of the larger of its two banks draws $150 a month, and the assistant cashier, $125. The assistant cashier of the smaller bank gets $25 a week and the assistant postmaster's salary was increased, last July, from $1100 to $1200 a year. In July of 1918 and 1919 he received a bonus of $200. The office manager of the foundry in which skilled men are earning $45 a week and semiskilled labor $35 a week receives $45.

One of the grade school-teachers in this town, drawing $550 a year, decided that the financial atmosphere of the schoolroom was a little too oppressive for her and therefore sought a job outside of her chosen profession. She is now drawing $1570 a year. This picture of the spread of incomes as between the white-collar crowd and the wage workers is duplicated in thousands of other towns.

Up to the fateful Monday of September 22, 1919, there were literally hundreds of skilled workers earning a weekly wage of $100 and up—with marked emphasis on the word "up." In 1914 the wage for common labor in the steel plants for the Calumet District was $1.95 for ten hours and $2.30 for twelve hours. The increase for the ten-hour basis has been 137% and for the twelve-hour basis 145%. In 1918 the average earnings of all the employees of this great corporation was $1685. The lowest daily wage paid to skilled help was $7 and the highest $80. The average pay of all rollers was $30 a day and the melters averaged $20. Last year the Steel Corporation had on its pay roll 268,710 employees. There are now more than 60,000 of it ployees who own stock in the corpor

For the sake of definiteness with r to the difference between white-colla ployees and wage workers the manager of several large corporations were viewed. One of these, in Detroit, dec

"In this city in 1914 first-class ma ists were receiving 35 cents to 40 cer hour, and first-class toolmakers 42½ to 45 cents. To-day machinists are aging $7 to $8 a day and toolmakers $9 a day; in other words, the wages of men in mechanical trades have incr at least 100%. Salaries of white-collar outside of important executive posi have increased approximately 70%.

Where White Collars Fare B

If this summary of the employmen ation in Detroit is accurate the white- crowd in the famous automobile city a decided advantage over their fell almost any other part of America. example, the pay roll of a very large p service corporation in Chicago shows a different situation. Since 1914 th of its wage workers has advanced 8 and the compensation of its white- men 18.35%! Another big public-s corporation is justly proud of the fac its salaried employees have been adv 50% since 1914, as against a raise o for its wage workers. One of the l ice-and-coal companies in America the following comparative showing:

	AUGUST 1914	AUGUST 1919
	PER WEEK	PER WEEK
Ice drivers	$19.50	$30.00
Ice helpers	17.25	27.50
	PER DAY	PER DAY
Coal drivers (2-horse)	3.00	5.00
Laborers	2.00	4.00
	PER MONTH	PER MONTH
Bookkeepers	$72.50	$115.00
Clerks	60.00	85.00
Stenographers	60.00	85.00
Car accountants	65.00	115.00
Collectors	65.00	100.00
Cashiers	75.00	120.00

In one of the large packing comp where employment conditions and are undoubtedly typical of the indus a whole, salary workers have been inc 43%, while common labor, working hour basis, has been boosted 167% 1914. One of the largest corporati the West has increased its pay to co labor 116% since 1914 as against an in to salaried employees in its manufac department of 75%. Perhaps the collar crowd makes its best showin certain big industrial corporation Middle West where employee repre tion is in a high state of development. common labor has been increased since 1914 and salaried employees 100%. This company, however, is liant, not to say startling, exception rule so far as the percentage of its in to salaried workers is concerned.

No investigator can follow this research to any great length without compelled to admit, at least to h that as a general rule the increase of salaried employees has been great those companies commonly classed business, not to say "malefactors o wealth." Also he cannot escape reco of the fact that the white-collar em fares best in those industrial organiz in which the principle of employee sentation is applied with the most si and practicality.

But to return for a moment to th shadowing and persistent presence H. C. of L., one national authority that it has climbed since 1914 to the altitude of 117% and a fraction. A equally distinguished and dependab thority puts its altitude at 103% abo of about five years ago. If you hap be a white-collar man you would pr prefer, as I do, to believe that tho have to maintain a white-collar fro entitled to believe the worst and acc higher figure.

If the reader persists in asking the p question: "What is to be done abo the answer is as simple as it is ol "Increase production and practice vidual thrift." Here lies the only w And to the innocent bystander it a to be pretty much up to the wage w

In view of these facts, Mister S Man, how would you like to swa white collar for a suit of jumpers snuff-colored work shirt?

BLACK SHEEP

(Continued from Page 38)

eter three days aren't very formidable. av Doctor Dill's affidavit about the scar th man's chin and so on. You can ex- n my chin with a microscope if you 's. 'll tell you, if you care to know, I was ein Billingtown, Nebraska, in my life. er oned William Pomeroy for my own sos. You two can get out now. If you r t a finger against me I'll smash you t leaks me."

He poke coolly, looking straight at them, d s they still stood paralyzed, he added er brief moment, "That's all! Get !' He moved to the table and pressed a l tton on the corner of it.

Jue mechanically McMurtry and Mor- rned to the door. As they stepped o ne anteroom the guard came up, w ing Dinsmore's ring, and they heard s ore say to him, "Thank you; it's no tt now."

Thy found themselves on the broad ewlk. It was the same thronged busy ce the same towering buildings, the ne une sunshine up above; nothing had n d—hardly even the Board of Trade ckwhich showed only two minutes past ce But for all that, it was an utterly ent world, in which the two pedes- n couldn't find themselves.

"Tr cell sold us out," Morden muttered in sly.

Bu the lawyer's mind was not so nd as that. He perceived that the x the matter lay in an entirely differ- rection.

"Jat damned smooth chin!" he said nly. "He has got Dill's affidavit— ou the scar and so on. The scar's all oth it. I don't make it out—yet."

Thy moved automatically up the street, idly shipwrecked and vaguely groping a ew bearing. But they found none.

"Jat damned smooth chin!" McMur- uttered again as they entered his co uilding.

Mnwhile Dinsmore had turned to rcl saying: "Of course they would ve windled you. You're a young man. u n do better than tie up with black- s. I'm willing to drop this where it n. But this thing started with you— nv that. Pomeroy went to you with s ry. I'm going to hold you responsi- . the thing ends here, very well; I've hg more to say. But I meant exactly at said when I told them I'd stand no re onsense about it. I shall look to you. u' young; you must have ability or u couldn't have that newspaper posi- n. Go straight and you've nothing to be ai of."

Hf paralyzed, Purcell, heart in boots, l only stammer abjectly: "I shouldn't ve got into it, Mr. Dinsmore. I was nged ——"

"C course," said Dinsmore, not un- di. "Buck up now! Go straight! u're nothing to be afraid of if you do. t ou started this. I'm going to hold r sponsible for the other two. Keep ir ye on them."

"I will," said Purcell shakily.

Dismore smiled and replied: "Good k you. That's all."

So Purcell also found himself out in a nir yet quite strange street; but some- w unlike McMurtry and Morden— lir tremendously grateful, as though he l arely escaped a dire peril.

As Purcell left, Dinsmore started to fol- w, ut he paused on his way to the door l ut his hand up to his face; then il as he realized the beard was gone. kig up the telephone from the table he le his house. The butler answered and ns ore gave him this message:

"Tell Mrs. Dinsmore and Louise that I a coming home at once and bringing ma surprise."

Th two women were expecting him er ore when he drove up to the house an ir ater and as he stepped into the living on his wife uttered a prolonged note of a ment.

"Why, Al-fred Dins-more!" She sprang ad ran to him, laughing in a joyous ci ment and exclaiming: "Why, Alf! he did you do it? Why didn't you tell yu were going to? You know I always n d you to!" And she fell upon him, kig him and hugging him, feeling his oth cheek with her hand, still bubbling pr laughter and exclamations. "You g have told me! Oh, I'm so glad u e got that old beard off! I told you it would make you younger—and handsomer! Doesn't he look just a boy again, Lou?" She turned her shining face to her daughter and at once gave a new note of surprise: "Why, Louie! Silly child, what are you crying for?"

Mysteriously the tall young woman seemed transformed back into a small child as she stood looking at her father, tears running down her face.

"I don't know," she murmured, and gave a helpless little laugh through her tears; "only I'm glad!" She silently put an arm round her father's neck and laid a cheek against his. Then she rubbed her hand over his chin and kissed it and murmured again with a helpless little laugh through her tears, "I'm glad!"

"Foolish Louie!" said her mother, herself sympathetically moved almost to tears by something mysteriously childlike in her daughter's emotion. She turned to her husband, bubbling again, "I told you it would make you years younger! Why didn't you tell me?"

Smiling, Dinsmore explained that he'd been thinking of shaving his beard for sometime, but he hadn't told her, because he wished to surprise her; and as husband and wife talked a moment in that strain Dinsmore was furtively regarding his daughter.

"Come! Let's show your mother—and Cousin Elliot too!" Mrs. Dinsmore cried, slipping a pretty hand under her husband's arm.

From where they stood in the living room they could see Mrs. Dinsmore, Senior, and Cousin Elliot sitting out on the lawn looking at the lake—the aged woman so blanched and frail she seemed a barely embodied spirit, and Cousin Elliot gravely happy in a new brown-linen suit.

"No, wait a bit," Dinsmore replied. "I want her to be prepared a little beforehand. Mother's too old for any shocks. You find a way to do it, Nell."

So a little later Mrs. Dinsmore left them. Through the east windows they saw her move across the lawn toward the older pair—a pleasing, gracious figure.

"So you approve it?" Dinsmore said to his daughter in a light tone, smiling a little, but watching her closely.

"Yes, daddy," she murmured, and leaned against his shoulder, her eyes downcast.

He considered a moment—recalling the evening before—dropped the light tone and asked soberly, "Perhaps you've heard something, Louie—something about that beard."

"Yes," she answered.

He waited a moment again and said: "It occurred to me last night—though I couldn't imagine how."

"I've been thinking of it all the time," she said, low, with downcast eyes, "whether or not I ought to tell you. Maybe you ought to know. My maid, Jenny, left to-day."

He could make nothing coherent out of those disjointed hints, but he could form a vague surmise. He took her hand, kissed it and tucked it under his arm, saying, "Let's go upstairs."

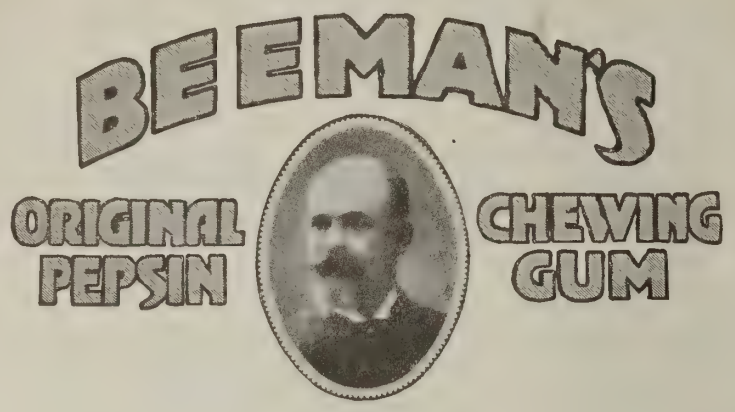
Up in his den she preferred to sit at his feet, where—looking steadily out at the lake—she repeated Jenny Dupee's story, concluding—in the same hushed voice, "I've been thinking of it ever since—whether I ought to tell you. It seemed you ought to know."

He had listened to the recital without comment or motion and was silent a moment after she had finished.

"I see," he said. "Well, it was high time. I should have cleaned this thing up long ago. I didn't kill that man, Lou. I was never in Billingtown, Nebraska, where he was killed—but maybe I wasn't very far from it in one way. I wasn't very steady as a youth. I played poker and did plenty of other fool things.

"Suppose, now, I'd got into a great mess at home and struck out at random, without any money to speak of, and so on. Suppose I had fallen in with a certain gang of older men.

"I've wondered a thousand times, if all the circumstances had been right, just how much I would have balked at a proposition to rob a country bank—all easy and safe, a lark. I hope to God I would have balked! I think I would. Yet I've wondered a thousand times—if all the circumstances had been just right and it had struck me



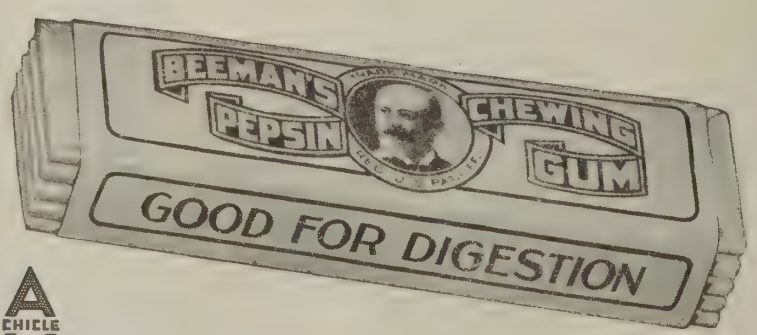
Increases Efficiency

WHEN a man is irritable and annoyed by little things his efficiency is greatly diminished, because under these conditions he cannot do his best work, nor can he get the best work out of those about him.

Generally indigestion in some slight form, due frequently to hasty eating, is the makings of a grouch.

In most cases of this sort the routine use after meals of my Original Pepsin Chewing Gum will relieve the indigestion and restore the temper of the individual to a calm, normal condition.

D. E. Beeman



CHICLE

AMERICAN CHICLE COMPANY

New York Cleveland Chicago Kansas City San Francisco

like robbing an apple orchard on a bigger scale. I've got a great fault, dear girl—I'm not enough afraid.

"Four men robbed that bank. The leader was named Colby—a county-fair faker and great rascal. There was a negro named William Pomeroy who was a sort of man Friday and bodyguard of his. And there was a man who lived out there in Billingtown named Sykes. Then there was a young man whom they called Tom Wilson. The cashier surprised them at it—came on them suddenly, it seems. Wilson fired—in sheer panic, no doubt—and killed him. But the cashier wounded Wilson and he was taken to Sykes' house where a Doctor Dill attended him.

"Years afterward Colby and Pomeroy concluded that I was Tom Wilson. I let them think so. I paid them money. Pomeroy came here to the house every month and got six hundred dollars. I don't know just why, but Pomeroy, the negro, got dissatisfied. He was afraid of Colby—with very good reason. No doubt Colby kept most of the blackmail money—gave Pomeroy what he judged the negro ought to have. Pomeroy got dissatisfied; he wanted to get hold of some money for himself and get away. That must have been running in his head a long time—how he could manage to do that without Colby finding it out until he'd got the money and disappeared.

"It's hard to tell just what goes on in the mind of a man like Pomeroy—a good deal like trying to dig back into the mind of a monkey. He was childishly ignorant in a good many ways, yet with a kind of simian shrewdness too. Well, he saw in the newspapers about my libel suit against the Leader. He thought the Leader would be anxious to get any kind of a hold over me. So he actually went up to the Leader office and asked for the editor and was shown in to a sort of amateur rogue named Purcell, the managing editor. This fellow Purcell got him to tell his story, but the negro demanded some sort of bond first, so Purcell—gauging his man—wrote out an absurd promise to pay him a hundred thousand dollars in case he felt like it, for that's what it amounted to, and signed J. Wesley Tully's name to it.

"You see, it was two blockheads and amateur rogues, but one with a better education than the other.

"So Purcell went with the story to a blackleg lawyer named McMurtry, who called in a blackleg detective named Morden, and the two proposed to blackmail me for a few millions. The detective went out to Nebraska and found Doctor Dill—a sad old wreck, all shot to pieces with drink and drugs—and brought him here. He cheerfully identified me as Tom Wilson. Then McMurtry came up here and demanded a quarter of a million dollars and I agreed to pay him seventy-five thousand the following day, which I did. I had to gain time to cast round and see how I could protect myself.

"You see, Pomeroy—with that curious kind of ignorant shrewdness of his—had said that John Colby was dead. I gathered from what McMurtry said, he even charged me with having killed him in some way or other. Pomeroy was mortally afraid of Colby and was shrewd enough to know that if these other fellows knew Colby was alive they'd probably insist on bringing him into it. So he told them Colby was dead. Of course he wasn't at all. He was living here at Luke's Hotel under the name of James Collingwood. Probably he'd got into a very bad scrape somewhere and thought it best to keep an assumed name. I don't know anything about it, but that's the reasonable presumption. When McMurtry began talking to me I saw he must have been talking to Colby or Pomeroy. When he said Colby was dead I concluded it must have been Pomeroy and that Pomeroy was keeping it dark from Colby.

"Well, I wanted to shut Pomeroy up and get him out of the blackmailers' reach, and I was satisfied he was acting behind Colby's back. So, soon after McMurtry left the house—as soon as I had studied it over and come to that conclusion—I went downtown and looked up Colby. I knew where he was apt to be found—a poker joint, in fact—and I changed my clothes, for I didn't want to attract attention in that neighborhood. Well, I found Colby and told him what had happened, and was more than ever satisfied that Pomeroy was acting on his own hook. I said he must find Pomeroy at once and get him out of town where the blackmailers couldn't reach him and then we'd think of a counterst against them. He agreed to that.

"It would take some money of co for they would be cut off from the ba supplies for a while. I said I would go to a hotel and engage a room and wai him there, while he found Pomeroy got ready to leave town. This was past ten or eleven at night, you know- a very good time to raise cash. I went to the club and got what little cash had there and found a young chap knows the way about town at night went out scouting for me. The upsho I got twenty-three thousand dollars. I went over to the hotel and waite Colby. It was sometime between tw three in the morning when he appear noticed that he had changed his clothe seemed shaken and had been drinki good deal.

"He said it had taken him a good to find Pomeroy and Pomeroy had disposed to bluff him off at first, but fi had confessed and agreed to leave t Pomeroy had told Colby about his deal Purcell and given him that strange ment which pretended to promise a hun thousand dollars. Colby showed it t and I kept it. That's how I knew t part Purcell was playing in it.

"That was Colby's story. He and I eroy were all ready to leave town the said. I gave him the money and he out. The talk took some time and I wa to think a while. When I looked at watch it was twenty minutes past thre too late to go home, so I slept at the and had some different clothes sent to the office in the morning."

He laid his hand on his daughter's and was silent a long moment and cle his throat.

"Louie, dear, Colby must have k Pomeroy that night."

She gave a sharp little gasp, lifting face on which the shock was registered clutched his hand.

"He must have killed him," he repe "It must have been Colby. From th cumstances, I'm satisfied he found Pom and talked to him just about as he tol and made him agree to leave town. must have left Pomeroy's lodging h together by the back door—Pomeroy's case packed ready to travel. It seems th a dark area back of the lodging ho next the alley. Pomeroy must have tri break away there. There must have a fight. I tell myself that Pomeroy denly attacked Colby to throw him of break away. Colby struck him wi knife. I must have it that it happened sort of self-defense. When it happened no idea. Colby changed his clothes came to me and got the money and

"The blackmailers traced that out charged it up to me. How much I'm ch able with it, I'll know at judgment day I know I never thought of it beforehan

"Well, Pomeroy and Colby were There remained Doctor Dill. I cont that he should make an affidavit iden ing me as Tom Wilson and describin scar on Wilson's chin. Then I shave beard and showed them my chin. I c late that checkmates Doctor Dill. Th checkmated all round and know it. told them this afternoon, if they ever a finger against me again I'll smash t I'm going to be done with it for good all. I ought to have been done with it ago. If I had cleaned it up long a wouldn't have this bad thought of much I'm to blame for the poor Pomeroy. I ought to have done it long

"Of course you're wondering wh didn't. You've got to know it all You know I had an older brother, Artl

The fact of her dead uncle had be her mind as far back as she could rem ber—a fact to which only the faintest, vicarious sort of emotion attached, as had never seen him. But with a su prickling of the nerves now she brea "Yes." Her father pondered a mo before resuming.

"Some day science will know what with beings like him, but it doesn't He was two years older, and as far ba I can remember I knew there was somet wrong about him. There was somet wrong in his brain—a grounded cir Looking back at it now, I'd hardly sa was vicious. It was hardly that. T was a patch somewhere in his brain tha hardly more than idiotic. too, Hereafter says she has already expiated whatever sin there was.

"I'm confident it's settled now for her. All these blacklegs wanted was money out of me. With me showing a smooth chin, they have no trail to follow, for their whole story hung on a scarred chin. Of course my wearing a beard just happened at first; then I kept it because I was used to it. Maybe it pleased me to wear a beard when most men went smooth faced. But afterward, when I heard about the blackmail, I kept it purposely, because it was a red herring across the trail. As long as they were looking to me they wouldn't be looking for another Dinsmore. In that way it protected her.

"They had me in a disagreeable place. I played a game with them and at what I thought the right moment shaved my beard for checkmate. I'm confident they are too discouraged now to go further. They might possibly try to find Colby; but he has three days' start and is an old hand at dodging. Of course they've no interest in finding him unless they can get me, and their case against me has collapsed. I'm not afraid of them.

"You see, when I learned about this blackmail I said that, after all, it was only a question of some little annoyance and paying some money that didn't matter to me in the least. Seeing how my mother felt, I said I'd just buy Colby off and have done with it. But probably it's only grocery bills that money will really settle. It finally let me in for this bad Pomeroy affair.

"I'm chargeable with something there. My hands aren't really clean. You can't do dirty business and keep clean."

She saw that he was moved, and said, "But you never meant it, father."

"No, I never meant it; but it happened all the same. I'm chargeable with something. There's a smudge on my hands—and a bad thing to think of. I haven't been a good man, daughter. I've been too headstrong and confident—too reckless, I suppose. I came up here to Chicago and went on the Board of Trade. Of course the grain business was what I knew about. It was my father's business. I liked the excitement and the risk. I liked to win. Your mother can tell you that I got my name in the newspapers as a daring operator and all that. It wasn't very good for me."

She saw that he was moved, and he laid his hand on her head.

"When you were a little girl, four years old, I gave up all that. On your account I didn't want it. I said I'd get into something steadier. But finally I had to quarrel with you over young Proctor, who's probably a very good fellow too. I might have done a lot better than I have done, Louie."

"It was my fault that we quarreled, dear," she said contritely, and kissed his hand. And for a little while they talked in happy reconciliation. Presently, clasping his hand and looking toward the window, she said: "I have a little story to tell too—I love Ned."

Having told that much, she looked up at him and told the rest—her mistake about Lowell Winthrop; how fine and steadfast Edward Proctor had shown himself in adversity; how with that miserable old misunderstanding in her mind she had suspected her father of hiring a spy and Edward Proctor had defended him. Then they talked further of that most intimate subject father and daughter could talk about. Finally she said—coaxing, half doubtful, but with a precious hope:

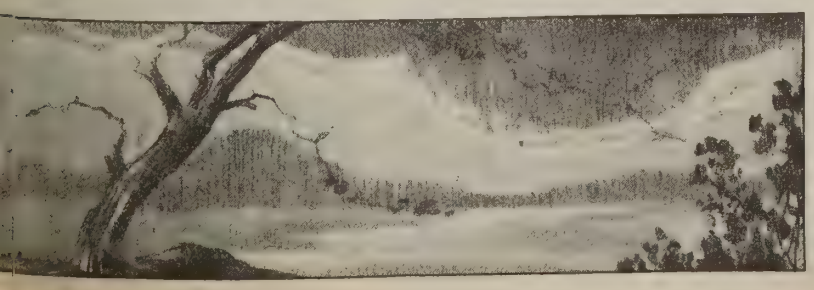
"Do you think, father—I might make him a beautiful present—might bring him a very beautiful marriage gift?"

"And what would that be?" he asked.

"To pay off those savings-bank depositors. It's about seven hundred thousand dollars."

He smiled at her upturned face and replied: "We'll talk that over with him."

(THE END)



Swinehart Tires

Dealers Know Why

They Wear -and Wear -and Wear

Tire Character

Swinehart Tires are character-tires; character that has endured the test of use for 16 long years.

Swineharts are manufactured by men devoted to the principle of the thing and they live up to the Swinehart Ideal.

When you get Swinehart Tires you know for a fact that you are getting all that is getable in tire service, tire reputation and tire quality.

The Tire Without a Single Government Rejection

Swinehart Tires are made in both Fabric and Cord—Hexagon, Ribbed Treads and Plain. All give more guaranteed mileage for your money than you ever would expect or ever have a right to expect.

Ideal Cellular Truck Tires

The Tire That Saves the Truck

A tire that has all of the advantages of the pneumatic with none of the disadvantages. *Its wonderful resiliency saves the truck—saves the load.*

It *wears*—and *wears*—and *wears* because it does not burn itself up.

The cellular construction of this tire keeps it cool; gives it pneumatic qualities; prevents skidding.

There isn't a tire made, solid or pneumatic, that will do more for you or your truck.

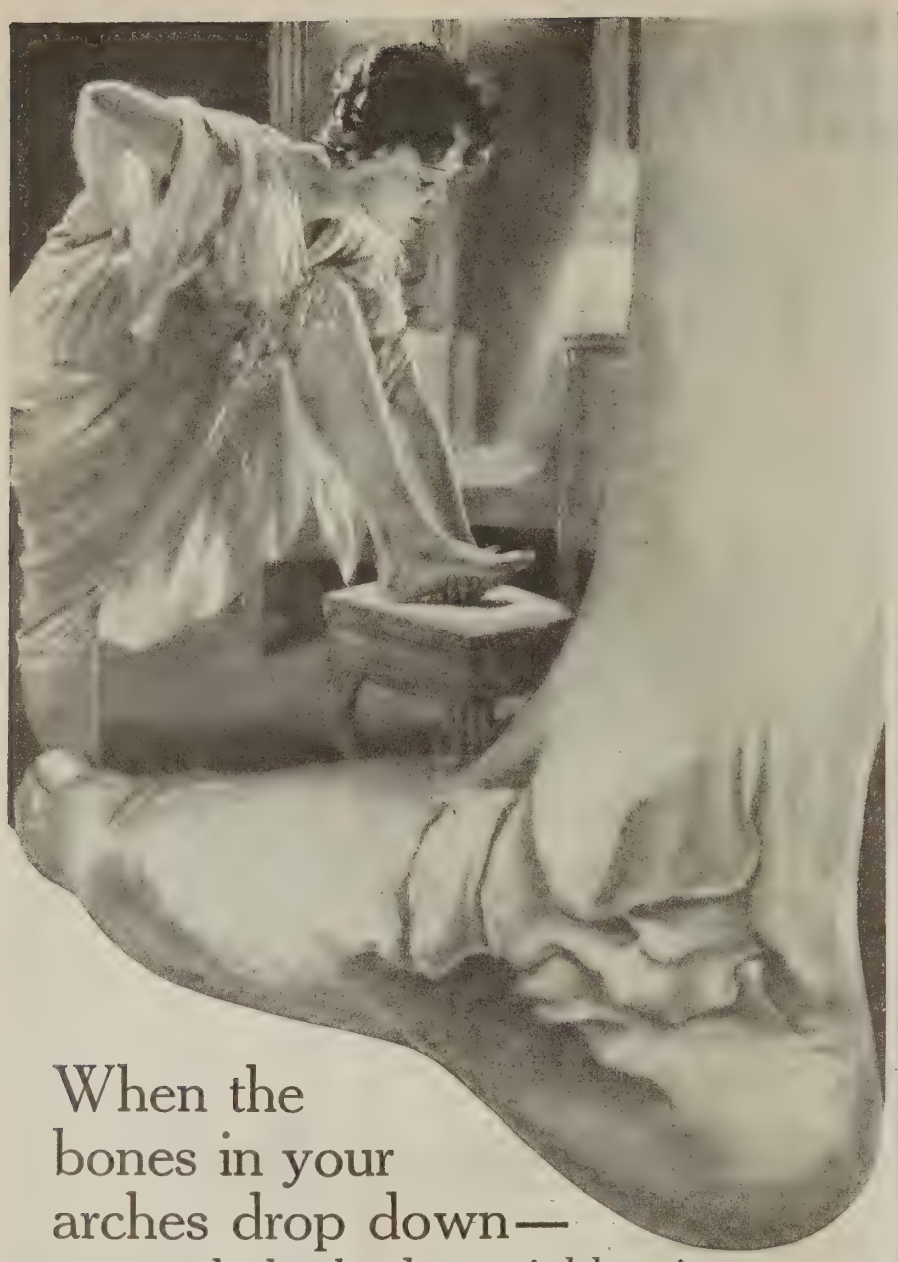
Let us explain these practical, scientific features.

Dealers to Serve you Everywhere

The Swinehart Tire & Rubber Co.
AKRON, OHIO

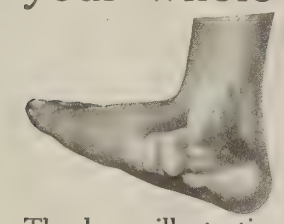
Dealers:

A Swinehart agency is the banner proposition of them all. Fewer comebacks, glad customers, and an absolutely A-1 tire. Better get our proposition at once.



When the bones in your arches drop down—

your whole body quickly tires out



Fallen arches, commonly called *flat foot*, cause pain in the feet, ankles, calves, thighs, and sometimes in the back. This condition, *also nearly every other form of foot trouble*—such as run-over heels or callouses on the sole—is the result of a weakness in the structure of the foot.

The large illustration above shows the proper formation of the arch in your foot. And in the smaller X-Ray view, you see the extreme stage of flat-foot. As the arch falls, the undue pressure of the displaced bones produces a painful strain on ligaments and nerves. Foot pains are *signals* of foot weakness. At the first indication of foot discomfort, you should have your feet examined by a qualified Orthopraxic expert. He will give you immediate relief—and remove the *causes* of your foot trouble.

Restore your arches to normal, with

Wizard

Adjustable Foot Appliances

The Wizard method of foot relief is entirely and exclusively *different*. With Wizard soft leather inserts in overlapping pockets—flexible, feather-light—a comfortable support is built under the displaced foot bones, holding them up in their natural formation. Your foot structure regains its proper conditions. All pain *stops*. Whatever your foot trouble, get *Wizard foot relief*. It is complete and lasting.

Wizard Foot Relief experts, qualified Orthopraxists, are at shoe and department stores everywhere. Also at surgical supply houses. Go and get Wizard Foot Relief today.

Write us for Free Booklet, explaining the exclusive principle of the Wizard Foot-Relief Method.

to the Wyalusing, Pennsylvania, Rocket. You're goin' to make all the rest of them look like shrinkin' violets on a foggy afternoon when I finish up with you. You just wait and see."

"How long have I got to wait, Jimmy?" ventured Lolita, who was adrift in the realms of fancy, carried thither by the soothing cadences of Jimmy's voice.

"Only until some afternoon when this June Delight person fails to show up. I hear she's talkin' of layin' off for a few days. If that doesn't happen by the middle of next week I'll get to her chauffeur and frame it so that she misses the show. Then we'll pull the big act. If you'll promise not to talk about it even in your sleep I'll hand you a little advance information on the subject."

Only the silent stars and the discreet moon shared Jimmy's confidence with Lolita. Its general tone and tenor lifted that despairing daughter of the plains out of the rut of hopeless striving into which she felt she had fallen and filled her with such anticipatory delight that when she said good-by at the door of her boarding house she impulsively reached forward and kissed him full on the mouth.

"You're a darling!" she murmured.

"I'll take an encore on that, girlie," he replied.

And he did.

MISS JUNE DELIGHT summoned Manager McClintock to her dressing room just before the Saturday-night performance and successfully simulated the classic symptoms of impending nervous prostration while she sniffed at a vial of smelling salts and submitted to the ministrations of a tired maid who gently massaged her forehead with her finger tips. Miss Delight in a voice that was barely audible informed the manager that she could not possibly endure the trying ordeal of further performances after that evening without a brief period of rest and that she was leaving for a week's stay at a sanitarium on the following morning.

McClintock gave voice to low moans and flew other signals of distress, but Miss Delight was obdurate to his more or less frenzied expostulations and remarked that though she was disturbed at having to disappoint her dear, lovely, friendly public she felt that her health was the prime consideration. The manager was in a surly mood when he left her to seek out the stage director.

"Who's the understudy?" he inquired.

"She calls herself Lolita Murphy," replied the director, "but I understand there's a certain party connected with the publicity department who calls her even flossier names than that."

"Jimmy's gal, eh?" commented the manager. "Well, she's there with the looks anyway. Has she had a rehearsal?"

"She's been through the thing roughly with the rest of the understudies, but I can have the whole troupe called for to-morrow morning and we can run straight through. We'll get out the dirigible and go through with the rescue stunt. We mustn't fall down on that. The little lady seems to be there with the nerve, but I'd like to try it out."

Jimmy was permitted to break the news to Lolita. He met her after the performance that night and imparted the glad tidings. When he left her he gave her a final word of caution.

"Keep the little old nerve up, girlie," he said earnestly, "and we'll wake up the whole country on Monday morning."

"I'll try, Jimmy," she whispered. "You're just the—well, just the dearest boy I've ever known."

On the following morning Lolita, athrill with excitement and a little nervous, assumed the title rôle in Secret Service Sally at a rehearsal, to the complete satisfaction of McClintock, the stage director, and Jimmy Martin. The latter watched her with adoring eyes and when she successfully essayed the sensational rescue scene he was moved to wild and clamorous applause, which sounded a bit startling in the great empty auditorium. Under Bobby Wilkins' expert direction the big clumsy dirigible was maneuvered round the edge of the roof and Lolita was lifted into the car by the former ace with such adroit ease that the whole thing seemed to be simply part of a casual everyday occurrence. When it was over and Lolita had been safely landed b earth and had received the congratu of everyone concerned she drew Jimm and clutched at his arm for support

"I'm ready to faint," she said w "I believe I would have up on the roo I saw that big thing coming towar that fellow hadn't grabbed me quickly."

"You need a little nap," res Jimmy soothingly. "The worst is o the best is yet to come. Don't forg young Mr. Arthur H. Opportunity date with you this afternoon and t big splash is due to-morrow morning you go in and get a little sleep and I a talk with my friend the handsom tenant. I fixed things with him last but I've got to go over some details

A few minutes later the press ag closeted with Bobby Wilkins in the in which the dirigible was housed park gates had just been opened for t and crowds of holiday merrymaker surging through them in quest of th seven varieties of feverish and hec tertainment which Jollyland provi those in search of diversion.

III

IF ANYONE had called Jimmy M psychotherapist he would promptl denied the soft impeachment first a asked for a dictionary and an expla blue print. And yet as a direct res random idea which had bobbed i active mind a few weeks before he consciously serving in that capacit large and ever-increasing throng of politan society women of varying ag flocked to Jollyland in search of a ne which he had provided. The windin war-charity work which had followe upon the return to these shores of th part of the American Army had many of these women back upon th resources; and their innate restless a which had found such an altruistic in new channels for several years, n periously demanded fresh excitemen it was this that Jimmy offered them

On the occasion in question Jimm overheard a coy young débutante w watching a performance of Secret Sally remark to a group of friends w companied her that she'd just love up on the stage and mix with the That was enough for the press agen minutes later, during the intermiss escorted the entire party behind the and under his guidance they parti in the London episode which conclu show. They mingled with the cr supernumeraries and entered into t ceedings attendant upon the thrillin gible rescue with such gusto that th manager gave Jimmy carte blanche courage the idea.

It happened that in this particula were several of the socially elect a papers next morning carried ex stories chronicling the event, couple the announcement that the park m ment would, throughout the seas pleased to extend the privilege of pating in the entertainment to other who might wish to take advantage opportunity for this unusual form o tainment. Society seized upon th voraciously and Jollyland parties new fillip to the summer season at Long Island resorts. Elderly mat ample girth vied with the members younger set in setting the pace, and i instances came again and again to a part of the great spectacle. For t time in its history Jollyland began t in the society columns of the daily and great was the prestige which enjoyed in McClintock's eyes as a

The particular luminary of the Island season at the moment and t spective lion of the month of August a port was none other than the Hon. Ashley, daughter of the second Lor bourne, and the most talked about woman in English society for a peri beginnings of which antedated the several years. Before the great Eu conflagration the Honorable Betty, then still in her early twenties, was a pean celebrity. Spirited, impulsiv headstrong by nature she had ea belled against the ultraconservative tions of her family and had so thor

my received this intelligence with a rss that rather annoyed McClintock. What did she want to pick out to-day "e inquired uneasily.

What's the matter with to-day? It's b t day possible for a good break for The papers are always glad of anything akes a noise like a story on Sunday. at the matter?"

O nothin'," replied Jimmy absent- d ly; "only I wish she'd waited until m idle of the week. I was kinda fig- 'n —— Oh, never mind; it'll be all t

IV

AN ACUTE observer would have de- tted signs of suppressed excitement h general demeanor of Jimmy Martin r the progress of the early scenes of the great spectacle in which Lolita Murphy was essaying the leading rôle for the first time on any stage. He had exchanged his customary cigarette for the solace of a particularly formidable-looking cigar, which he puffed at nervously as he sat in the manager's box with his cap pulled down over his eyes. His whole body was tense and rigid, and though there was a look of adoration in his eyes there was something more—a vague something that seemed to spell apprehension.

Justice compels the admission that Lolita was doing herself proud. She moved through the thrilling situations of Secret Service Sally with the ease and calm assurance of a veteran and more than merited the applause which the vast holiday audience showered on her. When the curtain rose on the final scene—the one depicting the streets of London—the audience, keyed up to expectant excitement by the gaudy promises of the program, held its collective breath and Jimmy sank his teeth viciously into what remained of his cigar. McClintock slid into the seat alongside of him.

"That gal of yours is sure making good!" he remarked good-naturedly. "If she goes through to the finish as nicely she'll find a surprise in her envelope on Saturday night. There's that English society dame and her party strolling along just as if they were back in dear old Lunnon. I had Lawrence, the assistant stage manager, go on with 'em to put 'em wise to all the business."

The mimic street on the stage was thronged with a motley crowd of supernumeraries who were supposed to represent the populace of the British metropolis out for an airing on a bank holiday. The rose-pink sweater of the Hon. Betty Ashley was the most conspicuous object in view. That patrician lady bobbed in and out among the others, apparently having the time of her life and urging her friends, with violent pantomime, to enter into the festivities with something akin to her own enthusiasm.

Presently the audience heard a murmur pass through the crowd on the stage and Jimmy's acute ear detected the muffled purr of the motor on the dirigible, which was at that moment maneuvering for position and awaiting its cue two hundred feet in the air just behind the backs of the last row of spectators. The press agent grabbed the railing in front of him and leaned eagerly forward. He was watching the right side of the stage.

A motor car shot out of the wings through a lane in the crowd. In it sat Lolita Murphy in the rôle of queen of the American Secret Service. It was plain that she was simulating great anxiety and that she was being followed. She looked apprehensively over her shoulder and the audience could catch excited shouts of "Stop her! Stop her!" A gigantic bobby stepped directly in the path ahead of the car and drew his revolver. The chauffeur pulled a lever and the car stopped abruptly. A man on a motorcycle came dashing up.

"Arrest her!" he shouted and he sprang from the saddle. "She's a German spy from the Wilhelmstrasse."

Lolita looked about furtively, poised herself for just a moment and then leaped out of the car, overturning an athletic super and making for a doorway as the crowd broke into frenzied cries of "Kill her! Kill her!" The incident had been rehearsed with the utmost regard for actuality, and as the mob surged after the suspected spy the vast throng of spectators swayed with excitement like a field of tall grass in a breeze. Lolita reached the safety of the doorway by almost the fraction of an inch and disappeared. The crowd poured in after her and McClintock caught Jimmy's arm as he caught sight of a vanishing flash of rose pink.

"Damned if that English dame isn't right in at the death!" he said excitedly. "She's going up on the roof."

Jimmy didn't reply. He was watching the roof of the make-believe building with eyes that were strained and staring. As Lolita emerged from the hatchway and plunged forward with a fine gesture of despair, he looked back over his shoulder for a moment and noted that the N-24 was slowly swinging forward and that the alert and eager face of Bobby Wilkins was visible over the edge of the car which hung from the rear of the big balloon.

Lolita held out appealing hands and gave voice to cries for assistance. The crowd, in the vanguard of which was a lady in a rose-pink sweater, with cheeks that were flaming and with eyes that were dancing, swarmed

WHEN TO SMOKE

If you smoke 6 cigars a day—
Smoke 1 about 10:30 A. M.
3 from 1 P. M. (after meal) to 5 P. M.
2 from 7 P. M. (after meal) to 10 P. M.

If you smoke 5 cigars a day—
Smoke 1 about 10:30 A. M.
2 from 1 P. M. (after meal) to 5 P. M.
2 from 7 P. M. (after meal) to 10 P. M.

If you smoke 4 cigars a day—
Smoke 1 about 10:30 A. M.
1 about 1 P. M. (after meal).
1 about 4:30 P. M.
1 about 7 P. M. (after meal).

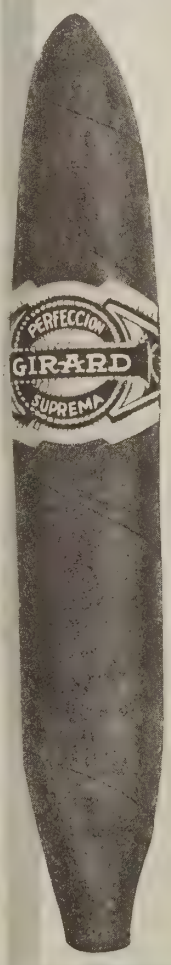
If you smoke 3 cigars a day—
Smoke none in the morning.
1 about 1 P. M. (after meal).
1 about 4:30 P. M.
1 about 7 P. M. (after meal).

If you smoke 2 cigars a day—
Smoke 1 about 1 P. M. (after meal).
1 about 7 P. M. (after meal).

If you smoke 1 cigar a day—
Smoke it after your heavy meal.

(1) Don't smoke continuously.
(2) —nor immediately before meals.
(3) —nor immediately before retiring.
(4) Always smoke slowly; it increases your enjoyment and is better for you.
(5) ***Never smoke the heavy, oily type of cigar at any time.***

The Girard Cigar is the most famous cigar in America today because it ***"never gets on your nerves."*** And at the same time, it is a mellow, ripe, rich, delicious Havana smoke—satisfying down to the last puff.



WHEN this Girard "Smoke Schedule" was first published in the magazines about a year ago, it excited so much interest and comment and brought so many requests for copies of it that we issued it in the form of a small card to be carried in the inside coat pocket. Many thousands of these cards are today carried by smokers throughout the country, who follow the schedule as a model of good smoking habit.

We are again reproducing the "Smoke Schedule" here in pocket form for the benefit of those smokers who do not already have a copy of it.

Cut it out and keep it with you. The man who smokes *the right kind of cigars,* and who follows this schedule as closely as conditions permit, will never have to worry about any ill-effects of smoking.

up through the opening and surrounded the suspected spy. The supernumeraries' voices became a blended babble of inarticulate cries and 3467 spectators watched the developments in a tense silence.

Nearer and nearer swung the great dirigible. Lolita was now in the hands of the mob, with which she struggled fiercely. As the N-24 swung round the corner of the roof she turned as per instructions, but Jimmy noticed with a gasp of concern that she had turned in the wrong direction and that she was making her way to the wrong side. She was evidently bewildered. Bobby Wilkins was leaning out of the car with his arms outstretched and was beseeching her to run toward the other side of the roof. In another five seconds the dirigible would have passed on and the spectacular finish of the big show would be ruined. McClintock swore softly. Jimmy sat as one entranced.

Some of the supers were pushing Lolita to the other side, but she seemed to be in a panic and struggled with them as if still acting the earlier scene. At this juncture Jimmy noticed that a lady in a rose-pink sweater had run to the edge of the roof, just above which the dirigible was moving, and that she was holding up her arms. His cigar dropped from his mouth a second later when he saw Bobby Wilkins grab her outstretched hands, swing her clear of the roof and pull her into the car as the great dirigible finally cleared the scenery building and in quick response to the hand of the pilot in the front car nosed her way upward at a higher rate of speed. The curtain fell and the repressed excitement of the great audience found vent in tumultuous applause. The thing had happened so quickly that there were apparently few who had noticed that the wrong young woman had been saved from death by the timely arrival of Lieut. Thurston Turner, U. S. N.

"What a whale of a story!" chortled McClintock, gripping Jimmy's arm so fiercely that the press agent winced with pain.

"Yes, isn't it?" responded Jimmy dreamily as he watched the N-24 winging her way over the park and out toward the sea. The spectators had risen from their seats and were applauding again as a big American flag was unfurled from the rear car of the dirigible.

The balloon kept on its way toward the ocean, and as McClintock noticed that it didn't make the turn it usually did when it reached the giant roller coaster that ran along the shore a puzzled expression came over his face. If he had looked at Jimmy sharply just then he would have observed the first beginnings of a pleased smile tilting the corners of the press agent's mouth. A minute passed and the great yellow gas bag receded farther and farther in the distance. McClintock stepped down and borrowed a field glass from a spectator. He glued his eyes to it for a few moments and then dropped his arms. His face had gone pale.

"His motor's dead," he said weakly, "and he's drifting out to sea. The propeller's stopped and he's being carried out by this land breeze. We've got to do something—we've got to get help of some kind."

The manager was plainly worried. He pressed the glass on Jimmy, who had followed him out of the box, and the latter watched the clumsy balloon, now at the mercy of the stiff breeze which had blown up, slowly but surely disappearing in the opalescent haze which hung above the line where sky and ocean seemed to meet. The owner of the glasses had overheard McClintock's remark and had passed the word on to his neighbor. In two minutes the news had spread through the great crowd, and thousands of eyes were focused on the drifting speck, which presently vanished. McClintock pushing Jimmy before him started for the main office and found himself surrounded by an excited group of men and women. An upstanding chap in a British major's uniform who wore a cap on which was the red-velvet band of a staff officer stepped forward.

"We're Miss Ashley's friends," he said with a touch of feeling in his voice; "and we'll do everything we can to assist you. She's a bit untamed, sir, and she shouldn't have done that wild foolish thing, but she's the best woman alive for all that, and now that she's in danger we're going to help you see her out of it. Has that dirigible got a wireless on board?"

"No," replied the manager. "There wasn't any need for one. Since it's been here it's never been more than a mile or two away from the hangar before."

"That's bad—damned bad," re the officer. "Of course maybe they' to fix the engine, but we can't take on that. If you'll let me use your t I'll call up our embassy in Washin get them to get in touch with t Department. We'll have all the range of the Arlington station on t out in an hour."

The thoroughly sobered group of seekers who had accompanied t orable Betty to Jollyland two hou followed McClintock and Jimmy into the offices in the administrati ing and talked in low voices while t began to fuss in the telephone bo the long-distance operator. Som women were weeping.

V

IN THE seclusion of his priva Jimmy telephoned a press syndi police and the nearest United Sta saving station, in the order name McClintock, who was plainly treme worried, paced restlessly up and d floor, pausing occasionally to glanc the window at the broad expanse of sea, in the vain hope that some sig lost dirigible might greet his eye. Jimmy began calling up the metr newspaper offices in a fine frenzy o ment both men heard the office do violently. They turned in unis found themselves confronted by Murphy. Gone were the shy man demure smile and the air of coy ing ness. Her cheeks were flushed, were blazing, and her whole mann cated that she was in what is g referred to as a "state of mind."

"Hello, girlie," Jimmy called ou antly. "What's the matter?"

"Don't you dare girlie me, Mr. J Martin!" retorted Lolita in a voi she was palpably trying, with a grea to keep at an even and menacin "Don't you dare to speak to me I came in to tell you that and to know that even if I do come from town I can't be fooled by any New by any New York—bunko man!"

Her voice broke on the last w tears came into her eyes despite the she was making to hold herself i Jimmy came toward her, but she him off hysterically. McClintock the proceedings in amazement.

"What's the idea, Lolita?" beg press agent beseechingly. "I don't I don't understand."

"Don't try to tell me that," ran lita, who was now half sobbing. try to tell me that you didn't turn m when that English girl came into t with all those society people and t didn't get together with that Wilkin to have me left there so you coul better story out of it with her. You all up and you can't tell me that yo because I just know, that's all. I sweater on under my dress so's I w catch cold and I had milk chocolate pocket and I'd written home to about its going to happen and telli not to worry about anything she read in the papers the first day, a nothing's happened at all to me a been made a fool of and it's all you and if you ever try to come near m or speak to me I'll slap your fac James T. Martin, I'll slap your fac you hear me, Mr. James T. Mart slap your fresh little face!"

She was gone before Jimmy co monstrate. The door closed behi with a more reverberating bang th one which had heralded her en Jimmy dropped into the nearest ch gazed vacantly into space. McC shook him roughly by the shoulder.

"Say," he shouted, "what in the of glory is this all about?"

"She handed me the mitt, Mac handed me the mitt, and she wouldn let me explain," responded Jimmy br "It's the real heart-throb stuff this Mac, the real heart-throb stuff. everything framed up for her, an English jane just drops in like a jok nin' wild and wins the hand."

"You had what framed?"

"Why, this drifting-out-to-sea s replied Jimmy in a dead voice.

"This drifting out to sea—— You d you can't mean that this thing is a p gasped the manager incredulously.

"Of course it is!" returned the agent with something of the old

scad of picked feature writers in- ollyland in quest of detailed par- rsoncerning the events leading up to egnings of the ill-fated balloon trip; db sisters motored to the palatial q which the Honorable Betty was a gest and interviewed a weeping and unt maiden aunt of that lady, who had been acting as a submissive chaperon and who was certain that when "dear Ned, her father, hears the news he'll froth at the mouth and have a stroke"; cables were frantically dispatched to London instructing correspondents to break the news to dear Ned and watch the results; city editors pawed over assortments of photographs of the beautiful heroine and conferred with art-department heads as to the most suitable ones to use for decorative layouts; dozens of leg men were sent out to points along the Jersey and Long Island coasts with directions to watch for any possible news of the return of the balloon and to keep on the lookout for any pleasure-yacht owner who might have seen the dirigible after she passed out of sight of land; the Washington offices were instructed to post a man in the Navy Department all night long to watch for any wireless news that might come flashing back from the torpedo-boat destroyers which at the urgent solicitation of the British Ambassador were to be sent out to scour the sea in search of the missing airship, and it was unanimously decided at editorial councils in every office to let the story lead the paper the following morning unless some great unforeseen national or international calamity transpired in the meantime.

Jimmy Martin became the focus point of more importunate news gatherers than he had ever fancied in his wildest dreams would assail him for information, and when a delegation of correspondents from a half dozen London papers looked in on him at eight o'clock and told him that they had been instructed to rush as much stuff as the cables would carry he almost passed into a trance.

"Mac," he confided to the manager when the English correspondents had gone, "I feel like the fellow who looked at the giraffe and said, 'There ain't no such animal.' There ain't no such story. It's a dream."

"Well, I've left instructions that we're not to be called," returned McClintock. "Let's dream a little more."

In the star dressing room on the big stage of the open-air auditorium Lolita Murphy was getting ready for the evening performance of Secret Service Sally and was making a brave effort to control herself. She was as forgotten as yesterday's newspaper, and the realization of it sent great tears of bitter disappointment coursing down her rouged cheeks into the make-up box on the little table in front of which she sat.

VI

IT WAS nearly midnight when Bobby Wilkins' chauffeur reported over the telephone to Jimmy Martin and McClintock, who had been keeping anxious vigil in the office all night.

"There ain't a sign of him," he said hurriedly. "I waited right where you told me to wait and if he'd been anywhere within a couple of miles I could have seen him after it got dark. The moon has been shining bright for a long time and I had a pair of glasses with me. I'm afraid it's all up with him if he hasn't landed some place else along the coast. It's tough for all of us if anything's gone wrong, ain't it?"

The chauffeur was instructed to make another trip to the selected landing place and to stay there until dawn, when relief was promised. Jimmy was pale and overwrought when he hung up the telephone receiver and turned to McClintock.

"If he had landed any place else," he remarked, "he'd have made every effort to get to a phone. He'd know we'd be worried. Gee, Mac, supposin' somethin's happened to 'em. If there has, little old Robert B. Remorse 'll be my side partner for life. He told me he'd be prepared for all emergencies and he's there with the nerve, but maybe they ran into a squall or something. Why 'd I ever think of this stunt? I've got too much imagination, Mac. I've got to teach it to lie down and behave."

The two sat up all night, smoking incessantly and discussing the variety of fates which they fancied might have overtaken the adventuresome Bobby Wilkins and his distinguished fellow passenger. Jimmy called up one of the newspaper offices every fifteen minutes for news, but there wasn't any worth mentioning. The dirigible had not been sighted by any ship with which the navy wireless had been able to get into communication and the half dozen destroyers sent out to search for it were reported to be without definite information.

The entire country seethed with the story in the morning. The press syndicate

Order By Mail — The South's Most Famous Confection

ORIGINAL
CREOLE PRALINES
(GRUNEWALD)

Scrupulous care is maintained throughout in producing this famous candy. That's why Original Creole Pralines (**Grunewald**) made only of Louisiana cane sugar and Louisiana (whole half) pecan meats are regarded everywhere as the highest quality Creole Pralines made.

IDEAL

Stencil Machines

This machine puts neat shipping addresses on millions of packages going from shipper to customer. A paper stencil cut in thirty seconds marks ten cases while a painter is lettering one.

Ideal Stencils may end your shipping troubles and save money for you. Ford, Armour, Edison and thousands of others use the IDEAL.

The rest of the story is in "Safeguarding Your Shipments", a valuable book sent free to business men.

IDEAL STENCIL MACHINE COMPANY
10 Ideal Block *Belleville, Ill.*

had carried fifteen hundred words into every newspaper office in every city of importance from coast to coast, and the big dailies in Chicago, Philadelphia and Boston had three and four column stories from their metropolitan correspondents, liberally illustrated with pictures of the Honorable Betty, who was one of the most photographed women of her time. McClintock, who had no knowledge of Jimmy's promise to keep Bobby Wilkins' real name out of print, had blurted it out to a group of reporters in the evening, and the salient facts concerning the modest wearer of six war medals were incorporated in all of the accounts. Robert Wilkins, Sr., forgot that he was a mere business machine, wiped a few tears out of the corners of his eyes, looked tenderly at a picture of a curly-headed boy he always kept in one of the drawers of his desk, and started East on a special train.

The total haul in the New York morning papers was seventy-six columns of solid reading matter and thirty-eight photographic illustrations. Every angle of the story was covered in great detail and in addition to the main narrative there were extended biographical sketches of the Honorable Betty and of Bobby Wilkins. There were cabled stories from London concerning the festive career of the former which contained an expression of deep concern from the British premier. There were also cabled eulogies of the one-time ace from personages no less important than the American commander in chief in France and the generalissimo of the Allied Armies. All in all it was the most spectacular feature story in years and the greatest achievement in the history of American press agentry. McClintock admitted that much when the first editions came in.

"Jimmy," he said, "it's a dog-goned shame that you've got to lie low and never get any credit for this. Still, you've got company. I was reading in the paper the other day that there's a well-defined rumor that the more or less celebrated covenant of the well-known League of Nations was finally framed up by a clerk in the British Foreign Office. You can drop over later on and take a little drink with him and cry it all out on each other's shoulders."

Jimmy's only response was a mournful attempt at a smile. He lit another cigarette, jerked out of his chair and began to swear softly as he walked up and down the room. He made a vicious lunge with his foot at a wastebasket and kicked it through the door into the next office. Then he took off his soft hat, rolled it into a lump and slammed it down on the floor with a wide sweeping gesture.

"I don't mind that so much," he said testily. "After landin' a smear like that, though, I'd kinda like to have a good time with myself for a few minutes. I'd kinda like to throw a few assorted flowers up in the air and let 'em drop on me, but I'm so gosh-darned worried about what's actually happened that I can't have even that much fun."

His anxiety increased as the day wore on and the early editions of the evening papers, which played up the story even more extensively than the mornings, failed to buoy him up. There was still no word of the N-24 and Navy Department officials in Washington were reported to be gravely alarmed at the possibilities.

At noon the British Embassy gave out the announcement that a "distinguished person" had cabled for detailed information and had begged to be kept in hourly touch with the developments. Flaming headlines carried the legend: King Anxious About Lost Dirigibles. Upon reading this three rival publicity promoters, who had suspected the presence of the fine Italian hand of Jimmy Martin in the proceedings from the beginning and who had forgathered for lunch in their favorite club, simultaneously started out on a joint jamboree that was to become a memorable minor historical incident in the turgid annals of the White Way. It offered the only means of escaping from the tragic feeling of profound and passionate envy that surged up from the very depths of their beings.

At three o'clock as Jimmy, red-eyed and haggard, nodded at his desk between telephone calls, a messenger boy dropped a cablegram in front of him. He tore it open and gazed at this cryptic message:

"HAMILTON, BERMUDA.
"JAMES T. MARTIN,
"Jollyland Park,
"Coney Island, N. Y.

"Come on in—the water's fine—give my regards to Lolita but can't say I'm sorry it happened as yet. BOBBY WILKINS."

Jimmy gave a second look at the heading and rushed into the next office, where McClintock was snoring sonorously on a sofa. He shook the manager savagely and waved the cablegram in front of his eyes.

"All's right with the world, Mac!" he shouted joyously. "They've landed in Bermuda. Can you beat that fresh son of a gun doin' a thing like that? What's the big idea, I wonder?"

McClintock grabbed the message and read it hurriedly.

"I guess maybe he's mailing the answer," he remarked. "It beats me. You'd better get a wire off to him asking for particulars."

The shrill summons of the telephone brought Jimmy back into his own office the next moment. The voice of his friend, Lindsay, the day desk man of the press syndicate, came over the wire in crisp staccato sentences.

"Got some news for you," he said. "It's going to make this morning's headlines look sick. Here's the way our first bulletin reads:

"WASHINGTON, D. C., July 7—The British Ambassador has just given out the following cablegram received from the Governor-General of the Bermuda Islands: 'Please announce to press the marriage this morning in St. John's Chapel, Hamilton, of the Hon. Elizabeth Ardsley Ashley, eldest daughter of the Earl of Norburne, of London, England, to Robert Benjamin, Jr., only son of Robert Benjamin Wilkins, Sr., of Chicago, Ill., U. S. A. The ceremony was entirely informal.'

"I'm ordering three thousand words from our Bermuda correspondent," went on Lindsay, "and I'm having London break the news gently to dear old dad. I suppose if I come down on Sunday with the wife and the kiddies you could slip us into a few of your side shows?"

"Say," responded Jimmy exultingly, "you're goin' to get a life pass good for each and every attraction within the big inclosure. Excuse me, won't you? I've got to write out a request for an armistice to a certain party. You see I've just figured out what the bridegroom meant in a wire I got five minutes ago."

As he hung up the telephone and swung round in his swivel chair the door leading into the hall opened ever so gently and the pale and tear-stained face of Lolita Murphy peered through the opening. Jimmy gazed at her, open-eyed, as she came slowly into the room. He noticed that she had a crumpled bit of paper in her hand.

"Jimmy," she said timidly as she held out her arms in appealing suppliance, "I'm just a—just a foolish small-town kid. I didn't understand, I didn't understand."

Jimmy in a daze took the paper which she held toward him. It was another cablegram. He smoothed it out, and the peace that passeth understanding settled down upon him as he read these words:

"HAMILTON, BERMUDA.
"LOLITA MURPHY,
"Jollyland Park,
"Coney Island, N. Y.

"Won't it ease your disappointment a little to know that the mad impulsive thing I did yesterday and the rash act I have just committed in the chapel have transformed me into quite the happiest woman alive? Bobby has told me all about everything and he fears that you may think your friend Mr. Martin had a finger in the pie. He had nothing to do with it, my dear—it was just fate. Bobby is wiring some advice to Mr. Martin. See that he heeds it. Our best regards to you both.

"ELIZABETH ASHLEY WILKINS."

McClintock coming into the room just then tiptoed out again and closed the door softly behind him, thus proving himself to be a gentleman of singular tact and discretion.

Christmas Gifts and a Bank Account

MISS OLYMPIA ROBERTS
of California

"I had never earned my own money before"

Wrote Miss Roberts. But she found it easy to make money the Curtis way from the very day she began the work. All about her were opportunities that she easily turned into the cash she needed.

After her Curtis earnings had bought beautiful Christmas gifts for her circle of friends, she began building a bank account—to buy a runabout. And her plan is not by any means over-ambitious. Other Curtis representatives have used their earnings for pianos, launches, houses, farms—our goal seems to be too high.

Do you want MONEY?

If you do, here is your chance to get it. Subscription representatives for *The Saturday Evening Post*, *Ladies' Home Journal* and *Country Gentleman* have an ever-ready source of profit on which they can draw. If you have only a few hours a week to spare, you can easily turn them into as many extra dollars. And for full-time work your earnings may run up as high as

$100.00 a Week

Want a Good Job?

you want work, either full time or for a few hours each day, we just the right open- for you, because:

Curtis work is easy.

"It was so easy," is the note that Mr. L. L. Hinton of Oklahoma, sent with one order on which his profits amounted to $37.10. "The easiest money I ever earned," is a frequent comment from others. You, too, can make money without previous experience.

L. Hinton

Curtis work is pleasant.

Miss Stella Williams of Tennessee, whose Curtis earnings run as high as $100.00 a week, says, "My work is healthful, wholesome, out-of-doors. It brings me into contact only with people of culture." And from the start you are your own boss.

ss ella Williams

Curtis work is profitable.

In one month Mr. David Duff of Ohio earned $500.00. Others of our workers have—some of them with only part-time work—built up Curtis incomes that pay them $5000.00 or more a year. Your opportunity to build a thriving business is as good as theirs!

r David Duff

Curtis work is permanent.

"I can safely bank on securing ninety per cent of my renewals," says Mr. Edwin Kohl of Wisconsin, who has secured four hundred and fifteen new and renewal subscriptions in a single week. This renewal value will enable you to build up a permanent business.

r Edwin Kohl

LOOKING BACKWARD

(Continued from Page 18)

the regeneration of man through the grace of God and not the winning of office or the exploitation of parties and newspapers. Journalism is yet too unripe to do more than guess at truth from a single side. The statesman stands mainly for political organism. Until he dies he is suspect. The pulpit remains therefore still the moral hope of the universe and the spiritual light of mankind.

It must be nonpartisan. It must be nonprofessional. It must be manly and independent. But it must also be worldly-wise, not artificial, sympathetic, broad-minded and many-sided, equally ready to smite wrong in high places and to kneel by the bedside of the lowly and the poor.

I have so found most of the clergymen I have known, the exceptions too few to remember. In spite of the opulence we see about us let us not take to ourselves too much conceit. May every pastor emulate the virtues of that village preacher of whom it was written that—

Truth from his lips prevail'd with double sway,
And fools who came to scoff, remain'd to pray.

. . . . . .

A man he was to all the country dear,
And passing rich with forty pounds a year.

. . . . . .

His house was known to all the vagrant train,
He chid their wanderings, but relieved their pain;
The long-remembered beggar was his guest,
Whose beard descending swept his aged breast;
The ruined spendthrift, now no longer proud,
Claimed kindred there, and had his claim allowed;
The broken soldier, kindly bade to stay,
Sate by the fire, and talked the night away;
Wept o'er his wounds, or, tales of sorrow done,
Shouldered his crutch, and showed how fields were won.
Pleased with his guests, the good man learned to glow,
And quite forgot their vices in their woe;
Careless their merits or their faults to scan,
His pity gave ere charity began.

IV

I HAVE lived a long life—rather a happy and a busy than a merry one—enjoying where I might, but, let me hope I may fairly claim, shirking no needful labor or duty. The result is some accretions to my credit. It were, however, ingratitude and vanity in me to set up exclusive ownership of these. They are the joint products and property of my dear wife and myself.

I do not know just what had befallen if love had failed me, for as far back as I can remember love has been to me the bedrock of all that is worth living for, striving for or possessing in this crosspatch of a world of ours.

I had realized the meaning of it in the beautiful concert of affection between my father and mother, who lived to celebrate their golden wedding. My wife and I have enjoyed now the like conjugal felicity fifty-four—counted to include two years of betrothal, fifty-six years. Never was a young fellow more in love than I—never has love been more richly rewarded—though not without some heartbreaking domestic bereavements.

I met the woman who was to become my wife during the War of Sections—amid its turmoil and travail—and when at its close we were married, at Nashville, Tennessee, all about us was in mourning, the future an adventure. It was at Chattanooga, the winter of 1862–63, that fate brought us together and riveted our destinies. She had a fine contralto voice and led the church choir. Doctor Palmer, of New Orleans, was on a certain Sunday well into the long prayer of the Presbyterian service. Bragg's army was still in middle Tennessee. There was no thought of an attack. Bang! Bang! Then the bursting of a shell too close for comfort. Bang! Bang! Then the rattle of shell fragments on the roof. Though on the other side of the river the Yankees were upon us.

The man of God gave no sign that anything unusual was happening. He did not hurry. He did not vary the tones of his voice. He kept on praying. Nor was there panic in the congregation, which did not budge.

That was the longest long prayer I ever heard. When it was finally ended and still without changing a note the preacher delivered the benediction the people in the most orderly manner moved to the several doorways.

I was quick to go for my girl. By the time we reached the street the firing had become general. We had to traverse quite half a mile of it before attaining a place of safety. Two weeks later we were separated for nearly two years, when, the war over, we found ourselves at home again.

In the meantime her father had fallen in the fight, and in the far South I had buried him. He was one of the most eminent and distinguished and altogether the best beloved of the Tennesseeans of his day, Andrew Ewing, who, though a Democrat, had in high party times represented the Whig Nashville district in Congress and in the face of assured election declined the Democratic nomination for governor of the state. A foremost Union leader in the antecedent debate upon the advent of actual war, he had reluctantly but resolutely gone with his state and section.

The intractable Abolitionists of the North and the radical Secessionists of the South have much historically to answer for. The racial warp and woof in the United States were at the outset of our national being substantially homogeneous. That the country should have been geographically divided and sectionally set by the ears over the institution of African slavery was the work of agitation that might have attained its ends by less costly agencies.

How often human nature seeking its bent prefers hard to easy. The North, having in its ships brought the negroes from Africa and sold them to the planters of the South, putting the money it got for them in its pocket, turned philanthropist. The South, having bought its slaves from the

YOUR QUESTION:

How Can I Make More Money?

OUR ANSWER:

Sell Us Your Spare Hours

Hundreds of thousands of extra dollars are earned every year by the representatives of The Saturday Evening Post—The Ladies' Home Journal—The Country Gentleman.

You are invited to share in the earnings.

Ellery Mahaffey
(Pennsylvania)
$606.40 in 2 Months

W. C. Cowgill
(Oregon)
$1.00 an Hour

E. D. Barensfield
(Minnesota)
$87.50 His First 15 Days

Raymond Starr
(California)
$100.00 a Week

You will find the work easy and pleasant, and, above all, profitable.

Commissions

On every subscription that you secure you will be paid a generous commission.

Monthly Salary

In addition you will be paid a monthly salary, based on your production. This alone may run as high as $100.00 a month.

Weekly Salary

Or, if you prefer, and if you can guarantee and produce a definite monthly quota, you may receive a weekly salary—up to $100.00 a week—in addition to commissions.

Permanent Profits

Every order that you receive will bring you additional profits year after year. The same commissions and salaries are allowed on renewals that are paid for new orders.

Territory

There is no restriction on the territory in which you may work. Unlimited territory spells unlimited opportunity.

Your Profits

The table that follows will give some idea of extent of the monthly profit on only part-time work:

Average Production	Total Earnings, About
Less than 3 a week	$4.50
Less than 4 a week	7.50
Less than 1 a day	12.00
Less than 8 a week	16.00
Less than 10 a week	20.00
Less than 2 a day	27.00
Less than 16 a week	37.00
Less than 3 a day	50.00
Less than 4 a day	67.00
Less than 5 a day	80.00
Less than 6 a day	101.00
Less than 7 a day	130.00
Less than 9 a day	160.00
Less than 10 a day	200.00
Less than 2 each working hour	275.00

Lloyd Hall

slave traders of the North under the belief that slave labor was requisite to the profitable production of sugar, rice and cotton, stood by lawfully acquired property, rights recognized and guaranteed by the Constitution. Thence arose an irrepressible conflict of economic forces and moral ideas whose doubtful adjustment was scarcely worth what it cost the two sections in treasure and blood.

On the Northern side the issue was made to read freedom; on the Southern side, self-defense. Neither side had any sure law to coerce the other. Upon the simple right and wrong of it each was able to establish a case convincing to itself. Thus the War of Sections, fought to a finish so gallantly by the soldiers of both sides, was in its origination largely a game of party politics.

The extremists and doctrinaires who started the agitation that brought it about were relatively few in number. The South was at least defending its own. That—what it considered its rights in the Union and the Territories being assailed—it should fight aggressively lay in the nature of the situation and the character of the people. Aggression begot aggression, the unoffending negro, the provoking cause, a passive agent. Slavery is gone. The negro we still have with us. To what end?

Life indeed is a mystery—a hopelessly unsolved problem. Could there be a stronger argument in favor of a hereafter than may be found in the brevity and incertitude of the present? Where this side of heaven shall we look for the court of last resort? Who this side of the grave shall be sure of anything?

At this moment the world having reached what seems the apex of human achievement is topsy-turvy and all agog. Yet have we the record of any moment when it was not so? That to keep what we call the middle of the road is safest most of us believe. But which among us keeps or has ever kept the middle of the road? What else and what next? It is with nations as with men. Are we on the way to another terrestrial collapse, and so on ad infinitum to the end of time?

v

THE home which I pictured in my dreams and projected in my plans came to me at last. It arrived with my marriage. Then children to bless it. But it was not made complete and final—a veritable Kentucky home—until, released from the all-round, all-night work which had kept my nose to the grindstone, I was able to buy a few acres of arable land far out in the county—the County of Jefferson—some ancient brick walls, which the ingenuine genius to which I owe so much could convert to itself and tear apart and put together over again. Here, indeed, "the sun shines bright" as in the song, and—

The corn tops ripe and the meadow in bloom,
The birds make music all the day.

They waken with the dawn—a full orchestra—incessant, fearless—for all its players—from the sweet trombone the dove to the shrill clarinet of the jay—knows that it is safe. We have with us have had for five and twenty years a family of colored people who know our ways and meet them intelligently and faithfully. When we go away—as we do each year and sometimes during the other seasons and come again—dinner is on the table everybody—even Tigue and Bingo dogs—is glad to see us. Could more be for more? And so let me close with a wish of my father's old song to make true—the words sufficiently describing the reality:

In the downhill of life when I find myself declining,
May my fate no less fortunate be
Than a snug elbow chair can afford for reclining
And a cot that o'erlooks the wide scene,
A cow for my dairy, a dog for my game,
And a purse when my friend wants to borrow;
I'll envy no nabob his riches, nor fame
Nor the honors that wait him to-morrow.

And when at the close I throw off the cov'ring
Which I've worn for three-score years and ten—
On the brink of the grave I'll not see the hov'ring
Nor my thread wish to spin o'er again.
But my face in the glass I'll serenely behold
And with smiles count each wrinkle and furrow—
That this worn-out old stuff which I've to-day bare to-day
Shall become everlasting to-morrow.

Editor's Note—This is the last of a series of articles by Mr. Watterson, who desires to say that in using Mr. Edward Bellamy's delightful story "Looking Backward" he had no purpose to carry the appropriation beyond the columns of THE SATURDAY EVENING POST, quite another title having been arranged for the issue of the series in book form.

"Making the World Sweeter"

"—And smile, smile, smile!

The full title of this Big Hit is

"Pack your good old pipe with Velvet —and smile, Smile, SMILE!"

Here's the scenario:

Enter You, registering a dark blue Monday feeling. You grab your tin of Velvet and load up. You strike a match. As the first cool, fragrant puff touches "the spot" you register "pleased surprise." Gradually over your well known countenance steals a smile which means "this is the beginning of a perfect day."

This Velvet "serial" was running big before most of the movie "head-liners" were ever heard of. But today it is still as fresh as the Velvet in the big generous tin. And why? Because American pipe smokers want *real* tobacco. And that's what Velvet is. Its natural flavor and fragrance are the smell and taste of the best tobacco old Kentucky ever grew. Two years natural ageing in the wood makes Velvet mellow, mild and sweet as a nut.

It *can't help* being the best pipe smoke you ever tasted in your life. Just taste that aged-in-the-wood mellowness and *smile.*

As Velvet Joe says: "At the end of the rainbow there's happiness—*maybe.* But at the end of a pipe filled with Velvet there's contentment for *shore.*"

The Soap for your finer things

Peet's Crystal White

EVERY housewife has choice pieces—table linens, luncheon sets and doilies, that require careful laundering. To restore them to spotless cleanliness, use a soap that is especially made to accomplish this task.

Crystal White is **a pure soap,** made from vegetable oils. Contains no ingredient to roughen and fray or shorten the life of treasures of your linen supply.

Dishes and silverware are sure to be hygienically clean when washed with *Crystal White* because it purifies as it cleanses.

Clank Clinkscales' Duodenum

A STORY OF REVOLT

"...e Heard About Ruthless Cutthroat ...etition—in the Old Days—Before ...ll Put On Silk Socks and Hitched ...ere in This Men's Sewing Circle. ...I'm Going to Show You Something ...ke it—But a Little Different"

By George Kibbe Turner

ILLUSTRATED BY M. L. BLUMENTHAL

OLD Clank Clinkscales, the head of the hard-ground cardamom-seed trade, was a heavy, hearty man with a high temper. Though many times a mil-...e, he suffered from a continual angry ill ...l, which his metropolitan medical experts told ...as due—after years of full eating—to his ...num. Nothing, they said, could be done. He ... victim for life of an excitable and often irascible duodenum. On the fifth of ...ry, 1920, Mr. Clinkscales was about to start for the sanitarium at Mt. Manitou ... usual semiannual trip, following the Christmas holidays. His duodenum had ...been in more wretched shape, nor he in greater haste to be gone. His reservation ...een procured, his baggage packed, and he had stopped in for a last look at his ...when Mr. Grout, his confidential man and cost expert, opened the private-office ...nd closed it softly after him.

"... visitor," he said seriously, "you'll have to see!"

"Whatchu talking about?" demanded Mr. Clinkscales. "I can't see anybody—...w."

"He has come on specially from Washington—from the United States Government," ...Mr. Grout, standing still, "to see you personally—on the high cost of living."

"Show him in then," said his employer finally. "I'll see him for just ten minutes."

A small man with a small mouth and large round glasses then entered the room, sat ...w and introduced himself.

"My name," he said, coughing lightly behind his hand, "is J. Everett Moon—Doctor ...o... You may have heard of my work."

"No," said Mr. Clinkscales, watching him closely, "I can't say that I ever did in ...fe."

He was in considerable discomfort—not to say pain. His duodenum felt decidedly bad.

"You would not perhaps—in merely commercial life," said his visitor, his small ...th contracting slightly. "My specialty," he explained, "is organic chemistry—the chemistry especially of food grains. I have been considered an authority, in a way—in this particular field."

"Uh-huh," said Mr. Clinkscales, secretly taking out and looking at his watch.

"Our present National Government," said his visitor, not observing this, "has made a new departure—and it seems to many a wise one. It has availed itself of the services of men of science and other experts during the war and post-war period. Which gives American business," he continued, "a touch with knowledge—scientific knowledge—which in many ways it has often lacked."

"Probably so," said Clinkscales, moving uneasily and again secretly consulting his watch. He was in a difficult position. His time was about up; his discomfort reminded him sharply that he must catch that train—if possible. And yet he hesitated to make the break, for the Government was hard after the cardamom-seed trade and he knew it.

"And so," proceeded Doctor Moon, who was of great precision in speech—a virtue for which Clank Clinkscales cared very little, "I myself and others have consented to take up this type of work. I personally have taken up the cardamom-seed trade, and am now up from Washington on a very special mission to consult with you."

At this Clank Clinkscales gave an inward groan. It was now full time for him to leave his office if he were to catch his train for Mt. Manitou. Yet this man was before him, still talking, the special agent of the United States Government, sent to the head of the cardamom-seed trade on a special mission, and he knew as well as anybody that his leaving now would have an ugly air of arrogance and subterfuge that a magnate of any kind could ill afford at this juncture of the nation's affairs. He sat, consequently, one hand heavily on the pit of his stomach, growing always redder as the special scientific agent from Washington explained his mission.

"In these times," the latter was informing him, "we must rely on each other's patriotism—especially in the present threatened social upheaval. That would be nothing, in fact, but enlightened selfishness for you, for example," he said, gazing steadily at his hearer.

"That's right! That's right!" said Mr. Clinkscales, straightening up into a more comfortable position, endeavoring to adjust himself to the inevitable circumstances. And at that moment the door opened.

"If you are going ——" suggested Mr. Grout, thrusting his sleekly combed head through the doorway.

"I'm not going," retorted Mr. Clinkscales briefly. "Get out!" For his train was lost now and he knew it.

His visitor, after a somewhat absent-minded stare, proceeded.

"Now my investigations," he stated, "convince me that by concerted effort the cost of cardamom seeds can be reduced considerably to the consumers of this nation."

And for some minutes he gave Mr. Clinkscales the benefit of his special knowledge of the cardamom-seed trade. He spoke crisply, as a man does who is sure of his ground—pointing out many mistakes which had been made in this line of industry. And Mr. Clinkscales, listening in silence, could see as he progressed that his face had a certain small-mouthed firmness of its own. He consequently waited, listening, though continually redder.

"Considering all this," said the visiting government official—after a convincing half hour—"these facts that I have given you—in all fairness can you sit and tell me that your product should not come down in price?"

He spoke in the friendly encouraging language of an instructor to a really promising pupil with whom one can reason. But Mr. Clinkscales, though now extremely red, still was silent.

"It is the Government's policy," his small instructor urged once more, "before proceeding to any action in any case, to appeal—to rely if possible on the patriotism of those concerned. Would it not be better in your industry for all to coöperate rather than ——"

He stopped now suggestively and turned his large glasses upon the larger, fuller-fashioned man across the desk from him.

"In all fairness," he said a second time to old Clank Clinkscales, "may I not ask you to help us in this? In all fairness," he repeated for the third time, "I ask, may we not rely on your patriotism to aid us?"

And all at once Clank Clinkscales sat upright; strangely enough all his physical pain seemed to have left him. He seemed full of energy and spirit.

"I'll help you," he said loudly. "I'll help you—and I'll start right now! And you'll get results—you don't look for," he added, gazing straight at him.

"How?"

"I'll tell you that when I figure it out," stated Mr. Clinkscales—"about April first," he added.

"This is very gratifying indeed," said his visitor finally. "I am glad to have convinced you by my arguments. I felt from the first that we could rely upon your patriotism. I shall await your progress with intense interest," he concluded with a certain cordial firmness. And he finally went out—two hours after Mr. Clinkscales' train time.

When he had left, old Clank Clinkscales sat minutes motionless in his silent office—staring at the opposite wall—before rousing himself.

"Chipmunks!" said Mr. Clinkscales, then speaking suddenly. "Chipmunks in glasses! Patriotic chipmunks, running round teaching us our business!"

And just then his telephone bell rang.

"Hello, Clank!" called a hearty, husky voice on the wire. "What'd he say to you? What'd you do?"

"If you want to talk to me you come to my office!" said Clank Clinkscales with a strong emphasis on the "me," and shut down the telephone firmly. He then sat motionless, like a man brooding, till he heard the voice of the speaker again in his outer office.

"Well, what about it?" inquired Mr. Charles Barker, friend and competitor in the hard-ground cardamom-seed trade, entering his door. "Do they put you in jail on Monday?"

He was a jovial man, very popular in the trade—a good story-teller, with a hoarse husky laugh; a warm, hearty, strong-armed friend, who beat all comers heavily on their backs.

"On Monday or Tuesday night?" he asked jokingly, and paused abruptly, his cigar suspended in midair, at his old acquaintance's unanticipated reply.

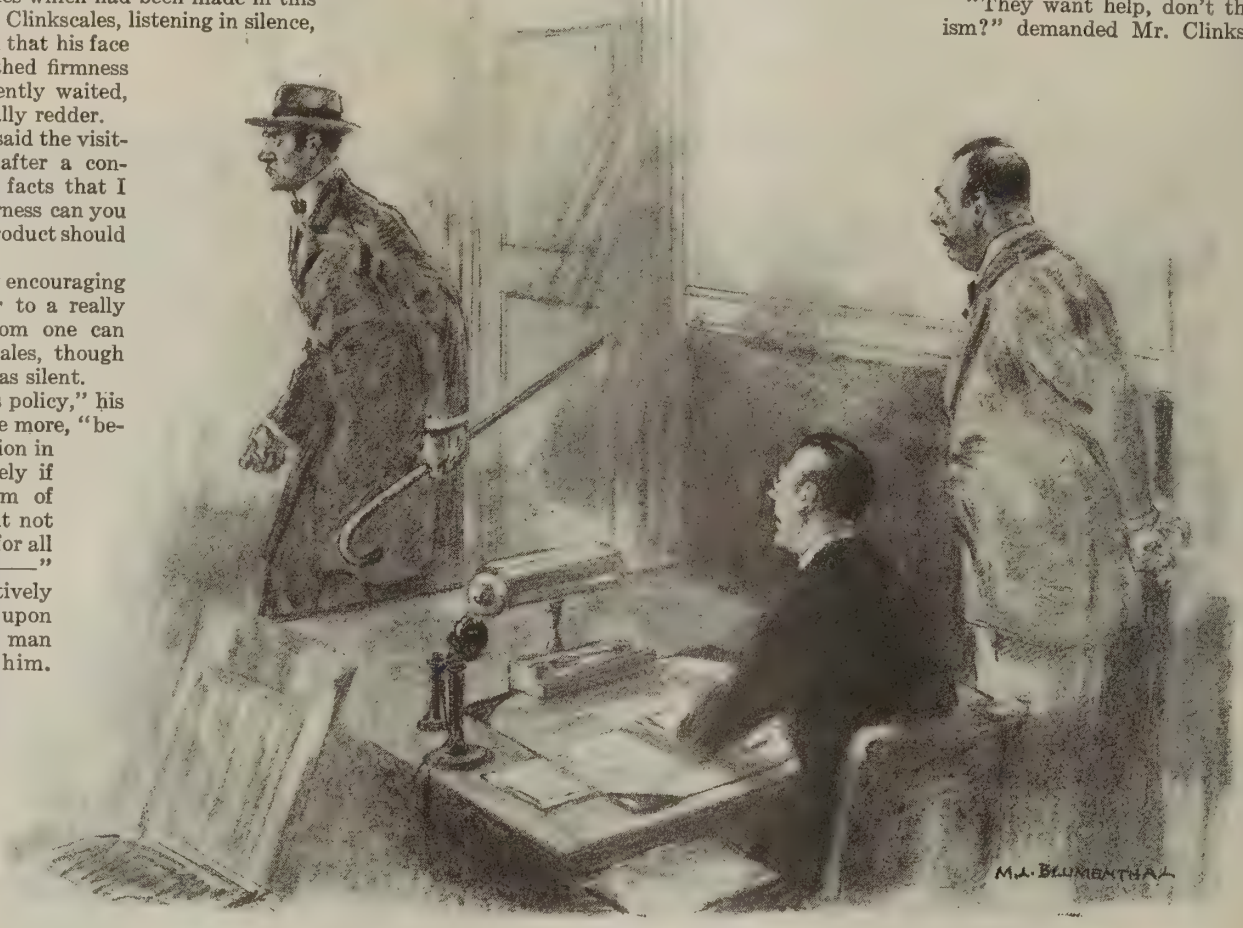
"Sixteen million chipmunks!" exclaimed Clank Clinkscales, raising himself from his apparent lethargy. "In glasses! Marching up and down this country. Relying on your patriotism."

He was a man of great energy, which at certain times expressed itself in his speech.

"Relying on our patriotism," he continued. "Telling us our own business."

His hearer sat, his cigar still held in his arrested hand, waiting for a clew.

"Chipmunks in the Army! Chipmunks in the Navy! Chipmunks in the Department of Agriculture! Chipmunks on the high cost of living—in glasses!" remarked Mr. Clinkscales. "Lecturing, talking, instructing—you and me—the country—the world—all the ages! Relying on our patriotism."



Mr. Grout and Mr. Hausinger Watched Him in Silence, Shaking Their Heads as He Passed Through the Main Office and Out Into the Corridor

His hearer rubbed his hand thoughtfully over his high forehead, still grasping his cigar.

"About our business," proceeded Mr. Clinkscales. "Relying on our patriotism. Women in square skirts, prize Sunday-school children, one-legged men, Indians, half-wits—experts from all the jerkwater colleges—lecturing, instructing, lecturing! I'm through! I'm done! I've had enough!" he exclaimed passionately, and taking out a large handkerchief blew his nose.

A faint gleam of understanding now appeared in his listener's eyes—as he went on.

"Five-thousand-dollar-a-year men figuring the possible annual savings on bone collar buttons—and writing us all about it—on government letterheads!" said the speaker, taking a fresh grip on his argument. "Rapid-fire business experts who can give seven thousand opinions on seven thousand different businesses per minute. Tons, acres, miles of printed matter—telling you all about dogfish meat, how to make over your last-year's shirt into an appetizing meal for six people! All relying on your patriotism! I'm through!" stated old Clank Clinkscales once again. "I'm through!"

As a matter of fact, this statement was not exact. Before Mr. Barker could quite open his mouth he was going on again, making inquiries of him.

"Who pays for it?" demanded Mr. Clinkscales now. "Who pays these things for prancing round the country—teaching us our business? You do and I do."

"It is kind of rough, Clank," said Mr. Barker, finding a slight opening at last.

"Teaching us our business—them things," said Mr. Clinkscales, shading his grammar a trifle in his excitement. "Prancing up and down the country, teaching us our business—by science. Politicians, ambassadors' nieces. Postmasters' second cousins. Expert chipmunks."

"Rough, rough!" interjected Mr. Barker, with a s of humor showing in his eyes.

"And down in Washington what's going on," inqu the excited man, "while they're out teaching us all t All gone! All gone! Nobody home!" he replied. " lions—billions—shoveled in, shoveled out—without b keeping, without a budget, without rime or rea Millions of good food dumped into the river; hundre millions of good automobiles burned up in France make the poor little suffering French children clap poor little thin hands. Hundreds of millions—billions manufacturing plants that never manufactured, and that never sailed, and letters that never came! And lions, hundreds of millions, billions probably," stated Clinkscales inaccurately, "for investigations—of pins, and truck horses. Millions of these squirrel-faced exp prancing up and down the land at our expense, lectu us on our own business—on our own money. And pay—the—bills—to get insulted!"

"It's hard, Clank," replied his friend with quiet hu "You're right, but what are you going to do about it?"

"They want help, don't they, relying on our pat ism?" demanded Mr. Clinkscales, gazing at him underneath his o hanging eyebrows. cutting down the cost of living?"

"That's what say," responded Barker readily.

"They want he repeated Mr. Cli scales with dign "All right! I'll give them. They rely on patriotism. All rig they can. I'll help down the cost of livin if they want me to."

"How will you?" quired his listener keen interest. everybody knew, course, old Clank Cli scales—and his ter and his duodenum.

"From now by ——," exclaimed Clank Clinkscales fanely, "not one s dollar from me! N dollar!"

"Not a dollar?" peated Mr. Barker q zically.

"From now on— one dollar. Not one lar for taxes. From on we are going to down where i needed—and everyb knows it is! It's h time too. From

on," stated Mr. Clinkscales, "we are going to cut d on the high cost of taxes!"

"Clank," said Charles Barker warmly, "there's a g idea."

"No taxes in 1920, by ——" said Clank Clinksc again profanely. "Not from this business!"

"Ha! Ha! That's a good one, Clank!" said Mr. Bar now laughing heartily. "Ha! Ha!"

"Not one dollar!" reasserted Mr. Clinkscales firmly.

"So no taxes for you in 1920, huh?" inquired Mr. Bar and again gave way to laughter.

"No!" repeated Mr. Clinkscales, and banged his d with his closed hand.

"But what about it—what about your profits for y company—if you cut out taxes?" inquired Mr. Bar still visibly amused. "How'll you get out of it?"

"There won't be any profits!"

"There won't be any profits?" repeated Mr. Barker, smile fading slightly from his lips.

"No!"

"What do you mean?"

"I'm going to show these fellows a novelty," said Clinkscales—a hard look shining from his eyes. "I going to introduce a new brand of patriotism into t country—a new kind. Patriotism without words—t costs you something! For one year I'll cut out taxes—a profits in my company with them."

"Do you mean to say ——" Mr. Barker now beg apparently much puzzled.

"I'll help them all right. I'll show them some p patriotism. Patriotism net!" continued Mr. Clinkscal "They wanted it—I'll show it to them. I'll do busin at cost if I have to!"

"You're fooling," said Mr. Barker—watching him wi a slight shade of anxiety.

n " exclaimed Mr. Clinkscales. "You watch me! ge two-thirds of it out of me anyhow—and more orull their damned Federal taxes together. They o ollars—and darn near three, if the truth were —o my one of what I earn."

nch as that?" inquired Mr. Barker.

s and more!" said Mr. Clinkscales loudly. "And I o it," he added, "anyhow, whatever it is—for one ow. I've got enough. I've got no children to . And it's worth it to me—easy—if for nothing h to stop listening to them lecturing, instructing, our patriotism. It's worth it to me—and more."

hat ——" said Mr. Barker, apparently much k. "What ——"

what?" demanded his senior somewhat ab-

about the rest of us—what of the rest of the nd cardamom-seed trade if you do that—cut h that?"

s you'll get along—after the last few years," said scales harshly.

on't mean that, Clank," said Mr. Barker, now riedly, his face visibly disturbed. "You don't —"

now me!" stated Mr. Clinkscales.

vouldn't do that, honest, Clank," pleaded Mr. ter a momentary study of the hard face opposite

watch me!" said old Clank Clinkscales, drawing up to his desk.

then," he inquired briskly, "is there anything do for you?"

Erker opened his mouth and closed it again.

ht, then," said Mr. Clinkscales. "Good-by! I'm e got to get started on this thing right away!"

Erker turned reluctantly to leave the room. But ng finally he stopped for a moment.

e give you some advice, Clank, as a friend," he on't get excited over this thing. Don't get that num of yours all out of whack. It ain't worth it," Barker solicitously, and at last went out.

rding him entirely, Mr. Clinkscales blew his ly and pressed his thumb upon a push button in k He felt, as a matter of fact, like a new man. s no discomfort whatever from his duodenum. rgotten for the moment that he had one.

chu doing now?" inquired Mr. Clinkscales of itio W. Grout, his assistant and cost expert, when ed. "Whatchu working on?"

Cout was a gray-faced man with a strong under lip, the wet style of hair brushing. "The dollar n' replied the old employee. After years of per- tact he assumed a brevity in speech not dis- om his employer's.

o it!" said Mr. Clinkscales.

"I'm showing what the cardamom-seed miller really gets for his work—out of the raw material, from the planter to the jobber."

"Drop it!" repeated Mr. Clinkscales a little louder.

"Three and one-half per cent," proceeded Mr. Grout with no change of voice or manner beyond a slight protrusion of the under lip. "That's all we get out of every dollar. Three and one-half cents."

"Drop it, I tell you!" said Mr. Clinkscales for a third time. "I've got something else."

"I've got it all ready for the newspapers—half pages. We'll show them!" stated Mr. Grout, his lip a little farther advanced.

"Will you drop it, or won't you?" demanded Mr. Clinkscales in a terrifying voice. "I've got something else for you now."

"Oh, all right!" said the trusted employee, looking at him coldly over his glasses. "What is it now?"

"If you have no objections now," said Mr. Clinkscales after an oppressive pause, "I'll tell you what I want done."

"All right, go ahead if you want to," responded Mr. Grout, his lower lip, however, still standing firm.

"How much'd this company pay the United States Government last year in taxes?"

"Six hundred and sixty-seven thousand, three hundred and twenty-five dollars and twenty-four cents," replied Mr. Grout in a clear distinct voice. He was an invaluable man. Clank Clinkscales kept the figures of his business in him; they were always right there.

When he wanted them he went and got them out of him—just as he took his securities out of his safe.

"That's good! That's good!" said Mr. Clinkscales, beating on his desk with an appearance of sudden happiness.

"What's good?" inquired Mr. Grout after a pause.

"They won't have it another year—that's all," said his employer.

"Who won't?"

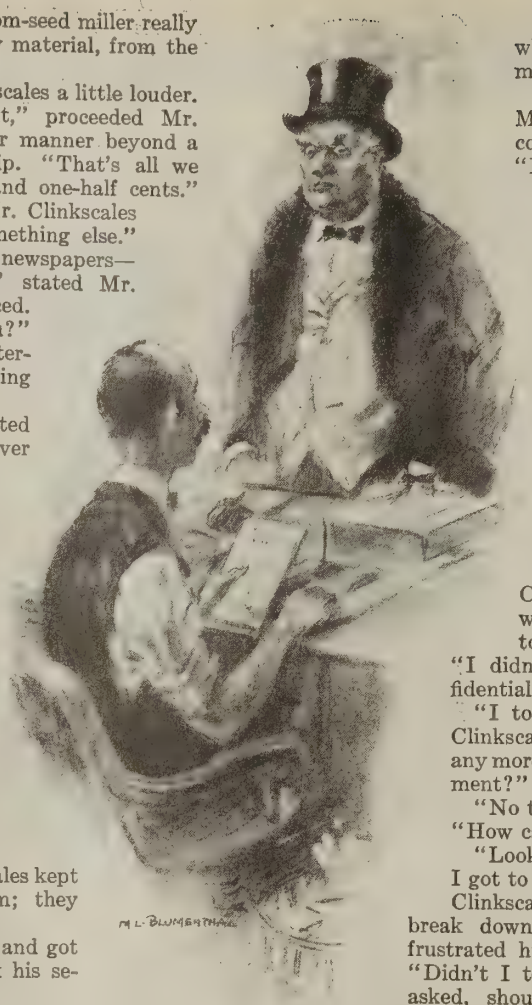
"Chipmunks," said Mr. Clinkscales—"in glasses! These damned, pindling, pipe-legged patrioteers!"

His employee gazed at him with some surprise. Mr. Clinkscales was often sketchy in his speech to his employees, but this seemed extreme.

"That spend it all for nothing," explained Mr. Clinkscales. "Relying on our patriotism, running our business, busting up this country—they won't get it out of me—not next year. How much did I make and keep personally—last year—after those damned taxes?"

"Four hundred and forty-one thousand, eight hundred and thirty-one dollars and thirty-one cents."

"It's worth it," said Mr. Clinkscales. "It's worth it to me," and beat again upon his desk. "It will be in the end anyhow. And a damned good investment too. Now then," he said to the waiting Mr. Grout, "I tell you what I want you to do—right off. I want you to figure out," he said, speaking with great deliberation and precision, "a schedule of all the grades from A-Number One Firsts to Number 6 Shunts—a new schedule, based on what we can sell for at cost!



"You'll Print That—in Your Paper—or I'll Squash You Like a Potato Bug Under a Trip Hammer"

"Is that clear?" he said when Mr. Grout did not immediately answer. "At cost!"

"What's it for?" inquired Mr. Grout with small spirit of compromise in his voice.

"Because I want it!"

"You understand that all makes work for me?" said Mr. Grout interrogatively. His lower lip stood firm and in his eyes appeared the look of a trusted employee who sees ahead unnecessary work for the mere whim of an employer.

"I understand that without a doubt," said Mr. Clinkscales, glaring steadily at him. "What of it?"

"What's the use of it?" inquired the injured man.

"I told you once," said Mr. Clinkscales, glaring harder. He was a man who gave few words to employees.

"I didn't hear you," said his confidential expert.

"I told you, didn't I," said Mr. Clinkscales, "we weren't going to pay any more taxes to the Federal Government?"

"No taxes!" exclaimed Mr. Grout. "How can you help it?"

"Look here, how many times have I got to tell you this?" inquired Mr. Clinkscales, his temper threatening to break down under the way this man frustrated him when he was explaining. "Didn't I tell you once—didn't I?" he asked, shouting his explanations now. "Are you getting deaf, or what? Didn't I tell you a dozen times already how it was?"

"You can't do it!" said Mr. Grout dogmatically. "It can't be done! You can't get round the law!"

"Didn't I tell you a dozen times," Mr. Clinkscales continued shouting, "that we won't pay any taxes—simply because we won't make any profits? Didn't I tell you twenty times that I wanted you to scale up a new schedule so we wouldn't have to make profits?"

"No profits!" cried Mr. Grout, moving back a trifle. "Do you have to do it?"

"Certainly not—no!" said Mr. Clinkscales. "I want to—myself." He was now feeling again under this opposition the old discomfort in the old region of the duodenum. He saw he would have to stop this.

"Why?" persisted the implacable Mr. Grout.

"Why? Why? I told you why at least a hundred times!" called Mr. Clinkscales, now genuinely excited. "Chipmunks! That's why! Chipmunks in glasses! High-sounding patrioteers! Self-playing mechanical orators from Tuscaroara, Alabama, and Sagaways, Montana! From the cotton fields and the corn! Wasting our money, running round, talking, spending it, tearing down the country—to cut down the high cost of living!"

His old employee took a step to the rear, a new light appearing in his eyes.

"Do you understand me now?" exclaimed his employer, seeing clearly that he did not. "Or don't you—yet? Chipmunks from the Federal Government!" he continued with bitter sarcasm. "I'm working with them! I've got a commission! I'm working myself—under the orders of our Government, you understand, to reduce the high cost of living. You see that, do you?"

Mr. Grout preserved the same inquiring silence.

"And I'm going to do it!"

"Do what?" asked Mr. Grout unswervingly.

"Reduce the high cost of living."

"How?"

"The one place you can reduce it, naturally. I'm going to cut down the high cost of taxes!"

"You mean ——"

"I mean I ain't going to pay any more—not a dollar that I can help. I'll do my bit. I'll show them once some patriotism—net. I'm going to stop paying taxes!"

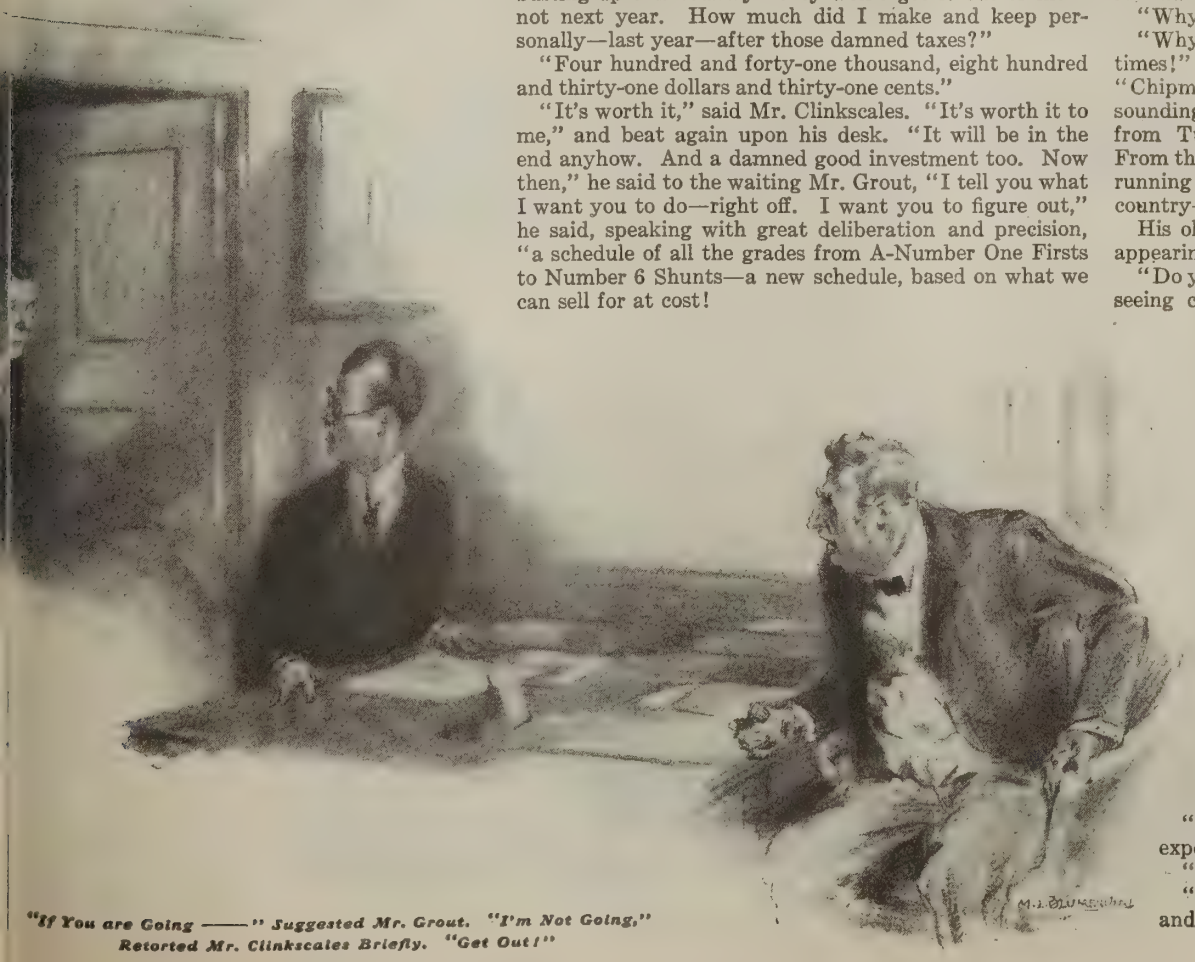
"Patriotism!" said Mr. Grout, his eyes now somewhat protruding. "Stop paying taxes! Patriotism!"

"Exactly!" said Clank Clinkscales. "At my own expense."

"Your own expense!"

"Certainly," said Mr. Clinkscales, getting more and more tired of this. "For every three dollars

(Continued on Page 75)

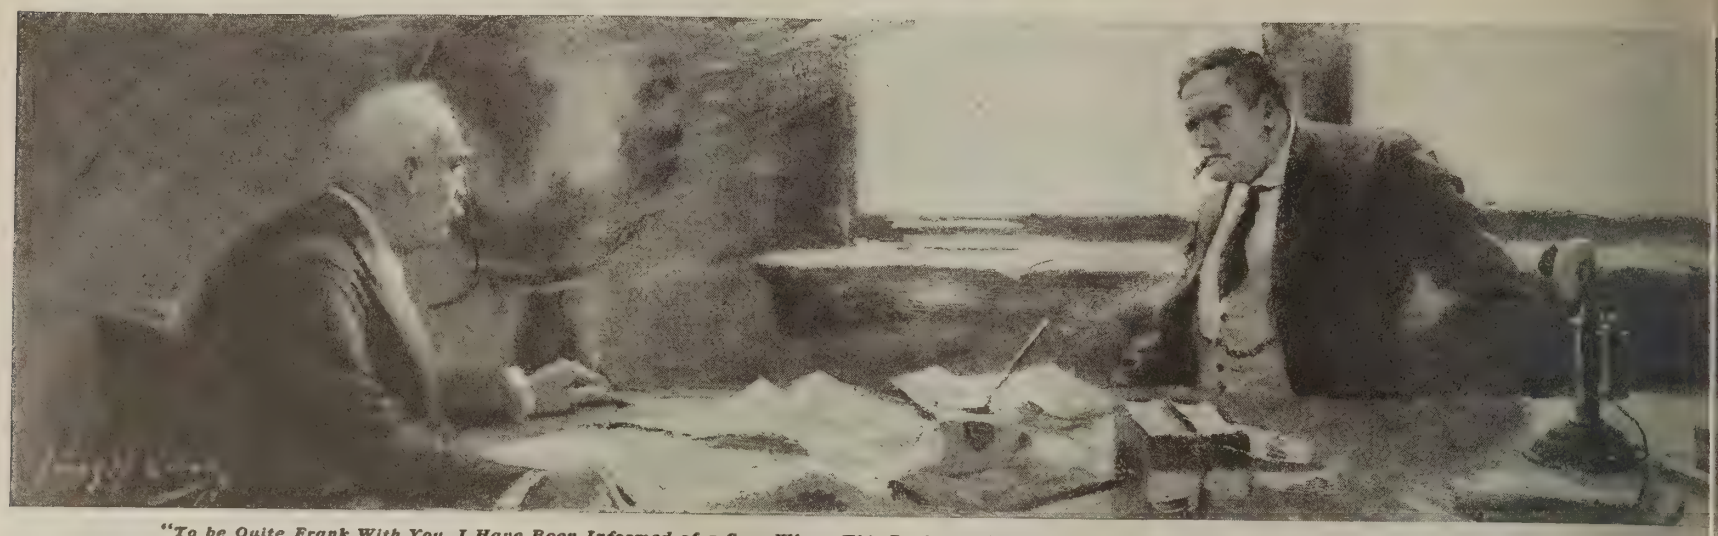


"If You are Going ——" Suggested Mr. Grout. "I'm Not Going," Retorted Mr. Clinkscales Briefly. "Get Out!"

DIRECT ACTION

By Wallace Irwi

ILLUSTRATED BY JAMES H. CR.



"To be Quite Frank With You, I Have Been Informed of a Case Where This Foxberry Has Given Bad Checks to the Amount of Thirty Thousand Dollars"

TWENTY-NINE years ago Macklin Prince was the aggressive junior partner in his father's business; Mellish & Prince, the firm was called, and they were wholesale lumbermen with headquarters at Denver. Their sawmills woke buzzing echoes among the pines all the way from Boulder to Cañon City. This was in the period when our nation's morals had passed from the Victorian into the Harrisonian and had not so much as dreamed of becoming Rooseveltian. In those days America doffed its hat to the successful man, quite regardless of how he got it; poverty was, of course, always jealous of wealth, but taken as a whole the country was tolerant of the silk hat and the fast-stepping trotter.

Not that the Mellish & Prince interests dealt in anything which, even according to present-day chastened standards, might be termed dubious. They bought forests, cut them down, and shot them through excellent machinery, which turned the wood into lumber both rough and smooth. Catering to public taste they had become masters of the jig saw which embellished our civilization with those diabolical pinwheels, scallops and spindles then considered indispensable to every well-constructed dwelling house. Times changed, fashions changed, and Mack Prince, an advocate of progressive methods, brought new life into the firm and compelled it to expand into the far-flung enterprise that it later became.

It was in his thirtieth year that Mack stood on the verge of a sensible matrimonial arrangement which, had it been carried out, would have offered no interruption to his hard romance of business. She was what it is found convenient to call a good girl; that is to say, she said her prayers, read the Atlantic Monthly at least two nights a week to her silver-haired father, never overdressed, never used face powder or any scent save orris root, sang in the Universalist Church choir and entertained no young men who did not meet with Mr. Fairley's approval. Her name was Amelia Fairley, and though a second glance might have discovered the sweetness of her eyes she could walk any bright day from Capitol Hill to Arapahoe Street without attracting what her beauty required—a second glance.

Now Mack Prince had carried her books for her when she was a student in the East Denver High School; he had even digressed occasionally from his later mild sporting life to accompany her to choir practice every Tuesday night. Nothing could be more natural than that they should have become engaged. There was neither fire nor chaos in that love. Cool, poetical, enchanting, it came to his heart like the pleasant silvery ripple that spreads and spreads when you drop a clean pebble into a mountain lake. Mack Prince was to learn the difference—in the nick of time, said innumerable unprejudiced witnesses.

Bianca Melling came like a bright spirit of unrest out of Philadelphia, of all places! Quaker-born, she went West to fire a frontier town with a new flame of pleasure. Newspaper paragraphers may disagree with me, but this has been done more than once in my lifetime. Pleasure ran with her like a racing companion whom she challenged daily and left panting at the milepost. Mack Prince, who had never been quite sedate and had had his bout with life among some wealthy Easterners in the mining camps, made no serious effort to resist her. He had heard much talk of her long before she danced into his field of vision. He saw her first under starlight, just as she stepped from a brilliantly lighted ballroom to a shadowy veranda. She stood laughing against the velvet curtains of the night, distant gleams catching her brilliant hair and teasing smile. A mooning Romeo already, he lingered in the obscurity to watch her splendor "like a rich jewel in an Ethiope's ear."

She singled him out for his money; at least that was the popular version of his case. There were several mining men constantly in her train, but the young ones were rough and the smooth ones old. Mack was obvious, easy and pathetically willing. There is no sportsmanship in taking willing game that will neither run nor hide. Poor Mack's engagement to Amelia Fairley had reached the chronic stage; he required the heart stimulant which Bianca always held in a spoon and administered to him in all but poisonous doses. Drugs create the craving which they satisfy; moreover they breed deceitfulness in the addict. Mack became horribly dutiful in his attitude toward Amelia until the little great world in which they moved began to pity and to make remarks. Bianca was created to have remarks made about her; she prospered under it.

It was Amelia's gentle hand that struck the blow which everybody but Mack realized must fall sooner or later; he was no feminist and held to the belief that man should propose and woman dispose. To do him justice Mack had made up his mind to do the right thing by Amelia, to hasten the marriage and be as happy as he could be under perplexing circumstances. It was upon such a melancholy errand that he faced his fiancée and received a pleasant surprise.

"Mack," she said, accusing him with suffering eyes, "you're doing this because you want to be kind to me. That's the sort of cruelty I can't stand. I know that Bianca Melling has turned your head. It's natural she should—she's twice as attractive as I am. I've been thinking it over, and the more I think the more I realize that I'm not the sort to make you happy."

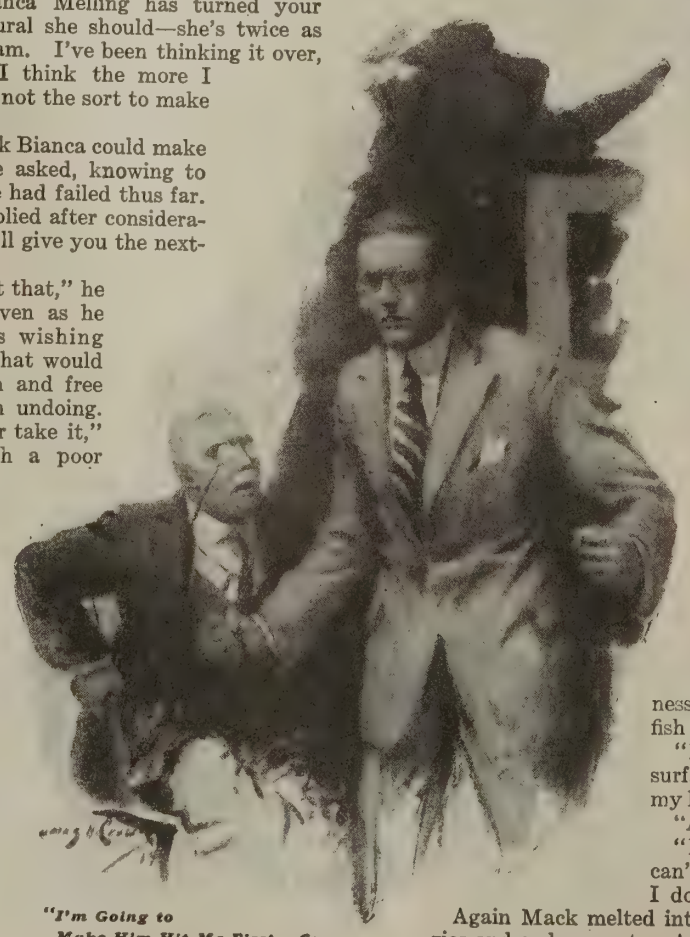
"Do you think Bianca could make me happy?" he asked, knowing to what degree she had failed thus far.

"No," she replied after consideration. "But she'll give you the next-best thing."

"I don't want that," he told her, yet even as he said it he was wishing for some word that would break the chain and free him for his own undoing.

"You'd better take it," she replied with a poor attempt at a smile. "It's more than I can ever give you now."

This closed Amelia's chapter, relegating her to a minor part until her brief and tragic epilogue. Less than six months after her voluntary break with Macklin Prince she married a mediocre lawyer, one Sextus Macgowan,



"I'm Going to Make Him Hit Me First. Come On, Mack! Are You With Me?"

who had been associated in her father's law busi Mack's wedding preceded hers by a fortnight and the young Princes, happy and prosperous as their implied, to New York, Chicago and Philadelphia sightseeing tour.

Four years later found Macklin Prince boiling i caldron of what Amelia had labeled the next-best t The good woman who had quit his book of life descended to the level of mediocrity adored by her gowan, and was living in a secluded, cottonwood-sh street somewhere in West Denver. Soon after her riage, Mack heard, a child had been born to her; h glad, because Amelia, he knew, was a domestic wom something which Bianca most certainly was not.

The Princes had built themselves a fine ugly gr house on Capitol Hill. Finished in the elaborate y oak of the period, lined with flamboyant Turkish hung with much velvet and chenille, it was intend impress the humble and the great. It was labyrinth large for them, Mack often thought, for they ha children. But to Bianca it was satisfying—if anyt could have been said to satisfy that greedy little perso gave her a background against which she could show o clothes and play the game of popularity to which she devoted with all her fluffy little heart.

Like many another man of ability Macklin Prince of a somewhat simple domestic taste. To marry a settle down were, to him, onymous terms. He had his wild life behind him. ness had grown round until in order to becom master he had become its s With the death of his fa the firm had been reorgan under the name of Ma Prince & Co. and had itself with the great lu interests of the Pacific C It would have been ridicu to think of a man like Ma Prince casting this load his shoulders in order to c with the young fry, the i and the retired capitalists whom Bianca coquetted, ways amusing, always amu

"Mack," she once told after one of his affectio little sermons, "there's a fu deep-sea fish that sort of sw and blows up when you b him to the surface. It's a heavy old soul and it just c stand anything light."

"That's me," he sm having as usual added forg ness to his kiss. "And what sor fish are you?"

"Naturally built for skimming surfaces, hitting the high waves my little fins."

"A flying fish," he agreed.

"Please don't scold me, Mack can't help the way I was born— I do love you somehow or oth

Again Mack melted into a creature of caresses, ap gies and endearments. Amelia's Cassandra prophecy well forgotten at such moments, when there seemed t

Mack went back to his offices and made the best of it. He even invented jolly bits of gossip, supposedly retailed in his wife's letters from Philadelphia. He must have lied rather well, for Denver was misled during the brief period when he found it necessary to act his foolish part.

She came back in December, arriving in a jingling sleigh over the white mantle which a recent blizzard had heaped up, torn wildly from the high peaks to the west. It was late in the afternoon, about twilight, when Mack Prince, smoking alone in the big sitting room, saw the furry bundle step carefully out upon the newly cleared sidewalk. She stamped her frivolous little fur-covered feet and

A Mooning Romeo Already, He Lingered in the Obscurity to Watch Her Splendor

stopped to shake fragments of snow from her skirt. Mack watched this all without the slightest trace of emotion. He had seen her come in this way so often before. She was home, that was all.

He was seated and smoking calmly when she appeared between the curtains of the door, her cheeks bright with the rare winds, her eyes shining, her face prettier than he had ever before seen it. Only in melodramas does the erring wife return in a black cloak, pitiably dejected.

"Hello, Banky," said her husband quite casually, though he did not rise to meet her.

"Hello, Mack!"

She sat down and began rather nervously to remove her gloves.

"Why don't you say something?" she asked finally.

"What do you want me to say?"

"Why don't you ask me where I've been and why I went? Why don't you send me packing right now?"

Mack threw down his cigar and the newspaper, which had concealed his face.

"I know enough," he admitted rather gruffly, "without asking questions."

"I suppose the whole town is echoing with it," she suggested, having rolled her gloves into a prim little wad.

"Not that I have heard. You are supposed to have been called to Philadelphia due to your mother's illness."

"Oh. I don't see why you gave that out. People will know as soon as you begin your suit ——"

"What suit?"

"You're going to divorce me, aren't you, Mack?"

"No." He sat and considered this a long time. Then he added faintly: "Not unless you want it."

She rose and rushed out of the room. He could hear her soft tread mounting the stairs. A moment later there came the sound of busy footsteps, indicating that the servants had been apprised of their mistress' return.

Another storm came up that night, howling about the stony towers and baronial buttresses with a fury to rival the cold tempests in Prince's heart. It screamed and gibbered, alternately shaking the window panes and whipping them with thongs of snow. Mack sat up in bed and he presented a comfortable picture, his head supported by soft pillows, a book held under the reading light in the crook of one silk-clad arm. It was Lays of Ancient Rome, which he had picked up at random from his library, and from this he was studying the fierce justice of the Conscript Fathers—worthy men indeed! It was a handsome volume, one of the Victorian first editions he had bought the year before—later to find that they were all counterfeit. Meanwhile the white demon of Pike's Peak, which seemed to have leaped across the foothills to uproot his specious splendor, sang to him the glory of that one sin he had sworn to deny himself. Hatred, hatred and yet more hatred!

All through Macaulay's martial strains the question persisted. Why had he sat there, calmly smoking, pretending to forgive the woman who had come back unchastened? Where was the spirit of his father, the spirit which would have settled it all simply and cruelly as old Kublai might have paid a grudge against a Tartar chief? Had he no courage? Was his tribe, bred to rough mountain justice, weakening under the influence of the luxury their crude strength had brought about them? It seemed so. Indeed it is wonderful how soon a breed of conquering Tartars can degenerate into soft Manchus.

Mack Prince must have fallen asleep upon his grudge, for when he opened his eyes he saw Bianca leaning over him. Her splendid yellowish hair lay in a thick braid against the pink lacy garment which with one hand she was clutching tightly across her breast. Her pure low forehead was creased with a puzzlement that seemed to be questioning his own distracted soul. Her pupils were distended like those of some frightened child just awakened from a bad dream.

"Mack," she said softly.

"Yes, dear."

He reached over and took her free hand, which was cold as ice.

"I know how you feel—how you must feel. You say you won't send me away. But I know you will."

"No," he replied sullenly.

"You didn't give me a chance to tell you. I could'nt. I promised to run away with Jerry ——"

"I don't want to hear anything about him."

He turned toward the electric light, which seemed to be burning its way into his brain.

"You've got to. I started East—but I couldn't bear the idea, Mack. I went straight to Aunt Ruth, at Harrisburg. He followed me there and did everything he could

(Continued on Page 99)

COMME SI, COMME ÇA

By Nina Wilcox Putnam

ILLUSTRATED BY CLARENCE F. UNDERWOOD

WHAT is antique and what merely secondhand? That, *mes amis*, is a delicate question, yet of such a nicety that it can only be answered by genius backed by an authorative name, such, *par example*, as my own.

Of course when one comes to old silver, Goblin tapestry and *objects de vertue* such as Ming pottery, this question cannot be mooted. But my claim is that any object coming under the head of curious is a curio, of age is antique; and if everyone will concede that a person is as old as they feel, why not that an inanimate object is as old as you feel it is, and that anything under the head of salability is an object of art?

Lionel, my head curator, who is on some such pretext ever on the verge of leaving me, brought up the question in one of those all-too-frequently recurring disputes which his absurd overconscientiousness gives rise to.

"But damn it all, Kentt!" exclaimed the transfigured Tom McGuire as he stood before the cheval glass in the dressing room of our flat while the dressmaker chap from Tonté fitted an exquisite costume for the forthcoming *Bal des Artistes* which I had designed for him—an Eastern slave effect in raspberry satin and silver with heavy ropes of pearls and a turban completely swathed in osprey feathers—a unique creation which curiously enough seemed to exasperate instead of please Tom, or Lionel, as he is and ever shall be to me, and which he had only consented to wear after my insisting upon the vital necessity of all the big art dealers and decorators like ourselves making a proper appearance at this important function.

"But damn it all, Kentt!" said he. "When you get a poor fish like Mrs. Allington into the shop and sell her an exquisite example of the late Tweed period consisting of an umbrella stand made out of concrete set with broken bits of colored glass and jolly her into paying fifty iron men for it on the ground that it is 'so amusing' my gall rises, I swear it does!"

"But wasn't it amusing?" I demanded with the candor upon which I pride myself. "Wasn't the very fact of her buying the blooming thing amusing?"

"But was it decent?" insisted the absurd creature. "Lots of indecent things may be amusing—but hardly in business relations. Why, where are you going to stop? You begin with George Washington, and his period is O. K. I guess—at any rate it's really old—then we get Adams and Co. And they seem fair enough too. Then the Victorian period and now Tweed. I suppose that if the Republican Party gets in you'll begin selling Woodrovian stuff?"

"Well, why not?" I snapped back. "It could well be called an interesting period!"

"Oh the devil!" exclaimed Lionel. "You know what I mean well enough! It's this selling people trash by hypnotism that gets my goat!"

And he stepped from the rose-satin pantaloons with an angry gesture.

"Nonsense!" I replied. "*Mon vieux*, it is not always the dealer by any means who creates an imaginary value about a valueless object. Why more often than not it is the client who is responsible. *Je vous assurez*, the very biggest collectors are sometimes subject to a craze for absurdities such as old medicine bottles or obsolete cooking utensils, and if their interest is engaged the price is nothing to them. What value, *par example*, would old hatboxes have unless some nut had started collecting them?"

With which masterly reply I took his place before the mirror and was draped in the nebulea of my own costume—that of a Roman senator. Lionel eyed me critically.

"Some indoor sports skirt!" he commented ruthlessly. "But," he continued, "what I mean about values is this: A big chap in the collecting line like, say, Morganthawl, doesn't fall for any of that fool stuff, and a big dealer like—like Madame Cartiea, for example, doesn't try to sell it to him. I wish to heaven we did business that way. She gets the big clients like Morganthawl just because she doesn't sell hokum at all!"

"Well!" I said, shrugging, "I'll make you a little bet that Morganthawl is as big a fool as anyone and that Cartiea sells him hokum—only we don't know about it—and I mean stuff that you and I will both admit is hokum, too, and that she will admit it."

"What'll you bet?" he demanded at once.

"A box of candy!" said I. "Five pounds."

"There Was an Arabella Durand, Was There Not, Mr. Kentt?"

"Bah!" said Lionel. "Make it—let's see—if I can prove you are wrong you let me off wearing that damn costume."

"All right," said I, "and if you lose you wear it. I'm satisfied. I've set my heart on having my dearest friend and head curator look his best at the ball, but I'll be a sport. You need not even go to it if you win. But, *mon ami*, of course this means that the test must come off during the next three weeks."

"I was thinking of the Durand sale," said Lionel.

"So was I," I replied, trying the effect of a fillet round my head. "Though how you are going to prove anything is more than I can see."

"Well, I'll make that sale the test if you will agree to it," Lionel informed me. "Old Durand left no heirs and no will and the estate will be sold by the controller. He had practically nothing but trash. If Madame Cartiea buys there for Morganthawl we'll call it a go."

"Nothing but trash—and the Sully miniature!"

"But did the old boy really have it?" said Lionel. "All you know is that Sully painted a miniature of Arabella Durand in 1820 and that it has been lost."

"Or remained in the family," I added. "There is apparently no record of their ever having sold it. Old Chester Durand was a collector in his way, you know!"

"And may have kept it in all his ... erty, knowing it was worth a fort... scoffed the dear, beautiful boy, toyin... the trimming of my toga. "Awfully likely, isn't it ... can't make me believe he did."

"Well, *mon cher*," I said. "We will be there at t... in hopes of its turning up nevertheless. And I am ... convinced that it not only still exists but that in sp... the fact that it is not listed it will be discovered in... some secret spot, let us say. open stoves. There was, however, the aforementioned superstition about the portrait by Sully—a miniature of extreme beauty often mentioned in works about the artist, referred to in the letters of—er—well, generals and admirals and senators and artists and so forth. I don't really know just what, but at any rate it is certain that the miniature of Arabella Durand had at one time existed, had hardly been destroyed, and that, *on dit*, the occasional adventurers who had attempted to see that old bird, the most recently deceased Durand, simply had the door shut in their faces like a beastly book-salesman person or something by the rude old fellow!

Eh bien! The sale had to be advertised, of course, since there were plenty of creditors, if no relatives, and the advertisement had appeared in a Springfield paper to which we had subscribed since hearing accidently from Herr Docktor Verboten that the old man was ill.

Ça va sans diere that a few other distinguished dealers beside ourselves were bound to have known of old Durand's existence and, of course, would show up. But we calculated that most of them would be local persons, female gift-shop proprietors and so forth, with very little money to spend. And so we had the delightful sensations incident to—er—worsting our competitors, in addition to the joys of the salubrious morning as we began our *voyage de reconnaissance*.

"Ah! My Friend! My Benefactress! How Much? Three Thousand Dollars—Four Thousand? Name Your Own Price!"

As we turned from the Parkway into the freedom of the highroad and darted ahead like a—er—arrow upon the blue, or something, I could not but wish that all the dull bourgeoise American public might have the treat of not only seeing us but realizing us, if I may so put it—our charm, our success, our vitality, good taste and culture, even our French. And I especially wished it for the people of my own home town of Dallas, Texas, which had curiously failed to appreciate me in my boyhood days and had unreasonably called me Percy, which name I never actually bore and failed to see the *raison d'atre* of. Could they have seen me, how their opinion would have altered! Poor things! How I pity provincialism! But I disgress. *O là, là!*

It was about ten when we left the city limits and not more than eleven-fifteen when, as we were hesitating for a moment at a fork in the road, a great black-and-red Roynton, driven by a liveried chauffeur, flashed by us, taking the left, but not so quickly that I failed to note the occupants of the back seat.

They were Madame Cartiea and Eloise Dubois, her assistant. Lionel and I exchanged a swift glance and he—for he was driving—swung into the left turn after them, making all possible speed.

"Great Scott!" said Lionel. "She's on her way of course! How much do you suppose she knew about Durand *et al?*"

"Easy enough!" said I. "She's been spying on us or been dining out again with your distinguished father and he mentioned your conversation with Morganthawl and she's trying to beat us to it!"

"Sush!" said Lionel. "She probably doesn't connect this auction with the Sully miniature at all. We'll say nothing at any rate."

Ahead of us the powerful touring car had slowed for a moment at the gateway of a handsome and pretentious estate, where an old man—a servitor of some sort—was standing, hatless. The chauffeur spoke with him for a moment and the old man waved and pointed ahead. Evidently they had asked for and received directions.

"They seem in a hurry!" I remarked, glancing at my wrist watch. "It's only a little after eleven and the sale is advertised for two. They must have heard something we don't know. My gracious! Suppose the Sully has been found?"

"I'll say something is up!" agreed Lionel. "We'd better reach there when they do at any rate."

And he sped up the auto until we turned another curve, when one of those unexpected congestions of traffic occurred. A long string of trucks was approaching and there was a long line of cars ahead. There was nothing for it but to fall in place, but as the road was now straight we kept going at about twenty-five miles an hour, which was all right enough, because there was the same condition ahead of the Roynton, which moved two cars before us in the long line.

Suddenly this line swerved to the right round an abrupt turn; a gate loomed before us as we made the unexpected curve on two wheels. I caught sight of a motor policeman, cap in hand, standing by the gate, and then the cars ahead began to slow down and stop. We stopped and once again dear Lionel and I exchanged a bewildered glance.

We were in a cemetery.

FUNNY FINGERS

By Maxwell Smi

ILLUSTRATED BY LESLIE L. BE

SQUATTING a moment on the window sill De Nutter grinned and tightened the buckle of his right sandal. As he dropped to the ground his chuckle of confidence was audible. He had put over his first attempt at burglary—put it over while two servants were in the house. It had been very simple; it would be profitable. Two steps took him across the fringe of flower bed to the gravel path which led to the gate onto the street a hundred feet away. Better to be seen going out boldly, if anyone chanced to be passing, than to go skulking. He was not concerned about the servants; their laughter had sounded from the rear of the house downstairs as he had departed.

In a trousers pocket he fingered the half dozen glass beads and the little bottle which once had contained the kohl that had darkened the eyes of an Egyptian princess. His coat bulged where he held beneath it a Byzantine tumbler.

The small bottlelike vase and the tumbler really were extras in the way of loot. He had not gone after these. They represented an inability to resist an itching temptation. The beads were all he had intended to take. But he sighed in regret over the things he had passed up, and indulged in a feeling of righteousness because of the strength of will with which he had refused, though the vase and the tumbler were evidence of a compromise with that righteousness.

There was, for instance, that maddening blue-black copy of the famous Portland vase—a copy made by Josiah Wedgwood when the original was discovered in the collection of the Duchess of Portland after her death in 1786—with its delicate white figures and bas-reliefs which are still disputed as portraying the birth and death of Alexander Severus, whose ashes the urn held, or as representing Pluto and Proserpine, or again the nuptials of Peleus and Thetis. The treasures, too, in Venetian crackled glass and milk white and opaque and enameled; and the rare engraved Venetian creations. Especially had it been hard to keep hands off the delicious works, with their burned-in lead enamels, of the Saracenic art which was stifled when Tamerlane invaded Syria and transported all the glassworkers to Samarkand. And the gems of Roman, Phœnician, French, English, Bohemian, Colonial American craftsmanship. It had required real effort to leave these where they belonged; but De Nutter knew repression and could practice it when caution dictated.

The glare of automobile headlights struck upon him as he passed through the gate. He checked an inclination to shrink back into the shadows, but he did bend his head and half turn away from the light to hide the bulge in his coat. His breath caught as he glanced at his feet. He hoped those in the machine would not notice his odd footgear—the sandals. While the thought was in his mind the light left him as the car passed on to slow and turn into the drive at the next house.

De Nutter moved more briskly, thankful that he had harked to discretion and therefore had not helped himself liberally from the magnificent collection of antique glass in the house he had just left. Had he been heavily encumbered he probably would have engendered suspicion, since someone after all had seen him departing. He had the beads that had impelled him to burglary. These alone would suffice to pay him for the risk. Besides, he had the Hedwig glass and the jasper-red kohl bottle with its Nile-blue and pale-buff curved chevrons.

De Nutter got unhurriedly into the roadster which he had brought impudently to the curb on his mission of burglary. In scheming the burglary he had proceeded on the conviction that the more openly he went about it the less likely would he be to attract attention. Who would suspect a man that drove up to the front door in an automobile?

"You've Lost What Nerve You Had, Betty—it's Gone"

Preferably he would have hired a professional housebreaker—the devious range of his acquaintance would have made that easy—but this had not been a matter of raking into a bag whatever looked valuable. It had been a job calling for an expert, this selection of the half dozen beads. He could, of course, have instructed a hired burglar to garner all the beads in the collection, but De Nutter had feared a professional would not stop there. The plate and trinkets in the house would have proved too much for a plain thief. And silver frequently was traced before it reached the melting pot.

That was what had made De Nutter take the chance himself. Suppose the burglar had helped himself to the ordinary articles of loot, had been arrested through their disposal and had talked to save his own skin?

Starting the car De Nutter slid at easy pace through the autumn evening to descend the steep ways from this highest of the residenced hills in Westchester County close by the New York City line. Ten minutes and he was mingling with the stream of automobiles on Broadway and passing within the city limits.

A layman wouldn't think much of De Nutter's plunder. The beads about which he was so highly elated might amuse a child for a while, but they would go into the discard any time if the choice were given of some wonder from the counters of a five-and-ten-cent store. A woman could be expected to murmur with pleasure at their coloring, the Stygian blue to palest turquoise with zigzags of yellow and red, but she wouldn't go frantic over them. A man probably would grunt, nod, say "Pretty" or something like that, and push them aside to make room for an ash tray.

They were like that, these beads, to ordinary folk; and likely would not hold much greater appeal to anyone not an enthusiast even though it were stated that they a back as far as the Twelfth Egyptian Dynasty, abo thousand years before Christ, or that the exqu blended one had belonged to Queen Hatasu of the eenth Dynasty, 1500 B. C., and by its hieroglyphs that this queen was "beloved of the Goddess H To De Nutter, however, the history of the colored glass meant much, since it had roused the covet which had brought him his commission and incited burglary.

De Nutter was a scout and procurer in the w antiques. He was not a dealer; he carried no sto no headquarters but his studio apartment. He hun and obtained whatever someone else wanted. And as a rule he was careful, he was not too scrupulous manner in which he filled orders.

In a business like antiques, ceptible to chicanery, there w and profitable play for his edge—he had been an assista tiquary in a national museum his talent in rooting out lon treasures. Nor did all his c sions come from shady sources were times when even the mo utable agents called upon h help—no questions asked—to need of some insistent collect

The demand for the Egyptian beads had com an ardent spirit who these few to complete a tion embracing every unearthed. Outside o seums the d beads were prac unavailable. J Cumerford, who lection De Nutt robbed, had be fered fabulous for the Queen H bead and th others but had r to sell. So had t other individua possessed the the baubles wanted, wi exception of that whic belonged to the queen.

As a last resort, to the importunate clien dealer had called up Nutter, given him the of the three who had th eted beads, and told him to use h judgment. Particularly, it wa pressed, the inscribed Hatasu was desired. For it ten thousar lars would be paid; the others be bought for five thousand a The money would be split 60-4 Nutter getting the three-fifths.

The dealer's cut was big not b he had obtained the commissi because it would devolve upo to bring the stolen relics to light again with enough bility to permit their new owner to display them in his This could be done by having a research party am ruins of ancient Egypt discover these selfsame b colored glass with others of lesser luster. There pro would be trouble over the Hatasu bead, but its ab identity could be clouded by the addition of some glyph without interfering with the original inscripti

Such was the problem to which De Nutter had a his energy and cunning; which now, as he swung h from Broadway into Van Cortlandt Park, he flattered self that he had carried out with considerable darin skill.

Out of the traffic he halted in a byway of the par changed the sandals on his feet for ordinary shoes. idea that had caused him to wear the sandals had a stroke of genius, he felt, but now their purpos served and he did not fancy being conspicuous by re ing to his apartment in the city with such odd foot

An hour later, having traversed the park and cont down through the Bronx to Manhattan, he garaged h and went on afoot to Irving Place close by Gramercy He called at the apartment of a young woman he emp sometimes.

"Take care of these, Betty," he enjoined without re liminary, dropping the beads and the kohl bottle int

ig lass and handing the lot to her. "I'll want them
in couple of weeks."
ut hy"—Betty Winstead, who was known in village
s a dilettante artist of sorts, looked at him with
ed rows—"why not get rid of them at once? Turn
our to the man who ordered them."
ecuse he won't take them," explained De Nutter.
ind. "That was his only stipulation; he won't even
at his layout until the police have quieted down.
rf d will make them go after this job hard, you
hey'll be scouring every antique shop within
y our hours. They'll be looking for everybody who
a anything to do with antiques; including"—he
sarcastically—"yours truly."
s Winstead weighed the heavy Byzantine tumbler
htully. She recognized it as a Wedgwood copy, and
e also the value of its contents because De Nutter
iv a hint when he had asked her to be at home this
he understood that he would be generous for any
h gave him. But she had an undefinable uneasi-
gnst taking part in the burglarious deal.
wh it wasn't necessary to leave them here," she
p. "You admit that you expect the police to
s you as well as the others. What if they extend
ry to your friends on the theory that you might
ce just this—passed the stuff along?"
Ntter dropped into a chair and crossed his long
ay. Lighting a cigarette he contemplated Miss
e through the smoke. This was the first time he
nived her in anything legally crooked, though she
sted in several doubtful transactions. He thought
ehow to reach her.
ou're getting cold feet, Betty," he challenged with an
attempt. A hardening at the corners of her mouth
h he had attacked from the proper angle. "If
there was any danger, do you think I'd leave myself open? Don't you suppose I'd have sense enough to bury that junk so deep that they'd have to dig through to China to get it—if I thought there was any chance of the job being brought close to me? But if it will hearten you any I'll tell you that I left 'em a first-class working clew that'll send 'em a thousand miles from me." He laughed and rolled his head backward, squinting at her from slitted eyes. "You've lost what nerve you had, Betty—it's gone."

Betty Winstead frowned two unbecoming wrinkles. She did not like being told that she lacked nerve. Her eyes remained shadowy, doubtful, but she smiled. She conceded that he would not keep the loot near him or place it where it readily could be connected with him if there was real danger.

"All right," she agreed briefly.

She examined the thick, dark-colored Hedwig glass with its imposing figures, deeply cut on a wheel, standing out in high relief. She wondered where she could conceal it, whether she should conceal it.

De Nutter rose to depart. He tapped the tumbler in her hand.

"There are only six like that in existence," he volunteered, and added with a chortle: "So if you happen to be short of glasses when some of the crowd drop in don't serve beer in it!"

Had this been a man you would have called it a grin. Men and cats grin; but certainly women smile. Julia Sinclair, then, smiled, with a trace of amused malice, into the telephone.

"It will cost ——" She hesitated, and this time it could be classed as nothing but a grin. The situation was funny. "If I am successful, Miss Cumerford, I shall expect to be well paid."

"Yes, yes." Miss Cumerford spoke with restraint. She had observed and understood Miss Sinclair's general intonation. "My father is willing to pay—well, as you put it. He treasures very much the articles stolen from his collection. It was my suggestion that you be asked to interest yourself."

The last sentence came grudgingly, half defiantly, and Julia laughed silently. Her initial meeting with Miss Cumerford had been unfortunate; Miss Cumerford had made it so. It had come soon after Julia's adventure in the affair of Mrs. Garrett-Welden's diamonds and Miss Cumerford therefore had been inclined to regard her with disapproval. When shortly they met again Miss Cumerford had been unable to recall the earlier introduction, though finally she had done so with rising brows and an offish remark that, of course, she remembered. "Who could forget Miss Sinclair—The Opportunist they call you, do they not?—who becomes so strangely involved in such awful crimes!"

At their third meeting Julia had taken pleasure in failing to place Miss Cumerford, and during an hour in the same drawing-room had emphasized the failure to be impressed by addressing her variously as Cummings, Mumford, Ford, and everything but Cumerford. A few days later they had snubbed one another on the Avenue.

Wherefore Julia laughed because here was the same Miss Cumerford within a month coming to her begging favor. And it heightened Julia's amusement that Miss Cumerford should be bringing Opportunity to her door. She was being appealed to now in the rôle of consultant, whereas she was accustomed to watching for straws drifting in the wind which might give her chance to use with profit the peculiar powers of observation that had afforded her a fruitful but uncertain living for the past several years. *(Continued on Page 87)*

"I Knew it!" Bill Exploded. "Didn't I Tell You," He Glared at Cumerford, "That This Dame Would ——"

CANNING OUR VOICES

By Kathleen Howard

My dear Miss Howard: Will you sing and record *Connais tu le pays* in French for us on such and such a day? Awaiting your reply, I am, Yours very sincerely,

———— ————,

Recording Manager.

THAT starts it all. You do not rest till you look up *Connais tu* and hum it over in its original key to refresh your memory as to the range. As soon as you get enough time to yourself you begin to try it over, imagining yourself in front of the horn.

The diction is, of course, of paramount importance and I always go over it many times, analyzing the different sounds and the placing of the strong consonants and vowels. I cannot tell how other singers prepare for the horn, I only know what I do myself.

Then I sing it over, using the same quality of tone from start to finish, equalizing the volume, making it almost like a following violin tone. Until I have recorded it I keep this mental picture of the selection in my mind. I always memorize every song I sing. Sometimes, if I have much other work in my mind at the same time, I copy out the words and keep them before my eyes in recording; but I do not like to have to depend on the printed music or words at the time of recording but be perfectly free to give my entire forces to the interpretation of the song.

The aria must be carefully timed. For a twelve-inch record it must be about three and a half minutes in length and for a ten-inch something less than that.

Sometimes I work many hours on a song the company desires recorded and finally decide that some other singer could do it better, make it more popular in appeal or grasp its style better. Then we discuss and change and my suggestions are courteously considered. We discuss: Shall we have a violin or cello obbligato? This is a popular form of record and to my mind a very good one. But the union charges more for solo work, and such things must be considered in the cost of a record.

At last the day set for recording arrives. It is usually in my case in the afternoon, so that we can do two selections. Also, big voices generally are inclined to be sluggish in the morning and we prefer the afternoon.

I arrive at the recording rooms, fatally punctual as usual. The singer before me is still recording. Her last effort is being heard critically by the orchestra leader and recording master. The orchestra men are sitting round in their shirt sleeves in the anteroom, smoking hard. Through their clouds of cigarette smoke are dimly seen the "Positively No Smoking" signs. They know that a sensitive throat is often affected by heavy cigar smoke, and so rarely indulge in that luxury.

From the room beyond—the recording room—I hear a Jewish wail, marvelously reproduced in the machine, *"Eïli! Eïli!"* The girl's chest voice is carried up to middle C, in defiance of vocal methods, but it suits perfectly the anguished lament. The sob in her voice, the Oriental emotion in her typically Hebraic tone quality wail and suffer with the bitter cry for help that she is voicing. You feel yourself miles away from New York and amid swaying cloak-clad figures beside some sunny wall in Palestine. With a last nasal cry of desolation the voice stops.

"Good!" I think. "My turn now."

All Set for the Horn

NOT at all. Apparently they are not satisfied. The orchestra is called back and I hear the girl herself repeating the phrases I have just heard from the machine. After three or four repetitions she comes out—a typical Russian Jewess, pale, with something mystic in her eyes belied by her smart clothes and general ready-made air.

"All right, Miss Howard!"

I have grown a bit keyed up by waiting—always to me one of the most trying incidents of life—and go gladly to the slaughter.

"Mi, mi," I hum a bit. Yes, the voice is still up—that is, still resonant and as I left it after my careful morning practice.

I enter the warm room. It must be kept warm because of the wax used for recording, and of course the windows are closed.

Some companies record in a big, resonant, empty room; some in one planned to dull all extra sound vibrations.

A Recent Photograph of Madame Howard

As for myself, I welcome the big vibrating emptiness. It helps your record, helps you on big notes when you sway back from the horn and all the air waves pulsate with your voice. It is better, I am told, to use a big, pulsating tone on high notes, warm and resonant, and step back from the horn, so that its intensity shall not make a blast, than to use a smaller, less vibrant quality close to the horn.

For me a record fails utterly that flutes gently and vaguely through a selection. Give me the punch and—if I may say so—guts of a Caruso record.

The orchestra is grouped round you. It is small, of course, and varies in size—from twelve to twenty men, say. There are some strings, a saxophone possibly, trombones, horns, cornets, oboe, different wood-winds and flute. Sometimes the violin has a queer metal horn attached to its side. This focuses a brilliant tone on the recording horn and allows the violinist to stand farther back.

All the men are on different levels. Some stand on blocks and little platforms, some sit on stools of different heights and built-up chairs. All are movable and can be adjusted and readjusted with ease. Their music is suspended from a network of cords and wires near the ceiling—a little sheet in front of each man's eyes. The men climb up, shuffling their feet and shoving their wooden stands about. The trombones are pushed back, the strings forward.

The flute is to play an obbligato close to my ear and is extremely afraid that I will not let him come within recording distance of the horn for his solo work.

I reassure him and win a smile. We all must record into that one horn somehow or other, and it is a finely balanced affair, requiring much nice adjusting to enable us to do so.

The orchestra talks about anything but the job on hand.

"Say, our show"—meaning the musical comedy where he plays in the evening—"is some work. Never stops playing from eight-forty-five till eleven. A that fi-nally! Gee whiz, it just about e you out!"

"Seen Bill's new show?"

"Zsyxrmp mushwimph rrampjkby."

This from the trombone player to the phone—confidentially.

"Schlumpfsky," responds the other cally; and they've got you—one of the on don't speak.

The orchestra leader taps his baton aft music is distributed and they begin to rel They try it through once. A mistake or the notes—groans and whistles of disgust corrected. They try again. The maestro way above you, facing you, his eyes on the tra and you. He is behind and a little to o of the horn.

"All ready?"

A fresh wax is put in place, everything at carefully—yes, all is ready. A moment solute silence, only the whir-r-r-r-r of the m is heard. The needle is put on the wax, from it, put carefully back again. Then if is just right—that is, the curling spiral of hair begins leaving the surface where the travels delicately over it—the assistant re holds up his hand, whir-r-r-r-r goes the ma and we are off. The attack is perhaps a bit at first.

I stand close to a suspended zinc horn c from the machine, shaped like a funnel. I stand with one foot in front of the other, to sway back or forward at will. The orc is thickly clustered behind me and if I sw much to right or left or too far backward I a violin bow or a bit of music sweeps my h

The flute has the air in the introductio yield him my place close to the horn and duck down out of his way or step noiseles one side.

I must get back on my beat in a perfect si position, soundlessly and ready to make a p attack.

I begin *Connais tu le pays.* My whole eff to use an unrestricted floating tone, singi easily as possible—it is fatally easy to ti in front of the horn—paying great attenti the enunciation. We go on swimmingly:

"Le pays des fruit d'or
et des roses vermeilles."

The orchestra does not follow me exact I resolve to ask a moment's leniency on "so *ciel toujours bleu"* to bring out the "s's," the "t" in *"toujours."*

The orchestra seems to be playing too covering my words no matter how caref pronounce. I try to sign this to the leader with my eye hands, without moving my position in the least in fr the horn.

He doesn't understand. He thinks I mean to go s so I nod the tempo slightly. This is only the first ti trying it, and ten to one it will not be satisfactory, s strain is not so great as when you know you are m a master, or matrix, from which the record will be and you feel you may allow yourself liberties in indic tempo, and so on.

The Wrong Time for Comments

WE GO on to the end. A silence, while the ma whir-r-r-rs a band of fine lines as a selvage to you bon of song. Sometimes a singer will forget this pause remark loudly, "That was pretty good, don't you thi which is, of course, instantly recorded on the faithful spoiling an otherwise good record.

An excitable Italian was once recording and was quite satisfied with the sounds coming from the in ments behind him. He turned like lightning and pered some sibilant command, back to the horn fo own phrase, and round again to someone in the orch with a penetrating direction. When the record was pl for him he was horrified to hear all this issuing from horn, and confessed with a crestfallen air that he tho only music would record.

At the close of a test the machine is stopped and director climbs down from his box to hear the record.

He says, perhaps to the trombone, "Those notes u ba—um—ba must be more sustained"; or, "What you play, cornet, in the fifth bar from the end?" an forth.

The Musical Recording Angel

By RUTH MILLER

R'ICS," once declared an eccentric pianist ftly, "are a canaille—a set of villainous ras- es. I never read what they write. What harm th' do my genius? What care I so long as my mere e sfices to attract the people? The people adore me. he. I am a god. What have I to fear from critics?" iss a representative and delightfully illuminating p of the sort of opinion entertained by musicians ering that small and distinguished body of men known e 'ofessional music critics when the grapes are sour. in the life of every musician, be he the most petted a pered idol, there comes a time when that coveted ptakes of a certain acidity. It is true that the dis- le artist is seldom so frank—at least not for publica- —t when his performance, his cherished art, is the t f adverse comment by some low hireling of the altic press our opening paragraph is a very fair lef his private opinion, whether it is publicly ex- eor not. But if perchance the reporting of his artis- fos takes on a more favorable tinge then he tells a er story. You may hear this erstwhile peevish soul dig and congratulating himself on having found at nn on a newspaper who understands and appreciates mical worth.

Gall and Wormwood to Critics

Consider whether the more prosaic people—for in- ace, the discoverer of a tooth paste or the originator of il rly flavored chewing gum—can bear with equanim- v se criticism of their handiwork before we condemn rtt's attitude as a childish and ridiculously preju- ce; before we dismiss it as conceited effervescing pression notorious for its temperamental qualities. oe doubted if anyone would consider chewing gum cue for artistic temperament, even when masticated auring and petite blonde; but it may be stated with ni that in case the perfection of any particular chicle product were slurred in print by some total ge its wrathful originator would put to entire shame hifew brief and well-chosen remarks the most viru- irle of any discredited musician.

erhe artist generally has this on his side: There is ngh truth in his exotic declaration of independence waper scribblers to make it bitter gall and worm- tthe gentle reviewers of music. For it is so obvious s to be a truism that there are a scant half dozen ias whose hold on the public is so strong, whose pt personality has enthralled audiences for so long, thr have created a following whose loyalty could not ered by even a deliberate campaign on the part of the music critics—if one could imagine such a highly improbable and far-fetched proceeding. The magic spell which they have woven with their music is so powerful that a few printed lines from the pens of some dozen music cynics could never break it.

But these artists are so rare that with the exception of a passing mention they have no place in this article. It is such a generally accepted fact that the making or breaking of music and musicians lies in the hands of the score of music critics on the big dailies; it is such common knowledge in the musical profession that their influence is so far-reaching and powerful that the aspirants to a career as concert artists pay out every year in the three or four great cities of America thousands of dollars on giving concerts in the hope that they will receive a scant two or three complimentary lines from these men which they may use in their subsequent advertising.

After the New York concert of a musical débutante one may pick up any one of the many musical journals which are devoted to hawking the wares of musicians and discover a conspicuously flamboyant half page or page advertisement of this particular embryo sensation, and above her carefully posed picture with the determinedly soulful eyes will be the lines: Tremendous Sensation Scored by Young Singer in New York Recital. Alva Missozza Eulogized by the Press.

Her name was probably Jones before she had the orthographic brain storm.

Below the photographic insult one may find two or three lines taken from the different big dailies that read something like this:

Miss Alva Missozza was heard yesterday for the first time. She is the possessor of a soprano voice of fairly sympathetic quality and has an attractive stage presence. —N. Y. Times.

A new singer, Miss Alva Missozza, possessing a small but rather sweet voice, was heard yesterday afternoon in Æolian Hall.—N. Y. Tribune.

Miss Alva Missozza has a charming personality and is the possessor of a clear soprano voice which she used with considerable skill.—N. Y. World.

Nobody knows with the exception of Alva herself just what was in the rest of those criticisms. And it is such a common practice for musicians to edit their criticisms personally that no one ever thinks anything about it—least of all the men who wrote them in the first place. Besides, it is generally understood that a week is the limit that any critic remembers just what he has written or that he has written anything at all about the average musical débutante.

Now some manager of a concert series out in Sassafras, Nebraska, reads that blurb in that musical journal and forthwith writes to Miss Alva offering her one hundred dollars to give a program under her auspices, provided Alva will pay her own expenses and her accompanist's fee. You can figure it out yourself, if you know anything at all about the railroad rates for the round trip between anywhere in Nebraska and New York, the cost and upkeep of feminine wearing apparel, the probable fee and expenses of a reliable accompanist, if you care to know, just how much that Sassafras concert is going to set Alva back financially. Generally the manager explains in her letter that she cannot afford to pay more because she has to pay Private Mudfry, who either never got overseas or who did all his fighting shoveling dirt in a concentration camp in France—which no one will deny generally takes more real patriotism than any other kind of warfare—one thousand dollars for his inspiring lecture on French Motherhood and the War, and she hopes that the advertising which Miss Alva will receive from her appearance on the Sassafras series will take the place of a larger compensation.

Ambition on the Warpath

AS ALVA has probably expended between twenty and thirty thousand dollars already on this career of hers and has really set her teeth into it, determined to make the pinnacle of fame or bust, she generally does not quibble about the extra railroad fare. Of course it is understood that if Alva had not been an American artist masquerading under this pitifully transparent garbled foreign name, if she had just been a Russian Pole or an Austrian Turk, that Sassafras manager most probably would have pleaded for the privilege of paying her six or even eight hundred for a concert and all expenses thrown in. So Alva packs her fitted-out suitcase that was the delirious gift of a worshiping aunt and hies herself to Sassafras to set the world on fire.

Once a cheerful newspaper man, a clever enough writer, but a cipher as a musician, in a moment of mental aberration took the post of music critic on one of the big dailies. Naturally, he discovered in time this practice of giving concerts in order to obtain the approval of the big-city critics. This delightful soul—being entirely devoid of that organ commonly known as a heart and knowing nothing and caring less about the underground diplomacy connected with the profession of music—took a vicious delight

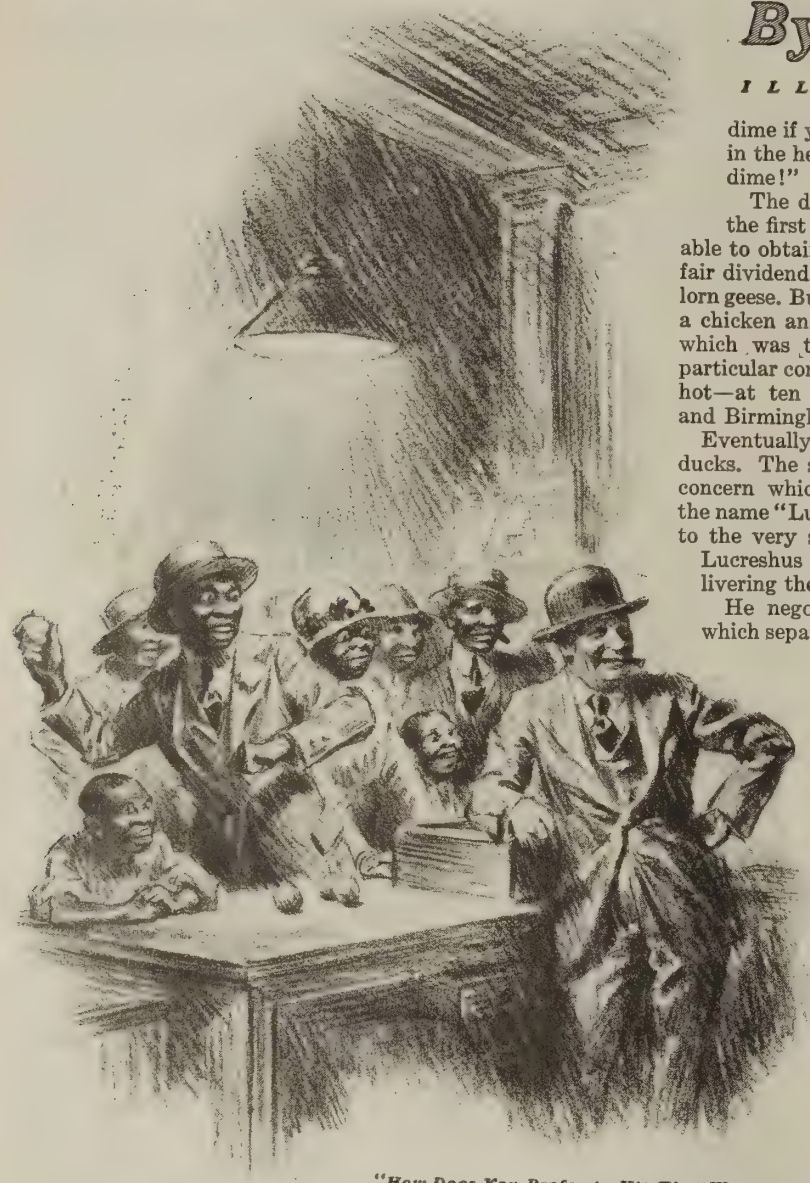
LL & FISCHER, PHILADELPHIA

Mr. Leopold Stokowski and Members of the Philadelphia Orchestra, the Foremost Organization of its Kind in This Country

The Survival of the Fattest

By Octavus Roy Cohen

ILLUSTRATED BY J. J. GOULD



"How Does You Prefer to Hit That Water, Mistuh Mabry, Sittin' or Lyin'?"

LUCRESHUS MABRY threw back his head and proclaimed to the world in a seedy barytone that he was always blowing bubbles:

They fly so high,
Might' nigh tech the sky;
Then like a dream
They bust an' die.

The front wheels of the delivery truck which he was piloting collided violently with an excessively large rock and the car slewed drunkenly. The seven crates of ducks comprising the passenger list set up a unanimous quackery of protest. Lucreshus righted the car with a deft twist of the steering wheel and shook his head: "Might' nigh busted an' died my ownse'f that time."

The road curved sharply to the right and Lucreshus crossed three seconds ahead of a New Orleans express. He grinned cheerfully. "Lucreshus Mabry," he mused, "luck sho' ain't ag'in you to-day. That N'Yawlins train sho' thought they was gwine be one mo' cullud angel answerin' the call on high."

But the narrow escape had caused a slight let-down in the Mabrian exuberance. No more did the raucous barytone split the clear warm air of the June morning. Lucreshus gave himself over to the business of driving his truck. He had been assigned to chaperon seven crates of ducks from Birmingham to Bessemer, and he entertained no overwhelming desire to become a corpse en route.

As for the ducks, they were blissfully ignorant of the fate in store for them. The morning was pleasant and the road generally good. What the ducks did not know was that a street fair had appeared in Bessemer the previous day and that they were destined for the sacrificial altar at one of the many raffling wheels.

The duck idea was always popular: "Three chances for ten cents, gents and ladies. You gives me your dime and I gives you a ticket containing three numbers. Then I gives the little wheel a spin and somebody wins a fine live duck for ten cents. Think of it, gents and ladies—a fine roast duck for a dime! One little thin dime. A Canadian dime if you insist. Knock the old H. C. of L. in the head and watch it duck. A duck for a dime!"

The duck man had a good concession. On the first day of the street fair he had been unable to obtain ducks and had managed to return fair dividends to himself with chickens and a few lorn geese. But a duck has infinitely more class than a chicken and is better understood than a goose, which was the reason why the owner of that particular concession had kept the telephone wires hot—at ten cents per heat—between Bessemer and Birmingham.

Eventually he swung a deal for seven crates of ducks. The selling firm was that Morris Avenue concern which claimed distinction by reason of the name "Lucreshus Mabry" on its pay roll. And to the very stout colorado-maduro complexioned Lucreshus had been intrusted the task of delivering the ducks before ten-thirty A. M.

He negotiated the thirteen merciful miles which separate the first and fourth cities of Alabama in slightly less than fifty minutes, narrowly avoided extinction by an argument with a Jonesboro street car and swung at length into the broad street which pridefully displayed the street fair.

He brought his truck to a full stop and stared reminiscently at the double row of once-white tents—nickel-snatching devices and aristocratic two-bit attractions.

Spread out before him were the Wor-ruld Famous Divin' Girls; The Wild West Dance Hall, You pays a nickel and you dances with the lady which you chooses; The Old Plantation Minstrels; The Wild West Show; The Only Original Hula Dancers, now also doing the shimmy; The Monkey Speedway; The Miniature City; The Motordrome; and, last and wealthiest, the score of booths where everything from kewpies to ducks was raffled.

Lucreshus remembered. Far back in the dim and distant past when he had been very small and very colored and very jobless, he had worked for five hectic months with a street-fair concession. His task had been to sit on a tiny platform which was suspended by an upright over a tub of cold and extremely wet water. There was a net in front of him and before the net a target which was connected by a trigger arrangement to the platform on which little Lucreshus sat. Thirty feet distant was a box, and in that box two score cheap baseballs. The price was a nickel—for three shots; the technic difficult but satisfying. It was merely a case of throwing with sufficient accuracy. That done, and the target hit, the trigger worked and Lucreshus was precipitated into the icy shallows below.

It was a fine thing—for the owner of the concession and the person heaving the baseballs. To Lucreshus it had brought no surge of ecstasy and but very little more than three meals a day. But it did bring him pneumonia. He stood for that, but when shortly after his recovery they played Anniston and the net split wide open and a ball caressed him in the eye Lucreshus struck.

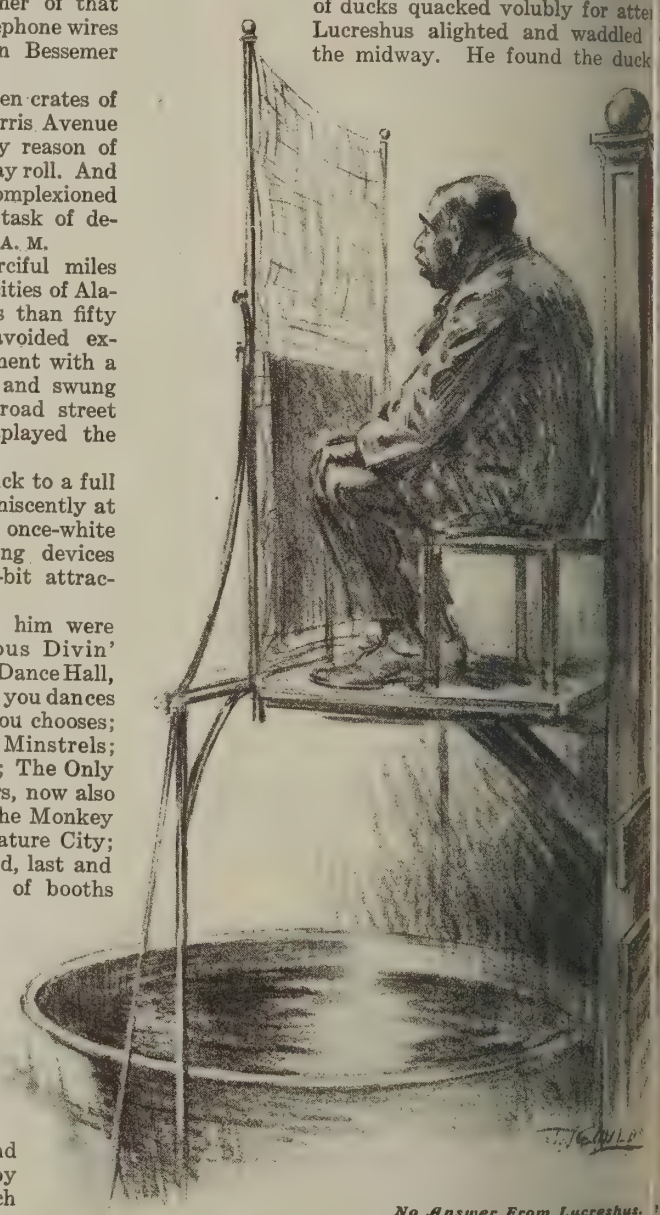
His strike was successful. He retired permanently from the street-fair profession. So it was that when the fair passed on to Rome, Georgia, Lucreshus borrowed a ride in an otherwise empty box car and migrated to Birmingham.

And there he had since remained, time mellowing the recollection of his watery trials and tribulations and affording him no little distinction and a considerable fund of reminiscence as he made his way upward.

He was now most decidedly a man of parts, a dark-brown individual of acute dignity, social ease, sporting proclivities, ample girth and matrimonial tendencies. Attainment of position had come only after years of patient labor, but there is no denying a man with the quality of persistence demonstrated by Lucr in holding a job with a firm for five years; and with such professiona bility, carried sufficient ning in the fingers of his right hand to roll sevens uplifting and chronic frequency.

And until very recently Lucreshus had been hot o trail of an ultimate social triumph. He laid arden almost successful court to Miss Zinnia Sanders, and the arrival on the scene of the loungy languid Nash ——

Lucreshus sighed ponderously and brought himself to the task in hand. Immediately in his rear seven of ducks quacked volubly for atte Lucreshus alighted and waddled the midway. He found the duck



No Answer From Lucreshus. Awaited the Smack of the Ball Against the Ta

without particular trouble, checked over with him number of prospective duck dinners and received pay in cash. Within a very short time the ducks were unlo and placed within the raffle booth in preparation fo opening of the fair at two o'clock in the afternoon fo second day of its week's sojourn.

At the present moment, however, the street fair lou in torpid desuetude. Performers, either without mak or else with entirely too much of it, loafed before their swapping gossip which was saturated with a verna that Lucreshus thought he had forgotten, but which came back to him in a pleasurable flood. He rememb his experiences of many years ago. He intercepted a l and burly gentleman who was headed due north and tr ing fast.

"Boss man?"

The big fellow paused and eyed the fat and dusky Lu shus. "What you want?"

"Is you got a baseball-th'owin' concession roun' is heah fair?"

"Yes." The burly one jerked his head in the direc of the far end of the midway. "Down yonder."

Lucreshus rambled heavily down the middle of the st which municipal authorities had closed to traffic for week. Every once in a while he paused and reflec

vre certain things that were startlingly familiar. ur Lucreshus knew that all traveling street fairs or less alike; but there was something about that il shirted spot-the-spot man, for instance; and the red-and-gold front of The Old Plantation Min-

ched the end of the midway—and then he knew. she beatitude of the successful man who returns to e of his boyhood and meets the chap who once im; meets him in his natural guise of the village

a the same old concession, and yet it was different. was larger and wetter; the counter had been d bilious green and decorated with gold and silver. net—the same hole was there; the very hole which had shot the ball that had expunged s from the roster of the carnival. Of course there ch over the hole, and a good many patches else- it even at that the years had treated it more an Al Rossler.

paunchier, and though the diamond in his ring r and the silk of his fiery shirt of more substantial ucreshus felt a sense of superiority. Even so fondness for his old employer. Al Rossler—big, od-natured Al—had an uncanny understanding sky brethren and it was with real pleasure that d his ex-employee.

lf an hour they retrospected violently; two old come together again.

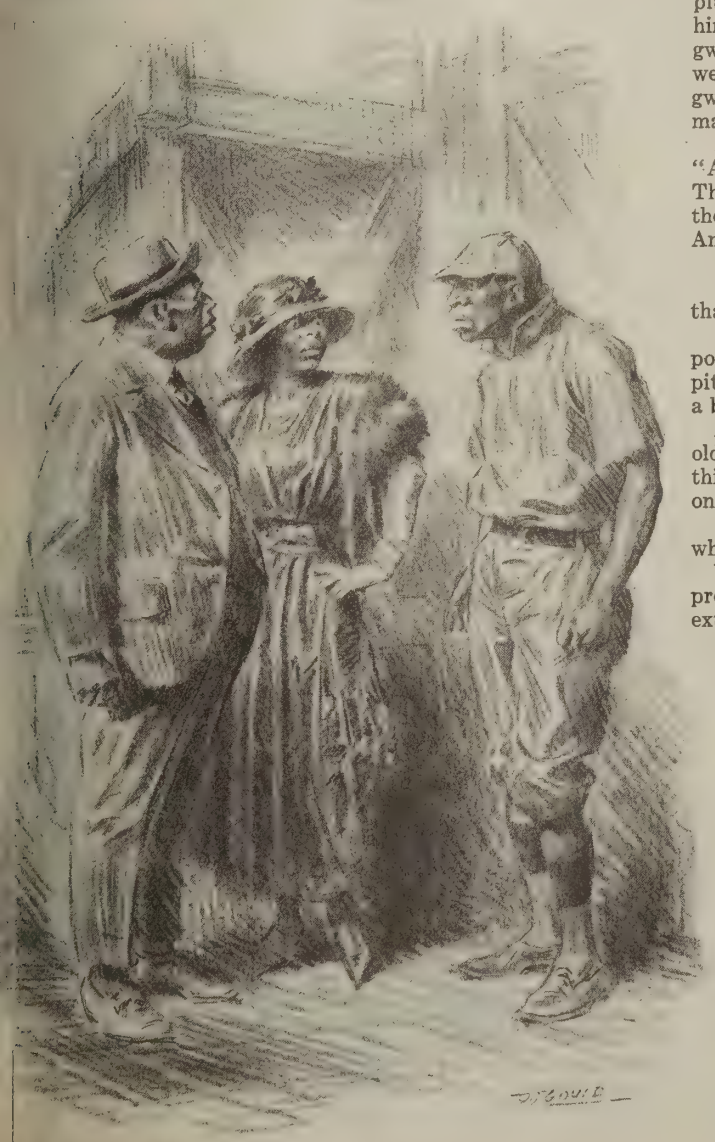
aus told of the affluence and prestige that had him along with his substantial embonpoint, and ler confessed that he was becoming fairly well his world's goods.

e you is been showin' at right recint, Mistuh r'

checked off. "Ensley last week, Gadsden the ore, Chattanooga before that. And just before Chattanooga we had a wonderful three weeks in ."

ville?" Lucreshus chuckled. "I is heahin' a-plenty noxville right recint."

o' is that?"



"Mo' Word Liken to That, Mistuh Mabry, an' You is Gwine to be Ain't!"

"The cullud ball team from Knoxville is playin' in Bummin'ham now. I is gwine win a heap of money outen this series."

"Betting on the Birmingham team?"

"You done said it, boss. We is got the bestes' cullud team which they is in the South. We win yestiddy's game one to nothin' in 'leven innin's."

Mr. Rossler laughed in good-natured derision. "I was in Knoxville for three weeks, Luke ——"

"They calls me Lucreshus now, Mistuh Rossler."

The white man's face remained impassive. "I was there for three weeks, Lucreshus; and I saw two series of games played by the Knoxville team. They beat Nashville and won two out of five from Atlanta. Atlanta beat the Birmingham team three out of four ——"

"We is a'ready win the fust game of the series from Knoxville, Mistuh Rossler; an' winnin' another one ain't gwine be nothin' on'y chil's play."

"You may be a good truck driver, Luke—er—Lucreshus, but as a dopester you're nix. The Knoxville team lost the series to Atlanta by a fluke. They can beat Birmingham without half trying."

"You ain't know what you is talkin' 'bout, suh. Beatin' teams liken to this Knoxville team is the easiest thing we does."

"You're not willing to bet that way, are you?"

"Ain't I jes'? I is done bet ev'y cent I c'n beg or borry on t'-day's game."

"Better hedge, Lucreshus. You haven't a chance."

"Ain't got a chance to lose! Lis'en heah, boss man. If'n you seen that series betwix' Knoxville an' Atlanta, does you 'member a Atlanta pitcher name Angel Nash? A soht of a lopsided feller with six gol' teeth?"

Rossler laughed. "Nobody could forget him. He's a corker."

Lucreshus looked round cautiously and lowered his voice. "We is got him!"

"Angel Nash?"

"You said it, boss. We hired him bouten two weeks ago to pitch two games outen th'ee ag'in Knoxville. He is be'n practicin' with us sence then. An', b'lieve me, he is got mo' speed 'n a cyclone an' better control 'n a preacher. What he pitches is named baseball. N'r neither he di'n't pitch yestiddy, 'countin' we was savin' him up fo' the last two games. He is gwine twirl t'-day an' t'-morry, an' what we is gwine do to that Knoxville team gwine make 'em feel 'bout as happy as a man drawin' his las' will an' testimony."

Rossler shook his head stubbornly. "A pitcher can't win the game alone. The whole Knoxville team is good. And their new pitcher is even better than Angel Nash."

"Says which?"

"The Knoxville pitcher is even better than Angel Nash."

"Haw!" responded Lucreshus with ponderous sarcasm. "If'n they's any pitcher in the world better 'n Angel, Ise a blushin' blond."

Al Rossler laughed heartily. "Same old Luke, aren't you, Lucreshus? I know this much—I'd like to lay fifty at even on Knoxville for to-day's game."

"Huh! Tha's 'bout the easies' thing which they is."

With a single deft motion Al Rossler produced a bulging wallet, from which he extracted five ten-dollar bills. "Take this with you and place it for me—on Knoxville."

"You ain't in earnes', boss man?"

"I am."

Lucreshus extended a restraining hand. "Don', cap'n; don' go an' do nothin' foolish liken to that. If'n yo' money is jes' nachelly bu'nin' a hold in yo' pocket gimme it. Bettin' agin the team which we is got is bad 'nough, but when we also is got Angel Nash to pitch fo' us this afternoon an' done beat 'em yestiddy 'thouten him—they mus' be sumthin' in the Alabama air, Cap'n Rossler, which is done went to yo' haid."

But Al Rossler was insistent. He had seen the Knoxville colored team play and had unbounded confidence in its powers. In the end

"I Gathers, Miss Zinnia, That You Disfavors Mistuh Nash at This Pretickler Momunt?"

he forced Lucreshus to take the money. Lucreshus sighed. "I wish I had 'nough money to cover it my ownse'f."

"Haven't you?"

"Lis'en heah at me, Cap'n Rossler: If'n they's a nickel in all of Bummin'ham which is gittable by me an' which same I ain't done got then I don' know it. An' it's all bet on Bummin'ham to win this afternoon's game. They ain't nary chance to lose. Tha's why I hates to see you th'owin' 'way yo' money liken to this. Now you take me: Gawd knows I hates Angel Nash ——"

"Hate him?"

"You said it; an' I repeats ditto. But he sho'ly is one hell-bendin' pitcher, an' ——"

"Why do you hate Angel Nash?"

"Hm!" Lucreshus' eyes dropped and he traced a design in the dust with a broad-toed shoe. "I soht of got a grudge agin him."

"Why?"

"It's this-away, boss man. He soht of done me dirt. He's went an' cut me out with my gal."

"A-a-ah! A rival of yours?"

"Tha's which. I is almos' but not quite engage' to Miss Zinnia Sanders, which is one of the quality cullud gals of Bummin'ham, an' things is been goin' elegant. Then we goes an' hires Angel Nash to come heah an' pitch fo' us, an' Zinnia remembers she has met him when the Atlanta team was playin' heah an' he was beatin' us. An' what I is tellin' you, Cap'n Rossler, is that my gal Zinnia is one mo' baseball fan. If'n they's a stitch on a baseball's hide she cain't call by its fust name, then I ain't never saw it. If'n she would of been bohn a man she would of been a cullud Ty Cobb. An' with her feelin' liken that 'bouten baseball, what she thinks of a winnin' pitcher like Angel Nash is a-plenty. Specially with me bein' soht of fat.

"Besides an' also, Angel is one of them fellers which is jes' natchelly got a way with wimmin. I b'lieve he could make his ma'-in-law love him if'n he had one an' if'n he was fool 'nough to want to. An' sence he is been practicin' with the Bummin'ham team I ain't had no mo' chance with Zinnia Sanders than what a roastin' pig is got in a nigger's back yard roun' Christmas time. Tha's how come me to love Angel so much like I don't, but it don't go to my haid an' make me foolish. Bettin' on that man to lose is 'bout as safe as stickin' yo haid in a zoo lion's mouth roun' lunch time. So you'd better take this fifty dollars back, boss."

The Plight of the Traction

By Edward Hungerford

DECORATIONS BY GUERNSEY MOORE

IF THE big steam railroaders feel that they are completely out of luck these strenuous days they had better turn a wee bit of their attention to their brethren of the trolleys. Such a glance might easily give them the same sort of encouragement that a man walking on a crutch gains when he sees another hopelessly confined to a wheel chair, for the tractions have indeed come to a sad plight. Within a little more than a decade a six-billion-dollar American industry has been reduced from prosperity to genuine beggary. Yesterday it was a commercial lord of creation; to-day it stands, hat in hand, seeking alms.

There is little fear of government ownership in the hearts and minds of the traction men these days; their fear is more apt to be that such a precious boon may yet be denied them. For the shrewdest and most farseeing of these men easily realize that a business which in the past flouted its independence in the face of the nation can hardly be received by that nation with open and welcoming arms simply because it has arrived at days of adversity. It matters not that not one but many traction systems refused to gouge or flout their own particular publics.

As in the steam-railroad situation, the good roads go down with the bad. The average American cannot or will not choose between them, and so indifferently turns his back to all of them. And if he possess a motor car or the opportunity of using a jitney bus he scorns the trolley with its increased fares and its lowered quality of service.

If this were all there were to it this tale would hardly be worth the telling. Unfortunately there is very much more to this extremely complicated traction situation here in the United States to-day. Its ramifications go far and in many diverse directions. They reach into the banks—even into the savings banks and the insurance companies. They touch investment everywhere. Yet this is not all, or even the largest part of the problem.

The Bark Rings of City Growth

IT IS not every man who can have a motor car of his own; not everyone who can command the services of a dependable jitney or motor-bus service. And many hundreds of thousands of Americans grouped in our larger cities remain and must continue to remain in their social and commercial intercourse utterly dependent upon the trolley car. In some of the largest of these communities the very size and the narrowness of their streets preclude any extensive regular use of the motor car, whether privately or publicly owned and operated. Especially is this true of such ancient towns as Boston and New York and Philadelphia, which not only have miles upon miles of narrow and fearfully congested thoroughfares but practically no downtown parking spaces available for the automobiles of their workers.

To cities such as these—and others too—the electric car, whether operated singly or in train multiples upon underground or overhead rapid-transit lines, is as great a necessity as fire protection or water or sewerage, and as a necessity must not only be conserved but operated at the highest degree of possible efficiency. There is no dodging this issue. It may not be pleasant to contemplate giving increased fares or consideration of any sort whatsoever to companies which in the days of their pride and power gave little or no consideration to the communities that they were supposed to serve; yet to deny financial relief invariably means lessened service, which in turn can hardly mean less than a considerable financial loss to the community. It is not a question of the traction man by this time or of the investors behind him—no matter how widely those selfsame investments may be scattered. It is a question of the time and comfort—and pocketbook—of the American community, and so demands attention as a national problem.

Go back with me, if you will for a moment, and consider how most of our big traction systems—particularly those of the larger cities—first came into existence. The rapid development of the electric motor as a cheap and clean and practical method for the propulsion of street cars was responsible for the inception of most of them. The horse-car line had come to the limits of its possibilities. It had enlarged the periphery of the average American town to a radius of three or four miles from its business heart. Beyond that distance—a half hour's ride or more—the average man would not ride regularly in horse cars; and our larger towns—growing continuously all the while—found themselves becoming more and more congested.

The electric car enlarged that periphery. Because of its greater power and speed a man in a half hour might now go five or six or seven miles. Great suburban areas became immediately available for development and the real-estate business began to be a real factor in the average enterprising American town. Indeed one can take almost any of these towns and with a little examination find that it has built itself in three or four great rings, like the bark rings of a tree.

The heart represents convenient walking distance from the center of the community; the first ring that surrounds it, the horse-car distance; the second, trolley distance; and the third and most recent, motor distance. But in each of these instances the time consumed by the average man is hardly more than thirty-five minutes. He is apt to begrudge much more than an hour for daily travel between his home and his place of business.

So it was that the "broomstick trolley," as folks used to like to term it, first worked economic revolution in the land. In some cities the smart managers of the horse-car lines did not hesitate to avail themselves of the new form of traction; in others horse-car lines which were not so smartly managed soon found themselves paralleled by new lines whose cars—cleaner, bigger, swifter and better lighted and heated than theirs—rapidly drew away their traffic. Which meant that in turn even the most conservative and stupid of horse-car lines were forced to adopt electricity as a motive power—at no matter what cost.

In the excitement and confusion of so radical a change in American life the big traction consolidations were born. It was open season for their financial exploitation. The business was young and in its flash era. No one knew just what it cost to operate an electric railroad. Thoughts were not on expenditures but on income. Big money! It was—and still is—a potent phrase. Speculators, the men to whom big money and nothing less is a moving inducement, went into the traction game. They began by buying horse-car lines either directly or by the stuffed-club process of invading and paralleling their territory with trolley roads, and immediately afterward commenced the inevitable process of consolidation.

It was a simple enough process at the o
And those old-time horse-car lines, in
ually owned and individually operated,
tried for a time to hold out against it i
ably found themselves beaten. The universal tra
was the club over public opinion that the street rai
operators used twenty years ago to force their o
ization of street transportation monopolies. In after
they were sick unto death of the universal transfe
all that it implied, but that was when they had beg
count its cost.

In those merry days of twenty or twenty-five year
apparently no one counted costs. Have I not just saic
the business was in the flash period of its exist
Replacements of cars and track and power-house e
ment had not come into the reckoning. The long up
rise of fuel and raw materials and labor had not
begun. One could get all the motormen and condu
that one wanted—and a fine high-grade type they
too—at from eighteen to twenty-three cents an hour

Now these same classes of labor want—and get—a
way from fifty to sixty-eight cents. A trolley car
to-day costs from $10,000 to $15,000 then cost from $
to $4000. And coal! Great Jehoshaphat, don't talk c
the old-timer in the trolley business! He will pull
diagrams by the dozen down from the wall and con
you that all the balm has gone from his Gilead.

Losses on Peak-Load Traffic

IT WAS indeed a merry game in those early days, t
vision and imagination as strong factors and smart y
men and investment capital just clamoring to get in
It made a lot of money not only for itself but for other
while fortunes were reaped in the real-estate busines
which the traction industry never received even a "t
you," even though it alone had made those fortunes
sible. It created summer parks and resorts, which in
days before the coming of the automobile were imme
popular and apparently very profitable. I say "ap
ently" with due purpose, for the business had not yet
sufficiently stabilized and analyzed for its operato
realize that a seasonal, or peak-load traffic which gav
a time many, many passengers but which made these t
few and far between, yet requiring a great deal of tern
and power plant, not only was not profitable but in
end a genuine loss.

I recall quite distinctly the days when the Wall S
operators used to watch weather conditions on the
mer Sabbaths and play B. R. T. up or down as the wea
had showed itself—good or the reverse. These opera
had failed to realize that because of its Coney Island tr
Brooklyn Rapid Transit had been forced to install a qua
of-a-million-dollar terminal plant that stood idle, or p
tically so, on nearly three hundred days out of the y
and that in order to carry its vast Saturday and Sur
overload of three brief summer months it was force
employ great numbers of extra or green motormen
conductors whose careless mistakes in operation usu
cost the company more in damage claims than its er
excess profits of those record days.

...ember once again, if you will, that in the begin-...his New York system, like the consolidated systems of many and many another metropolitan city in America, had been upbuilt by the bringing together of various separate smaller street-railroad companies. The properties of these companies had been leased for long terms of years, and usually at excessively high rentals, so great were the ambitions and the greed of the men who brought these great consolidations together. A guaranty of ten per cent was as nothing; twenty or twenty-five or even thirty per cent was not out of the question. The rental price was decided upon the value of an individual property to a consolidation, as well as upon the business acumen of the men who controlled it.

But no matter how out of reason were these rentals—and men seemingly did lose their heads and all their business sense in those early days of traction consolidation—the patron was the gainer. Not only was he beginning to ride in clean swift electric cars instead of the unspeakable horse-car horrors of an earlier generation, but instead of having to pay five or six cents for a short trip in each car he boarded he might ride in three or four in succession, anywhere in the larger cities from eighteen to twenty or twenty-two miles, for a single five-cent fare. Those were the days of his prosperity. He built his house in the suburbs and far from the heat and the congestion of the crowded town and visioned an unchanging condition of peace and prosperity—and a universal five-cent fare—for him and his. He dreamed not of these troublous days, with the five-cent fare practically obsolete and costs still mounting so rapidly that the disintegration of many of the big tractions has not only come to pass but the question become acute as to whether or not the individual units which originally went to comprise them can be made to earn their mere operating costs even with considerable fare increases.

What has caused the utter breakdown of this six-billion-dollar transportation industry?

The causes are so many and so varied that such a question cannot be answered in a single moment. The over-capitalization in the organization of so many of the big city tractions, the quality of the personnel, the coming of the automobile, have all been mighty factors. But in my opinion the chief cause of the failure of the electric-railway industry in the United States has been its ludicrous and entirely unscientific basic plan of trying to give the maximum amount of transportation on any railway anywhere for that once universal nickel.

A nickel would carry a man five miles—or more—in a Pacific Coast city, just as it would carry him five miles—or more—in one on the Atlantic Coast. And yet upon the Pacific Coast the traction companies had to pay far more for both labor and equipment and, because of their almost universally steeper grades, to use much more power per passenger to take him home at night, while for their greater task they received only that same standardized nickel that custom had fixed as street railroad fare—North, East, South and West.

North and East and South and West! And no account whatsoever being taken of the fact that when the wages of the platform men were twenty cents an hour in the South they were thirty-five cents in the North. No wonder that the general public gained exaggerated ideas at one time of the wealth or profit of the street-railroad business. If the thirty-five-cent property could pay high rentals and decent dividends in the North, the road in the South—in all probability with no rentals whatsoever to pay—should have been wallowing in wealth, yet seemingly was not.

That universal five-cent fare was, as we already have seen—with the transfers—the price that the big men of early traction paid for the privilege of consolidation. It proved to be a high price indeed. Advancing costs of labor and fuel and raw materials had precious little real or sentimental regard for that arbitrary nickel. They squeezed it harder and harder until, despite the really great economies that had been effected in their operating practice, the traction men finally were forced to seek a higher fare, which was easier said than done, for they had to fight the pressure of public opinion, abetted and encouraged by scheming politics.

Politics remembered. It recalled, for instance, that when in those golden days of apparent superprosperity it had backed the body politic to inquire for a fare based on something less than a nickel, how the traction folk had protested and argued that a fare figured in odd copper cents was quite impractical of collection. That argument in turn has come home to roost uncomfortably upon the roofs of trolley companies seeking increased fares of six or seven or other multiples of odd cents. In their opinion at least the problem of collection of odd pennies has apparently ceased to exist, even though it has become a factor in the demand for the Roosevelt memorial coin of two or two and a half cents.

Rising Costs and Vanishing Profits

WHEN we entered the war the plight of the tractions, which already was most serious, quickly reached an acute stage. Their earlier troubles—the first generous stages of their steadily advancing cost of living, the fair or the unfair competition of the publicly owned jitney and the privately owned automobile—were as nothing compared with those which were about to come upon them. War commandeered steel and copper and rubber, and not only skyrocketed the prices of these essential commodities but made it practically impossible for the traction man to get hold of them in any quantities at any price. Generally speaking, his was not regarded as an essential war industry. He had to take his place in slow line with the manufacturers of pianos and passenger automobiles and phonographs and the like.

It was not altogether a question of price of materials, even though price had ascended to a figure far beyond the flights of former imagination.

Then add to these superincreases in materials, raw and manufactured, fuel and the wage demands of the men. The traction industry found itself in active and seemingly hopeless competition for shop and platform men with shipyards and munition factories and other war-bride industries. In some cases it violated American tradition by placing women on the platforms of its cars. In all cases it was compelled to raise its wage scales again and again—and yet all the while seemingly to no effect. Some of these raises were voluntary. Most of them, however, were set after extended hearings by the National War Labor Board down at Washington.

The electric roads showed, of course, that the payment of the increase that the men demanded—and they were willing to concede the simple justice of most of the early wartime demands of their employees—would drive them into bankruptcy, particularly unless they could be permitted to gain substantial increases in their revenue. To which

TUTT AND MR. TUTT

By Arthur Trai

ILLUSTRATED BY ARTHUR WILLIAM BR

Case No. 7: The Dog Andrew

"Every dog is entitled to one bite."—Unreported opinion of the Appellate Division of the New York Supreme Court.

NOW see here!" shouted Mr. Appleboy, coming out of the boathouse, where he was cleaning his morning's catch of perch, as his neighbor Mr. Tunnygate crashed through the hedge and cut across Appleboy's parched lawn to the beach. "See here, Tunnygate, I won't have you trespassing on my place! I've told you so at least a dozen times! Look at the hole you've made in that hedge, now! Why can't you stay in the path?"

His ordinarily good-natured countenance was suffused with anger and perspiration. His irritation with Mr. Tunnygate had reached the point of explosion. Tunnygate was a thankless friend and he was a great cross to Mr. Appleboy. Aforetime the two had been intimate in the fraternal, taciturn intimacy characteristic of fat men, an attraction perhaps akin to that exerted for one another by celestial bodies of great mass, for it is a fact that stout people do gravitate toward one another—and hang or float in placid juxtaposition, perhaps merely as a physical result of their avoirdupois. So Appleboy and Tunnygate had swum into each other's spheres of influence, either blown by the dallying winds of chance or drawn by some mysterious animal magnetism, and, being both addicted to the delights of the soporific sport sanctified by Izaak Walton, had raised unto themselves portable temples upon the shores of Long Island Sound in that part of the geographical limits of the Greater City known as Throggs Neck.

Every morn during the heat of the summer months Appleboy would rouse Tunnygate or conversely Tunnygate would rouse Appleboy, and each in his own wobbly skiff would row out to the spot which seemed most propitious to the piscatorial art. There, under two green umbrellas, like two fat rajahs in their shaking howdahs upon the backs of two white elephants, the friends would sit in solemn equanimity awaiting the evasive cunner, the vagrant perch or cod or the occasional flirtatious eel. They rarely spoke and when they did the edifice of their conversation—their Tower of Babel, so to speak—was monosyllabic. Thus:

"Huh! Ain't had a bite!"

"Huh!"

"Huh!"

Silence for forty minutes. Then: "Huh! Had a bite?"

"Nope!"

"Huh!"

That was generally the sum total of their interchange. Yet it satisfied them, for their souls were in harmony. To them it was pregnant of unutterable meanings, of philosophic mysteries more subtle than those of the esoterics, of flowers and poetry, of birdsong and twilight, of all the nuances of softly whispered avowals, of the elusive harmonies of love's half-fainting ecstasy.

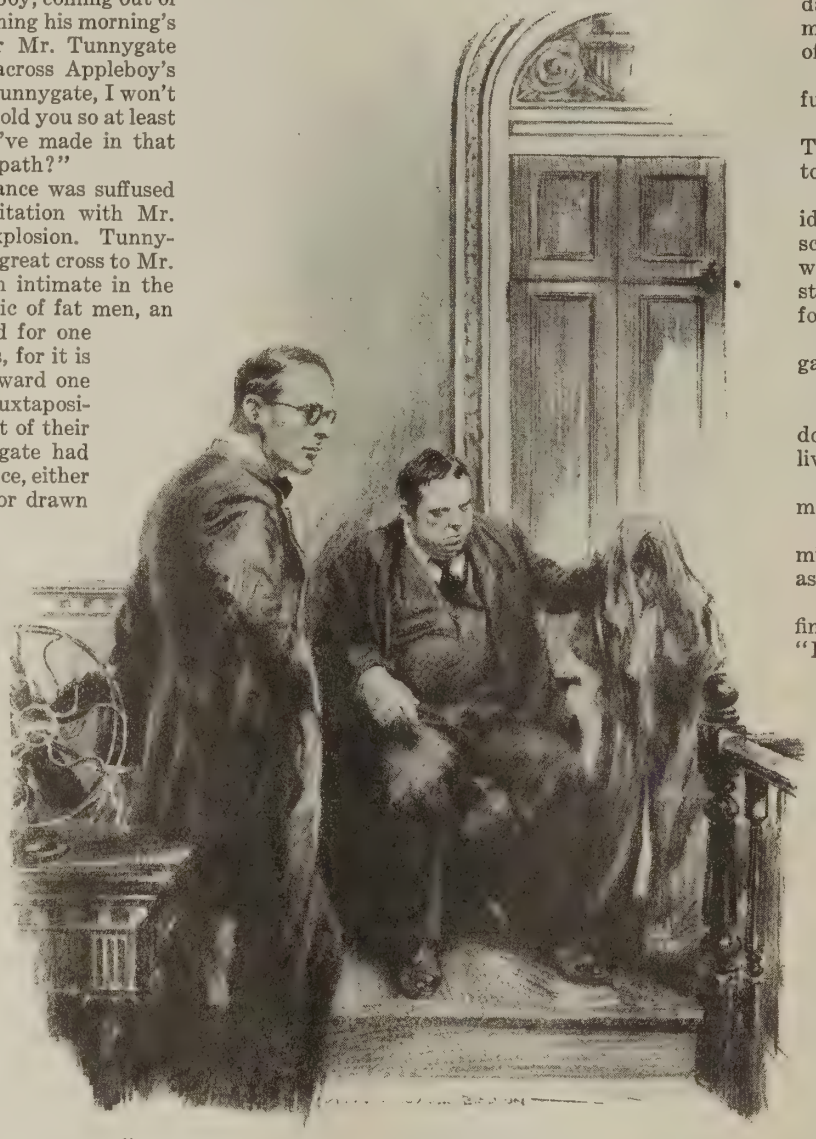
"Huh!"

"Huh!"

And then into this Eden—only not by virtue of the excision of any vertebra such as was originally necessary in the case of Adam—burst woman. There was silence no longer. The air was rent with clamor; for both Appleboy and Tunnygate, within a month of one another, took unto themselves wives. Wives after their own image!

For a while things went well enough; it takes ladies a few weeks to find out each other's weak points. But then the new Mrs. Tunnygate unexpectedly yet undeniably began to exhibit the serpent's tooth, the adder's tongue or the cloven hoof—as the reader's literary traditions may lead him to prefer. For no obvious reason at all she conceived a violent hatred of Mrs. Appleboy, a hatred that waxed all the more virulent on account of its object's innocently obstinate refusal to comprehend or recognize it. Indeed Mrs. Tunnygate found it so difficult to rouse Mrs. Appleboy into a state of belligerency sufficiently interesting that she soon transferred her energies to the more worthy task of making Appleboy's life a burden to him.

To this end she devoted herself with a truly Machiavellian ingenuity, devising all sorts of insults, irritations and annoyances, and adding to the venom of her tongue the inventive cunning of a Malayan witch doctor. The Appleboys' flowerpots mysteriously fell off the piazza, their tholepins disappeared, their milk bottles vanished, Mr. Appleboys' fish lines acquired a habit of derangement equaled only by barbed-wire entanglements, and his clams went bad! But these things might have been borne had it not been for the crowning achievement of her malevolence, the invasion of the Appleboys' cherished lawn, upon which they lavished all that anxious tenderness which otherwise they might have devoted to a child.



"These are They," Mr. Tunnygate Announced Dramatically

It was only about twenty feet by twenty, and it was bordered by a hedge of moth-eaten privet, but anyone who has ever attempted to induce a blade of grass to grow upon a sand dune will fully appreciate the deviltry of Mrs. Tunnygate's malignant mind. Already there was a horrid rent where Tunnygate had floundered through at her suggestion in order to save going round the pathetic grass plot which the Appleboys had struggled to create where Nature had obviously intended a floral vacuum. Undoubtedly it had been the sight of Mrs. Appleboy with her small watering pot patiently encouraging the recalcitrant blades that had suggested the malicious thought to Mrs. Tunnygate that maybe the Appleboys didn't own that far up the beach. They didn't—that was the mockery of it. Like many others they had built their porch on their boundary line, and, as Mrs. Tunnygate pointed out, they were claiming to own something that wasn't theirs. So Tunnygate, in daily obedience to his spouse, forced his way through the hedge to the beach, and daily the wrath of the Appleboys grew until they were driven almost to desperation.

Now when the two former friends sat fishing in their skiffs they either contemptuously ignored one another or, if they "Huh-Huhed!" at all the "Huhs!" resembled the angry growls of infuriated beasts. The worst of it was that the Appleboys couldn't properly do anything about it. Tunnygate had, as Mrs. Tunnygate sneeringly pointed out, a perfect legal right to push his way through the hedge and tramp across the lawn, and she didn't propose to allow the Appleboys to gain any rights by proscription, either. Not much!

Therefore, when Mr. Appleboy addressed to Mr. Tunnygate the remarks with which this story opens, the latter insolently replied in words, form or substance that Mr. Appleboy could go to hell. Moreover, as he went by Mr. Appleboy he took pains to kick a clod of transplanted sea g nurtured by Mrs. Appleboy as darling of her bosom, and designed to give an air of v militude to an otherwise bare and unconvincing su of sand. Mr. Appleboy almost cried with vexation.

"Oh!" he ejaculated, struggling for words to expres full content of his feeling. "Gosh, but you're—mean

He hit it! Curiously enough, that was exactly the w Tunnygate was mean—and his meanness was second to that of the fat hippopotama, his wife.

Then, without knowing why, for he had no formu ideas as to the future, and probably only intended to t scare Tunnygate with vague threats, Appleboy added warn you not to go through that hedge again! U stand—I warn you! And if you do I won't be respon for the consequences!"

He really didn't mean a thing by the words, and Tu gate knew it.

"Huh!" retorted the latter contemptuously. "You

Mr. Appleboy went inside the shack and bange door. Mrs. Appleboy was peeling potatoes in the kit living room.

"I can't stand it!" he cried weakly. "He's dri me wild!"

"Poor lamb!" soothed Mrs. Appleboy, peeling an i minable rind. "Ain't that just a sweetie? Look! It's as long as your arm!"

She held it up dangling between her thumb and finger. Then with a groan she dropped it at his feet. "I know it's a real burden to you, deary!" she sighed.

Suddenly they both bent forward with sta eyes, hypnotized by the peel upon the floor.

Unmistakably it spelt "dog"! They looke one another significantly.

"It is a symbol!" breathed Mrs. Appleboy i awed whisper.

"Whatever it is, it's some grand idea!" exclai her husband. "Do you know anybody who's one? I mean a—a ——"

"I know just what you mean," she agreed. wonder we never thought of it before! But t wouldn't be any use in getting any dog!"

"Oh, no!" he concurred. "We want a re dog!"

"One you know about!" she commented.

"The fact is," said he, rubbing his forehead i they know about 'em they do something to 'em ain't so easy to get the right kind."

"Oh, we'll get one!" she encouraged him. "] Aunt Eliza up to Livornia used to have one made a lot of trouble and they ordered her- selectmen did—to do away with it. But she pretended she had—she didn't really—and I think got him yet."

"Gee!" said Mr. Appleboy tensely. "What sort was

"A bull!" she replied. "With a big white face."

"That's the kind!" he agreed excitedly. "What its name?"

"Andrew," she answered.

"That's a queer name for a dog!" he commented. "I, I don't care what his name is, so long as he's the r kind of dog! Why don't you write to Aunt Eliza to-nigl

"Of course Andrew may be dead," she hazarded. "I do die."

"Oh, I guess Andrew isn't dead!" he said hopefi "That tough kind of dog lasts a long time. What will say to Aunt Eliza?"

Mrs. Appleboy went to the dresser and took a pad pencil from one of the shelves.

"Oh, something like this," she answered, poising pencil over the pad in her lap:

"Dear Aunt Eliza: I hope you are quite well. I sort of lonely living down here on the beach and t are a good many rough characters, so we are looking a dog for companionship and protection. Almost kind of healthy dog would do and you may be sure would have a good home. Hoping to see you soon. Y affectionate niece, Bashemath."

"I hope she'll send us Andrew," said Appleboy vently.

"I guess she will!" nodded Bashemath.

II

"WHAT on earth is that sign?" wrathfully demand Mrs. Tunnygate one morning about a week late she looked across the Appleboys' lawn from her kitc window. "Can you read it, Herman?"

Herman stopped trying to adjust his collar and w out on the piazza.

"Something about 'dog,'" he declared finally.

"Dog!" she exclaimed. "They haven't got a dog!"

'e" he remarked, "that's what the sign says: ar of the dog'! And there's something above it. Oh! rding this property. Trespassing forbidden.'"

'h impudence!" avowed Mrs. Tunnygate. "Did 've know such people! First they try and take land ot belong to them, and then they go and lie about dog. Where are they, anyway?"

haven't seen 'em this morning," he answered. h they've gone away and put up the sign so we g over. Think that'll stop us!"

'at case they've got another think comin'!" she ngrily. "I've a good mind to have you go over up the whole place!"

ull up the hedge?" he concurred eagerly. "Good

et, to Mr. Tunnygate it seemed the supreme oppor- th to distinguish himself in the eyes of his blush- i and to gratify that perverse instinct inherited g cave-dwelling ancestors to destroy utterly—in haps, that they may never seek to avenge them- on us—those whom we have wronged. Accordingly unnygate girded himself with his suspenders, and eam of fiendish exultation in his eye stealthily d from his porch and crossed to the hole in the o one was in sight except two barefooted search- clams a few hundred yards farther up the beach n working in a field half a mile away. Tunnygate o the door to see her spouse lumbering up the beach with a white object gyrating in the air behind him.

"What's the matter?" she called out languidly. Then perceiving the matter she hastily followed. The Appleboys were standing on their lawn viewing the whole proceeding with ostentatious indifference.

Up the beach fled Tunnygate, his cries becoming fainter and fainter. The two clam diggers watched him curiously, but made no attempt to go to his assistance. The man in the field leaned luxuriously upon his hoe and surrendered himself to unalloyed delight. Tunnygate was now but a white flicker against the distant sand. His wails had a dying fall: "O—o—oh!"

"Well, we warned him!" remarked Mr. Appleboy to Bashemath with a smile in which, however, lurked a slight trace of apprehension.

"We certainly did!" she replied. Then after a moment she added a trifle anxiously: "I wonder what will happen to Andrew!"

Tunnygate did not return. Neither did Andrew. Secluded in their kitchen-living room the Appleboys heard a motor arrive and through a crack in the door saw it carry Mrs. Tunnygate away bedecked as for some momentous ceremonial. At four o'clock, while Appleboy was digging bait, he observed another motor making its wriggly way along the dunes. It was fitted longitudinally with seats, had a wire grating and was marked "N. Y. P. D." Two policemen in uniform sat in front. Instinctively Appleboy realized that the gods had called him. His heart sank among the clams. Slowly he made his way back to the lawn where the wagon had stopped outside the hedge.

"Hey there!" called out the driver. "Is your name Appleboy?"

Appleboy nodded.

"Put your coat on, then, and come along," directed the other. "I've got a warrant for you."

"Warrant?" stammered Appleboy dizzily.

"What's that?" cried Bashemath, appearing at the door. "Warrant for what?"

The officer slowly descended and handed Appleboy a paper.

"For assault," he replied. "I guess you know what for, all right!"

"We haven't assaulted anybody," protested Mrs. Appleboy heatedly. "Andrew ——"

"You can explain all that to the judge," retorted the cop. "Meantime put on your duds and climb in. If you don't expect to spend the night at the station you'd better bring along the deed of your house so you can give bail."

"But who's the warrant for?" persisted Mrs. Appleboy.

"For Enoch Appleboy," retorted the cop wearily. "Can't you read?"

"But Enoch didn't do a thing!" she declared. "It was Andrew!"

"Who's Andrew?" inquired the officer of the law mistrustfully.

"Andrew's a dog," she explained.

III

"MR. TUTT," announced Tutt, leaning against his senior partner's door jamb with a formal-looking paper in his hand, "I have landed a case that will delight your legal soul."

"Indeed?" queried the elder lawyer. "I have never differentiated between my legal soul and any other I may possess. However, I assume from your remark that we have been retained in a matter presenting some peculiarly absurd, archaic or otherwise interesting doctrine of law?"

"Not directly," responded Tutt. "Though you will doubtless find it entertaining enough; but indirectly—atmospherically, so to speak—it touches upon doctrines of jurisprudence, of religion and of philosophy, replete with historic fascination."

"Good!" exclaimed Mr. Tutt, laying down his stogy. "What kind of a case is it?"

"It's a dog case!" said the junior partner, waving the paper. "The dog bit somebody."

"Ah!" exclaimed Mr. Tutt, perceptibly brightening. "Doubtless we shall find a precedent in Oliver Goldsmith's famous elegy:

> *"And in that town a dog was found,*
> *As many dogs there be,*
> *Both mongrel, puppy, whelp, and hound,*
> *And curs of low degree."*

"Only," explained Tutt, "in this case, though the man recovered of the bite, the dog refused to die!"

"And so they want to prosecute the dog? It can't be done. An animal hasn't been brought to the bar of justice for several centuries."

"No, no!" interrupted Tutt. "They don't ——"

"There was a case," went on Mr. Tutt reminiscently. "Let me see—at Sauvigny, I think it was—about 1457, when they tried a sow and three pigs for killing a child. The court assigned a lawyer to defend her, but like many assigned counsel he couldn't think of anything to say in her behalf. As regards the little pigs he did enter the plea that no animus was shown, that they had merely followed the example of their mother, and that at worst they were under age and irresponsible. However, the court found them all guilty, and the sow was publicly hanged in the market place."

"What did they do with the three little pigs?" inquired Tutt with some interest.

"They were pardoned on account of their extreme youth," said Mr. Tutt, "and turned loose again—with a warning."

"I'm glad of that!" sighed Tutt. "Is that a real case?"

"Absolutely," replied his partner. "I've read it in the Sauvigny records."

"I'll be hanged!" exclaimed Tutt. "I never knew that animals were ever held personally responsible."

"Why, of course they were!" said Mr. Tutt. "Why shouldn't they be? If animals have souls why shouldn't they be responsible for their acts?"

"But they haven't any souls!" protested Tutt.

"Haven't they now?" remarked the elder lawyer. "I've seen many an old horse that had a great deal more conscience than his master. And on general principles wouldn't it be far more just and humane to have the law deal with a vicious animal that had injured somebody than to leave its punishment to an irresponsible and arbitrary owner who might be guilty of extreme brutality?"

"It is a Symbol!" Breathed Mrs. Appleboy in an Awed Whisper

Making the Films Safe for Provincialism—By Rob Wagner

THIS story is what Jim would call "inside stuff." And that is true in more ways than one, for while it will tell some delicious inside secrets, most of the material will come from the dark mysterious bowels of the projection room, than which nothing could be more inside. It is in that cavernous crucible our film classics are smelted for better or worser, the latter condition usually resulting in anticipation of an official ruling from a provincial moralist who can look through a keyhole with both eyes at once.

My office in the Superba-Prettygood Actors Company is just across the hall from the projection room, and I can usually tell by the sounds that percolate through its dark vestibule about what is happening to the film drama that is unwinding before the tired eyes of the editorial staff. If, for instance, I hear nothing but the monotonous click of the projecting machine for an hour or so I know that the big boss is sitting defiantly by wondering how they can cut a picture from that bunch of junk. Then if loud words and an occasional explosion rend the air I am sure the director is trying to save a pet scene from the iconoclastic scissors of the cutter. But when, like this morning, I hear loud guffaws I know that Jim and his co-wits are putting it over their enemies the censors.

"Kittie," said Jim, about ten o'clock, "I'm going in to cut that artist-model story for the Pennsylvania censors and I don't wish to be interrupted, for I have a feeling it will violate about every one of that board's rulings and I've got a fine job."

It was during the following hour that I heard the laughter, and at eleven o'clock Jim and his gang all came out grinning like a lot of naughty schoolboys.

"Well, my dear," said the best film editor in movie land, "what have you been doing while I—poor I—have been in yonder preserving the purity of the great state of Pennsylvania?"

"Nothing," I replied, "except that every time you all laughed I blushed."

"Kittie, you're bright but brutal. You know it isn't always like that when we laugh. This morning, in fact, the question was quite sad. The story proved to be exceedingly chaste and rather dull; but there is a posing scene in it, and you know how dreadfully frightened censors are of looking upon artist's models; and so we were trying to figure how we could save the scene from their gentle scissors. Then all at once came the inspiration. We would drop the main title, 'Why Change Your Clothes?' and substitute—what do you think?—'Innocence,' by gad! The dear, white-souled little girl poses for a statue called 'Innocence.' You see how that will put the censors in a hole, for, my dear, as turrible as these creatures are, even moral monitors don't like to have the purity of their minds questioned."

Some Censors Cut This Scene Lest an Accident Befall the Plumbing

Arms' Harms

THUS it was that the rough miners of Pennsylvania, whose delicate æstheticisms are carefully watched over by legalized shepherds, were permitted to look upon the bare arm and shoulder of a hard-working girl, and the only reason they got that much of an eyeful was because the shepherds were outwitted.

A few weeks ago Jim wrote an article for THE POST in which he told how the censors all over the country cut our films into the most curious and diverse shapes, but he recounted only half the story. The other half has to do with the ways the studios meet these censorship problems, and as Jim insists that he shot his wad in that first story it devolves upon his determined little wife to complete the narrative.

Like most men, Jim is a map fiend. His pockets, bureau drawers and automobile cushions are simply bulging with maps. He has maps about everything under the light of the sun. W he goes—by boat, or railw riage—he co maps, and on sorship travels he no sooner got train than he straightway bought for, as he said: "Kittie, if I just city hall, the Superba Theater jail in my mental topography have to ask nothin' of nobody."

His map fiendishness extends his business, and we have on t maps showing the rainfall, sunsh shooting days—the location of ou ters throughout the country, and of multicolored pins that tells at where all our releases are showin the most interesting map to this the one that makes our contine as though it had German measl will presently see why I refrain fr ing them Liberty measles—for it is over with red blotches of various si shapes defining the censorship d

Indigestible Films

and equipment, using the same personnel.

Sometimes the whole blessed army would shift from one uniform to another six or seven times, most of the day being spent in dressing and undressing. I remember hearing one poor half-frozen extra complain: "I'll lay in a ditch all day bleedin' and dyin' for Uncle Sam, but I don't see why in hell I should have to do it all over again for John Bull."

And woe to the poor assistant director who left the least evidence of Americanism in the Canadian forces—and vice versa! One famous hero of the war had to return from the East all the way to Los Angeles just to kiss the British flag in a local set

convenient to localize our stories close to the Canadian border so that we could shift our action from one to the other side of that imaginary line without violating local color.

Some of our best tales, however, were so uncompromisingly specific that uniforms and equipment for both armies had to be supplied throughout. The awkwardness of this elaborate doubling may be easily guessed. Instead of shooting the American scenes in the morning and the Canadian in the afternoon it was necessary, in order to match the shadows, that the scenes should alternate through the day, which meant alternating uniforms so as to get the picture accepted in Canada.

One of the curious psychological results of the war was the tolerance by many of our sensitive censors to the most blood-curdling scenes, just so long as the villainy was Hunnish.

Ingenuity

YET one of our largest impresarios of cheaper films, in his patriotic zeal went so far over the top in German dastardy that his atrocities were a greater indictment of photo-dramatic art than of Teutonic kultur. So absurdly comic was his emphasis that as works of art his films fell with their own weight among the "white" people; and in the pink districts they were too much even for the German-hating monitors, who lacking a sense of humor cut it to ribbons.

"Pro-German—that's what them censors are!" exclaimed the great artist. "Why, in Ohio they cut out ten thousand dollars' worth of my best atrocities!"

To show the pure patriotic purpose of this naturalized American I must cite his crushing rejoinder to a member of his scenario staff who one day proposed a film version of Pudd'nhead Wilson.

"No!" he roared back. "At a time like this we must all stand shoulders to shoulder mit the President."

But the war furnished a high carnival for the hokum writers. Anything got by if it was hung on or addressed to the Germans. We had a heavy in a film—having nothing to do with the war—who was such a low-down villain we thought we'd have to rewrite his part before the censors would stand for him. But Jim happily hit upon the grand idea of calling him Karl Schwartz, and he went over with an enthusiastic whoop. And speaking of this simple device, Jim once saved a picture from total extinction in a certain town by renaming an unpleasant character "McGuire," that being the name of a fellow the local censor had it in for. It is quite natural in one's national vanity that most meannesses should be hung on foreigners,

(Continued on Page 110)

THE DOOR TO FREEDOM

V

By George Agnew Chamberlain

ILLUSTRATED BY CHARLES D. MITCHELL

THE sun had not yet set on the opening day of Mr. Blurt's studio for the microscopic inspection of female character models when that gentleman, fresh from an afternoon bath and a change into other and smarter clothes, found himself standing, somewhat to his own bewilderment, on the same church steps from which he had passed the Avenue under review during the very first hour of his advent to the metropolis, caught a glimpse of one or two potential goddesses, and ended up by bagging a human hair mattress in the person of Mr. Alexander Sutey as sole recompense for his watchful waiting. But at this moment all the intervening epoch of preparedness was blotted from his thoughts.

"What a day!" he murmured to himself, referring only to the strict union measure of the last eight hours, and wiped his brow, not because it was, but because it ought to be, perspiring from its bulging weight of crowding recollections. His business mind knew down to a jot and a tittle what he had actually done; it now demanded to be shown in three clearly stated dimensions what was the gain to its spiritual complement, that part of Mr. Blurt which had suddenly launched the whole of him into a furious quest for the one woman.

It was easy to line up the facts against the wall and coldbloodedly shoot them down one by one, thus: Early arrival at the studio office; engagement of Miss Phyllis Joy Livingston as stenographer and typist; interview with Miss Mabel Trenton, lady sleuth; interview with Tillie, manikin and reservoir of L. J. Libbey dreams; interview with Alice in hunger; collision with a miniature sphinx in the person of Miss Nameless; lunch for four; discovery of Miss Livingston's adorable nose; crash of the bull; the ensuing battle with misunderstanding Law; the second coming of Joan of Arc and the discovery in rapid and blinding sequence of the light that never was on sea or land playing about Miss Livingston's hair, in her eyes and on her cheeks, as happily as a child at home in its own back yard.

All this sounded as exciting as a five-reel movie with the final emotional close-up still to come; but excitement even in great plenty had no intrinsic bearing on Mr. Blurt's pursuit of heart's desire. He was engaged in a very definite enterprise and the question one part of him now asked insistently of the other was What could it show as the exact measure of accomplishment? Above the level of the flashes that had followed hard after each other throughout the day stood out two high lights: One was the revelation of Miss Livingston; the other the occultation of Miss Nameless.

These two forces by the mere fact of their lingering so long and vividly on his mental horizon declared themselves as the sum total of the day's gain, but even after he had come to that conclusion he was at a loss to determine just how far he had traveled along the road to freedom; he was painfully aware, however, that even thus early in his pilgrimage he had arrived at a fork in the highway, one branch of which tugged him on to further revealing, the other to deeper mystery. So equally was he drawn by these opposing poles of womanly attraction that he was solemnly considering the tossing of a coin to decide between Miss Livingston and Miss Nameless as his immediate objective when chance anticipated itself by drawing his eye to the top of a passing bus.

Behind a cloud of hair and beard stirring majestically to the light airs of the peaceful afternoon sat Mr. Alexander Sutey with three bundles of varying size in his lap and Miss Phyllis Joy Livingston at his side. The two seemed completely unconscious of each other, but the mere fact of their incongruous juxtaposition seemed to Mr. Blurt to form an ample incentive to curiosity irrespective of his natural impulse to follow the quarry which had so opportunely presented him with a full view halloo.

He hailed a passing taxicab, gave its driver surprising but clear instructions to trail the bus with the beard on top, entered and settled back to a well-earned rest, tinged with the mildly exhilarating wine of anticipation. Who and what was Miss Livingston in the hours when she regularly discarded the mask of everyday business stenography? Where did she live, what did she eat, which was the true highway of her heart—the flat and hard road of suppression or the rare outbursts he had witnessed to open country swept by the clean winds of old-fashioned human kindness?

Some of these things he was about to learn, and as he thought upon them his mind grew keen to a power of appreciation of values such as it had never before attained. What was woman? Was she the eternal, one and the same, forever and forever, of popular belief and the oft-printed word; or was she the varying child of each age as it came along, the daughter of individual tradition and circumstance, a free agent sprung clear from the general sea of her sex? Was it possible that there were two species of the genus, both capable of perfect blooms, and that Miss Livingston represented one, Miss Nameless the other? What had the latter party to do with the matter in hand anyway? he asked himself impatiently. He reacted violently and almost with a sense of fear from the uncomfortable admission that it was in the power of any one person to inject five minutes of personal conversation into the remorseless grind of a man's life.

There are few New Yorkers and fewer outsiders who know that five independent white-clapboarded and green-shuttered little houses still exist in the side streets just off the park limits in the New World's greatest city, where they are dreaming away their rural existence under the threatening shadows of stately mansions and towering apartment houses with a quiet air of persistence that would be ridiculous were it not so astoundingly self-complacent. They are located on both the East and the West sides, and so absorbed Mr. Blurt in his absorption failed to notice whether the taxicab he was shadowing turned at Fifty-seventh Street or continued up the Avenue it is impossible to say to which of the enterprising dwellings his chase finally led him.

Suffice it to state that when, having abandoned his cab, he saw Miss Livingston open the little gate of prim white palings, run up sagging steps and rap for admission with an old-fashioned knocker he was so taken aback by the virginal appearance of the house, which seemed to be full of the innocence of Red Riding Hood surrounded by a pack of wolves, that he was brought up all-standing at a distance still comparatively safe from observation, and was only subconsciously aware that Sutey with his parcels followed the girl at a more leisurely pace through the gate which promptly closed behind them.

"Can you beat it?" inquired Mr. Blurt of himself as he stared at the tiny house behind its tinier grass plot.

The longer he gazed the more did he become absorbed in the dwelling, not as a structure appropriate on the stage setting for Way Down East, but as a symbol of quiet and unreasoning permanence in the midst of change.

He walked round the block three times in a maze of heavy pondering, and each time he came in sight of the house it arrested his steps with a jerk; he found that its importance as an edifice became more insignificant with every return, but that as a monument to stark endurance it steadily grew. During his walking, evening had begun to fall, and in accompaniment to darkness the shades on Miss Livingston's dimity-curtained windows had been drawn.

ngs had waited until the membership blanks had ributed, and until long queues were forming e platform, and then he had squeezed Sylvia's et's go home," he said hoarsely. "I've had haven't you?"

rved they slipped out into the velvet night; and l blocks neither of them spoke. The occasion was ntous.

"Of course," said Mr. Bangs, "I would like to have had my name mentioned somewhere—or yours."

"That doesn't signify anything," said Sylvia; but he thought he detected the faintest possible overtone of regret in her voice.

"Sort of funny," said Mr. Bangs, "to think it cost us two dollars to hire somebody to stay with the baby just a couple of hours while we were out organizing, isn't it?"

"It cost Helen two and a half—and hers is colored," said Sylvia. "Only it was either that, or stay at home."

"In two months," said Mr. Bangs, "they'll be glad to take whatever we choose to give 'em." He slept less peacefully than common, for he was much excited; and in the morning he was feverish to see what his newspaper said about it. The headlines were promising, and the record of a hundred and seven active members enrolled at the first meeting was better than he had anticipated, but the text of the story itself was rather baffling. It was two full columns, but the reporter who had written it was a master of innuendo. When Mr. Bangs went over to the Eversons' for breakfast he spoke feelingly about it, and glared at the elder Kellogg brat, who was beating an obbligato with a spoon on his plate.

Henry Kellogg laughed outright at him. "Suppose you owned a retail grocery or something yourself, and advertised in the papers regularly—how'd you like to have the club get a big boost on the front page? The papers are noncommittal because they've got to play safe." Henry beamed pridefully at his own offspring, and frowned at Baby Bangs, who was splashing milk on the carpet.

"Oh!" said Mr. Bangs. "There's something in that, too." And presently he picked up the paper again and out of sheer curiosity counted the advertisements of retailers.

He spent the day, as prearranged, with Sugden, and attended the stockholders' meeting, where Ruth and Henry were the only temporary directors to resign. Sugden proposed a nominating committee, which was generally acceptable, and which produced a set of nominations without leaving the room. A council was quickly chosen, and the two vacancies on the directorate were filled. Sugden and the Bowkers were in, Rupert was a director, Ruth and Henry councilors, Mr. Bangs was nowhere. At the directors' meeting, after officers were elected, Mr. Bowker proposed Mr. Bangs for the club's attorney—without fee—and he was loudly acclaimed, but yielded to Sylvia's tacit command, and declined gracefully. He felt that he was too dogmatic about this club, he said, to make a good attorney for it.

When the Journal came out he was still a trifle downcast at the absence of his own name from the lists of the mighty; but during the course of dinner he got a different viewpoint.

"Almost every single tradesman I do business with," said Helen Everson, wide-eyed, "has either been up here to see me to-day, or telephoned! One poor little rabbit I buy eggs from was almost crying! Honestly he was. I've been paying him eighty-eight cents a dozen for eggs too. And he said the club would ruin him. And my vegetable man—why, I never had anybody talk like that to me in my whole life! He just as much as accused me of joining in a conspiracy to rob him!"

THE GREAT ACCIDEN

XLVI

By Ben Ames Williams

ILLUSTRATED BY F. R. GRUGER

WHEN Winthrop Chase senior returned to the dining table after telling V. R. Kite that they would expect him at eight o'clock that evening, Wint asked: "Did he say what he wanted?"

Mrs. Chase exclaimed: "I don't think you ought to have let him come, Winthrop. I don't want that man in my house. He ——"

Chase answered Wint: "No. Just said he wanted to see us." He was troubled and he showed it. "What do you think he wants, Wint? Something about Lutcher?"

Wint shook his head. "I think he's going to hit at me somehow. There's been a rumor round town all day. They say he has something ——"

Chase asked quickly: "Has he? Has he got anything on you, Wint?"

"Not that I know of. There's nothing he could get. Nothing to get." He looked at his father in a quick, appealing way. "Dad, I wish you'd just remember that—whatever happens. You know the worst there is to know about me. Anything else is just flat lie."

His father nodded abstractedly. "Of course. But Kite is confoundedly clever. Now I wonder what he's ——"

"What's the Idea? You Turned Me Down Cold, in Public. Now You Come Whining Round"

"I always told you, Wint, that you hadn't any business in politics," Mrs. Chase exclaimed. "I don't think it's decent, the way men talk about each other. Why, Mrs. Hullis told me that Jack Routt is going round saying the most terrible things about you. That you ——"

"I know, mother. That's Jack's idea of a campaign. We'll show him his mistake next Tuesday."

"But he says that you ——"

"Now, mother," her husband interrupted. "Never mind. Wint, did you hear anything definite about Kite? What he's planning?"

Wint hesitated; he had heard something definite; definite but incredible. That which he had heard could not possibly be true; he could not believe it. To tell his father would only disturb the older man; he could not be sure how Chase would react to the report. He held his tongue.

"No, nothing definite," he said.

"If he's coming to see you about it he must have something."

Wint got up from the table. "Well," he said abruptly, "we'll soon know. It's after seven now."

They went into the sitting room to wait; and the waiting was hard. Wint tried to read a paper; his father took a book from the shelves. But Wint's eyes strayed from the printed column. He was in a curiously numb state of mind. This was part hopelessness, part the sheer suspense of waiting. Wint was one of those men who in their moments of greatest passion and excitement become outwardly serene and calm. Their own emotions put a physical inhibition on them so that they are still and do not speak. Once or twice Chase glanced toward his son and saw Wint motionless, apparently absorbed, apparently quite at ease. But actually Wint was stirring to the throbbing of his heart, held still by the very fury of his own dread and anger and suspense.

At fifteen minutes before eight someone knocked on the front door. Wint said, "There he is," and got up and went to the door; but when he opened it Jack Routt stood there. Wint was surprised. He said slowly, "Oh, you, Jack?"

Routt nodded, a little ill at ease. "Is Kite here?" he asked.

"No. He's coming."

Routt smiled ingratiatingly. "I don't know what he wants. He told me to meet him here about eight to have a talk with you."

"Told you to ——"

"Yes. I asked him what he meant; and he said to wait. I supposed he had made arrangements with you."

Wint said dully: "Yes; he has. He's coming." And after a moment he added: "You might as well come in."

Routt grinned. "You're damned cordial," he remarked.

"Oh, that's all right," Wint assured him abstractedly. He was thinking so swiftly that he seemed stupefied. His father came into the hall and Wint said: "Here's Jack Routt. Kite told him to come."

Chase looked at Routt uncertainly; and Routt said: "I'll get out if you say so."

Wint shook his head. "No. Sit down. Go on in."

They went into the sitting room; but before they could sit down someone else knocked. This time it was B. B. Beecham.

He stood in the door when Wint opened it, and smiled and said: "I'm not sure I understood, Wint. V. R. Kite telephoned me there was to be some sort of a conference here about a matter for the good of Hardiston. I thought it curious that the word should come from him."

Wint laughed harshly. "All right, come in," he said. "I don't know any more about it than you do. I suppose Kite thought it would be cheaper to use our house than to hire a hall."

B. B. said simply: "I don't want to inconvenience you."

"Come in," Wint repeated. "I'm up in the air, that's all. Routt's here already. Kite will be along, I suppose."

"Routt?" B. B. echoed in surprise.

"Yes; in there."

Wint and B. B. went into the sitting room, where Chase and Routt were talking awkwardly. After the first greetings no one could think of anything more to say. B. B. broke this silence.

"I saw a robin to-day," he said. "They stay here sometimes right through the winter."

Birds and flowers were B. B.'s hobbies; he knew them all. And other people recognized this interest in him, and shared it. They liked his enthusiasm.

Chase said: "Is that so? I had no idea they stayed. It doesn't seem to me I ever saw one in winter."

"They live in the sheltered places, B. B. "You'll find them in the woods a brushy hollows and round houses where is a good deal of shrubbery. Especially people put out a l suet for them t on."

"Why, ever ought to do t Chase declared quick interest. ought to tell th in the Journal,

B. B. smiled a he was telling just this, every He spoke of othe Chase seemed ested. Routt an said nothing. seemed uncomfo and that was a s thing to see in t sured young Wint's eyes wer ered; he was thi lost in a maze o jectures. Kite w coming any m now.

B. B. was still about birds whe came. Wint hear steps on the w front of the house them come up the There were sever not Kite alone sounds told him He waited, sittin till they knocked front door. Th went out into t and opened the d saw Kite standing his dry little fa umphant, malig rejoicing.

Wint looked at Kite steadily for a moment; an he lifted his eyes and saw, behind Kite, Amos Ca and at one side, Ed Skinner, of the Sun. He had t there were others; but he saw no one else.

Kite stepped inside the door. Skinner and Amos still till Wint asked, "Well—what is it?"

Kite said then, "Come in, Amos. You too, Ed."

Amos, his big head on one side, his eyes squint a friendly way, drawled a question: "How about it, Kite says he's got something to talk over. Asked come along. But I don't allow he's got any right me into your house."

"Come in, Amos. Both of you," Wint said.

And Kite repeated: "Yes, come in. I know wh talking about. This young man isn't likely to object

"All right, Wint?" Amos asked again; and nodded, and Amos lumbered into the hall.

Then Chase came to the door that led from the room into the hall; and at sight of Amos he st very still, with a white face.

Wint crossed to his father's side and told him q "It's all right. Kite brought him. It's all right, d

Chase exclaimed: "How do I know it's all rig don't understand all this mystery. Kite, by what do you use my house for a meeting place? What this, anyway? What is the idea, Kite?"

Kite smiled his dry and mirthless smile; and h mockingly: "Do not fret yourself, Chase. Our c is with this young man, Wint. You shall hear." H stripping off his overcoat in a businesslike way. was Kite's big hour, and he meant to make the m it. He dropped the coat on the seat in the hall Amos and Ed Skinner imitated him.

Kite said briskly, rubbing his hands: "Now where can we have our little talk?"

Chase looked at Wint uncertainly; and Wint, held by that curious inhibition which made his level and low, said quietly: "The sitting room."

There were not chairs enough for them in the s room. Wint went into the dining room for an and found his mother there, putting away the dishes

She asked in a whisper: "Who is it, Wint? Mr. K

Wint nodded: "Yes, mother. Several men. better go upstairs the back way."

He as so steady that she was reassured; he did not m cited or disturbed. Yet there was something about n tit made her think of a hurt and weary little boy; d s laughed softly and put her arm round him and de im kiss her.

He id so, patting her head; and then he said, "There, th Run along."

went out toward the kitchen, and Wint took the r e had come for into the other room. He found ers all sitting down. Amos had slumped into the e and the easiest chair in the room. B. B. sat g in the straightest chair, his round firm hands on his knees. B. B.'s legs were short and chubby; lap was barely big enough to hold his clasped ds Ed Skinner and Chase were on the couch at one e the room. Routt sat on the piano stool, twirling wback and forth through a six-inch arc. Kite, in nner of a presiding officer, had pulled his chair thable in the middle of the room and sat there very thy his head held high in that ridiculous likeness to rly.

Wi set his chair just inside the door and sat down. ar Kite were the only composed persons in the room. B looked acutely embarrassed and uncomfortable, as was angry, Skinner was nervous, Routt's ease s lpably assumed, and Amos was fumbling uncer- nly with his black old pipe. He asked when Wint ne t: "Your mother mind smoke in her sitting room?"

Wi said, "No; go ahead."

He lled his own pipe, and Amos sliced a fill from his g nd deliberately prepared his smoke and lighted it. e emed in no hurry to begin. He had taken a letter w and a slip of paper from his pockets and was study- tim in silence. Wint thought he recognized that c paper—a check. It seemed to him that a cold d lutched his throat. He felt a sick sense of the elsness of it all; a sick despair. Not so much on on account ——

Ki at last looked round the room and said impor- th "Well, gentlemen!"

Wi's father could be still no longer. He cried: "See e, Kite, what's all this tomfoolery? What's this non- se It's an outrage. Be quick or be gone. I've no e waste."

Kite looked at Chase; and then he looked at Wint and asked maliciously: "Do you bid me to be gone too, young man?"

Wint shook his head. "Say what you have to say," he suggested; and there was a great weariness in his voice.

Kite nodded. "I mean to." And to Chase: "You see, the young man understands it is in his interest to handle this thing among ourselves."

"To handle what thing?" Chase demanded.

Kite cleared his throat.

"A matter," he said importantly, "that concerns first of all the good name of Hardiston; a matter that concerns, very intimately, the good name of your son. A matter that will be decisive in the mayoralty campaign now pending. A matter ——" His poise suddenly gave way before the fierce rush of his exultation; and he cried: "A matter that will stop this damned Sunday-school nonsense of denying grown men the right to do as they please! That's what it is. A matter that will show up this young hypocrite in his true light. If I were not merciful I would have spread it before the town before this."

He stopped abruptly, looking from one to the other as though challenging them to deny that he was merciful. No one denied it. B. B. cleared his throat; and the sound was startling in the silence that had followed Kite's words. Amos puffed slowly at his pipe and squinted across the room at Wint. Wint said nothing. He had scarce heard what Kite had said; he was curiously abstracted, as though all this did not concern him. He was like a spectator, looking on.

Chase looked at his son; and there was fear in the man's eyes, for Kite was so terribly confident. Chase looked at his son, expecting Wint to make denial, to defend himself. But Wint said nothing; Wint did not lift his eyes from the floor. He only puffed slowly and indolently at his pipe, moving not at all.

Kite cleared his throat again; and his dry little eyes were gleaming.

"I have given this matter some thought," he said; "some thought since the facts came into my hands. And I must confess at first they seemed incredible. I made investigations, I was forced to believe the whole black story."

He paused again. He wanted someone to question him, but no one spoke. He went on:

"My first impulse was to cry the truth to the whole town, but I held my hand. I went to Columbus for the final proof, got it, and when I came back it was to find that this young man had caused the arrest of one of my friends, Lutcher, on a ridiculous liquor charge. Simply because Radabaugh discovered Lutcher and three others engaged in a game of cards, drinking as they had a right to do.

"I was indignant; but even then I was merciful. I wanted to give this young man a chance; and I went to him and offered him the chance to save himself."

He paused, moved one of his hands as though to brush the possibility aside. "But it is unnecessary for me to tell you his chief trait is a blind and unreasoning stubbornness. It betrayed him on this occasion. He rejected my offer, refused to take the easy way out.

"That was this morning. I considered. My chief concern was for the good name of Hardiston; that such a man should not be chosen mayor. This seemed to me the simplest and least painful way to arrange his withdrawal. So I asked you to come here."

Amos drawled from the depth of his chair: "Did you fetch us here to talk us to death, Kite?"

Kite smiled bitterly. "No, Amos. Be patient."

Chase was watching Wint, still with that desperate hope in his eyes. They were all watching Wint; but Wint was looking at the floor, following with his eyes the pattern in the rug. This was the end. He had just about decided that. There was in him no more will to fight. He had been a good mayor. If they didn't want to reëlect him—that was their affair. He would do no more. He had a sick sense of betrayal. His lips twisted in a bitter little smile.

Kite addressed him directly: "So, young man, we want your withdrawal from the mayoralty race. And this whole matter will end right here."

Wint still did not lift his head. His father thought the boy was ashamed, and his heart was torn.

Kite asked sharply: "Come! What do you say?"

Wint looked at Kite then for the first time; looked at him with a slow, steady, incurious gaze that made Kite

Demosthenes and Democracy

RUNNING through a list of presidential possibilities the other day, a politician paused at one of the names to observe: "He is a man of wide business experience, of broad sympathies, a splendid executive and thoroughly versed in international affairs, but he wouldn't do, for he can't make a good speech."

That is a fatal handicap under our system of government by conversation. Unless a man has a flutelike larynx, violin-toned vocal cords and a pair of lungs with which he can play The Storm, he cannot hope to get far in our public life. In America a candidate is known by the speeches he makes, by his skill on the oboe, the piccolo, the cymbals, the cowbells and the snare drum; by the runs, trills, warbles, bangs and smashes in his performance; by his skill in juggling the drum sticks, balancing the trombone on his nose and waltzing out on the floor while he plays the bass viol; and above all by the number of words in his system and his ability to talk anything and everybody to death. Few remember the man who sponsors an important bill, but the member who talks for two days and two nights without stopping to gargle his throat is pointed out for years to an admiring gallery.

This will continue until the country wakes up to the fact that the President of the United States is first of all a big business executive; that the members of his cabinet are first of all heads of big business departments; that the members of Congress are first of all business directors, shaping the rules under which we make our daily bread, and that it is up to them to see that the loaf is full weight. When these simple facts are once fully grasped by voters the national Government will be made up of men from all branches of business, instead of being wholly dominated as at present by lawyers, necessary as it is to have a fair proportion of them in lawmaking bodies. We shall then attach more importance to what a candidate has done and can do in business than to the orchestration of his promises. It was a sad day for America when Demosthenes began to practice with his pebble.

Few capable men of practical affairs—farmers, merchants, manufacturers and laborers, as distinguished from labor leaders—can make a speech to which anyone could fox-trot. They have a habit of saying everything they really have to say on a subject in a few terse sentences, thus spoiling a perfectly good speech and saving an exceedingly valuable hour. Speech making has its uses—many of them—and it may be the most harmless of all indoor and outdoor sports, but it does not often expedite the work of the world. "Thinking on his feet" is a phrase that is frequently used when "talking on his feet" is meant.

There is no more reason why we should demand that our governmental executives be orators than that they should be actors or grand-opera singers or banjo players. These are all desirable accomplishments, but they have no direct bearing on taxation, housing, the price of hogs and various other matters that have a very real and intimate relation to our happiness and prosperity. If this seems a sordid view to take of government, we should remember that the price of hogs has some very intricate ramifications that finally affect even the arts and the sciences.

In all other subdivisions of our business—and we use the word in its broad sense—we select men for fitness. A lawyer is chosen to attend to legal affairs; a professor to run a college; a general to lead an army; a manufacturer to head a corporation; nor do we ask them to sing a popular song or to make an impassioned speech on the wrongs of the voter at the hands of the party in power as a test of their fitness. Experience and a practical habit of success are our criteria. But when we want a President for our great national holding company we shy away from the men who by training, experience and habit of mind are best fitted for the job. We look at a candidate's vocal cords instead of his ideas; consider his geographical position before his experience in handling business problems; and count his popularity as more important than his platform. Popularity is a poor test of character. A man who has offended no one has fought no one.

Democracy is being done to death by speech makers. Action is being smothered in oratory. Discussion is degenerating into drivel. As this is written the country is facing the music, listening for some inspired note of leadership to which it can quickstep ahead, but the Silver Cornet Band keeps right on playing In the Sweet By and By with variations, while the very children in the streets are being taught to dance the turkey-Trotzky.

If all this talking and spouting were done to full benches, to an alertly listening and interested House and Senate, it might be justified, but the arguing and speechifying usually goes on to empty seats. It is almost always addressed to men whose positions were taken, whose minds were pretty well made up weeks before. Deliberation on important matters is wise, but not after the possibility of any new light being thrown on them is over. Many able and useful men in national and local government are only half effective by reason of the system and lack of system.

Legislative bodies have been steadily degenerating into debating clubs in which not even the debaters are interested. By the time one of these debauches of speech making is over the public has usually forgotten what it was all about. Nothing would so expedite public business as a rule that every member of a legislative body should sit through every speech made. No one has so little toleration for a bore as his fellow bores.

The man who is responsible for this condition and the only one who can remedy it is the voter. Heretofore the hustings have been a combination of stage and arena, and a speech something to shout over rather than something to think over. The voter has demanded pep, hokum and the emotional appeal instead of a straightforward, common-sense discussion of the real issues—and the demand has created an overplentiful supply. In response to it we have the boy orators, the silver-tongued spellbinders, the one-hundred-and-twenty-four-minute men who can play Home, Sweet Home on their larynxes and who operate with a full set of stops, from the fake vox humana to the bogus thunder, all resulting in the election of conversationalists and government by conversation. It would be well worth the voter's while to secure a stenographic report of one of these political speeches and to read it over in cold blood the morning after—away from the crowd, the cheers and the brass band; to strip it of its adjectives, its flag waving, its sob stuff and its generalities in order to see what it contains of genuine, constructive, unequivocal horse sense.

This plague of oratory has not only kept many of the best men out of politics and befuddled the voters, but it has made hot air the moving force in many fields besides the political one. We pass over the curse of after-n speaking and the rapidly growing habit of "confe r over many things that we are afraid to look squarely eye and settle with one stiff punch. Much of thi s ferring is simply deferring. We doubt whether a conf a of more than a dozen people ever really got any n or decided anything. We refer to the growing ascen n of the blatherskite over all classes of people; to tl s ting up of the soap box in all classes of society.

If one is an orator one must orate; and if one orat o must please; and if one is to please one must agre v his crowd and denounce its adversary; and in denou i an adversary one is often unjust; and injustice for th a of pleasing is demagogism. There is always an und i everywhere, sometimes held down through no fault own, oftener through some lack that no laws or rear g ment of society can help; but no underdog wants to b e that, so he is with anyone who agrees with him ar d nounces whomever he fancies to be the man who is s i on his chest. Many men are willing to cash this wea e into votes and money; so we have the profession of gogism—and it is overcrowded. A rush of words t h head is an almost sure symptom that the demagog about to break out in a red rash of radicalism. T ers have reported that so many men were making spe h on the street corners in Russia that finally there v nobody left for an audience. We have even heard o r crafty engineer who stopped his train on the stepp Siberia and, when the speech makers in the cars r n forward to see what was the matter, began an impass a address from his cab on the wrongs of the prolet a Verbum saphead: Cut it out!

Labor has been the favorite underdog—though it i fact no longer one—of both the politician and the agit o The country has always been disposed to take capit a its worst and labor at its best, with the result that ca has been damned far beyond and labor glorified far a its deserts. The sanest and most industrious men i councils are gradually being displaced by those who a talk loudest and hottest, who will promise the most m for the least work, until labor is in danger of being s from its moorings into the maelstrom of red radicalis

The strikes now under way and under consideratio probably result in a flat increase of from twenty-fi fifty per cent in the cost of living, and they are largel to oratorically faked rather than to actual grieva The radical labor leader who cannot find a grievan t justify his leadership and keep him busy is out of a with work staring him in the face; so he naturally ke full line of grievances in stock for his followers. Any of talk, any sort of a demand, if there is only enough pepper on it, gets over with a yell these days. And th prices go higher with every strike, still the carnival of versation without cloture continues—on the husting i the unions—sound and fury over exploded theories, e rotten economics, over political parties that are begin to call for burial in Arlington Cemetery, so far as clear-cut, convinced declaration of policy and prog of performance on the great issues before us is concer Only men above party, above popular clamor, who not afraid to antagonize this selfish vote and that patriotic voter for the greatest good of the grea number can help the country to-day—and not enoug those men are in office.

It is time for every man to sit down and ask himself w is the one overwhelming and overshadowing issue be the country, whether he is going to play a man's part unselfish patriotic part, or be beguiled by fiddling de gogues or a chance to reap some quick personal vantage. The men who are cashing in on the pres situation are laying up treasure in hell. There is s choice for the devil between the red flag demagogue the black flag profiteer. They are brothers under the s

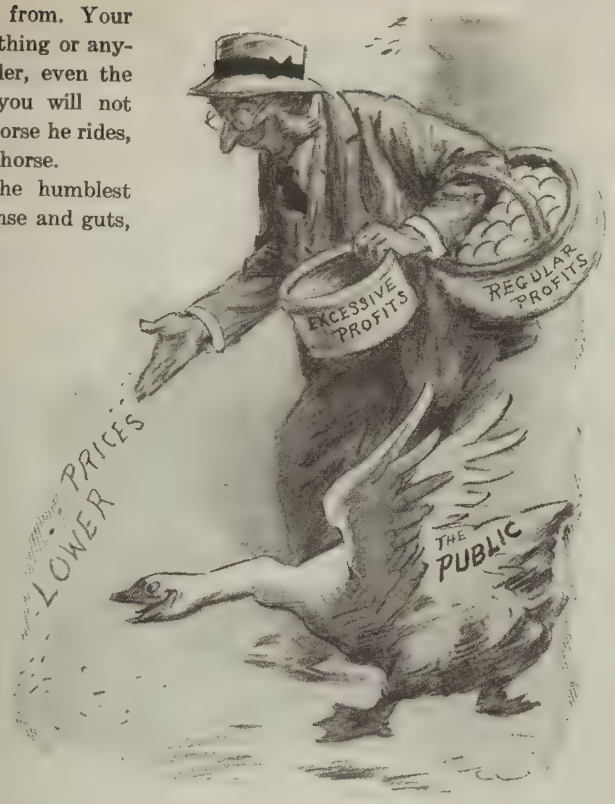
ot ıcceed in public, though he finds it easier to bury
lu ers. He simply takes more money from the tax-
s ıd so staves off bankruptcy.
n' be afraid to let the help know where you stand and
yo expect of them. Follow this method right up the
o t Presidency and you will finally have parties that
s ıething, stand for something and will do some-
b ides talk, officered by men of action instead of



conversationalists. The issues before us are clear. The man who says "perhaps" and "if" about everything is not the man for us now. Salvation is by faith, and faith without works is dead, and there are too many dead ones discussing and conferring and speech making over live issues as it is. They will not listen to each other, but they will listen to public opinion. Verbum sap! And that word is being spoken almost daily by men who "can't make a good speech," but who can talk good sense: Americans, get together!

Exchange Distortions

BEFORE the great war broke upon the world it was confidently predicted that such a calamity could not happen because of its prohibitive cost. After the war had actually begun many persons assumed that financial necessities would limit its duration to a few months. Both prophecies proved false, and as a result there was a swing to the other extreme, to the view that financial considerations were of no or only nominal importance. But the disordered and chaotic condition of international trade since the Armistice and the breakdown of currency systems, especially in the defeated countries, proves that financial machinery cannot be abused with impunity.

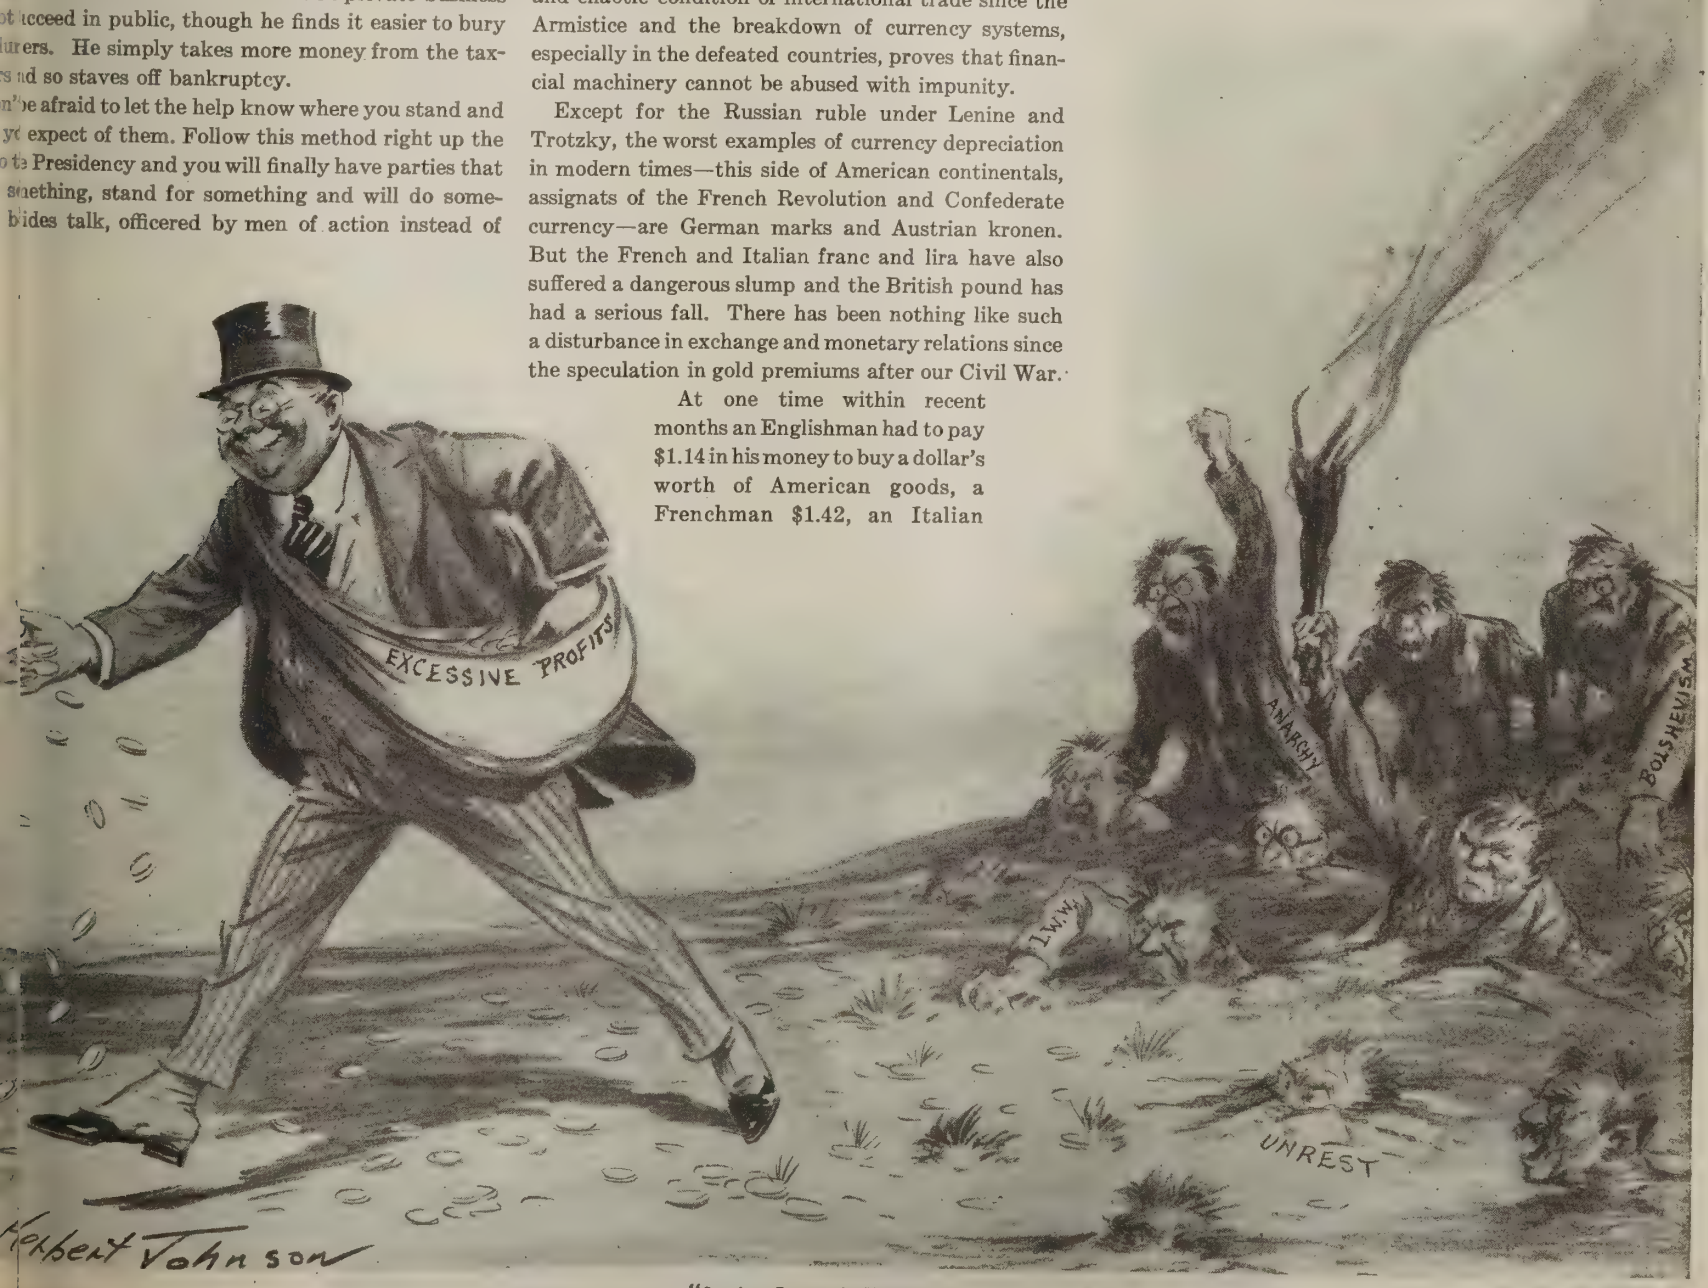
Except for the Russian ruble under Lenine and Trotzky, the worst examples of currency depreciation in modern times—this side of American continentals, assignats of the French Revolution and Confederate currency—are German marks and Austrian kronen. But the French and Italian franc and lira have also suffered a dangerous slump and the British pound has had a serious fall. There has been nothing like such a disturbance in exchange and monetary relations since the speculation in gold premiums after our Civil War.

At one time within recent months an Englishman had to pay $1.14 in his money to buy a dollar's worth of American goods, a Frenchman $1.42, an Italian $1.67, and a German—if he had been buying—$4. Thus, besides having to buy at high prices in this country, a European importer was obliged to make payment in American money which cost him a great premium.

Recently a Belgian firm placed an order in Germany at thirty-five per cent of the nearest American bid, the controlling factor being that Belgian money was worth a premium over German but was at a heavy discount as compared with American dollars. But while American exports are hindered by such perversions of the exchanges, imports from Europe are stimulated. When the Frenchman had to pay $1.42 for a dollar's worth of American goods, the American had to pay only seventy-odd cents for a dollar's worth of French goods.

Then, too, the American who buys European securities, either of governments or private corporations, is likely to make an unusual profit, provided foreign exchange ever returns to normal. For an American investor in buying British Victory bonds does not pay the market price in London, but a price as much lower as English money is lower than American. Likewise the American tourist traveling abroad will find that his American dollars multiply magically when exchanged for foreign monies.

A decrease in our exports, an increase in imports, attractively low prices for foreign securities, the temptation for tourists to go abroad—all these conditions will tend to restore equilibrium in the exchanges, even though we do not extend great credits to European countries. But until there is some approach to equilibrium there will be costly and dangerous disturbance, along with a paradise for the speculator and gambler.



"Sowing Dragon's Teeth"

Checking Up Our Thank Offerin

PRODUCERS' YEAR OF PLENTY BROUGHT NEW PROBLEMS

By Charles Moreau Harger

BACK on the old farm, when father had hauled the last load of wheat to the mill and had closed the bulging barn on the last load of hay, Thanksgiving came with sheer rejoicing for the bounty of Nature. He did not figure the expense of raising the crops or the discount on the grading of his grain. The "lower eighty" may have fallen off slightly in its usual return, but the orchard had borne a generous yield of fruit. On the whole, he looked upon the farm's production and pronounced it good.

This first year of peace has reaped a marvelous bounty of the fields. Gathered into a whole, the soil has given to the people of the United States one of the notable seasons of history. With this has come an unexampled high price level for everything the farmer raised, turning into the banks a swollen tide of deposits. Whatever of storm or drought affected local sections, a broad mantle of plenty has rested on the land and given real cause for thanksgiving.

But the modern producer has kept books. He has translated every bushel and every ton into terms of dollars and cents. Out in the fields he has been riding up and down the brown furrows or wrestling with the sheaves—thinking. He has come to the end of the season with his problem yet unsolved. With varying views are summarized the season's returns. Thorough satisfaction mingles with disappointment, volubly expressed. Partly the latter reaction is temperamental, for often the farmer is disposed to consider that he is getting the worst of every bargain; partly it is due to close figuring and comparison of his anticipations with his accomplishments.

Big Crops and High Costs

FOR one thing he expected this to be a banner year for profits. All last winter as he watched the growing wheat he counted his gains. With a guaranteed price of $2.20 at primary markets and the prospect of a billion-bushel yield, it seemed that he must come into his own. He raised the billion bushels approximately, but the events of summer brought revision of his figures.

Waiting the passage of a shower at a country elevator in the wheat belt last August were a half dozen wheat growers, each having brought a fifty-bushel load of grain to market.

"This is the last of my crop," said one—"eleven hundred bushels off one hundred acres. I'm done—I'll not put in an acre this fall."

"What's the matter with wheat?" I asked.

"Cost me too much to get it. I paid $10 a day for harvest hands—and they were poor hands at that. Then threshing cost $150 a day for the machine, and when I have paid my note at the bank I'll not have good wages for myself left."

"What are you going to do if you don't raise wheat?"

"I'm goin' bummin'. I can earn more money on the railroad or carpentering than I can raising crops. We pay all we get out for wages and I thought this year would be a big money-maker."

The man at the elevator stated his case in extreme terms, but in somewhat similar temper thousands of farmers cast up their crop profits and unite in a demand that there be a return that will give them a definite profit on their crops.

Probably no one factor has been so unpleasant a surprise to the producer during the past season as the skyward trend of labor's demands. For years the hired man has been content to work from sunup to sundown for $25 a month. In rush times extra help could be procured for $2 a day. This year during the wheat harvest workers demanded at first eighty cents an hour, which rose to $1 an hour—a ten-hour day and found[employers balked, but wheat wa[s for cutting; help was scarce. country stations workers waited until they receiv[price—which in some instances reached twelve d[day.

"It certainly pays!"

Yes. And just now a handy supply of these wholesome soups pays you at its best.

Think of the appetizing zest they add to your holiday dinners, the inviting relish they give to the cold cuts and left-overs that follow, the ready nourishment they provide between times in the fatiguing days of shopping and "getting ready."

And think of their economy—both in cost and in use. For example—

Campbell's Vegetable Soup

We include fifteen different vegetables in this tempting soup, beside barley and macaroni alphabets—all blended in a hearty stock made from selected beef.

The high energy value of this savory soup makes it lessen your need of expensive meats. Its appetizing quality makes all your food do you more good. It saves waste and cooking-cost. And everybody enjoys it every time.

Order a dozen or a case.

21 kinds

"A regular cut-up am I
Which nobody can deny
And cutting the ills
From house-keeping bills
Is the jolliest stunt I try."

Campbells' Soups

(Continued from Page 30)

an acre, it is difficult to understand how the new owners can make interest on their investment if the price level of products returns to the pre-war level, or even near to it.

A questionnaire sent to representative men in every county of Iowa in midsummer brought these estimates: The average price of farm land is $234 an acre, an increase in sixty days of $28 an acre and in five years of $94 an acre. In many instances the increase has been far more than this, and it has not been unusual for speculators to make a profit of $50 an acre in a few weeks. When it is considered that in most instances there was paid down but a small amount to bind the contract, to be completed next March, it beats operating on the stock exchange.

PHOTO. BY NATHAN R. GRAVES, ROCHESTER, NEW YORK

Take the specific instance of the 240-acre farm near Traer, Iowa, sold to Guy Monroe for $265 an acre; sold again to C. E. Lambert for $275 an acre; sold again to Charles McElihinney for $325 an acre—an advance of $14,400 in less than three months, and the new owner expects to sell it for a yet further advance before the holidays. There was Con Mahoney, who sold his 160-acre farm for $250 an acre, bought it back for $270 an acre, resold it for $425 an acre after taking off the wheat and corn—a profit of $24,800, plus this year's crops, in less than twelve months.

A well-informed Des Moines banker is authority for the statement that the best class of Iowa farms have advanced in selling value $100 an acre since March first, adding:

"I think I am safe in saying that Iowa bankers generally and henceforth will adopt a policy of discouraging the purchase by their patrons of Iowa land at anything above $300 an acre. Deals in farms at fancy prices are flooding into banks these days. The bankers are beginning to worry about the effect. I am not certain that prevailing prices represent actual inflation; neither am I certain that even in these days of high prices Iowa land generally can produce sufficiently to make such investments wise. The movements in farming lands and the great retail trade with it, regardless of high prices, are expressive of the same state of mind, and both get their chief impulse from the fact that Europe is below its normal food production."

Not Enough Land to Go Round

THESE illustrations could be duplicated by the score over a half dozen agricultural states and indicate a speculative movement borne out by further features of the Iowa questionnaire. A summary of the reports gives the proportion of purchasers who expect to make the new farms their homes as 49 per cent; those who expect to hold for permanent investment, 17 per cent; those who buy for speculation, 34 per cent. The speculators include town capitalists, who see a chance to make a profit on a moderate investment, and professional traders, who are operating on a shoe string, trusting to the chance of reselling.

Startling as has been the advance in values, seventy-five per cent of the replies say that yet further increases are probable. In other words, the land boom has not yet spent itself.

Out of this grows an increase in tenantry, already of proportions to bring serious consideration from every Western commonwealth. The tenant is unable to purchase land at present figures; the investor is satisfied to hold the land in expectation of a rise, in the meanwhile obtaining a generous income from his share of the crops or the cash rent. This share has risen with the increased investment until a rental value of $10 to $12 an acre is considered reasonable and it frequently runs to twice or three times that amount where production is liberal and the owner receives a share of the crops delivered at the nearest market. So, farther off is realization of the renter's dream to have a home of his own and more numerous are those who seek land to lease.

"They even wake me up in the night," said a land agent, "to get a first choice when neighborhood gossip spreads the news that there is likely to be a vacancy. One man recently traveled all night from a neighboring county to get a farm that his daughter had telephoned him would be leased next March."

Definite reports of the number of tenants are difficult to obtain except when the decennial census is taken. A recent bulletin of the Kansas State Agricultural College says that in two of the richest counties of the state "fully one-half the farms are operated by tenants." In the state at large 36.8 per cent of the farms are so occupied. In Nebraska a similar condition exists, estimates showing that only 50 per cent of the farms are occupied by their owners. In July, 1919, were checked up the assessors' returns on two townships of Central Kansas. They are rich townships, with some of the best land in the state. It is doubtful if any farm in either could be bought today for $100 an acre. Yet in Jefferson Township the assessor reported that fifty-three owners were operating farms and twenty-four farms were occupied by renters. In Liberty Township, with a large German-American settlement and many families who have lived there since the sixties, there were sixty owners and forty-three renters on 103 farms. In that county agents say that for every rent there were twenty mer the lease.

With the average size of the United States decrease decade ending 1910 from 14 to 138.1 acres and the prop tenants rising from 35.3 pe 37 per cent, the opportunit steadily less for the labore survey of 465 farms in Kans found that rented lands are invariably lower in fertility joining farms tilled by own the report adds, "If the tenant farms decrease fur tenant's problem of making ing operations profitable much more difficult."

When the farmer adds creased value of his real esta other income he finds that he ing financial headway; wh renter he is handicapped, an tem of rural credit material ficial to the man with little means has been devis even under present conditions the tenant often larger income than the owner, because of his smal ment. Both are giving much thought to the matt reduction in the cost of living. Both complain of of implements and household supplies compared w years ago.

"It is a shame and a disgrace," says Mr. Farmer, have to pay twice as much for a mower or a cultiva that my family is charged fifty per cent more for than in 1914—something ought to be done about

War Benefits Felt by Producers

WELL, something was done about it in mid through the activity against the high cost of liv profiteering. Whether the agitation or the appro new crop caused it, corn took a drop of forty cents and cattle and hogs declined four to six cents a p

"This will ruin me," then declared the produc cannot fatten stock and send it to market at these I do not receive enough to pay wages for my labor. not the place to begin cutting down prices."

The agricultural sections, where the interests ducer and consumer are interrelated, are poor pl settle where the change in values should begin. L there is on the part of the business interests a reacti the feeling of the producers who are the basis of the perity. Take the merchant in a farming sectio knows that if his customers are to prosper they mu good prices for their products. If the income of the falls his trade lessens. In consequence there is n enthusiasm for a falling market for the foodstuffs in that community.

Since the beginning of the war the producer has beneficiary of the increased call to America to fe world. When the first offering of Anglo-French bor made, a country banker was approached by one customers, who asked, "Is this bank going to take y

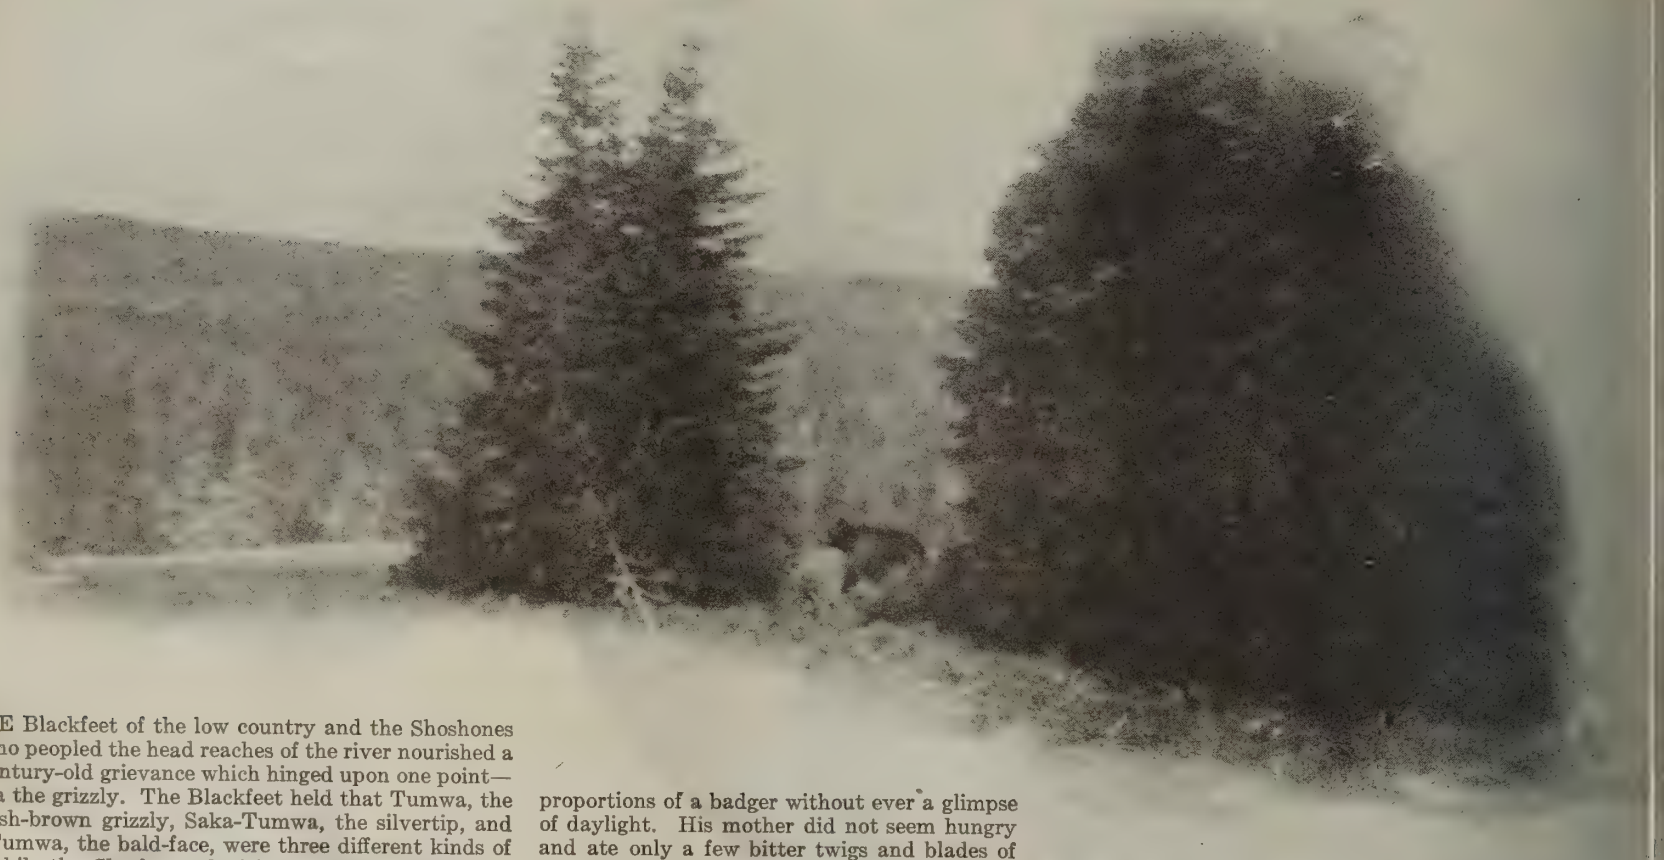
THE BALD-FACE—By Hal G. Evar



THE Blackfeet of the low country and the Shoshones who peopled the head reaches of the river nourished a century-old grievance which hinged upon one point—Tumwa the grizzly. The Blackfeet held that Tumwa, the yellowish-brown grizzly, Saka-Tumwa, the silvertip, and Logo-Tumwa, the bald-face, were three different kinds of bear, while the Shoshones had it handed straight down from Manitou, their revered god and ancestor, that they were but three different color phases of the same beast. It was a fact well known to both tribes that when any bear was killed in his winter den it was found that his stomach was shriveled into a solid rubbery knot. Agreed upon the fact, they differed as to the cause.

The Blackfeet insisted that the bear gorged enormously prior to entering the long sleep of hibernation and that the stomach contracted for the purpose of extracting the last ounce of nourishment from the food. Pakatan, head medicine man of the Shoshones, let it be known to his people that the bear fasted for the last few days before denning. The stomach having nothing to keep it distended, the natural consequence was that it shrank.

There was but one way in which to settle this dispute; and in the time-hallowed manner in which all peoples before or since have adjusted their grievances, so the Blackfeet and Shoshones prepared to settle this. They painted for war.

The legends of those who keep no written records but instead pass history from generation to generation by word of mouth are apt to become a trifle distorted as time goes on. The white men knew this and when the last of the Shoshones told the first of the whites that the big tracks had always been seen in the hills since their forefathers first came to the headwaters of the river the white men, knowing that the Shoshones had lived there for perhaps a thousand years, were inclined to doubt. But knowing too that the grizzly lives a long life, perhaps even longer than man, and having themselves seen the great prints, the white men were prepared to admit that the monster silvertip had been leaving his tracks in the hills for some time. In reality he made his first tiny tracks in the melting snowdrifts when he followed his mother from the den on the very spring that the hills first echoed to the war whoops as two mighty nations battled over whether he should later go to sleep with a full stomach or on an empty one.

He was a lone cub and his mother had gone into the winter in good shape. Bears vary greatly in size at maturity—as do men. The Shoshones knew from Manitou that the condition of the she bear when she dens in the fall predetermines the eventual size of the offspring who come forth with her in the spring.

But Logo, the bald-face cub, did not know that the great god Manitou had so prearranged things for him, and if he had known he would have cared but little. It was sufficient for the moment that he could enjoy the delights of the open sidehill after the months in the gloomy hole, its opening blocked by feet of snow, in which he had been born the size of a squirrel and had grown to the proportions of a badger without ever a glimpse of daylight. His mother did not seem hungry and ate only a few bitter twigs and blades of grass before retiring once more to the mouth of the den, where she slept for a day and a night.

Even at this early age Logo gave indisputable evidence of what he would be at maturity. His shoulder blades slid up and down under the loose skin when he walked and gave him a lurching, swaggering air. He had not the timidity of the young of other beasts. In his veins flowed the blood of a thousand generations that had trod the forest ways before the bark of the magazine gun had been heard in the hills—and every living thing had given trail. Only when tired or hungry did he return to his mother to sleep beside her.

A new note roused him from one of these fitful naps. He could not locate its source. It seemed to fill the whole expanse of the hills, borne on every breeze. He sat on his haunches and cocked his head sidewise as he listened to a distant drone that swelled and receded, rose again, but never died.

Far below on the banks of the Stinking Water a thousand savage throats were chanting the birth song. A plaintive wail issued from the tepee of Striking Eagle, chief of all the Shoshones, and the chant rose excitedly. Leonona, squaw of Striking Eagle, had brought forth a child.

There was a strange mark upon the infant's breast. Pakatan was with the child and the chant swelled in volume as the rumor spread that very soon now he would interpret the meaning of this queer sign for his people. There was the silence of death as Pakatan threw back the tepee flap and stood before them. He paused impre
before speaking, then violently struck his breast.

"Mighty warriors of the Shoshones," he then
"Manitou has sent us a proof of his children's wisdo
that of the braggart Blackfeet! Upon the breast
infant chief is a mark the meaning of which is as
you as the trail of the trout in the streams, but to P
it is as plain as the tracks of the bull elk in the snow
mark is the sign of the bear! The grizzly, the bald-fa
the silvertip are cunningly blended in the one sign, p
them to be the same. The son of Striking Eagle sha
sess the qualities of all three. There will be a cub
white face and a pelt of shining silver born of a yel
she grizzly. As surely as the young chief shall live
all men, so shall the cub live to rule all the bears
hills until such time as men with faces as pale as th
head of the bald-face and natures even more fierc
come to the banks of the Stinking Water. The
Striking Eagle will live to know many of the whit
and at last will come one with the courage, streng
beauty of the silvertip and he shall find our maiden
more lovely than his own. His blood will mingl
that of Shoshone chiefs.

"The young chief's reign will accord with that
grizzly king. When the great bear dies, then sha
chieftain be called to Manitou—but not until thre
after the passing of the bear, one day for the grizzl
for the bald-face and one for the silvertip."

Pakatan paused in his flow of barbari
quence. Then:

"Manitou wills that the child be named Tu
Ka-Tin, Three-Bears-In-One, and thus thro
lie in the teeth of the Blackfeet dogs."

The chant rose and swelled in a frenzied t
to the infant chief and the volume of it roll
across the hills. Far up on a spur of the
Mountains, Logo, the bald-face cub, place
forefeet on his sleeping mother and growled
defiantly across her at the sound.

This roused the old bear and she rose an
the den. She returned to it no more, but lin
in the vicinity for some time, eating incre
quantities of grass and bitter twigs each suc
ing day. Then she headed down across the
packed snowdrifts of the spruce slopes towar
lower valleys. At frequent intervals she
her nose and sampled the wind. Logo, emul
her example, also elevated his little muzzle
sniffed. The second day of their forest t
the wind bore an odor that was delicious.

PEEP into the minds of the members of any organization which standardizes on Systems Bond for forms and letterheads.

What do you find?

The stenographer who takes pride in her work—"I like a paper that doesn't crumple up going through the machine. This sheet comes out smooth—no re-typing on *that* score. Erases well too. Yes, Systems Bond suits me."

The office manager—"Every sheet of Systems Bond gives the right impression—it represents the firm as we want it represented."

The President—"I like a manufacturer who puts his mark on his product. Then we know he's proud of it. We do business that way ourselves, and we like to do business with others who do business that way. Systems Bond is a good paper to standardize on."

The P. A.—"Systems Bond is the goods—and it sells at a business man's price."

The advertising manager—"Enclosures printed on Systems Bond don't look like throwaways. They're read because they're respected."

Ask your printer to use this rag-content loft-dried paper on your next order of forms or letterheads. Also he can obtain for you a free copy of our book "Your Letterhead," containing practical hints on design that show what your printer can do for you at little cost.

Systems Bond is the standard bearer of a comprehensive group of papers—a grade for every Bond and Ledger need—all produced under the same advantageous conditions—and including the well-known Pilgrim, Transcript, Atlantic and Manifest marks.

(Continued from Page 34)

intestines until she felt capable of relishing solid food. They headed straight into the wind and came at last to the remains of a winterkilled elk and feasted with satisfaction upon this ancient relic.

The old bear's feet were tender from long disuse. She lingered near this first find of the season, bedding down near by and returning frequently to feed.

Logo's education progressed with each new day. He sprang from a race of thinking animals. Combinations of sights, scents and sounds were stored as facts in his busy little brain. Also tastes, for in addition to holding the world's record for sleeping and fasting the bear is the free-for-all champion eater of the universe. His menu is as varied as that of most other animals is limited and as a direct consequence his sense of taste is as sensitive as that of other animals is dull.

Logo's sense of smell was the most highly developed, but the Shoshones had been told by Manitou that this wonderful nose was but for the purpose of detecting new morsels of food to tempt the palate. And Manitou must have spoken truly, for no single new object caught Logo's eye but what he tested its edibility with his nose. The fact that his fare now consisted almost exclusively of meat did not affect his continual sampling of all else. The rich meat was somewhat concentrated, so he ate quantities of elk hair, grass, pine needles and shreds of bark for roughage.

As the wind shifted the old bear changed her bed. Day after day the wind bore straight from the elk to her and kept her informed of all that transpired there. She waddled forth and warned off each new intruder. From this Logo knew that the elk belonged to them. All things moved aside for his mother.

Once sure of this Logo appointed himself custodian and undertook to drive off all comers who would feed there. It was great sport to chase black and brown bears much larger than himself. On the third day the wind spoke of an alien presence and he rushed forth to find a great he grizzly enjoying his first mouthful. He gave one startled grunt and moved off before the cub's puny rush, casting many an apprehensive glance behind him.

Logo swaggered as he returned to his mother, his back roach bristling and a growl rumbling in his throat. He knew now that he was indeed a terrible fellow before whom all other living things gave trail. He had no slightest doubt but that it was his own personal prowess which they feared.

The old bear's stomach was distending rapidly and the net increase in the amount of each succeeding meal was marvelous. At the end of a week the elk was but a pleasant recollection, and Logo followed his mother on in search of more. Her pads had now toughened and she fed but once or twice at a spot. For a month they shifted back and forth, scouring the hills for the remains of the winter-killed and hauling the refrigerated carcasses from the drifts.

In one deep pocket they found the last resting place of a dozen elk. Here for the first time Logo learned that others were sometimes permitted to share the neighborhood of their own choosing.

Two grizzly families fed in the pocket. It surprised him that his mother did not drive them off. Instead, when he showed symptoms of clearing the field himself the old bear flattened him with an admonitory forepaw. The tap was no gentle one, and he desisted, not from fear of the beasts before him but from certain knowledge that he would once more feel the weight of her paw—the one thing on earth he had discovered to be more powerful than himself and consequently the one thing which he respected.

Logo concerned himself with facts alone, the reasons for the facts being immaterial to him. One fact was apparent. His mother did not wish him to drive these others off. He decided to let them stay, but behind this decision was a reservation to the effect that they had best look out for him. The old she grizzlies were inclined to be friendly, and each mother kept a wary eye upon her own offspring lest they precipitate such widespread trouble as to draw their elders into difficulties.

A she grizzly with two cubs fed upon an elk near the one selected by Logo's mother. One was Tumwa, a brownish-yellow cub; the other was Saka, a handsome little silvertip.

In less than an hour after his arrival Logo started off upon one of his rambling excursions. Halfway between the two elk he came face to face with Tumwa exploring among the pine needles between two drifts. Logo looked back to make sure that his mother was not watching him and bore valiantly down on Tumwa.

Logo Started Off Upon One of His Rambling Excursions

Tumwa, having a brother, was already an experienced fighter. Every day he had a number of lively brawls with Saka. A horrible shock of surprise flooded Logo as the brown cub instead of fleeing for his life whirled and met him with tooth and claw. Tumwa cuffed him with his forepaws, trampled him with his hind feet and bit his ear almost simultaneously.

Logo was roughly handled before he recovered sufficiently to protect himself. But he came of a stanch breed and it never once occurred to him to give back an inch. He returned blow for blow, his one consuming desire that of retaliation. They raged all through the timber, cuffing and hugging and slamming against rocks and trees. Their feet churned the surface of the oozing spring drifts to slush which soaked their fur as they rolled in it. Logo grew very tired and would have stopped except that there is no such thing as quit in the composition of a young grizzly, that quality coming only with the experience of age and even then only in the shape of mature judgment.

It was Tumwa who led the way to settlement of the dispute. He too dealt only in facts, and he was well aware of one fact of which Logo was ignorant. This fight differed from Tumwa's daily bouts with Saka only in the one detail that he was somewhat less well acquainted with Logo. It was a positive certainty that when these rows lasted too long his mother intervened. He knew that the time limit had been reached and was apprehensive of feeling a sudden numbing stroke of her paw. She raised her head and looked in his direction—and Tumwa simply ceased hostilities. Logo administered a few finishing cuffs before he discovered that Tumwa was no longer on the warpath.

Tumwa turned over a few pine needles with his forepaw and shoved his nose among them as unconcernedly as if nothing at all had happened. Logo descended from his perch on the drift and buried his nose beside that of Tumwa. He had learned a new fact. Old grizzlies, with the exception of his mother, were perfectly harmless. They knew his prowess and fled from him. With grizzly cubs it was different. They were the only living things with courage to face him. Tumwa was a fighter after his own heart. He decided that the brown cub was a fine fellow—a stanch warrior like himself, and he had great respect for his late antagonist.

They lingered in the pocket for a week and he had frequent bouts with both Saka and Tumwa.

Then he learned still another fact. He saw their mother discipline both cubs. He was forced to revise the fact that big grizzlies were harmless. It was somewhi fusing. Some old bears could inflict harm some young bears, yet all old bears could not harm upon all young bears. This was very c He had no knowledge of relationship upon to base it. There seemed to be no set rule matter. From its very haziness he sensed th was but a part fact. But he stored that part in his keen little brain, even though he cou know that other parts so stored in the would eventually piece out the whole.

At the end of a month carcasses were har find and the straight carrion diet was beginr pall. They varied the menu with the larvæ of under rocks and in rotten logs, tearing the la shreds in their search. They ate bushels o onions and other bulbous roots. Logo nipp many different varieties of tender buds wi same relish as browsing animals such as the and deer. He gorged on green grass and enj as thoroughly as the grazing elk, and no otter streams was more fond of trout than he. They ran the open sidehills and he burrowed tirelessly for a squirrel or a nest of mice.

There was one animal, the porcupine, which he d understand and about which he was therefore curiou spied one of these quill hogs before his mother scen the wind being at her back. When the strange merely squatted down some distance ahead instead ing trail Logo bristled with rage. His mother notic roach rising along his spine and looked up to see w was all about. She gave a startled grunt and as Logo the first forward lunge of his rush she reached out f with her forepaw and scooped him end over end brought up against a tree with a jar which dislodg intent. She repeatedly impressed it upon him that not to molest these animals.

The Shoshones knew far more of the teachings of tou than the white man knows of the workings of N The white men believe that Nature has endowed all animals with an instinctive knowledge which leads th avoid the porcupine. Manitou had let it be known Shoshone that this avoidance comes to pass in the instinctive way in which the scorched papoose drea cook fire in the tepee.

Logo chanced across a porcupine when far fro mother. The menace of her paw was a menace tempo removed. Nevertheless his approach was cautious reached out a tentative forepaw. There was a lightning flip of the murderous tail and Logo fell ward, bouncing about in terrible agony. No less tha score quills were driven solidly home in paw and fo After a few acrobatics occasioned by the first sh surprise and torture he would have attacked agair grizzly tenacity, but his mother arrived in time t courage this.

He pulled out the stubborn quills with his teeth. were broken off and worked deep into the flesh. Aft rage had cooled and his pain grew hot he was consci still another fact—that the porcupine was bad me for small bears. He was very sore for weeks. The c little points worked through and festered under the He walked on but three legs.

During this period their trail once more crossed t Saka and Tumwa. Saka, too, held one foot carefull pended. One side of Tumwa's face was swollen tw natural size. He was gaunt and thin from eating lit save the pain the operation brought him. Both were with instinctive knowledge and porcupine quills.

Logo learned many new and interesting things day, but principally he learned of food. He even ate and mouthfuls of fresh earth and clay. As the s advanced he added every new berry as it appeared a two months he lived on almost an exclusive fruit Wild strawberries, service berries, chokecherries, red berries, gooseberries, currants and the seed pods o wild rose all swelled the list of edibles.

It was in the berry patches that he learned a part fact which dovetailed with another part previously stored awa the hills they had crossed many trails o mals who left a very rank scent. His m had frequently circled spots from which scent came fresh. He had neither sigh sound of these beasts to associate with odor. Therefore while scent was even actual than sight to him, yet it was o part fact until some other sense was a He judged that they must be some new of porcupine from the fact that his m avoided them.

One day he rambled far ahead of his m and this scent came from a berry patch a He approached it and heard their voices, then the beasts themselves—queer two-legged creat They seemed to have no quills. He drew nea a closer inspection. There were dozens of the

All Old Grizzlies Learn That Men Follow a Trail by Sight, Not by Scent

(Continued on Page 38)

If any one of the several uncommon Hupmobile qualities is especially prized by owners, it undoubtedly is dependability.

The unvarying faithfulness of *The Comfort Car*—its thorough *willingness*—are as well known, we believe, as its extraordinary performance and economy.

The fact that the Hupmobile does return a maximum of good service, for a minimum of care and attention, naturally serves to heighten our owners' feeling of confidence.

(Continued from Page 36)

beasts and they drew aside before him, looking anxiously down the slope into the timber from which he had come. His mother caught the man scent and lumbered forward to join him. They forged straight ahead through the berry patch and the prior occupants gave trail as they advanced.

Logo became conscious of a very curious thing which had never before been called to his attention: It required the coördination of three senses—part facts—to round out the whole—the senses of hearing, sight and smell. But after once being completed things which had previously been merely part facts were now capable of being translated into the whole without coördination. He now had only to catch their trail scent in the timber, hear their voices in the distance or see their upright figures silhouetted on some far-off rim—any one of these without the others to have the knowledge of the whole before him.

The grizzly is a beast of great sagacity, and Logo was capable of associating one known fact with others and thus gaining a third. This process was an unconscious one and therefore hazy, but it was working, nevertheless. His mother avoided the two-legged creatures. When she stumbled full upon them they returned the compliment by avoiding her, and from this Logo came to understand that there was a mutual respect between the Shoshones and his own kind; that they were jointly the rulers of all the hills. Why they should be accorded such sharing of privileges with the grizzly tribe he did not know, but his mother so decreed it.

The Shoshones often noted this cub who followed a yellowish she grizzly, yet whose own fur was dark, almost black, and shot through with long white guard hairs. He had, too, a white face and his belly fur was yellowish. Truly this was the cub of whom Pakatan had spoken.

Late in October Logo lost his ever-present appetite. They were far up on the slope of the Wapiti Divide and the old bear felt less and less inclined to travel. She selected a hollow under the roots of an overblown spruce and deepened it. They evidently sided with the Shoshones in their quarrel, for neither of them touched a morsel of food for several days prior to denning, but instead drank quantities of water, washing their intestines spotlessly clean before retiring to the hole.

Logo was restless and frequently moved out for a look round. This restlessness subsided and he slept while the snow drifted deep across the opening and sealed them in.

The old bear brought forth no cubs that winter. The Shoshones knew from Manitou that a she bear has cubs but every second year and that the young bears follow their mothers both as cubs and yearlings; that it is this fact which leads the unknowing ones—such as the Blackfeet, who speak of yearling bears as big cubs—to believe that she bears produce each year.

Logo spent the following spring and summer much as he had his first, except that in early summer a big he grizzly joined them and traveled with them for two weeks. This old fellow had no love for Logo, nor yet any pronounced dislike. From long experience he had come to look upon a trailing yearling or two as a regularly accepted feature of each succeeding honeymoon.

As the summer waned Logo grew increasingly impatient of his mother's heavy-handed discipline. She seemed not to realize that he was growing up and should therefore be accorded greater privileges; instead she cuffed him soundly and frequently.

When denning time came they were heartily sick of each other and Logo refused to den with her. In any event she would have driven him out if he had so decided. He crawled under a flat slab in a rock slide and let the deep snow form his blanket.

He came forth in the spring a full two weeks before his mother. After the period of relaxing his intestines with grass and stringent twigs he fared forth alone to search for the remains of the winter-killed. At each new find the former proprietor moved off and left him in full charge. Everything was running smoothly, but no more so than he had been led to expect. But at last he learned something decidedly new.

He neared an elk carcass and a great he grizzly fed there. He failed to move off as the young bear approached. It was high time that this big gray beast learned who it was that came. Logo growled a warning, but the old fellow paid no heed. He charged headlong—and the big silver-tip calmly knocked him thirty feet with a sweep of his paw. He knew from long experience that a two-year-old grizzly was not accompanied by a terrible fighting female. Logo rushed again with redoubled fury and again the old bear knocked him end over end. As he prepared for his third attack the big grizzly whirled on him with bared teeth and bristling roach. This young fool who so persistently disturbed his meal should be accorded some drastic lessons in proper conduct.

Fears Nothing on Earth Except a Man With a Gun

The memory of his mother's punishing paw welled up out of the past, coupled with a part fact stored away long ago: Some large grizzlies could inflict hurt upon some young grizzlies. It was sound judgment, not fear, which caused Logo to turn aside in his third rush and keep on going. Many grizzlies have been born with a tinge of yellow in their fur, but no single one with a yellow streak. Logo had merely learned a lesson which all two-year-old grizzlies must learn.

His further schooling followed unpleasantly close upon the first. Two grizzly cubs approached an elk upon which he fed. When he failed to leave both youngsters charged him. Logo sent them sprawling, and their squalls of rage as they bounced valiantly back to the attack roused a very sleepy old she bear some distance away.

Logo had never concerned himself over why big he grizzlies had fled before his tiny rushes when he had been but an insignificant mite of a cub. The answer was now thrust upon him.

A furious fighting avalanche bore down on him. He was juggled horribly from side to side. Savage teeth tore at his neck and great mauling forepaws hammered him. Flashing claws raked him from end to end. Eventually he found all four feet upon the ground at once and fled with the enraged mother in hot pursuit. By virtue of his greater speed he escaped with his life.

Many men have found that a two-year-old bear can run away from their hounds, where an older heavier bear plays out. The Shoshones knew from the wisdom of Manitou that there is a reason why a grizzly is speedier in his youth than at maturity; that lacking this speed all grizzlies would surely die as two-year-olds as a direct consequence of their own indiscretions.

Logo was much battered and he sulked among the rims, rolling in the mud of the elk wallows to keep the flies from his wounds. Here he came face to face with another mud-encrusted figure. Tumwa, too, had been learning things. Later he met Saka similarly plastered with mud.

He rapidly learned the lessons of his own kind, but he was long in learning the lessons of man. He met many Shoshones in the hills and they respected him. In the valley of the Stinking Water the tepees in their villages were as numerous as the burrows of prairie dogs in the foothills. He feared them as little as he did the timid elk and deer. He avoided them less and less as no new reasons occurred to prove their right to share privileges with the bald-face kind. The memory that his mother had usually circled their camps was the one dim restraining touch which held him back from invading their main village with as little impunity as he felt in going among the elk. He had never seen evidence of their quills.

The Shoshones Knew That a She Bear Has Cubs But Every Second Year

In his fifth year Logo first learned one of the reaso grizzlies sometimes disliked the man scent. He what appeared to be an unusually solid arrangen windfall logs wedged in between close-growing tr was open at one end and a large piece of meat w pended at the far extremity. He entered and to down. He heard logs sliding solidly into place behi but paid no heed. Not until he turned to leave did cover that his way was blocked. Even then he r round the pen, not fully realizing for some time was really trapped and shut off from t hills. But at last he knew.

The man scent was heavy and he kn for their work.

High above in their hunting camp in th country a band of Shoshones listened bellowing roar as he battled for hour aft at the logs. The bear pens were used ye year and this one had grown old. Wh Shoshones slipped through the trees a they found that a joint had given before his h strength and the bear was gone.

Thereafter Logo despised the man scent and feasible avoided it, not from fear but from a vast di this reeking odor which recalled the hours he had walled in by logs. A new sound was now heard in th a roar which rumbled and echoed among the rims. powder muzzle-loaders—trade guns in the hands warring Blackfeet and Shoshones. At first the so these sounds was unknown to him, but eventually h and associated them and the reek of powder fume the man scent.

As he grew older he increased his range. He l tracks on the Gibbon and the Firehole, the Yello and the Buffalo Fork of the Snake. But always h back to sleep the long sleep in the Wapiti Mountai place of his birth. And as he looked down from the rims he noticed that the tepees in the swarming villa the banks of the Stinking Water grew fewer year b The strange roars in the hills were much more fre sometimes thundering for hours at a time, accom by the savage war whoops of those who bitterly de or contested Logo's right to feed or fast before de

The war parties that followed the game trails t the hills were but half their former size, then but a fo a fraction. In his youth Logo had seen these winding in single file as far as his eye could reac finery of the gayly bedecked warriors glistening li scales of a many-hued serpent twisting its tortuous across the hills. By comparison they now seeme marauding bands, not the assembled fighting streng nation. As these bands wound up some valley or file him in the night Logo noted a giant warrior at thei towering almost a foot above his fellows. Tumwa-K the young ruler of the Shoshones, led the thinning ra battle and all enemies gave trail before his prowess.

The crashing reports grew less frequent, then ver Logo threaded the valley of the Stinking Water thirtieth year and as he passed along the banks he st and stood swaying from side to side as he looked at a few shadowy figures squatting round a fire o opposite shore. The firelight reflected on but a sc tepees on the spot where a thousand lodges had once A mighty warrior stood before the blaze and his boomed across the waters as he sought to infuse h followers with his own never-failing courage. Bu spirit of the tribe was broken and Logo saw no mo parties in the hills. They did not even hunt, but gat about the council fires and made medicine to Ma while the squaws gathered grasshoppers and berrie dried them for winter food. Of them all, only one h for red meat which would put new life and heart and age in the men.

Tumwa-Ka-Tin scoured the hills for meat. His crossed Logo's many times and the big grizzly ca know him—the first man he had s out as an individual, having always classed men as a whole. But alway Shoshone chief had known Logo from bears. As a cub the wise men had po him out as the bear of Pakatan's pro and now that he had attained such there was no doubt upon this point. frequently saw the brawny chief w whole buck or bighorn ram slung acro shoulders. Sometimes they met face t and each veered from his trail to le other pass. And each time Tumwa-K gave the greeting sign used betwee highest chiefs.

Except when mating with some she Logo was fond of company and often eled with other big grizzlies, Saka Tumwa among the rest. There ca day when the three of them wandered u

Times have changed since Shakespeare

SHAKESPEARE thought of all the world as a stage.

Motion pictures have made that thought a fact.

When the olden plays were first put on at that queer little cockpit in London called the Globe Theatre, the audience had to *imagine* suitable settings to the action of the drama.

How the old playwrights would have been amazed and delighted by Paramount Artcraft Pictures, in which are supplied all the living realities of romance—scenery, climatic conditions, tall forests, salty oceans and the very flesh and blood of men and women!

"The play's the thing" still, but think what has happened to the motion picture theatre also, the comfort of the audience, the luxury of the presentation!

Hardly a community anywhere that lacks a theatre worthy to show Paramount Artcraft Pictures.

Hardly a community anywhere that does not know enough to demand them.

Watch the theatres' announcements and know before you pay.

EVERYBODY'S BUSINES

By Floyd W. Parsons

Affairs and Illumination

A Good Example of Street Lighting in Salt Lake City. Three Luminous Arc Lamps are Placed on Each Post

OUTSIDE of food, water and air, light is perhaps the most important boon to mankind. For hundreds of years the human race has been wrestling with the problem of producing artificial light to banish the hours of darkness Nature throws upon us. Not one person in ten realizes that the science of illumination is one of the rare arts of the present day and that industrial efficiency, health and happiness depend in great measure on our skill in the production and proper utilization of artificial light.

For forty years prior to 1855 the average home procured its light from sperm oil and candles and used 25 candle hours a night, or 9000 per annum, costing $22. Then kerosene was produced for illuminating purposes and for the next ten years people got 50 per cent more light at the same cost. In 1875 gas had been introduced and the average family was using about 35,000 candle hours at an annual cost of $30. Prices were later cut down and families increased their consumption of gas so that the average home consumed 76,000 candle-power hours a year at a cost of less than $30. In 1905 kerosene lamps were fast disappearing, while electricity and the gas mantles were coming in. The average home now used 200,000 candle-power hours of light annually at a total cost of $20. At the present time the maximum daily light requirement of an average American home is 360 candles, or 18 times that of a century ago. The cost now per family for this far greater light is only two-thirds what it was then. Expressed another way, the cost of lighting per unit to-day is less than 3 per cent of what it was in the early days of sperm oil and tallow candles. For one cent in an average community we can now purchase sufficient electricity to operate a 16-candle-power lamp for five hours.

There are upward of twenty-four million homes in the United States. Of these only nine million are lighted by electricity. Last year 180,000,000 incandescent lamps were sold in the country. Of these 89 per cent were tungsten. Ten years ago nearly 93 per cent of all the lamps sold were of the carbon-filament type. Then the average candle power per lamp was 19; to-day it is 52. As a reminder of the amazing growth of things electrical it is interesting to know that in the United States there are now 5543 central-station companies that provide current for 12,859 communities. Of these stations 1411 are hydroelectric in whole or in part. It is estimated that this use of water power saves the nation 20,000,000 tons of coal annually.

But just how are we translating all of this satisfactory growth into a benefit to American industry? In no way more than in the progress of lighting devices and methods. The modern illuminating engineer will tell you that his business is something more than plain engineering. He will explain how his work is closely related to physiology, psychology, ophthalmology, architecture, interior decoration, fixture design and other liberal and fine arts.

Just for example, take the lighting of a theater. In the old days little thought was given to anything except the simple requirement that there be a sufficient volume of light. At present the engineer considers carefully the effect that certain lighting arrangements will have upon the patrons of the theater. He will tell you that there must be a system of lighting that will not prove to be a disturbing influence. The illumination must be such that it will not detract from the pleasure of little visits between the acts; it must take into account the use of opera glasses by the inquisitive ones; it must foster the spell cast upon the audience so they will not realize the sham of it all.

Back of the stage in the dressing rooms the lights must cater to the temperamental eccentricities of the artists. On the stage the effects must be realistic, or the interest and value of a scene are destroyed. Out in front of the theater the lights must attract the passer-by and indicate not only the manager's desire for patronage but also the warm and inviting qualities of the house.

The modern theater manager knows that the success of his performance may be limited by the fatiguing discomfort that results from too great glare due to light sources placed in the range of vision and the resulting depressions of vision caused by viewing objects beyond these sources. The highest efficiencies and the best psychological effects can only be obtained when the architect, the interior decorator and the illuminating engineer properly coöperate. There must be an intelligent selection of tints and colors for reflecting surfaces and general decorations. It is also necessary that consideration be given to the tonic effects of red, the sedative effects of blue and the absorptive qualities in the decorations. The manager would be no more foolish if he placed a poor actor in his cast than if he ignored the delicate problem of theater illumination.

Here in the United States each year 25,000 persons are killed or permanently disabled, 500,000 are seriously injured and more than 1,000,000 are slightly injured. Expressed in dollars alone, this loss is tremendous. Anything that can be done to reduce or eliminate this condition is worthy of careful consideration. Deficient industrial lighting is an important cause of accidents. A majority of our lighting installations in factories, shops and mills are improper and inadequate. This is due primarily to praiseworthy but ill-advised attempts to better the plant illumination on the basis solely of providing a greater candle-power output. The questions of distribution, diffusion and absence of glare are either unknown or not appreciated. As to savings in fuel through the reduction of light, gross ignorance is frequently exhibited. Take the simple case of a landlord who owns an apartment house minus an elevator. On one of the stairways he cuts out a 25-watt lamp that has been burning ten hours a day. This saves him one-eighth of a ton of coal a year, but if

In some supposedly well-lighted works many em are injured, not as a result of insufficient illumina because of poor light distribution. A certain wo was well illuminated by local lights with proper r but the bench cast a shadow and the general illu was not sufficient to offset the shadow. There fo sequence of small accidents due to the toppling partly finished work piled in the shadow. When a g arrangement was installed that eliminated the sha accidents stopped.

In a chemical plant was a passageway that as often traversed and which as a consequence as lighted. A carpenter was called in to do some work. In the passageway a cup had been placed the drip from a slight nitric-acid leak until repairs u effected. The carpenter, assuming that the cup wa to catch oil drip, poured some of the acid on his then rubbed it with his hand. Before neutralizin could be applied the man's hand was badly bu there had been proper illumination the workma have noted that neither the color nor the consis the acid corresponded to that of an oil.

Many workers labor along painfully, not realiz their unusual fatigue comes from glare or light re An investigator noticed that a workman at a s press continually stood at one side of his machi man explained that he could not see in any other The inspector discovered that there was plenty but the man was working on large tinned sheets a in front of his machine a dazzling reflection was toward his eyes. Though the shop foreman was solve the problem by getting a larger tungsten l trouble was easily removed by simply adjusting light so as to change the angle of incident and rays.

Here is a simple statement that would save hun thousands of dollars annually if it was known and by every man in America who runs a shop or bos

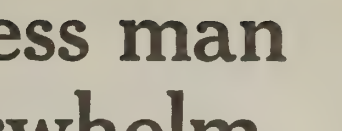
The loss of illumination due to the coating of with dirt may result in a loss of light equal to 60 or more before attention is given to the fact that t cleaning.

It is often possible to reduce the current consum a plant 25 or 50 per cent through the systematic of all reflectors and lighting equipment. By adop simple plan of cleanliness it is often possible not

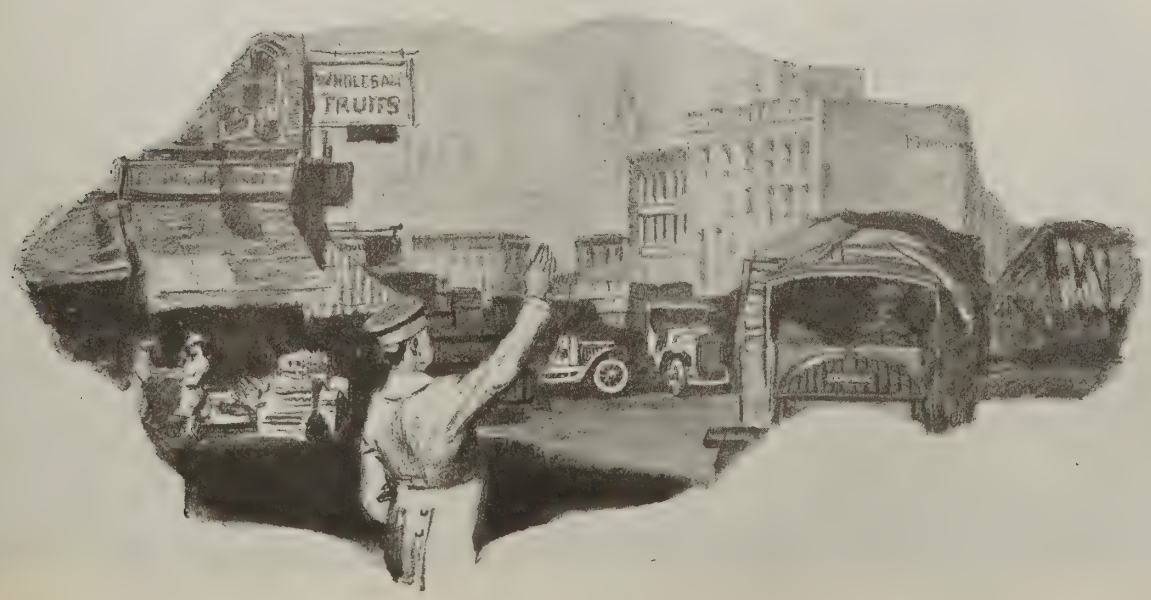
(Continued on Page 42)

THE thing that decides any business man in favor of the Republic, is the overwhelming evidence in its favor. He cannot escape the facts of the wonderful Republic performance, because 60,000 users testify to them. And he knows that these 60,000 owners endorse Republic Trucks only because their service record is unequalled.

REPUBLIC TRUCKS



Republic Motor Co. Inc., Alma, Michigan



(Continued from Page 40)

eliminate the need for an additional installation of lamps but it is frequently the case that a company may thus reduce the necessity for using all of those already installed. In some works managers have contended that the cost of systematic cleaning is greater than the benefits derived, but such an argument is too false to deserve serious attention. Lamps that are properly placed can always be reached. If this is impossible it is easy to replace fixed lamps in high places with others that may be lowered.

Ever so many instances are on record showing the direct relation between poor illumination and accidents. One great industrial association made a study of the subject and found that the percentage of accidents in a long list of plants was only a little more than one-half as great during the hours when all the work was done by natural light as during a late-afternoon hour when artificial light was used to supplement natural light. A similar frequency was also noted between the winter days with fewer hours of sunlight and the longer summer days. Another survey proved the greater frequency of accidents in plants where the walls were dark and rough than in similar plants where the walls and ceilings were kept smooth, clean and of light color. In this connection just remember how much easier you got round on a night when the ground was covered with snow. Everything was so plain and the visibility was twice as good as on other nights when the ground was bare and the landscape bleak.

One engineering authority states that his experience in manufacturing plants shows that the installation of scientific systems of illumination will produce the following benefits: There will be 10 per cent more output, 25 per cent less spoilage, 26 per cent fewer accidents and 25 per cent better workmanship. There will also be more light per unit of current consumed, less sickness, decreased labor turnover and—if desired—twenty-four hours' utilization of facilities.

In support of these statements it is interesting to read the report of a large insurance company. In this report the writer says that "A survey of 91,000 accidents from the company's records for the year 1910 shows that 23.8 per cent were due to improper illumination." The author explains that there are now fewer such accidents, due to the progress in illumination, but states that: "There is foundation for the assumption that 18 per cent of our industrial accidents to-day are due to defects in the lighting installation. On that basis the services of 108,000 men for one year are lost annually because of insufficient light."

As to the question, What constitutes good lighting? the best answer may be found in Nature. Light without stint is not the answer. Often the sun's rays are too intense, and here we have an example of light without stint. Experts now concede that the ideal illumination occurs on a cloudy day, when light from the sun must pass through a screen of vapor and clouds before reaching us. So it would seem that Nature herself is at her best when supplying a semidirect form of lighting.

But this is not all. It has been further discovered that not only must the illumination be uniform in diffusion and intensity on adjacent walls as well as on working areas but the light must be of the proper color to suit the purpose for which it is employed. All classes of work do not require the same intensity of lighting. Again, red and yellow light rays have greater penetrating power than blue rays. Consequently in such places as foundries, where there is a heavy, cloudy atmosphere, the red or yellow rays serve best. As for the much-talked-of glare, this is something difficult to define. An automobile headlight at night may be dazzling and hurtful to the eyes. The same light may be operating just as fiercely at noontime, but, when viewed against a background of daylight, may be hard to recognize. Likewise there are conditions in shops where glare is present in sufficient degree to work injury to a workman's eyes, and still the man's mind may not be acutely conscious of any such dazzling light. Someone aptly said that "Just as dirt is matter out of place, glare is light out of place."

A lighting expert called my attention recently to carefully conducted lighting tests at various plants to discover the value of good lighting in definite terms. In an iron-pulley shop the consumption of electricity amounted to 0.27 watt a square foot. The daylight effect, except on one or two machines, was negligible. The windows were few and dirty. A lighting committee took hold. The electrical consumption was increased almost seven times and the average illumination approximately twenty-five times. The new installation consisted of 200-watt reflector-equipped units mounted 10 feet above the floor. The testing engineer's own records showed an average increase in production of 20 per cent. The proprietor's figures indicated an increase of 35 per cent in output.

An interesting case was that in a western machine shop. Here an elaborate test was to be made. A new lighting equipment was put in for one month and a record procured. Then a second and better system of illumination was installed and records of production for a second month were obtained. The testing engineers had planned that during the third month the plant was to revert to the original system of lighting. When this was broached to the management of the operating company the officers flatly refused to go back to the old scheme of illumination, stating that the increase in their production as made possible by the improved lighting was vastly more important than the testing engineer's desire to procure entirely unbiased data. The higher efficiency and production were determined by a study of eight operations. The increase ranged from 8 to 27 per cent, the average being 15 per cent. This test was significant, because the original illumination coming from 100-watt lamps was held to be at least 20 per cent superior to that of industrial lighting generally.

There were many other tests. One was in a shop handling heavy steel parts used in trucks. The improved lighting resulted in a production increase of from 6 to 14 per cent in three operations. The cost of productive intensity was one and one-half per cent of the pay roll. In a carburetor-assembling shop the men had to handle small parts and make delicate adjustments. The management, appreciating the value of good light, had installed an equipment well above the average. However, a new scheme of illumination was put in, and though the test was made just after the signing of the armistice, when company efforts were slackening, the productive intensity of the shop was increased 12 per cent. Because the number of workmen was large and the rate of wage high, the increased production was procured at a cost of only 0.9 per cent addition to the pay roll.

If the statement is true—and excellent authorities say it is—that here in the United States we lose $150,000,000 each year through industrial spoilage, nearly $30,000,000 of which is due to poor lighting, then there is a real need for better illumination in our many factories and m addition, if we are injuring 108,000 workmen a because of deficient light, then surely there is ca urgent remedial measures. The time has come fo banish the accumulated mass of ignorance on a su first importance. A walk down the main street f average town will disclose the horrors of poor light short talk with the average merchant will convi skeptic that even to-day the rank and file of busin entertain only a hazy idea of the value of good lig business. Most merchants and industrial manag tell you that their light bills are already too high, v the same time the lamps that burn above them a and the reflectors black.

For this reason we say: "More power to the illum engineer! May he stop selling merely lamps and and devote his efforts to selling illuminating service

Nine times out of ten the thing a customer is wi pay for is not identical with the thing the salesmar ing to sell. Too many people lose weight trying t cause to a fellow who is perfectly willing to buy ar The coal man tells us how many British therma there are in his particular grade of coal, while he tell us how many loaves of bread we can bake wi pound. The man in the garage tells us his gasolin specific gravity of 68 degrees Baumé, but the t ought to state is how far we can go on a gallon. things we should understand.

We are told that the application throughout A industry of our best present knowledge in the l field would result in a 15 per cent increase in in production. By using our pencil we find that this i is equivalent to the production of an army of a mately 1,500,000 workers who consume neithe clothing nor wealth in any form; an army that p without additional factories or machinery; an arm gives at least two-thirds of its wages to be divided b capital and labor. Surely here is some opportunity, who know will only start a vigorous campaign to se instead of cause; tell us why we should buy s illumination and not so many lamps. What we know is how more and better light will add to our i ual wealth and happiness—how we can work as we night as during the day. The reason we lack natur because the season is so short. Tell us how to flo our ponds and rivers and cut ice at night. Let us kn how to build roads after dark, when traffic is light, big steam shovels and operate our dredges in the after sundown. Perhaps the illuminating engine solve a lot of our puzzling problems. At any r country is ready and willing to be shown how t a double shift and make up our losses incurred in t

Night View at the Famous Hog Island Shipyard, Where a System of Floodlighting is in Use

Driver: P. E. Frost, Franklin Dealer, Portland. Observers: W. R. Cutter, Vice-President, J. R. Libbey Co., Department Store, Portland; F. A. Currier, Cumberland Rubber Co., Portland; A. Cole, newspaper representative.

FRANKLIN CAR Reliability and Air-Cooling Superiority Again Demonstrated by a 98.2 Mile Non-Stop Low-Gear Run Ending at the Top of Famous Mount Washington.

On August 17th, a Franklin stock model touring car ran all the way from Portland, Maine, to the top of Mt. Washington in New Hampshire on low gear without a stop. This remarkable feat is the latest public proof of the superiority of Franklin Direct Air Cooling (no water to boil or freeze).

This car, just such a one as thousands of Franklin owners are driving all over the country, carried three official observers besides its driver and averaged 11.1 miles per hour—*on low gear*.

The Franklin had already run ninety miles on low gear without a stop before reaching the base of Mt. Washington—in itself a test never duplicated by other cars.

Then, without halt, came the real task the Franklin had set out to perform—a climb to the top of Mt. Washington, an elevation of 6293 feet.

Road and Weather Conditions Make Feat More Notable

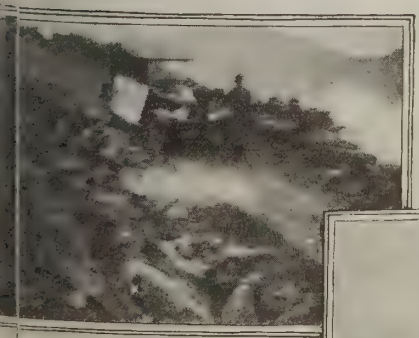
Rain soaked, slippery roads; no chains; no stops permitted—these were the added difficulties to a performance generally considered impossible even under the best conditions. But the Franklin reached the summit, overcoming the final obstacle of a 27% grade, in perfect running shape and returned to Portland the same day.

By official observation, the Franklin did not show the slightest trace of wear and tear or over-heating, its engine performing with absolute regularity on all grades as well as on level going.

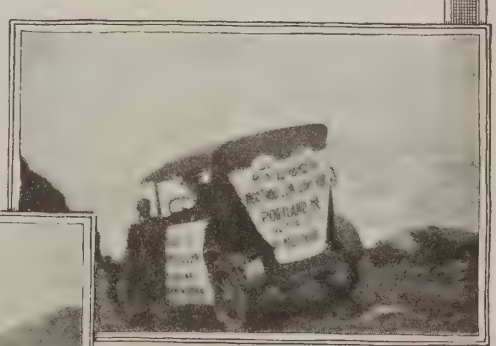
Ability for eighteen years to demonstrate consistently this kind of performance is what has made the Franklin known as the most practical fine car.

20 miles to the gallon of gasoline
12,500 miles to the set of tires
50% slower yearly depreciation

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, N.Y.



As no pictures could be taken on the way up without necessitating a stop, these shown were snapped during descent to give an idea of the angles at which the Franklin had to travel. They do not give any idea of the length of the grades. Experienced motorists will appreciate that the return journey was something of a feat in itself.



(Continued from Page 42)

noncomplicated machine which readily measures the illumination intensities of rooms, offices, factories and, in fact, any inclosure that is artificially lighted. The arrangement is not only accurate but is so light and compact that it can be carried anywhere, which quality of portability insures its eventual wide use in one form or another as a common necessity.

The basic principle on which it operates is very simple and may be readily demonstrated by means of a piece of white cardboard containing a small opening over which has been placed a piece of white tissue paper. If the cardboard is held between the eye and a light source the tissue paper spot will appear brighter than the white cardboard. On the other hand, if the spot is viewed with the eye on the same side of the cardboard as the light source the spot will appear darker than the white cardboard. If the illumination on both sides of the cardboard is the same the tissue-paper spot and the cardboard will appear to be of the same brightness.

The above principle is applied in the following way: Instead of cardboard and tissue paper the screen consists of a piece of clear glass on which are two thicknesses of paper, the one which contains the round holes being fairly opaque and the other highly translucent. This screen forms one side of the light box, which is so constructed that the screen is illuminated from within to a much higher intensity at the right end than at the left. The exposed side of the screen is very nearly uniformly lighted, and the round spots appear brighter than the surrounding screen at the right end and darker at the left. It is evident that at the point where the spots change from brighter than their background to darker the illumination on both sides of the screen is—as with the cardboard illustration — approximately the same. When the instrument has once been calibrated the illumination intensity indicated on the screen may be read at a glance.

The human eye is capable of adapting itself to illumination intensities which range from a small fraction of a foot candle to several thousand foot candles in value. At very low intensities the eye does not receive sufficient light to enable it to distinguish details; and at very high values a blinding effect, which also obliterates detail, is experienced. Between these limits there is a wide range of intensities where good vision is possible. Considerations of economy usually limit the intensities employed in artificial lighting to the lower values of this range. So closely is the lower limit approached in general practice that it is necessary in designing a lighting installation to take into consideration such factors as the color of the objects requiring illumination, for objects are only seen by the light which they reflect. Dark objects, of course, require higher intensities than light ones for equally good vision.

For example, a jewelry store in a small town may be brightly lighted at an intensity of 4 foot candles, whereas a jewelry store located on a prominent business street in a large city will require—to be considered well lighted—an intensity of 6 or 8 foot candles. Again, the cloak-and-suit department of a large store will require a higher intensity than will the white-goods department. An industrial plant engaged in rough-box manufacture will be well lighted at an intensity of 3 foot candles; if accurate cabinet work were the product an intensity as high as 6 or 8 foot candles would be desirable.

An auditorium or church will require from 1.5 to 3 foot candles, while the show window in a city store should have from 10 to 50.

A private office will need from 4 to 7, but a drafting room requires from 8 to 12 foot candles. Such fine work as watchmaking, engraving, typesetting and shoemaking should have from 10 to 20 foot candles.

By means of Doctor Sharp's device the school superintendent can tell at a glance whether his classrooms are sufficiently well lighted to meet the requirements laid out by the illuminating engineer. As a result, there will be fewer students going home with a headache. The factory superintendent can estimate at once whether his workrooms and hallways have sufficient light. The office manager can easily determine whether each employee is working under proper conditions. Result—better health, more production, greater safety and increased satisfaction.

Not long ago I heard of a minister who made a great discovery. Some of the male members of his congregation went to sleep in spite of his best efforts at oratory. The women folks stayed awake. The reverend gentleman commenced to search for a possible reason for the phenomenon. A little science was brought to bear on the subject and the conclusion was that the men were lulled into a slumber by a glow of light that had been located above the pulpit. The investigation brought out that the women's hats shaded their eyes, while the bareheaded men were wholly unprotected. At any rate, as the story goes, the misdirected light was eliminated and the masculine members of the congregation are now wakeful and interested listeners to the minister's sermons. I would not be so bold as to state that in all cases it is the intense light and not the sermon that makes the audience sleep, but the thought is worthy of attention on the part of many a doubtful preacher.

The Metal of Romance

IF I WERE offered my choice between an ounce of silver and an ounce of gold I would lose no time in taking the yellow metal. My net gain by doing so would be something like $19.50. But if some master of magic threatened to change me into one or the other of the two metals I should pray that he make me a unit of silver, so that I might travel to India and the Orient, there to see the continuation of a civilization centuries old. I would become part of the inner life of people who have the mysteries and traditions of thousands of years behind them—nations that prefer the old and the familiar and no more understand the Anglo-Saxon of to-day than he does them.

If I were an ounce of silver I should probably be born in North America, for of the world's total production of the white metal last year, about 77 per cent—138,000,000 ounces—was produced in the United States, Canada and Mexico. After first seeing the light of day the chances would be about seven out of ten that I should finally land in India or China. If in India, I should likely be made into jewelry and would represent a part of the wealth of some native whose earthly possessions would be clearly visible in the form of bracelets, rings or neck ornaments, worn almost continuously for the sake of safety.

"Why not keep their wealth in the form of mon posited in a bank?" you ask. That's a part of the t and will be explained in due time. However, let back to the beginning and try to show how, though the United States control the production of silv world's markets for the white metal are governed hundreds of millions of disciples of Buddhism, Hin and Mohammedanism who live on the other side earth.

Many years ago the price of silver exceeded that o To-day it is the most common of all the precious m The bulk of it does not come from silver mines, bu by-product from gold, copper and lead mines, a few of silver per ton giving the ore a workable value. In past the price of silver was greater than that of gol the ratio of its value to that of the yellow metal st decreased until it reached a point where its value w little more than one-fortieth the value of gold. I the price of silver was 57 cents an ounce; to-day it is Thereby hangs a most human story of war and p a story that renders doubtful the love and loyalty quarter of a billion people in India for the stern sys imperialism that holds them tight; a story that emp the fierce ambitions of the great nations of Europe matter of territorial concessions and trade dominat

Let us start b ting a few basi fixed in our m First, as is ge known, Chin India have a silv for their national tary systems. T the world's prod of silver last ye only 180,00 ounces, the norm duction is 200,0 ounces. Of thi total the Chine approximately 3 000 ounces a and India tak 000,000 ounces. erage years the States uses 2,250,000 ounce ver for coining a sorbs 30,000,000 in the arts. T of the world use 20,000,000 oun making coins a balance goes fo things as jewelr tography, elect ing, markin surgery and hai It is plain, th that the two big of Asia use consi more than one- all the silver pr each year.

When an Ar or an Englishma to China he r against a peculi

ation in respect to money. He finds a people who that gold is a fine metal—but only for use in thei As a result the gold that China imports goes into de and nothing pleases a Chinaman more than to be exhibit a row of teeth luxuriously plastered with gold This is considered a sure sign of substantial prospe

Then the stranger will find that in China there w coins up until twenty years ago. The people mad exchanges by an elaborate system of bookkeeping there are 10 and 20 cent pieces made of silver a kinds of copper coins—one being a small coin kn "cash," and the other a larger coin, or penny, kn "10-cash." The poor people, who constitute the part of the population, use the copper coins almost sively. If something is priced at five cents the pu buys it for "50-cash."

The Mexican silver dollar of course is in use in and has been for about seventy years. However, t Chinese living in the large cities are about th natives who ever use or even see a real silver dolla Mexican dollar represents "1000-cash."

The big unit of money as well as a common weight in China is the tael, which is cast in the sh horseshoe and consists of so many grains of silver, in weight from 480 to 560 grains, according to t ticular Chinese province that happens to issue it lack of uniformity exists all over China and af profitable business in exchange for the foreign b who thrive on the settlements that are made by

Just arrived- new crop almonds

When you see this message in your grocer's window, you will know that the fresh crop of almonds, which for days past has been traveling by carloads to all corners of America, is ready for your Thanksgiving feast.

Not just almonds—but Blue Diamond Almonds, the finest grown—big, soft-shelled, full-meated, fresh "from the valleys of California."

Use Blue Diamond Almonds as a relish, blanched and salted. Use them in cakes and candies—or right from the shell for munching before, during and after the feast—at Thanksgiving time and all times.

Almonds are best when right from the shell—crack them yourself and get *all* their flavor and goodness.

CALIFORNIA ALMOND GROWERS EXCHANGE
SAN FRANCISCO, CALIFORNIA
A non-profit organization of 3,009 American Citizens

BLUE DIAMOND BRAND *Almonds*

from the Valleys of California

To our friends The Retailers:

If you are not well stocked, call upon your wholesaler at once. The holidays are the natural top-notch selling season for almonds, and this year the demand will be heavier than ever.

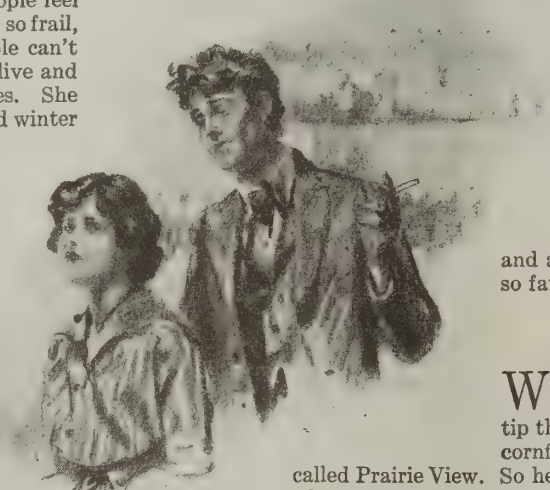
Keep Blue Diamond Almonds out where your customers can see them. Utilize the window-display material enclosed in every bag of nuts, and send at once for the beautiful window sets we will supply as a background for your almond display.

The Anthology of Another Town

By E. W. HOWE

Mrs. Joe Buey

MRS. JOE BUEY isn't seen in the stores once a month, and then she buys only calico and gingham and muslin which she makes up herself. After she appears on the streets the people feel uncomfortable for days—she looks so frail, overworked and wretched. People can't understand how anyone is able to live and look as bad as Mrs. Joe Buey does. She has worn the same hat summer and winter for years and her appearance gives one the queer feeling of hearing a strange noise and thinking maybe it is a ghost. People know there is no such thing as a ghost, but they used to think there was no such woman as Mrs. Joe Buey.



He Says Kate Brown is as Good-Looking as Mlle. Cavalieri

It is generally said Joe treats her better than their children do. Joe is a teamster and works as steadily as work offers, but when not otherwise engaged he stays round home and helps his wife, which the children never do. The teacher once sent a Buey boy home from school, and next morning the boy's mother appeared, imploring the teacher to take him back. She didn't claim her son had been mistreated; she just asked that he be given another chance, and was such a picture of woe that the teacher relented. When her baby is ill she is so poor that she is compelled to take it to the doctor's office, and Dan Sayer says the most pitiful sight he ever saw is Mrs. Joe Buey carrying her sick baby to the cheapest doctor in town, as she knows she can't get credit anywhere else.

John Davis

A TRAVELING man yesterday gave John Davis, the grocer, a twenty-cent cigar. John Davis has been selling cigars at his grocery store and smoking twenty years—and a good cigar made him sick.

Taylor Ward

IT IS generally said certain mean men in this town should be chased out for the general good; and Taylor Ward says that if the meanest men should be voted on all of us would get votes.

Uncle Jimmy Haskins

WHEN there is anything going on in the surrounding country some of the town men drive out. The habit not only brings trade but extends our acquaintance.

Last week I drove out to attend the golden wedding of Uncle Jimmy Haskins. There were a good many children and grandchildren present, and all the neighbors; and after dinner Uncle Jimmy and his wife told reminiscences.

Mrs. Haskins remembered little but hard work. It seemed wonderful to me that a woman should work as hard as she did, even in the early days, and she made out quite a case, I thought, against her daughters, her daughters-in-law and the other women present.

I suppose Uncle Jimmy worked hard too, but he didn't say much about it. I was struck with the fact that the most remarkable event he could recall in his history was that he once killed a squirrel with a rifle after several other men had fired at it repeatedly. Here was a man seventy-seven years old, yet he had no other adventure worth recalling. Uncle Jimmy has five sons, who are prosperous farmers, and four daughters, who married good men. He is a man of fair intelligence and ability, yet he has nothing to boast of except one lucky shot at a squirrel!

Uncle Jimmy went to work early. I heard him recall that he did farm work when he was six years old and that his father used to complain bitterly that the boy had been a burden until he passed into his seventh year. For seventy-one years therefore he had been going to bed only to be called in the morning to go to work, and nothing remarkable has happened to him except shooting a squirrel.

I have heard it said that every man's life would make a book if candidly written, but probably this is a mistake; certainly Uncle Jimmy's memoirs would be rejected by a publisher. In his day there were bears and deer and buffaloes, but he never killed one. He was once young and rode about looking for adventure, but never found any.

In the early days there were bold and wicked men, but they never disturbed him. For seventy-odd years he has locked his doors and fastened his windows at night, but has never been robbed. In seventy-seven years he has never had an illness worth recalling. The wind and lightning have threatened more than three-quarters of a century without hitting him.

I have been thinking of Uncle Jimmy's humdrum life and am compelled to confess that so far mine has been much like it.

Gus Sanderson

WHEN the railroad decided to extend, Gus Sanderson had a tip that a town was to be built in a cornfield twenty miles west to be called Prairie View. So he went to an ignorant Indian, who didn't know anything, and offered him thirteen thousand dollars for forty acres adjoining the proposed town site. The Indian accepted the offer, and everybody abused Sanderson for cheating a poor Indian. They said Sanderson having had the benefit of public schools and civilization and newspapers was an intelligent and learned man and that therefore he should not have robbed an ignorant Indian who had never had any advantages.

For two or three years Sanderson was held up to public scorn because of the transaction and there was a good deal of talk about his tainted money. One pastor refused to accept a donation from Gus because of the transaction with the Indian, and the pastor was generally praised because he was high-minded.

But the boom at Prairie View did not develop as was expected. The land is not now worth half what Sanderson paid for it. There is now indeed some sympathy for Sanderson and people say it was a shame for a smart Indian to rob a fool white man.

Tom Harrison

OLD Tom Harrison, who was very old, very poor and lately rather weak-minded, died last night. There was not a dissenting voice. We all said, "He's better off."

Usually in case of a death many say, "It's too bad." But the decision was unanimous in old Tom's case.

Judge Terry

WHEN Roscoe Terry, the lawyer, came to town we somehow knew he expected to be called judge, and so he has been known ever since. He is quite old now, somewhat deaf and being cared for by his children. Having long been a widower, he has no wife to talk to and is alone a great deal, so his children pay the hired girl an extra dollar a week to listen to him politely while he settles things and criticizes what he reads. The hired girl is a Swede and doesn't understand half he is saying. A man doesn't care to quit expressing his opinions because he is old. The Swede girl is wise enough not to reply to his arguments, so he soon settles the questions he discusses and goes off to read and find something new to be indignant about.

Kate Brown

WHEN the weather is bad there is no amusement in this town except to listen to George Buck tell about his trip to New York, where he heard the opera and saw nearly everything. He says Kate Brown, who works at the restaurant, is as good-looking as Mlle. Cavalieri, the famous singer.

Old Mr. Neal

PEOPLE probably live as long as they ever did. I believe old Mr. Neal is as old as Methuselah—if he would admit it.

Bill Alvord

EVERY two or three years Bill Alvord returns fro[m] city to permit us to shake his hand and be pro[u]d him because he has a job paying eighty-five dol[lars] month. But we're not so glad to see Bill as he th[ey] After people haven't seen a man for three or four [years] they don't care if they never see him again.

Martha Wendell

BEING an only child, Martha Wendell was notor[iously] spoiled by her parents. She lately married [Tom] Mason, and as Tom comes of an old-fashioned f[amily] where the children were compelled to mind he refus[ed] have a spoiled wife, so he insisted on certain things a [good] wife carried them out. But she did nothing a wife s[hould] not have done. Indeed she became an object less[on] shiftless young married women, since she was useful, [capa]ble and a good wife and home maker.

But I wish you could have heard the fuss the nei[ghbor] women made! They said Tom Mason was a slave [to] though he asked nothing of his wife she should not [have] done, and she confessed to me only lately that she [worships] her husband and is happy. The bride's own mothe[r] her daughter was spoiled and that her husband has [married] a woman of her. But the neighbors are not satisfied

Chris Halleck

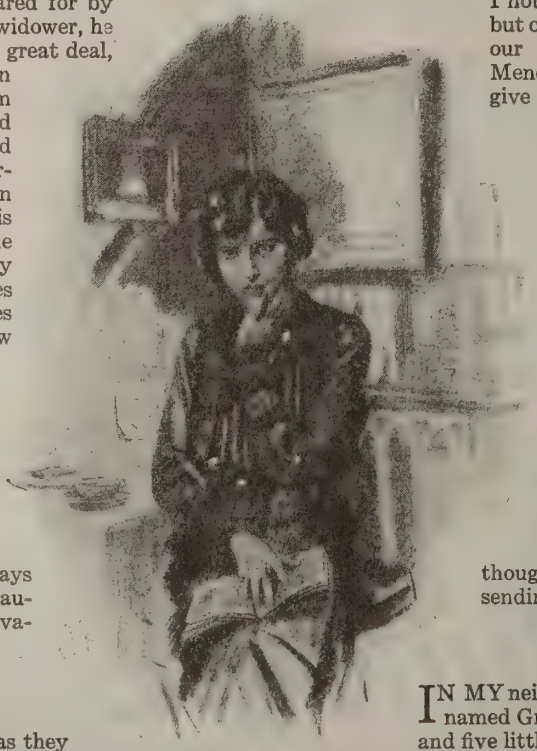
THE women won't believe it, but I once knew a wi[dower] named Chris Halleck who didn't like to marr[y] second time. He did it, but the day of the weddi[ng] looked as though he had been called upon to atte[nd] own funeral. He loved his first wife, but something [kept] him to marry again. Maybe it was the fact that h[is] two little girls he could not properly care for. He [had] housekeepers, but couldn't get on with them and [finally] began going with another woman. He was marrie[d] evening without his little daughters knowing it. Th[en] returned home and spent the night with them. For [hours] he tried to tell them, and was afraid. But along t[oward] morning he screwed up his courage and told them [and] they clung to him and sobbed and the father sobbe[d with] them.

I don't know that a man ever died of a broken h[eart] possibly no woman ever did either—but Chris Hallec[k died] of something very much like it. His marriage pro[ved] be a mistake. His second wife wasn't kind to his [little] girls and Chris couldn't stand that.

Belle Ransom

NOW that I am getting to be an old fellow, I don't [mind] telling about my first love affair. When a [man] young he denies he ever had any love affairs. He s[ays] is still waiting for his ideal. I confess I found mine [long] ago. She was a school-teacher named Belle Ranso[m] the finest woman I had ever [known]. I not only worshiped her in [secret] but openly. But a cloud cam[e over] our happiness—a man [named] Mendenhall. The teacher u[sed to] give me notes to take to Me[ndenhall], hall, and I was torn be[tween] love and duty; I want[ed] money she gave me to [pay] the notes, and I hated [her] it. I redoubled my eff[orts] be nice to her, but Me[ndenhall] hall won. She quit te[aching] school and went awa[y to a] distant town to live. [I have] never seen her since.

They say a man soo[ner or later] gets a love affair, but i[s it] true. Last week a tall [stranger] man called on me and s[aid his] name was Fred Mende[nhall] that his mother was e[lla] Ransom, my former s[chool] teacher, and that sh[e had] asked him to call on [me]. thought it was rather inde[cent] sending her son in to see me.



Martha Wendell Was Notoriously Spoiled by Her Parents

Charley Grover

IN MY neighborhood there lives a [family] named Grover—the mother and [four] and five little children. Whether I [am] my room at work or sitting on the [porch]

WHO'S WHO—AND WHY

REG. U. S. PAT. OFF.

Serious and Frivolous Facts About the Great and the Near Great

Hugh Wiley *(An Autobiography)*

[OREGON, at the age of nine years, I resolved to be n outcast. Up to that time I had lived with my parents nd other friends, including an insanitary Indian by the an of Joe. This Indian, when not engaged in whittling ed sailboats for me on the banks of the Columbia River, vored at the liquor business as a nonproducer. Joe had ome petition for a while, but just before his funeral he ecame the unchallenged champion of the nonstop whisky rinkers of the great and only West. I liked Joe, especially

(Concluded on Page 133)

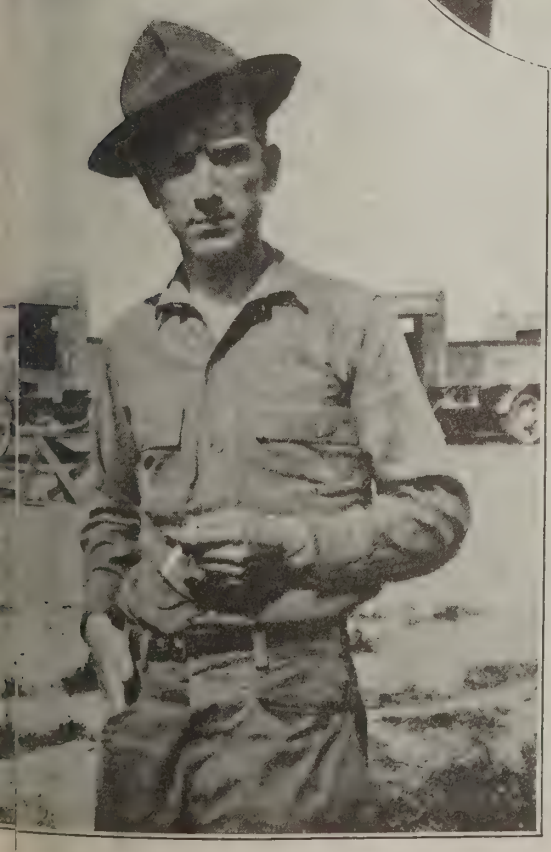
Temple Bailey *(An Autobiography)*

IN MY early writing days a suddenly illumined correspondent wrote, "I understand that Temple Bailey is no oman." In spite of a style which has since been called y itics unmistakably feminine, I was addressed for ea by publishers, editors, and those who knew me only rough my stories, as "Mr. Bailey": a mistake which would ot ave occurred had I used the "Irene Temple" which is y ll name, and which has belonged to more than ne eneration of my family. Yet had my readers no n me always as a woman, I fear that I ig have missed many delightful letters. ie were men who, believing me a man, o without self-consciousness. There r women who, believing me a man, ro with entire self-consciousness. he was one darling old lady who ld f her school-teacher days in Ine sota, and of a little lad whom e d taught: "I can see him ow is he stood in front of my sk n red tippet and red mit- ns with his mischievous eyes eeng mine. My name was ar Blank. The boy's name as emple Bailey. Are you e oy?"

Tre were girls, too, whose ut flamed in every line, and no letters I left unanswered t destroy their belief in a fire ic matched their own. In ad g some of these youthful re s I was assailed at times by a ns of double personality, as if I re ot in the least a sane and rather well-balanced person with a flair for writing romances, but a Byronic masculine who burned midnight oil, and rose and fell to temperamental heights and depths of ecstasy and despair!

I have never burned midnight oil, and I have always envied those who do. I have a feeling that Kipling and Conrad and Wells and Snaith and our own Tarkington and Margaret Deland must have moments when they rise from their beds and dash off masterpieces by candle dips. As for myself, a typewriter and three hours in the morning do the trick. There is never a fine frenzy. I wish there were, and hope for it.

PHOTO. BY H. MARSHALL GARDINER, NANTUCKET, MASS.



For the rest, I love opals, the ocean, orderly living. My political allegiance went to Theodore Roosevelt, and now that he is dead I look for another of his kind to lead me. I like old-fashioned churches and old-fashioned houses. I like up-to-date ideas and new fashions in clothes. I am neither Bolshevik nor Bohemian. Yet a strain of Spanish gypsy blood may account for certain wayfaring moods in which I travel north, south, east and west. I am an American and love mine own people. And since I am of Massachusetts ancestry, of Virginia birth, with years of residence in Washington, and other years of sojourning in New England, the Middle West and on the Coast, I know the lands of Bret Harte, of Mark Twain, of Mary Wilkins, of Thomas Nelson Page. I wish sometimes that I knew only one section that I might make it in a literary sense my own.

May Edginton (and Her Son)
(An Autobiography)

IT'S the most difficult short story to write, this: One is anxious to find a crisp beginning and a sparkling finale—but as yet I only have the beginning, not a very adventurous one at that. The finale is not yet, for which I am thankful, for my feeling is that one will never get enough of life if one lives it every moment.

I was one of a large and jolly family, and didn't think of writing until after I'd slaved really hard for three or four years—beginning before I was eighteen—at teaching. It was hard work for little pay—but mine was not a rich family, and I had to do something or literally pauperize at home. I discovered a facility for writing short stories; I wrote hard; saved a little money; threw up teaching, and came to London to make my way, quite alone, totally ignorant of how to do it or of the ways of a big city.

I am bound to make the disappointing statement, though, that adventure ended where it began. My way was smooth; editors friendly; I discovered in myself another capacity, a business one. I never had an empty pocket; I never starved in a garret. I worked hard; and I began a banking account with a feeling of pride unrivaled by anything since! I played hard. I loved life. I still love it. I love it more and more.

You see there is no story at all!

Nearly seven years ago I married F. E. Baily, the editor and writer; my small son is now four years old. I don't know if the editors of THE SATURDAY EVENING POST are going to publish his picture with mine—but in case they do I want to say firmly that he isn't so hideous as he looks therein!

He didn't like the photographer.

Do believe me; because, as a mother, I am really wonderfully impartial.

THE GENIUS—By Stuart River

Every Morning They Told Him What They Were Going to Do and How They Were Going to Do It

THE little stationery store was sandwiched in between a house of red brick that had been left over from the days when Greenwich Avenue was the promenade of fashion and a butcher shop that carried a side line of fish, oysters and crabs displayed in the window. It was a curious little hole in the wall and it somehow gave the impression that it was trying to hide behind its own newspaper stand, an ambition that was certainly possible, for—low-browed and ages old—the little store was neither prepossessing nor in the least degree aggressive.

After all, and in spite of the gold sign that whined on an iron bar over the door, it was simply a stationery store, where transient trade supplied its wants in unthinking indifference. But then again, it wasn't just an ordinary store, and those customers who came for the second time realized something of this. It was more friendly than just an ordinary store, for there was an air to the little box of a room, an atmosphere that prompted people to hesitate and then, gazing idly about the shelves, decide they needed something else, until they finally left with two or three more purchases than they really wanted.

There was a tangible reason for this, but only a person interested in the whys and wherefores of things would have discovered it. More people came for tobacco than anything else, therefore the tobacco was in the rear instead of by the door, and as a man lit his cigar he found himself staring at the bookshelves. Women came for writing paper and magazines, but to reach them they passed the candy counter. Besides all this, little printed cards drew the observer's attention on, always on and round the room.

So even though the place was a collection of conglomerate odds and ends the stock in trade was not allowed to accumulate dust on the shelves and be forgotten; it was sold. Sometimes slowly, but always surely, a consignment of goods found its way into customers' hands and other goods came to fill the empty places.

This was a principle with Davey Grattan, a belief, and it was as far outside his comprehension that goods could not sell as it was that he might sometime make a mistake and stock the wrong article.

If his shop was in some ways peculiar and out of the ordinary, the man himself was only different from the rest of humanity inasmuch as he was more alive than nine hundred and ninety-nine people out of a thousand. He was the spirit of the store, the atmosphere of the little room and the personality that created the lettered cards.

Just now he was standing a little back from the show case, inspecting a newly lettered card that he had only a moment before designed with the aid of a bottle of India ink and a camel's-hair brush. Across the top of the sheet of pasteboard was a staring caption whose evident mission was to catch and, more important still, to hold the attention of the passer-by:

CAN YOUR WIFE SHARPEN A LEAD PENCIL?
YOU KNOW SHE CAN'T!
AND NEITHER CAN ANY OTHER WOMAN!
BUY ONE OF THESE PIN-POINT PENCIL SHARPENERS!
GET IN STRONG WITH THE MISSUS!
15 CENTS!

"That ought to do it," the man said aloud, his head on one side as he continued his study of the poster. "Unless—no, it ought to be the woman's point of view—yes—let's see——"

Taking a new sheet of board he resumed his artistic efforts, tongue between his teeth, head thrown back a little as he worked intently with the brush.

Possibly twenty-five years of age, this young-old man had watched the Village Store grow out of the meek beginning of a news stand on the corner. His face, drawn into hard lines that spoke mutely of a life wherein toil and labor had been uppermost, gave the impression of advanced years, also his shoulders—stooped a little—also his hands. Youth ran riot, however, in his gray eyes that gleamed from under heavy brows, and his mouth, which smiled as easily as Davey breathed.

After a time he stepped back again and viewed this new sign with evident satisfaction. The lettering was a little neater than on the other and he had spaced his words with a trifle more care.

The sign read as follows, and Davey smiled a little as he studied it:

OF COURSE A WOMAN CAN SHARPEN A LEAD PENCIL!
BUT NO WOMAN LIKES TO CUT HER FINGERS!
ONE OF THESE PIN-POINT PENCIL SHARPENERS
WILL DO IT FOR YOU WITHOUT DANGER!
GET ONE FOR
15 CENTS

"That's it," he went on with a laugh. "That'll sell 'em!"

Conviction was dominant in the man's whole being. He knew. This particular article of trade had been an inspiration of several weeks before, and even as he read the announcement in a trade journal he had visualized his campaign of advertising.

"Yes," he decided at last, "it's the woman's point of view first."

Fifteen minutes later the sign had been placed in the front window, a space cleared for a display of pencil sharpeners and Davey stood on the pavement viewing the effect with critical gaze.

"All right," was his verdict. "Now we'll see what happens."

It was more than half an hour before anyone entered the shop. Then a girl with large brown eyes and a dimple in each cheek looked in through the doorway and entered as she caught sight of Davey's head as it poked up over the counter.

"Hello, Julia!" he exclaimed, glancing up and discovering her. "I'm glad you came in. I want to show you something—need your advice."

He led the way outsi… pointed to the adv… ment of the Pin-Point S… ener.

"What do you th… he asked. "Would … make a woman mad?'

"Mad?" the girl rep…

"Sure! You kno… right. First I thoug… saying something like … can't sharpen a lead … if you're a woman, bu… can with one of these … Point Pencil Sharpe… That wouldn't have … would it?"

The man was all int… his idea and the girl wa… him with a curious li… her eyes.

"You see," he wen… giving her no time to ar… "you can't get a p… sore—that's bad; or i… tell a person he can't … thing that's just the … he wants to try an… Understand? Now tha… tells her she can shar… pencil, but it suggests … she might cut her f… Get my idea?"

The girl laughed a… walked back into the …

"What a funny p… you are, Davey!" she … at last, leaning back a… the counter. "Takin… that trouble for a sign … over a pencil sharp… Why didn't you jus… 'Pencil sharpeners, f… cents'? Wouldn't they … sold just as well?"

"Maybe," he retu… thoughtfully. "Yes, I … pose they would. But it wouldn't have worked … principle. Now, in this one ——"

A customer interrupted, and five minutes later wh… was again free Davey's mind had shifted to another … thought.

"There's only one trouble with those pencil sharpe… he explained to Julia, who had picked up a magazin… was idly skimming through the pages. "They're … little things, but there isn't a chance in the world o… selling a person a second one. Now my idea wou… this: You see how the blade is fastened in. You can … it out, but if it were made detachable—put on … screws, you know—you'd have a chance of selling … tomer some extra blades, like safety razors."

"But won't these get dull?" the girl put in, the … amused smile on her lips.

"Ah!" Davey exclaimed. "Of course, but you … raise that doubt in a customer's mind. If the blades … detachable you'd have a selling point. He'd think h… buying something that would last him for the rest … life."

"But good gracious, Davey! They're only fifteen … apiece!"

"Well, yes, but it isn't the price, it's the principle …

"But where does it all lead?" the girl broke out … denly. "You just stay here in this little store and … her voice faltered as she turned her gaze out of the … doorway.

"Yes," he returned slowly, watching her face, … some day ——"

"It's always going to be some day!" Julia cried … tiently. "You're so much interested in advertising, … can't you go out and get a position where you can am… to something, not be just a storekeeper?"

"I know," Davey answered, a little touch of sa… creeping into his voice. "But I'm learning the prin… here, first-hand principles—the reasons, the big answ… it all!"

A pause followed his explanation, but Julia refus… meet his eyes. She only continued to look out of the … way, where the street cars were clanging past and … soiled children were playing on the sidewalk.

"I came in to see you about—about something, Da…," she said at last, turning and facing him. "About … engagement." *(Continued on Page 53)*

(Continued from Page 50)

Je man remained silent, but as he waited a little puzed frown wrinkled his brow.

"don't think I can go on with it!" she blurted out. I n't!"

"ou want to break it off?" Davey asked, his voice hear and dull. "You mean it's all over?"

Vth the girl's nod the lines in Davey's face seemed sud nly to deepen, grow more sharply defined, and the you in his eyes faded like mist before the sun.

"guess I've felt this coming," he said after a long time. "Mybe you didn't know it, but you've been changing tow d me for the last couple of months. I'm awfully sorr Julia—I am. I didn't know how to help matters, o I ast let 'em drift. Yes, I saw it coming all right, but I cou n't help it. I don't blame you. I'm not the sort of man for you, that's all. I'm too old. I've had to work too ard and I don't know how to play."

"ut you could be," Julia exclaimed, "if you'd only take chance and go somewhere out of this store!"

"aybe," Davey answered doubtfully. "But the store s all've got and it's doing pretty well too. Last month I mai he advance in the rent and had some left over to put in t bank. It wasn't much, but it was some." Pausing for moment, he added, "But I understand, Julia. It isn't ny use talking it over. I'm just kind of an old hack and hat you want is some fellow that can give you a good run Maybe you don't know it, but that's what you want You give me the ring back, Julia, and we'll wait a few onths. Maybe I can come round to your point of view and maybe you can come round to mine. Maybe y but time I can let down a bit; things might go better here or something."

Slvly the girl drew a ring set with a pitifully small diamond from her finger and passed it into the man's hand Her mouth trembled a little and as she tried to speak her voice choked with a suspicious huskiness.

"Don't feel too bad about it, Julia," Davey said. "We'll get better in a couple of months. In the meantime may you'll come in to see me?"

"Ertainly I will!" she exclaimed. "And can't we go to a icture show sometimes like we always have?"

"Sure!" was his answer. "We won't be engaged—that's a ely difference."

"Hope you understand, Davey," Julia began after a long pause, but a gesture of one of his big hands interrupted.

"Course I understand. Gee, I'd be a fool if I didn't. Ha you tell me only follows along the line of another mole that I've learned since I've been in this store. Ve person time to make up his mind and he'll usually buy hat you want him to. If you try to force him you gh as well put the goods back in the case. That's it, lia When you make up your mind—in the meantime hope I keep the ring."

He watched her go with a sinking feeling round his heart. Now his figure seemed to have shrunk until his clothes hung from his shoulders in loose folds. The quality of age on his features had heightened and his eyes were dull. Dropping into a chair behind the counter and idly the ring between his finger and thumb, a sigh escaped from his lips, a sigh of intense longing and regret.

Removed from the Village Store by some hundreds of feet the low glass-roofed buildings of the Tanner Manufacturing Company spread like card houses for acre after acre on the outskirts of Hardford. A dozen campaigns of colossal advertising had put them on the map, and for a series of different articles Tanner was a household word in every state in the Union.

Tanner himself was totally unlike what everyone pictured him to be, for he was short, fat and roly-poly, with frank, blue eyes and a babyish mouth that was only guileful as sincere as a twenty-dollar gold piece.

But for all his looks he had been the moving spirit behind the Tanner Manufacturing Company. He had built from a shoe string and a tin can, as he was fond of telling people, and he always leaned back in his chair and put his pudgy finger tips together when he said this, for the visitor—if he was clever enough—saw another story behind the man's words, the story of another struggle.

Instinctively he looked about the office for the men who had helped put the Tanner Manufacturing Company on the road to fame—the assistants who had helped the man sitting in the chair on the other side of the big mahogany desk. And this, though it was never told to visitors, because it was one of the business secrets of the firm, was the unvarnished truth of Mr. Tanner's success, for he had gone to the world with a horseshoe in either pocket and spent his ensuing years in finding other pockets for other horseshoes. Of course the horseshoes weren't real—they were executives. But heavens above, the man seemed to have the very luck of the gods in choosing executives!

Tanner for one. He was the mechanical and technical genius who worked positive miracles in the shops. He had had his finger in this too, but he spent most of his time with his models, for it was his brain that conceived most of the product that was stamped with the Tanner Manufacturing Company's brand. Streeter and little Lathrop were also up on the firing line, with French in the office and taking charge of the credit department. The whole thing was like a football team, working in complete harmony, and the only person about the plant who had no niche of his own, no real work, was Tanner himself.

Of course he showed up in the gilded office every morning about ten o'clock and the rest of the crowd came in and told him what they were going to do and how they were going to do it, but sometimes they forgot and things went along just the same. That was part of the system he had installed, but the system was so completely perfect that he had almost systematized himself out of a job.

Maybe he felt this and maybe this was the reason he took the stand he did about the Pin-Point Pencil Sharpener. Carter and Lathrop and French all said that it wouldn't sell in a thousand years. Browne agreed with them and added that if Mr. Tanner really thought they needed a pencil sharpener he'd get busy and design one. All this touched the old man on the raw, because the Pin-Point Pencil Sharpener was his own particular pet design that he had thought out one night while he was trying to go to sleep.

In the end they couldn't budge him—he simply balked like a mule—and Carter with tears in his eyes spent untold dollars on a stamping machine and reamers. Streeter took on a force to do the packing and shipping and Lathrop added the advertising to that already overburdened department.

Then they all stood round waiting for a good chance to say, "I told you so!"

"It isn't the money he gives a damn about!" Carter exclaimed at French, as though he was at the bottom of the trouble. "It's just because he thinks we've begun to take over too much on our shoulders and he wants to show us that he's still boss round here!"

"Nonsense!" French declared. "He believes in the silly thing! It's the first time he's ever had an idea along the mechanical line, and when Bell talked over his first telephone he couldn't have felt any bigger than the old man does. The mere fact that we're getting out a dozen of the greatest lines in the country doesn't interest him at all. This whole bloomin' plant might have been put up solely to produce Pin-Point Pencil Sharpeners; and what's more, he doesn't give a tinker's cuss about anything else. Let him have his head, Carter, something will stop him. At least he can't manufacture 'em and give 'em away."

"I saw Lathrop going in with some boards—looked like charts," Browne put in. "What's that for?"

"Ask Lathrop, if you want to hear something," French laughed. "He worked till one o'clock last night on those charts and he was down here before breakfast to finish them before the old man got here. Lathrop says he's going to swear out a warrant for the old man's arrest."

Lathrop said a great deal more than that, but he was precious careful to keep it under his breath.

"That's all right," Mr. Tanner finally agreed after a close inspection of the boards that had been fastened to the wall of his office. "Now, Lathrop, I'll tell you what I want. A good big map of the United States mounted in a frame, and a lot of white and red-headed pins. When we get an order we'll stick a pin in the town and when we get a repeat order we'll stick a red-headed pin in. What do you think of that idea?"

"But you've got all that," Lathrop objected, "in this chart of the States. You'd only duplicate things with a map!"

Mr. Tanner made a clicking sound with his tongue and looked at Lathrop reproachfully. "You can't see a chart like you can a map!" he exclaimed. "A map's a map and a chart's a chart! That pencil sharpener's a mighty good thing, Lathrop, and I want to watch how it's doing. Get a map, and I'll post it up to date."

Lathrop produced the map as he would have produced the North Pole if Mr. Tanner had asked for it, and the president spent an enjoyable hour and a half sticking the little white-headed pins into the board.

The effect pleased him when he surveyed the result, but also it suddenly dawned on his mind that the pins were unquestionably scattered, so scattered indeed as to be hardly noticeable from where he stood, and he was forced to move closer to realize that any pins at all were fastened in the map.

West of the Mississippi was as devoid of pencil sharpeners as when the red man trailed the bison across the trackless plains. Michigan had one pin. Chicago was represented by two pins, but Mr. Tanner could have passed his hand across the Middle Atlantic States without removing another pin from its hold. The South had done better, here and there the pins raised their white heads from the Cotton Belt until they died a natural death as they struggled in the colder climates. One straggling marker pointed to New York and that was the last until the final pin reared itself from the little black spot of Portland.

Mr. Tanner frowned and reached for the telephone. Getting Lathrop on the wire he instructed him to double the advertising on the Pin Point.

"And produce some results," he added, hanging the receiver on the hook and turning his attention to the board headed, "Order Chart."

Here again the evidence of unused space was strikingly pronounced; in fact, most of it was unused, save where a line of customers' names stretched across perhaps a quarter of the board. Under these "1 gr.," "½ gr.," "¼ gr.," had been inserted, but never by any chance was it more than a gross, and those "1 gr.'s" stood out like beacons on a foggy night.

"Well," Tanner mused aloud, lighting a cigarette and blowing the smoke pensively at the chart, "that bird down in New Orleans ought to do pretty well and that fellow in Dallas—funny about that gross going to Tampa. If Tampa can sell a gross of Pin Points that fellow in New York ought to sell a million. He'll do well—Grattan," Mr. Tanner added, noting the name. "Why, New York ought to be good for a hundred, maybe two hundred, agents. Anyway, we'll see."

They saw. But strangely enough it was not quite in the way Mr. Tanner had dreamed.

In time a few more white pins were added to the map. The West gradually dotted itself here and there and even out on the coast a white head stuck up from the dull pink of California, but thus far Mr. Tanner had looked at the little box of red-headed pins in vain and returned them to the drawer of his desk. Apparently the United States was as completely fed up on pencil sharpeners as though they had been given away with packets of cigarettes for the past hundred years.

"Didn't I tell you?" Carter exclaimed gleefully. "You couldn't give those confounded things away to an Eskimo!"

"One bird sent in a second order," Lathrop put in as he passed through the office. "I just came from in there. You might think the old man had been left a gold mine overnight."

That was the first repeat. The order came from "that fellow Grattan down in New York."

"Well," Mr. Tanner mused, watching the stenographer write "1 gr." in Grattan's square, "of course New York will do well. That's a pretty big town down there—there are a good many people who need pencil sharpeners. Now Chicago'll repeat and then New Orleans and after that ——"

And the man sat on the edge of his desk and stared at the map for the next half hour.

But Chicago failed to repeat, so did New Orleans. Only New York after a few weeks came across again. The third gross, and once more the stenographer wrote "1 gr." under Davey Grattan's name.

Mr. Tanner was worried and when he was worried it usually ended by his taking his place on the edge of Carter's desk. This time it was about again doubling up on the Pin-Point advertising.

"But confound it, boss!" Carter exclaimed after a moment's thought. "The thing isn't practical in the first place."

"What do you mean, isn't practical!" Tanner cried. "You mean the sharpener isn't any good?"

"No—no, I don't mean that," Carter hedged. "But it's too old-fashioned. In this day and age who is going to spend time twisting a pencil into a little chunk of brass! There isn't an office in the country that isn't supplied with a pencil sharpener like that one." He pointed across the room to a shelf. "That thing works with a crank—sharpens a pencil in half a second."

"Yes, and you have to get up and walk all the way over there!" Tanner interrupted. "With the Pin Point ——"

"Fasten it over here, if you want to!" Carter broke in. "Anywhere—the point is you don't have to do the work yourself. Those cost eighty-five cents. Your fifteen-cent article doesn't stand a ghost of a chance. Business men aren't counting pennies in this generation."

"Well," Tanner plugged on doggedly, "there's one man selling 'em—that fellow down in New York. He's just ordered his third gross. If he can sell 'em, why can't anyone else sell 'em?"

"He's probably giving them away as an advertisement. A pencil sharpener with a box of writing paper. But you can make up your mind to one thing, he hasn't sold three gross—that's four hundred and thirty-two—Pin-Point Pencil Sharpeners for honest-to-goodness money! If he could do that he wouldn't have to sell pencil sharpeners—he'd be out selling steel bridges!"

"That's a lot of bunk!" Tanner exclaimed, getting down from the desk. "A lot of claptrap bunk!"

And giving Carter a look of utter contempt, he turned and strode heavily into his own office.

In the back of Tanner's head, however, Carter's words stuck fast and took root, and the more he studied the order chart the more he began to wonder and speculate on the ways and means "that fellow Grattan" had used in disposing of those Pin-Point Pencil Sharpeners.

"Eighteen and a half Greenwich Avenue," Tanner mused aloud, turning his eyes from the chart and gazing out of the window. "That's down there somewhere in Greenwich Village—Bohemian quarter. I wish to the Lord I knew why that particular spot in the United States was

so badly in need of pencil sharpeners! Bohemians—let's see—artists—but hang it all, there can't be four hundred and thirty-two artists going round with their tongues hanging out for pencil sharpeners! I wonder if that bird could be selling 'em—selling 'em with good old-fashioned salesmanship!"

A half hour longer he remained in his chair, then he rose abruptly and calling his secretary informed her that he was going to take a flying trip down to New York.

"I'll be back to-morrow," he explained, reaching for his hat. "Tell Carter I'm going to try to get him that steel he's been hollerin' about for the past week."

The last Pin-Point Pencil Sharpener of Davey's second gross went to old Mrs. Ripley, who kept a boarding house round on Charles Street.

"I dunno how it is," the old lady mumbled, extracting three nickels from her bag and passing them into Davey's hand, "that I never come to think about a pencil sharpener before.

"Ain't been more'n a week ago that I bought a pencil, then went home an' hacked it all to pieces with a carvin' knife. This'll work, will it?"

Without giving the man time to answer she continued, casting a shrewd look into his face: "They tell me you an' Julia Weaver have broke things off. Too bad, Mr. Grattan!" She paused, her eyes disappeared among the wrinkles of her face and she added: "If you was half as spry in makin' love as you are in makin' folks buy things you'd see with half an eye that she's havin' a fit till she gets that ring back on her finger. Mrs. Calhoun and me was talkin' and ——"

"I don't know," Davey interrupted. "We went to the movies last night and she didn't say anything."

The old lady sniffed her contempt.

"Say anything!" she gasped. "The only way she isn't tellin' you is shoutin' it at you. Land, I don't know what you expect!"

"We didn't exactly break things off—that is, not for good," Davey explained after a moment. "I just wanted to give her a chance to make up her mind."

"Stuff and nonsense!" Mrs. Ripley exploded. "Give her enough time and she'll make up her mind that she don't want you! In my day ——"

A voice from the doorway interrupted and Davey looked over the old lady's head square into the full-moon face of Mr. Robert Tanner.

"I'm looking for Mr. Grattan," began Mr. Tanner. "David Grattan—know him?"

"I'm Mr. Grattan," Davey smiled. "Something I can do for you?"

Mrs. Ripley, instead of taking her departure, bestowed upon the gentleman one careful look of scrutiny. It missed nothing from the top of Tanner's hat to the soles of his shoes, and quite suddenly Mrs. Ripley decided to remain. This was all out of the ordinary, decidedly so, and the old lady moved to one side, taking up her position near the magazine counter, where she picked up a book and stared unseeingly at the cover.

"I want Mr. Grattan, the proprietor of this store," Mr. Tanner persisted, his blue eyes, full as keen as Mrs. Ripley's for all their baby innocence, sweeping the four walls and coming at last to rest on Davey's nose.

"That's me," Davey nodded.

"Oh! Well, I'm Tanner," the other said. "Tanner of the Tanner Manufacturing Company." And he held his hand across the counter.

"Is that so!" Davey exclaimed.

It was maybe five seconds before he said this, but just in time he remembered who the Tanner Manufacturing Company was and what they had to do with the Village Store.

"We're about stocked up on pencil sharpeners," he went on, using his regular editorial "we" as the fat man remained silent. "Got in a shipment from you the other day."

"I didn't come down about that," Mr. Tanner explained. He was conscious of a keen sense of disappointment as he viewed the man before him, for there was nothing in Davey's loose raw-boned figure which seemed to indicate that he had the making of a super-pencil-sharpener salesman. As the last straw Mr. Tanner looked down and caught sight of Davey's big hands as they rested on the counter. "No, I didn't come in to sell you any pencil sharpeners," he continued hesitatingly. "I—I—well, I was just going through—happened along this way."

"Mighty glad to see you!" Davey interrupted heartily. "That's a great little article you people are turning out. Making a good thing of it, I'll say. With millions of women in the country needing 'em, you ought to make a fortune."

"Women?" Mr. Tanner repeated.

"Sure!" Davey always had a way of rushing his words. "Sure, women! That's who I'm selling 'em to. Did you see my sign in the window? Well—say, just take a peek at it. Of course you'll think it's pretty crude—it is, too, but you wouldn't believe how it does the business."

He was out from behind the counter and had Mr. Tanner by the arm.

"One thing I'm going to tell you about," Davey went on as he propelled the fat man through the door, "if you won't think it's too fresh.

"Of course it was your design and maybe you had a reason to make the blades—there, what do you think of it?"

Mr. Tanner stood and read the sign that held a message of hope and sympathy to every woman who had ever struggled with the stub of a lead pencil and an ancient kitchen knife. Possibly he read it several times, certainly he stood there long enough to learn the words by heart, but the expression on his face gave Davey no inkling as to what the man's inner thoughts might be.

"What was it you were going to tell me?" he asked, walking back into the store.

"Oh, yes!" Davey exclaimed, following at Mr. Tanner's heels. "About the blades. I was wondering if you could make them so they'd come out—put 'em on with screws, you know."

"Yes," the other nodded, seeming to find a new interest in Davey's face, "that could be done. But what's the idea?"

"Why, make a repeat proposition," Davey hurried on. "One blade gets dull, change it and get another. It isn't so much the money. It's just one of my principles to bring people back into the store. Think that's a good idea?"

Very slowly Mr. Tanner nodded. His blue eyes were a trifle wider than ordinarily and his mouth had the same expression that it did when Carter came in and fully agreed with him.

"You figure everything that close?" he asked.

"Sure!" Davey laughed. "But you understand, it's only because there's a principle in it—not always the money. I suppose it's more the fun of the thing, just to be sure that you know how the average human will think; and if they think that way, how they'll act."

He laughed again and continued:

"I'm kind-a funny about things like that. Always like to figure 'em out. That sign in the window, for instance. First I had it to read, 'No woman can sharpen a pencil, but she can with one of these Pin-Point Pencil Sharpeners!' But that was dead wrong—you see it, don't you?"

"But no woman can sharpen a pencil," Mr. Tanner mused.

"Never argue with a woman!" Davey exclaimed. "Never tell 'em they can't do anything—never tell anyone they can't do anything, but especially a woman, because that's the thing she'll try and do in spite of Billy be damned! See now? Simply a principle! You can apply it to people like you measure off cloth by the yard."

"Who taught you all this?" Mr. Tanner asked. "How'd you learn it?"

"No one," Davey returned, his face suddenly growing serious. "No one but me. Unless the store taught me. It's funny."

"I guess I've heard enough," Mr. Tanner said after a moment. "How much will you take to come up to the Tanner Manufacturing Company and give us the same amount of brain effort that you've expended on this store?"

"How much—what?"

Davey stared.

Mrs. Ripley gripped the magazine a little more firmly and concentrated her attention on the fact that she must not turn round.

"I'll tell you what I came down here for," Mr. Tanner said with a sudden mopping of his face with a handkerchief: "That pencil sharpener is my own idea. It's a good one, too, but somehow it doesn't sell—no repeat business at all—and I want a man to get after it and put it across. There's opportunity up there with us—loads of it. Carter found it, and Carter started with me at thirty-five per the day he got out of college. Do you want to go on keeping this shop more than you want to come to work for me at five thousand a year?"

A long quivering sigh escaped from Mrs. Ripley's lips and both men turned to stare at her where she stood engrossed in the adventures of some queen of the movies.

The old lady's emotion somehow broke the spell of Mr. Tanner's words. It was not that the statement and the amount that he had mentioned were any the less impressive; it was simply that Davey had had that moment in which to collect his scattered faculties, and now he smiled a little as he met the other's eyes.

"That sounds pretty good to me," he said. "Mighty good."

"Call it a deal then," Mr. Tanner answered. "You can hang your hat up with us as soon as you want to." Half turning toward the door he paused and added, "By the way, you're single?

"Good!" he went on as Davey nodded. "I wouldn't want a married man in the job I'm going to hand over to you. Al I'll see that you get a contract and—

"Wait a minute!" Davey inter "I can't take the job then. You s not married now, but I will be befo get up there."

"No," Mr. Tanner said with a s his head, "I couldn't use you as a man. See here! You've made a su this store by putting all you had be You couldn't have done that if you married, and that's the way it is w proposition. You know the old about two masters? That's me! I in it! That's one of my principles!

"Well, I'm sorry," Davey re "I'd like to tackle that job, but—w got a girl I wouldn't give up for you plant! You understand? Hope the hard feelings."

At the doorway Mr. Tanner paus stared at Davey for a full half Once it seemed as though he was point of speaking, but finally with shake of his head he turned and walk

Mrs. Ripley put her magazine do a slam.

"Well!" she exclaimed, facing t as he leaned over the counter, spread apart and chin in the palm hands. "Up to now I always thoug was considerable of a fool, Davey G the way you've gone about makin Weaver your wife, but I listened t that man said to you an' I came rig denly t' the belief that you ain't fool at all. It's been that girl o' yo just as soon as I get a good chan goin' t' tell her so!"

Davey's laugh followed the old la the store, but for a long time after he brooded in silence, absently wat fly that had been caught by a p hanging fly paper. Somehow the sh a little more barren than he had ev it look before; he noticed how th was coming off the wall over the m counter—and after all, what a silly stock in trade he had to sell! Foolis toys and penny candy! Davey sh head and sighed. For the first tim life he had let down and relaxed, caught himself wondering if it was while going on with anything.

The following morning brought the outside world, a mean drizzle fr of a leaden sky, but to the Village well, roses and sunshine, little la brooks and green things shooting u the edge of a meadow were moros things in comparison to the flood of ness that rushed over the young-old Davey Grattan when Julia Weaver through the doorway and demand engagement ring.

"I saw old Mrs. Ripley this mo she sobbed in embarrassed expla "She told me what happened here day afternoon. Oh, Davey! Did yo for me, because you loved me bette you did your principles and the tising?"

"Oh, my Lord!" Davey gasped, at her in astonishment. "You tho was so much interested in selling that I didn't have time to love you that it?"

Julia nodded and buried her face his coat.

"Oh, my Lord!" Davey groaned "And I thought I knew something women!"

He was a messenger boy who h vanced to the age where all messenge seem to stop and he ambled into th with his cap on one side of his head cigarette hanging from the corner mouth.

"Say!" he exclaimed in his peculi guage, grinning as he caught sight of and Julia. "'S this-ah-Mister Grat

Davey stared and nodded, but onl a moment of hesitation.

"Sign 'er," the boy said, and he t yellow envelope and a black-covere up under Davey's nose.

They read the message together- the mature youth appropriated the part of a tray of candy. At the sa stant they caught the big story of s and his laugh mingled with her sudd of happiness.

The telegram was signed "Tanner over this were a few badly typew words that glowed like diamonds sunshine.

"Bring your wife if you have to, Tanner had written. "But get here Still no repeats on Pin-Points!"

THE DOOR TO FREEDOM

(Continued from Page 24)

lurt glanced up and down the deserted blo:, opened the little gate with great care, tipped up the walk, the steps and along he narrow veranda, examining the three inows minutely until at one he was re-ared by the discovery of a triangular ga in the veiling shade. By stooping a itt and placing his eye close to the win-lov ane he obtained a full view of the in-eri', which was illuminated by the soft glo of lamplight.

Directly before him sat Miss Livingston, clad in a big easy-chair which looked like a pic of bygone age, but still possessed mu dignity and strength. She had dis-arid her trim business suit for a soft, vo-luminous negligee that clung to her slim figu in caressing folds, displaying the un-exp ted roundness of her limbs and ex-cing to view the creamy whiteness of her ar arms. Her lips were half parted in a mi of drowsy contentment, the cause of whi was not far to seek.

Behind her stood an active though aged wo an clothed in gray goods of an ancient cut nd long wear, capped with lace, be-spectacled and plying with one hand a ru while across the other she held sus-pended the fragrant loosened flood of Miss Livingston's lovely hair. In the back-ground of this highly intimate scene hov-ered Mr. Alexander Sutey, evidently ill at ease and with good cause, for upon a too-close approach he received a smart slap on the brush, bristles first.

Owing to the loose construction of the double sashes Mr. Blurt could hear the murmuring voices, and by deliberately eavesdropping he managed to catch enough words to run a thread through the conversation. He was largely aided in this reprehensible enterprise by the rumbling remonstrance of Mr. Sutey under punishment.

"Here, you, Anna," he protested, but with surprising meekness, "can't you remember to use the back of the brush? The last time you did that I got took up for fifty dollars."

"Pity you didn't stay took," replied the old lady spiritedly. "You old gallivanting Don Juan-do-weel. Get into the kitchen until you're ready to go home to the wide world. What Miss Phyllis to tell me how the mere sight of you almost led her to the police station."

Sutey mumbled a reply inaudible to Blurt as a wide window on her right was raised his arm quickly as though to ward off a second blow, and retreated through a rear door. For a moment there was silence while the old nurse brushed the long, soothing sweep of a practiced hand, then she asked in a voice which had become all tenderness: "Don't you want to tell, sweetheart?"

There was a long pause before the girl replied: "I don't know. The day has been so long, so long, so crowded, so ——"

"So what, dear?" prompted the gentle voice.

"So uprooting," finished Miss Livingston with sudden rebelliousness in her tone.

As she concentrated her thoughts on the events that had befallen since eight o'clock that morning of this very day her face took on a look of unmasked repose, her eyes narrowed, her brow returned to its free-dom, a tiny frown and a flush of anger tinted her smooth cheeks with a glow that was lighter than their normal color and as forbidding, as though it shared the confusion between warmth and fire.

"Nanna," she said finally, clasping her hands about her crossed knees, bending slightly forward and staring so directly at a little tear in the curtain which was Blurt as a wide window on her right that he started back precipitously before his reason had time to tell him his fears were groundless, "I met a man today—a real man, walking round in a boy's young skin. His eyes were looking for something fine, yet you knew they had seen every little thing there is; his lips didn't let out a single unkind word to anyone, but you knew there's no word they hadn't said. He's dreaming the things I've always believed. He's a good man, Nanna, and just meeting him for a day has frightened me out of myself, shaken me, torn at something that is rooted too deep, down here."

She clutched at her breast with one hand, leaned farther forward, buried her face and burst into tears. Nanna dropped the brush, seated herself on the arm of the big chair, gathered the sobbing form to her breast and rocked it gently to and fro.

"There, there, my own dear," she murmured; "there's no man on earth worth the tears of your lovely eyes. Think no more of him, darling."

"It isn't him that makes me cry," gulped Miss Livingston. "It's myself, the cold shell of me, the heart that rattles round in it when I move."

"There, there, sweetheart," repeated Nanna; "don't you be crying for any man in the world."

The girl released herself, drew sharply erect and threw out her arms in a wide gesture as though she demanded space to stand alone. With her head upthrown, her eyes opened to their fullest, her loose hair cascading over her shoulders and the white column of her throat rising amid its divided golden flood like a pulsing band of light, she presented a picture as lovely and heart-rending as the first apple tree that blooms in the spring.

"You won't believe me," she said, more to herself than to Nanna—"you won't believe that it's myself that made me cry. Oh, Nanna, I am like this house—terribly clean, small, hidden, divided from everything round. My walls are thin, too, and when you rap on them you hear the echoes of all the lives that have gone before. Why, that's what I am, an echo of beliefs and customs, of big tenets and little rules of thumb. I know that outside there's a world of great beginnings, a world of quite new sounds, whose echoes are all ahead, but not for me, Nanna. No power can lead me out into it; I'm this little house, so old behind its fresh white face."

"There, there, sweetheart," repeated the old nurse once more; "don't you be crying for any man."

Miss Livingston surrendered to Nanna's fixed idea with a despairing sigh that broke into a smile as radiant, as all-embracing as it was sudden; she threw her arms round Nanna and hugged her.

"You darling!" she cried with laughter in her eyes. "You saving grace! You incarnate and persisting echo!"

"Here!" answered Nanna. "No calling me out of my name, please, to cheer yourself up! Now let me go. I feel a stepmother's breath between my shoulders; it's that old rapscallion has gone out the back way and left the door open."

Blurt caught the warning in the words, but it came too late; he heard a shuffling step, saw Sutey loom, a darker shadow in the night, fearfully watched him pass and make for the gate. He gave a sigh of relief but swallowed it a little short of completion, for the giant did not leave the yard; he stood leaning against the gatepost, filled his pipe with tantalizing deliberation and lit it.

Blurt flushed red with anger at himself; he was fairly trapped between Miss Livingston and Mr. Sutey, emblems of innocence and disrepute, and felt like a smeared mixture of both. Which should he do, rap on the door as if he had that moment arrived or sneak out, trip up disrepute and make a run for it on the slim chance of escaping recognition in the dark? If he chose the first of these dubious alternatives, what was he to say, how explain his advent at that hidden spot? Hesitation left him but a single course; he tiptoed along the veranda, down the creaking steps and along the walk, stooping over with the intent to grasp Sutey's ankles and yank them from under him.

"Good evening, Mr. Blurt. What are you walking that funny way for?"

Blurt drew erect with a jerk; the shamed glow of his face amounted almost to an illumination, in the light of which he realized that Sutey's before and behind were practically identical, owing to the cloud of hair that completely encircled his head, and that he had been facing him throughout his absurdly stealthy approach.

"Sh-sh! Sutey," he whispered hoarsely. "Come away from here."

He slipped through the gate and hurried toward the Avenue, looking over his shoulder to make sure that his retainer had obeyed orders and was following. Under the screening shadow of a towering apartment house he stopped and waited. Sutey drew near, and by the light of the street lamp the fact that he was in a highly nervous state would have been apparent even to a passer-by; his small eyes shifted this way and that, his whole vast frame seemed to be cringing and wrinkling in an effort to turn into a worm and crawl away. These signs meant much to a man of Mr. Blurt's experience; he instantly divined that Sutey's abnormal self-consciousness had led him to the belief that he himself, not his prowling employer, was appearing in the rôle of culprit.

"What were you doing in that house?" demanded Blurt promptly.

"Nothing," snuffled Sutey.

Mr. Blurt's arms shot forward, his hands grasped great masses of silken beard and held them gently but firmly in response to the fearful tremor that shook Sutey from stem to stern.

"D-d-don't," stuttered the giant.

"I'm not going to hurt you, Sutey," said Blurt, "unless you oblige me to; though I've often wondered how far I could swing a bull by his tail. What relation are you to Anna? Why do you let her spank you?"

"I'm married to her—more or less," grumbled Sutey.

"Just what do you mean by 'more or less'?" demanded Blurt after a weighty pause, to allow himself to absorb the surprising news.

"I go there once in a long while," explained Sutey, "but I used to be there all the time."

"I see," said Blurt. "Now you can explain why you didn't tell me all about Miss Livingston when she first appeared."

"You didn't ask me," complained Mr. Sutey.

"I gather you have known her long and well?"

"Long and well!" repeated Sutey with an unwonted fixed gleam in his eyes. "I've known her ever since before she was born. I've known her three times over—in herself, her mother and her mother's mother."

"Do you mean to stand there and tell me there's anything to criticize in Miss Livingston, you old reprobate?" demanded Blurt, his grip tightening.

"Not a single thing," replied Mr. Sutey with impressive emphasis. "Mr. Blurt, she's just something that keeps on happening. There ain't any criticism in saying that, is there?"

To that question Blurt was not prepared to make immediate reply. He released Sutey and stood staring at him for a long moment in silence, as though striving to determine just where in the big cowardly frame was located that germ of originality which spells character whatever the apparent barrenness of its habitat and the immediate surrounding country. The faint indications that Sutey had a philosophy were astounding enough in themselves, but the conviction that no power on earth could dig up that philosophy to the light of day and show it round turned the timid giant into a ninety years' wonder and gave him the rare air of a potential miracle, held perpetually in suspense.

"Sutey," said Mr. Blurt, "I caught sight of you following Miss Livingston, and as it seemed a little strange to me, not knowing the circumstances, I felt bound to investigate. I'm glad you have been able to explain the matter. Go down to the studio to-morrow morning and clean up, but don't let anyone in. I shall probably take a day off."

With those words he turned and walked thoughtfully away. A quite new brand of loneliness assailed him as he realized that casual contacts alone, no matter how inspiriting, are not enough to give man a continuing sensation of participation in the warm Gulf Stream of happy people that weaves its hidden way through the cold wide world.

In spite of the fact that he had done nothing all day but rub up against and into a variety of personalities he was lonesome as never before. It made him angry, and when Mr. Blurt was enraged there were few things he wouldn't do on the mere suspicion of an impulse.

He drew out his watch and saw that it was nearly eight o'clock, climbed into a taxi and told the cabman to stop at the first telephone booth. In a few minutes he had a book and was looking up Miss Nameless' number. He took down the receiver and was feeling for a nickel when it occurred to him that the chances of that particular person's being free for the evening or himself was a shot so long that no gambler even out of his senses would play it. He returned to his cab and gave the Nameless address.

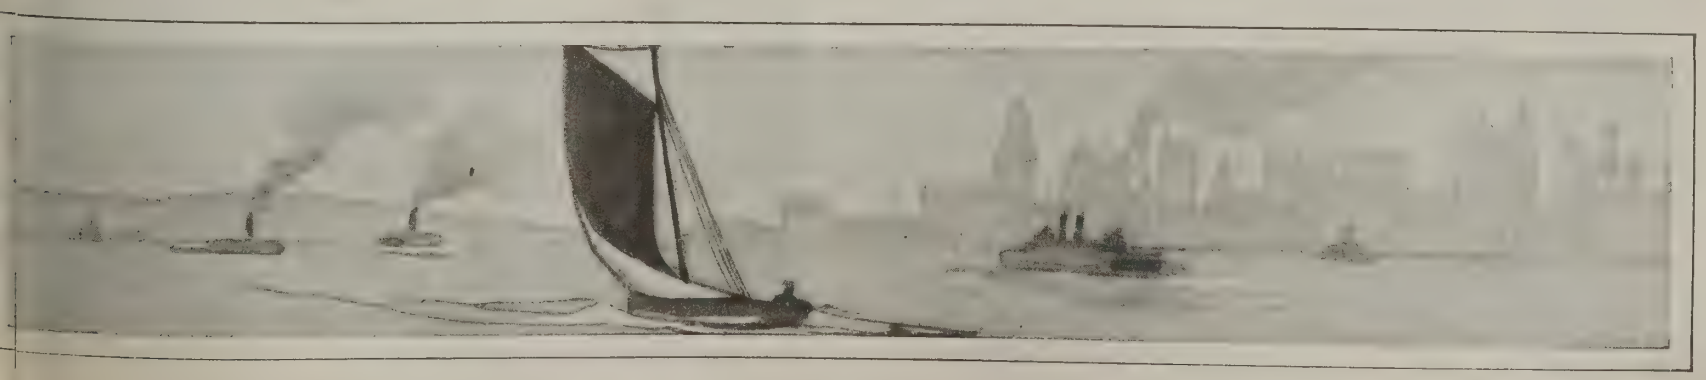
There are some men who meet an all-important minute through pure luck; there are others who are carried to it by a very real force recognized lately and only in the unwritten lexicons of the United States under the term "hunch." Mr. Blurt belonged to the latter category; even without a cab and with his eyes closed the driving power of this vaguely defined inner impetus would have carried him straight to the Nameless door and brought him face to face with an astounded flunky at the very crucial moment when the young lady he sought was about to issue forth with two aunts who didn't like each other to an opera that she herself detested.

"Is Miss Nameless at home?" asked Blurt of two popping eyes mounted on a florid face under a thatch of powdered hair and over an array of nearly bursting buttons.

"Miss Nameless is not at home," replied the butler without the slightest hesitation, staring at Mr. Blurt's natty but anachronous attire.

"Oh, yes, I am!" said a voice from behind his bulging padded shoulders, a voice of a timbre which once heard lingered forever in the treasure house of memory.

The butler stood aside with malicious alacrity, as if to say by that withdrawing gesture of his whole person: "You will



interfere, madam. Well, just see what you've let yourself in for."

"Good evening, Mr. Blurt," said Miss Nameless promptly, holding out her hand to give the hall-mark of welcome to her greeting.

She was wrapped in a cloak of a peculiar blue, striking to the eye, yet as soft as the bowl of heaven on a sunny April morning; behind her stood the aunts, more roughly but no less gorgeously clothed for the transit from hall to limousine, limousine to lobby. Blurt's mind prodded him with the reminder that it had called his attention to the waiting car and that it was not its fault if he was now in for an awkward act of prompt withdrawal. He was seeking desperately for the right word—if there was one for such an unwarranted occasion—when Miss Nameless spoke again, this time to the two aunts.

"I am so sorry," she said, "you will have to go on without me. And please don't send back the car. Will you come this way, Mr. Blurt?"

He thrust hat, stick and gloves into the butler's unnerved hands and bowed low as he passed the elderly ladies, partly out of deference, partly because he feared he might betray his amusement at the way all remonstrance had been left suspended on their severely puckered lips by their niece's summary dismissal and prompt departure from the hall. She had been rude both to him and to her aunts in not offering an introduction, but he recognized in that very rudeness a rapierlike stroke of finesse as swift as it was masterly. She had saved him, the situation and herself.

He followed his guide through a formal drawing-room, a slightly less formal drawing-room and a dining room, in each of which Miss Nameless paused just long enough to give him a chance to glance round and pray that she would go on to a kinder atmosphere. As though in answer to his prayer she opened a door into such a library as is the beating heart of a great house; it was a room crowded with worn books, worn furniture and worn memories of all the ages known to print, a brown room of mellow lights and deep inviting shadows, of smells of old leather, old oak and a pungent wood fire sparsely lighted, for incense, not for warmth.

"My wrap, please," said Miss Nameless, turning her shoulders toward Blurt with that demanding gesture which makes of so slight a service as the lifting of a cloak a symbol of favor and bestows a nuance of intimacy as delicate but as ravishing as the scent of unseen roses blown across a hedge.

Blurt lifted the light burden and for a moment held its softness crushed in his hands and against his chest while he stared spellbound at the beauty his action had disclosed. It was not the large dark eyes that held him, nor the mobile lips, nor the small head poised on slight but exquisitely rounded shoulders, nor the curve of the white bosom, nor yet the dark chalice of the dress in which these charms were cupped. All these things existed not for themselves, not necessarily for Miss Nameless, but as an indivisible whole which breathed to his senses the single word "woman."

Into his trance came the sound of her voice: "Do you think it's too 'Lo! and behold'? My dress, I mean."

Blurt turned to drop the cloak across a chair; even in flippancy, he thought, her voice was not robbed of a certain innate dignity. It still held the power of restraint behind the sound of a distant gong, lightly touched.

"I am afraid I have been rude," he said. "I didn't mean to stare."

"A look like that isn't rudeness," said Miss Nameless as she walked to a couch and sat down.

"What is it then?" asked Blurt, following and turning toward her abruptly. "Adoration?"

"No; oh, no," said Miss Nameless, laughing softly.

Her face sobered. "I'll tell you what it is. Tribute, impersonal homage such as you would give to a masterpiece in marble or in oil. That is all."

Blurt sat down on the couch beside her, clasped his hands between his knees and stared into the dying fire. "You are right," he said after a long pause; "uncannily right. But what do you mean by saying, 'That is all'? A masterpiece is imperishable." He turned to her face. "Do you recognize something within and about you that is undying?"

She met his eager gaze with a look that hesitated between sincerity and trifling, glanced at him mischievously and then with a sweet gravity which brought a peculiar youth to her face as though she had the power to rise at will to the level of truth, where all ages are one and forever young. Slowly she raised her hands to her breast.

"Here," she whispered. "Sometimes."

"How old are you?" cried Blurt, exasperated by the confusion her varying spell had thrown round him. "Why did you come to my place? Why did you go? Why do you see me here? What are you, and just what do you wish from me? Are you woman or maid or—or both? Where is your heart, and to what day do you belong?"

As he shot the string of preposterous questions at her he leaned closer and closer to her face, watching it intently as though he sought solution from its fleeting transitions in expression. She turned her eyes deliberately to his, but some instinct of self-preservation drove him to evade them; he sat back, baffled.

Miss Nameless rose, went swiftly to the wall, pressed a button and flooded the room with light from a ponderous bronze-and-crystal chandelier.

"I wish to give you every advantage," she said in explanation as she turned and walked slowly back to him, stopping as she felt her full figure to have come within the focus of his eyes.

He stared at her unceremoniously, no longer with amaze, but in a purposeful effort at penetration. The slimness of her slippered feet, of her sheer silk-clad ankles; that dark chalice of her dress looking like a pliant wisp of night grown

"Oh, Nanna, I am Like This House—Terribly Clean, Small, Hidden, Divided From Everything Round"

fixed to hold aloft in its gossamer embrace the flushed white dawn of her bosom, her neck and cheeks; above all, her face, now shining as though on the verge of intimate betrayal, now shadowed under the sweep of thoughts that passed like clouds across the infinite spaces of the mind, raised him to the heights of hope for a revelation only to dash him down into despair at the portal of unfathomable mystery.

It was right, he told himself, that words should not issue from such a vision to strive in vain to pin the hovering wings of the unexplainable. In answer to his questions she offered herself—the firm soft texture of her matchless skin to tell her youth; the rapt and luminous stare of the seeker to give reason to any voyage of discovery; the momentary absence of light from her face, that left it a translucent shell to paint in a single stroke withdrawal from any failing tenure, the hunger for some bourne long sought to bid him to her side and then, question to his question: What are you, and just what do you wish from me? Ah, what indeed! Are you woman or maid or both? How often asked, how often wondered! Where is your heart, and to what day do you belong? Silence, long silence of expression, as though in woman eternity can find faint echo!

Such was the nature of the vague, ephemeral, tantalizing yet in a measure soul-satisfying reply that Miss Nameless offered to the sum total of Blurt's rapid-fire series of queries.

It left him dazed, as though he had just walked the dizzy ridge between the wide sunlit valley of infinite revelation and the yawning depths of ultimate denial without toppling into either.

The sensation that now assailed him was one of the pleasurable excitement that is found alone in a feeling of strictly temporary safety; he feared yet he wanted more.

From this point of doubtful vantage his thoughts involuntarily turned back to consideration of Miss Phyllis Joy Livingston as if in the midst of swirling and untried elements his gaze sought to fasten upon some fixed and unalterable landmark in the human stream and steady itself to a safe and sound sense of actual va... Here was no mystery, no will-o'-the- to confuse the eye and reduce grim t through reckless ignoring to the di... sions of a laughingstock. As science the phrase is ...s because there is no fact to which ...esonds.

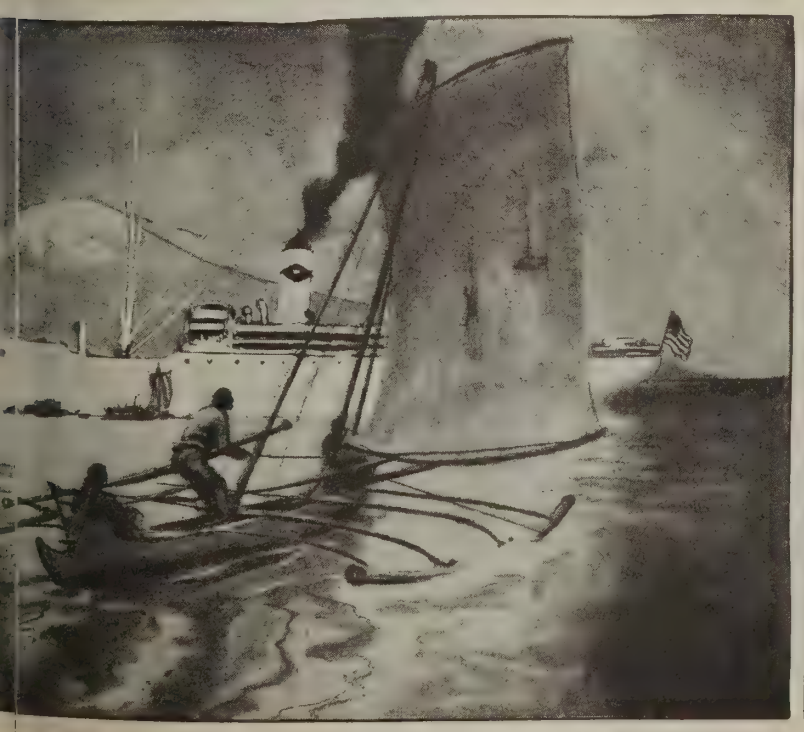
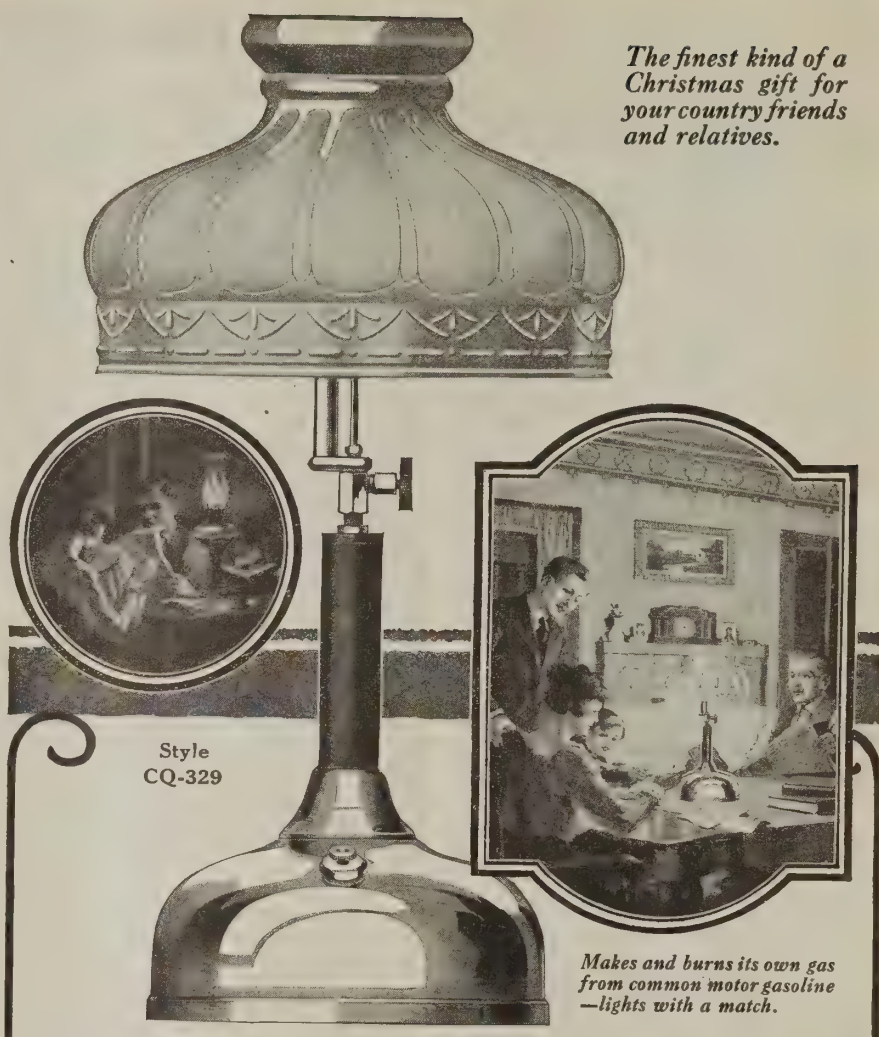
...the stock devices of a certain ...oriction is to regard the capitalistic ...individual ownership of property ...rtf lodge, much like the Masons or ...el ws, to which one gains admission by making an application. When the application is approved and the candidate has taken the prescribed oath of fealty the grips and passwords are imparted to him. In a side room sit the hierarchs who manage the concern—meeting, presumably, every Tuesday and Friday afternoon at two and deciding what the capitalistic system shall do. Hierarch A moves that the capitalistic system shall embark in a world war, which is duly debated and a binding vote taken. Hierarch X proposes that no further concessions shall be made to labor and that the capitalistic system shall forthwith proceed to dig its own grave, according to the Marxian prophecy. The motion is carried, whereupon all individual owners of property are irrevocably committed to that program.

One might exactly as well speak of monogamy in like terms, for capitalism is no more a system, in that sense, than monogamy is. Nobody controls it, nobody directs it, nobody leads it. Some bishops have taken strong ground against polygamy and divorce; but nobody thinks of calling them the leaders of monogamy and implying that their opinions are specially binding upon every man who has only one wife or expects to have only one wife. No capitalistic leader's opinions or wishes are any more binding upon other men who are capitalists because they own property or expect to own property or believe in private ownership of property.

To indict the capitalistic system is as easy as, for example, to indict democracy. Anybody can point out scandalous abuses that exist under the democratic system—lynchings, demagoguery, wasteful and inefficient government, incompetent representative bodies, and so on. Thoroughgoing theorists like Lenine undertake to obviate all that by discarding democracy and setting up a dictatorship. To most people the only hope is not in discarding democracy but in improving it. No particular wit is required to get acquainted with a disease. Cave men did that. Finding a genuine remedy is infinitely more difficult.

Fiction masquerading as economic science not only loses the credit it might claim as fiction, but so far as it has any effect at all beyond furnishing a transitory entertainment the effect must obviously be bad. There is a good deal of it afloat nowadays. A word of caution is in order: Startling statements and startling word pictures that pretend to be scientific—that is, to give facts—should be well shaken before they are swallowed. There are plenty of painful and scandalous facts. But painful and scandalous statements or deductions that are not facts are still more plentiful. Try to get the genuine. Check them up by your own experience and information wherever you can. A healthy, critical Missourianism, that demands to be shown, is especially useful just now.





The finest kind of a Christmas gift for your country friends and relatives.

Makes and burns its own gas from common motor gasoline —lights with a match.

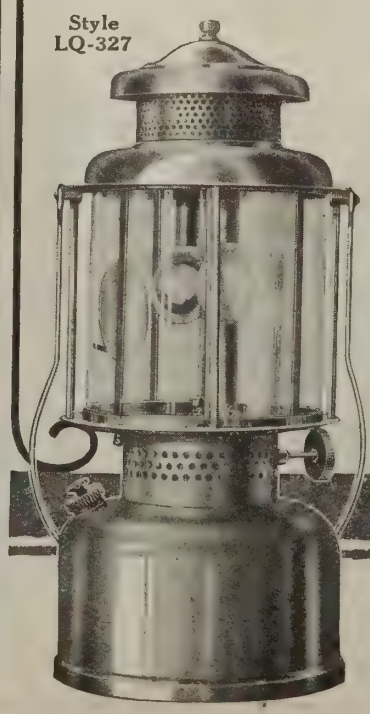
The Coleman Quick-Lite

Most Brilliant Light in the World

THE Coleman Quick-Lite is the finest of all home lights. Once you enjoy the pure, white (yet soft and restful) brilliancy of the Quick-Lite, you will never be satisfied with an old style lamp. You can always depend on the Quick-Lite to give you plenty of natural eye-easing radiance——

More Light Than 20 Oil Lamps

The Quick-Lite—aside from the wonderful light it gives—has many other advantages. No wick to trim. No globe to wash. No daily cleaning or filling, etc. It is really a miniature gas plant—the fuel is common motor gasoline. Also, you will find the Quick-Lite a most handsomely designed lamp, with Universal Shade Holder fitting any style of shade you prefer.



The Quick-Lite Lantern

Is the best light made for out-door night work. It is built and operated under the same principle as the Quick-Lite Lamp. Lights with a match and gives the same brilliant white light of 300 candle power. The wildest storm won't blow it out. Burns in any position. No danger if tipped over and rolled around. Made of durable brass, heavily nickeled and highly polished. Will last for years.

15,000 *Dealers* sell Coleman Quick-Lite Lamps and Lanterns. If yours can't supply you write nearest house.

THE LEAGUE OF NOTIONS

(Continued from Page 25)

Henry Kellogg laughed shortly. "I've had a few calls myself to-day. Some of these small dealers round town aren't taking this thing right."

Mr. Bangs addressed himself to Ruth. "Have you been interviewed too?"

"Only twice," she said. "The butcher wanted to know why I'm not satisfied with him, and he couldn't seem to get it through his silly head that I *am*. I couldn't persuade him of the principle. And the other was our coal dealer. Of course we haven't put in our coal order for next winter. It's too early. He—well, he sort of threatened. Not that we need to worry, but he said we're taking an awful chance when we antagonize everybody like this."

"Meaning he'll refuse to sell us? Well, let him," said Mr. Bangs scornfully. "Let him. It's his suicide—not ours."

Nevertheless, he wished that the publicity had been delayed until the club was ready to function. A good field marshal doesn't notify the enemy before an attack over the whole front. Sugden thought that the machinery would be ready in two or three weeks, but during that interval it would still be necessary to deal with the former tradespeople. And some of them might prove crotchety about it. Mr. Bangs had to admit that he couldn't blame them.

As a matter of fact, there was grumbling among the retailers already, and no small amount of heated argument with their customers over the telephone, and a slight advance in prices; but when, on Friday, Sugden announced that he had arranged with Robinson's market, the largest in town, to store for him at a fixed charge two carloads of dry staples, which were sure to be wanted speedily, and could be bought now from a bankrupt wholesaler at a great bargain, a hurricane of protest sprang up on both sides of Main Street and eddied powerfully through the residence section. On Monday the Wellington Retailers' Association sprang into being as a defensive alliance—and the market which was to store goods for the club was denied membership. And almost every local dealer in foodstuffs, including Robinson, had a sale of specials.

"Well," said Sylvia defensively, "the club only talks about twenty per cent, and Robinson's selling cereals at a third off, if you take two cases. And we're trying to save money, aren't we? And our club agreement isn't in force until the club's ready to begin buying, is it?"

Mr. Bangs had to admit that it wasn't, but he thought that Sylvia had transgressed the spirit of the constitution. For himself he saw no harm in buying a few boxes of cigars, ten per cent off and triple certificates besides, making a virtual discount of thirty-four per cent, but that was different. Cigars were luxuries anyway, and food wasn't.

"Robinson's doing the right thing," he said confidently.

"He's modern. Sugden's paying him for storage, and he wants to make a contract with us. He says he can do as well for us as we could for ourselves, if it's a cash proposition instead of credit."

Sylvia's eye wavered unexpectedly. "Ruth's hired a nurse," she said. "Of course that isn't part of the servant problem and she's an awfully nice girl, but she'll have to eat with us. Do you mind so very much?"

"I don't mind anything that'll keep those brats quiet," said Mr. Bangs smartly.

Never before had any single movement got into its stride in Wellington with such alacrity. Sugden announced to the directors that the club would be ready to function on Saturday, and he also reported a total membership of two hundred and seventeen, with ninety nonmembers already put down as privileged buyers. Office space was ready; and a force of clerks, and a dozen telephones, and limitless blank forms and slips.

To deliver orders with special speed—at a slight extra expense—there was a fleet of half a dozen motorcycles with side cars, and two small delivery wagons. And the office adjoined a dilapidated four-story building where imperishable goods were to be carried in stock. Later this would become the Number One Branch of a cooperative department store.

Neat little bronze buttons appeared in coat lapels, and the wearers thereof looked barbers and waiters straight in the eye, and left them tipless and profane. Mr. Bowker laughed lightly at the garage owner who wanted to charge him the list price for a new gasket, and countermanded the order. He could buy it at cost next week. Mrs. Bowker found herself the chatelaine of a province hitherto unclaimed; and for the first time in her life she posed as a civic benefactor. And Mr. Bangs going silently about his business still resented, now and then, the lack of honor in his own country. There were already several little anti-servant eating clubs in his immediate neighborhood, but everybody thought the idea was Ruth Kellogg's. And he was getting very tired of eating every day with two other families. He thought that the other children were teaching Baby Bangs bad manners.

On Friday night three very excited women sat round the Eversons' dining table and wrote out three comprehensive lists. At the same hour downtown in his office Sugden leaned back in his chair and smiled wearily at Mr. Bangs.

"All set!" said Sugden. "Leave go the ropes!"

"Sure?"

"Sure as shooting. I've let contracts for everything I can think of from meat to gasoline. Favored the local crowd as much as possible. Held 'em all up to the last minute, and then jumped. Robinson's Market got the meat contract; they've leased the next building already. Robinson says he netted forty-five hundred dollars last year; I'm practically paying him a salary of forty-five hundred, and getting the meat at cost, and the cost'll be a lot less because he's doubling his business overnight. I've got a year's agreement for green vegetables with a limit of prices on everything direct from the gardeners; the Elite Grocery'll simply clear the stock for us and deliver it for us, and take a flat commission. They yelled hard at first, but it'll save their lives, while some of the others'll bust. And so on right down the line. This is all aiming toward our owning our own stores eventually. Just now we'll only stock what we can't contract to have delivered for us."

"Think we'll really save twenty per cent, Walter?"

Sugden laughed. "I've got advance orders from members that foot up to six thousand dollars, market prices, right now. I figured out what they cost us, just for the fun of it. Forty-two hundred. Overhead's very low. Rebate to members, sixteen per cent on the first bunch of business. His smile presently faded, and his mouth straightened. "There's one thing about it I don't quite like, though. Bowker's been down here twice. He wants me to throw a lot of business to one or two pets of his. His son-in-law, for one."

Mr. Bangs stiffened.

"Well, can you do it?"

"Not at the lowest prices, John. And I tell you frankly there isn't anything in this for me unless I make a mighty good job of it; and if I don't get rock-bottom prices on everything—if I try to please somebody by placing orders out of friendship—you all lose a little."

"Hm!" said Mr. Bangs, looking at the ceiling. "I've been sort of worried about our milkman. He's been so oblig[ing] his milk's so good, I was hoping—"

"Milk's an out-of-town contra[ct]" Sugden. "Best quality, and I'll sa[ve] cents a quart."

"Just for emergency though, [as] you ——"

"Couldn't do a thing," said [Sugden] "This isn't a sympathy propositi[on] war on the cost of living. And we [can't] let it become a League of Notions [or] be trouble."

At home Mr. Bangs told Syl[via] whenever he met that milkman h[e] feel like a defaulter.

"I shan't!" said Sylvia prompt[ly] feel like a liberated slave! Why I found out that the little cheater w[as] it to Ruth for half a cent less!"

It was midafternoon on Saturd[ay] her freedom suffered a totally un[ex]shock. She had forgotten fruit, automatically telephoned her regul[ar] for it.

"Sorry, ma'am," he said. "I [can't] it to you."

"Haven't you got it?"

"Why, yes, but ——"

"Well, please hurry and send [it] then, because we've got four [or] to ——"

"Sorry, ma'am, but I can't [do] nothin'. I belong to the retailers' [asso]tion. I might have waited a week to say this, but I'm sayin' it now."

Sylvia gasped. "You mean yo[u] sell me anything?"

"Yes, ma'am. This here refor[m] cuttin' the underpinnin' out from u[nder] business, and we can't sell nothin' members.

"I'm awful sorry, Mis' Bangs. [You] a good customer—awful good. [We] had no trouble. But we got a pr[int] list of your members, and we simp[ly] have no dealin's with 'em. I'm so[rry] we gotta take steps."

She was so angry that she ran[g] stantly and called a second groc[er] listened and said: "Hold the wir[e]" then shouted: "Hey, Jimmy! B[ring] Elm Street?" At the end of a thirty interval he also informed her that [he] sorry, and she was still pawing the [air] the di[al] when R[uth] logg ca[lled] white an[d] mined.

"Syl[via] just we[nt] the C[lub] Pharm[acy] get som[e] lates. W[hat] you thi[nk] said? T[hen] they'll [be] drugs ar[e] up pr[ice]tions, bu[t] for that—

S y[lvia] laughed [so] cally. "[Oh] know? [What] for it no[w] club's [the] succeed!

"Is it [so] it? Hac[k] better t[han] over? If [you] us really [do] anythin[g] hurry—

"The [ad] we start club was [so] ourse[lves] money a[nd] from [the] sandba[gs] wasn't it

And I don't think she's such an awfully good leader anyway. I wonder."

VII

AT THE end of a month the three families agreed to breakfast independently. No one cared to speak out in plain English, but the fact was that all of them had had enough of constant association, and preferred privacy to economy. So they agreed that the children made breakfast rather too confusing, and that it would be far better not to begin coöperating until after nine o'clock.

As far as the activity of the reform club itself was concerned, however, they were increasingly optimistic. Sugden's tremendous energy had enabled them to snap their fingers at the pugnacious retailers, and they liked the sensation. They had won the first move in the battle for independence.

And at this same juncture they began to realize that in their mutual efforts toward economy and comfort they were doing now what could just as easily have been done years ago, at the expenditure of a little thought and the sacrifice of a little convenience. An hour's concentration on Sunday was enough to plot out the menus for a week ahead, and plot them cleverly; and after that there was nothing to bother about. Sugden's clerical force did all the bothering.

To be sure it was awkward if one discovered at five in the afternoon that an important item for to-day's dinner had been left out of the order given the day before yesterday, but memories improved as time went on, and there was always the exhilarating consciousness of thrift, no matter what happened. And it was delightful to discover what the club could buy at reduced rates, if needs were only anticipated—it could buy at a heavy discount anything from Mr. Bowker's gasket to Rupert Everson's negligée shirts and Henry Kellogg's drawing pencils. One had to wait, of course, but the saving was worth it. More than that, Sugden had made alliances with a score of good shops in New York; and if anyone cared to walk a little out of the beaten track it was possible to get special discounts on articles that the club didn't care to handle, and to charge them through the club too. Why, in the very first month the amount of time saved from wrestling with bank statements and credit slips was enormous.

And then for this particular trio the servant problem was solved too. They reminded themselves of it at frequent intervals, but always out of hearing of the Kellogg nurse.

It was making Elysium, and yet there were drawbacks. Half a dozen of the oldest retailers in Wellington had already gone out of business—shut up shop and quietly drifted out of the town, and Sylvia, innocent of intent, began to feel guilty of result. The call which was made upon her by her quondam grocer was no balm. He came, painfully attired, late one afternoon, and grinned feebly at her.

"Well, I'm leavin', ma'am," he said. "I sold out to Sugden, lock, stock an' barrel, this forenoon. He's gettin' a fine line o' goods at a back-breakin' price. But last month alone I lost all I made last year, and that wasn't nothin' to brag about."

Sylvia murmured something in sympathy. Theory seemed to work out rather cruelly in practice.

"Well, you see it was like this: A grocer don't never make no big wad o' money—he makes it in dibs an' dabs. An' now I was losin' money instead o' makin' it on half the stock I sold. Take sugar. The last time I could buy and sell like I wanted to I bought sugar by the bar'l at nine an' a half, and sold it to you people for fifteen cents. There's a waste of an eighth in every pound. The bag an' the string costs a cent nowadays. The store an' rent an' light an' one thing an' another—well, that costs suthin', and if I charge in my time for waitin' on a customer—charge it, say, at a cent a minute, like a street-car conductor gets, that makes the deal cost me fourteen an' a half cents. An' now I gotta sell it at eleven and a half, like the Food Administration says. An' it's the same way with lots o' things. I lose the pickin's. Is it worth it? No; but if you'd bought your sugar from me the way you do from your club—a lot at a time, and not a little bit, an' not wait till you'd run out, an' then have to have it delivered all alone by itself in an awful hurry—well, that's just an illustration."

Sylvia, against her instinct, wanted to condole with him.

"But—but what are you going to do?"

"Oh, I got a job on the street cars," he said; "an' I took out a privilege in your club. Now I gotta chance to kick when I wanta. I'm in the union, an' if I wanta strike for more pay I c'n strike, an' I'm gonna see my family fed an' took care of, too, I am. I sh'd worry. I'm glad I'm out of it. I'll make more money on the cars, an' not have any risk, neither. Well, I kind of thought I'd come round and see you, that's all. I never had no quarrel with you. But you folks in your club seems to think all the rest of us was gettin' rich off you. Well, we wasn't. We was goin' broker an' broker. Well, I guess that's all. Good day, Mis' Bangs."

She told her husband about it that evening, and he laughed at her canonization of a profiteer. He also quoted the statement of the president of one of the Wellington ice companies, who had declared naïvely that though he could have made a profit on ice at fifty or sixty cents he had charged a dollar so as to teach the public to conserve the supply. During the remainder of the evening he had many interludes of abstraction, nevertheless, and in response to Sylvia's inquiries he told her that all the Wellington stenographers were unionizing and hinting at a seven-hour day.

By this time Sugden's vigorous campaign had drawn to the club four hundred active members, and twice as many associates, and made it a huge and humming solidarity. The retailers had also strengthened their forces, and stood to their guns, refusing to sell a penny's worth of goods to a club member, even in the direst need, so that for insurance, in case of trouble, the directors, who had fixed up an imposing room where they could argue in comfort, were already planning the department store, which should be a model and a monument combined. It looked very much, indeed, as though Wellington were in a fair way to settle its living problem permanently; or at least to prevent a complete victory of the enemy.

At the end of the second month Mr. Bangs bought the small car he had coveted for half a year. Sugden added it to the club order for delivery wagons, and saved him fifty dollars on it.

"We can certainly afford it now," he said to Sylvia. "Our club bills have been six hundred dollars, counting the porch furniture and your dressing table, and that means a hundred and twenty clear savings, in two months, when we get our dividend. The flivver'll pay for itself in a year at that rate. Of course it isn't a car like Henry's, but ——" He shrugged his shoulders expressively. "Sometimes I wonder," he said, "if we aren't seeing almost too much of those people."

Sylvia looked up quickly. "Have you been thinking about that again too?"

"Too?" echoed Mr. Bangs. "You don't mean to say you've thought of it again?"

Sylvia regarded him as though he had discovered a remarkable secret.

"Well, if you're so tired of them when you only see them at dinner maybe you can imagine what it's like for me—every single day."

"But I thought one of you had a vacation every day, in turn."

Sylvia hesitated. "That was the way we started," she owned; "but the one who was supposed to have the vacation felt sort of mean about it, and Ruth's nurse has really been looking after all of the children, so all three of us have helped. It does save a lot of time, and we aren't bothered with servants any more—still it does get sort of tiresome. Lots of the other crowds who got the idea from us gave it up long ago. It's so—sort of public. And—there's something else too. Rupert and Henry are getting awfully Bowker lately. They didn't used to be, at all. Somebody said just yesterday that Mr. Bowker's lining them up to work for him when he wants to be mayor. Rupert's head of the real estate and insurance people, and Henry's awfully important in his lodge. I suppose it *is* catty to say that, isn't it?"

Mr. Bangs sprang to his feet and began pacing the room.

"By George," he said, "these things would go great—simply great—if you could ever break away from the human element! There isn't any servant problem, and we're saving money, and I don't have to fret about your doing all your own work, and yet I'm so sick of eating with Ruth and Helen and Henry and Rupert all the time, I want to heave a soup plate at 'em!" He stopped at her chair. "I'd give most anything if we could get back by ourselves somehow. That's what I married you for. Honestly, do you think they'd be offended if we did?" He interpreted her reaction correctly. "Oh, I wouldn't want you to do all your own work again. Besides, we're saving every month as much as a cook used to cost us. Better wait until I've looked over the accounts, though. I'm a little shy this month. Can't you get somebody to come in by the day, temporarily, to sort of fuss round and look after the baby and all that?"

Sylvia smiled straight up at him. "I'll do that, Bruno—only you'll tell me as soon as it's safe to have a cook, won't you? Only, if we had a cook how could we afford the car?"

"Why, that's easy. Cutting loose from these other people won't cost much more than it does to eat together now. I doubt if there's twenty dollars a month difference. And I buy gas and oil and spare parts from the club anyway, and Sugden saved me fifty dollars on the car itself. But you wait a week, and then we'll see. I'd parley with Ruth and Helen, anyhow."

She evaded a direct response, because she wanted to think it over. She was afraid that Ruth and Helen would be seriously offended indeed, and she hadn't forgotten that the domestic trio was her own suggestion. The food question was less important than the communal housework, and she saw that Ruth and Helen might reproach her for spoiling a very excellent labor-saving device.

"The club must be doing a tremendous business," she said irrelevantly.

"Terrific," said Mr. Bangs. "Sugden's got the proposition right under his thumb. The dealers are scared to death of us. Every few days he buys out some chicken-hearted swindler for next to nothing. He told me yesterday he'd done a gross business, so far, of over two hundred thousand dollars, and there's twenty-two per cent rebate in sight for us this minute."

She was silent while she did mental arithmetic. "What does Mr. Sugden get out of it, then?"

"Two per cent of —— Well, by George!" Mr. Bangs' face was a study. "Well, I'll be —— Why, he gets the excess two per cent, and that'll be something round four thousand dollars; plus ten dollars a member—that's another four thousand. Why, he'll have made eight thousand dollars out of us the first quarter! I hadn't stopped to figure it out before."

They regarded each other steadily. Sylvia drew a long breath.

"Well, I guess he's earned it, hasn't he?"

"That isn't the point!" said Mr. Bangs hotly. "I bet you he'll clear upward of twenty thousand dollars for half a year's work! And we could hire just as good a man for ten! I'm going to speak to Bowker about that, by George! I don't care how much he's saved us. It's too much money to pay him."

He did see Mr. Bowker about it, but Mr. Bowker refused to be excited. Mr. Bangs could hardly believe his ears.

"Oh, well," said Mr. Bowker, "I don't think we ought to begrudge him anything. And as far as economy goes, it's cheaper to hire a crack man at a big salary than a second-class man at a second-class salary. John, what do you think about buying the land the storehouse is on and building us a building right there? We're going to want to carry bigger stocks. It's a little mite out of the way, but it'll be a lot cheaper than if we bought on Main Street, and that's the thing that really matters, anyhow. And we want to make it worth while for us men to go shopping the old-fashioned way and carry things home. We'll mark up the delivery charge a little, and make folks be economical. Now you've got influence with some of the men in your neighborhood; I wish you'd talk it up with 'em. Just so the council will put an outside price on it, and then let us dicker. I haven't sounded the proposition out yet, but I hear the land's on the market. If we're in this thing to save money we're in to save it, and a question like a little convenience don't count for so much. Besides, it's high rents and things that make the retailers charge high prices. Isn't that so?"

Mr. Bangs thought that it was so, and he talked it up. Seven of the councilors were close friends of his, and a dozen were good acquaintances, and all of them promised faithfully to support the resolution to buy the cheaper site.

"But will that be fair to Sugden?" one of them asked.

"Oh, yes," said Mr. Bangs, recalling how carefully he himself had worded Sugden's contract. "It's a matter of bookkeeping. His commission's a fixed charge against our operating profit. To build a store may come out of our dividend, but it can't come out of his rakeoff. It's just a question of what's best for us in the long run."

Sylvia also did a little lobbying, and the council advised the directors to buy the land if it could be bought reasonably. At the quarterly meeting Sugden showed a surplus of nearly seventy thousand dollars, which would justify a rebate to active members of nearly twenty-five per cent.

"And if we purchase the land, ladies and gentlemen," said Mrs. Bowker stiffly, "at a fair valuation, we shall still have forty-five thousand dollars left, or a fifteen per cent rebate—which seems to me plenty good enough."

And apparently the board agreed with her, for the resolution went through, together with an authorization for the president to negotiate with architects and builders, for the best interests of the club. But the payment of twelve thousand dollars to Sugden very nearly broke up the meeting; and the attitude of the board toward the managing director wasn't helped by Sugden's protest at the way the board was furnishing its quarters and interfering with his work.

VIII

MR. BANGS came home the following evening deeply pleased with himself, and was hardly able to kiss his wife before he launched his good news.

"Our rebate'll be about a hundred and fifty dollars," he said, "so I ordered some slip covers and a spot light and a rug for the car.

"From Sugden of course. It'll take three or four weeks to get 'em, but I'll get a rebate next quarter on the order, and while I think of it there's no harm in stocking up now on all sorts of stuff for the early winter—stuff that'll keep. That'll boost our next dividend. It's like compound interest, worked backward! . . . Where do we go to-night—Henry's?"

Sylvia laughed excitedly. "Hadn't you noticed, silly? Look in the dining room."

Mr. Bangs looked. The table was set for two. He looked back at Sylvia. "By George!" said Mr. Bangs, softly overwhelmed.

"It wasn't as awkward as we thought, Bruno. They were all just as tired of it as we were, only nobody wanted to be the first to say so. We'd all rather be alone, even if we lose a little by it."

"What a relief—what a relief!" said Mr. Bangs, exhaling luxuriously. "Only we'd better run in and see both of them a second, to-night. I don't want 'em to think anything's gone wrong between us, exactly."

During the dinner he continued to express unbounded relief, and he even claimed once that he had never enjoyed himself so much, and never expected to again. When, after he had helped Sylvia with the dishes, he strolled over to have a friendly word with Rupert Everson, he felt far more friendly than common. The sunshine of peace was breaking through the clouds, even though the servant problem was coming up again and he was extraordinarily short of cash.

Rupert greeted him with effusion. "How's the car running, John?"

"Couldn't be better. Why?"

"I'm thinking of getting one myself." He grinned all over. "I suppose you knew I'm the broker in this club land deal, didn't you?"

"Broker?" Mr. Bangs was momentarily missing. "Oh!" His eyes narrowed. "You don't mean the department-store site?"

"That's what I do! Bowker said as long as some broker had to get a commission on it he wanted it to be me. I tell you I was pleased. Never thought he was that much of a friend of mine. It's the biggest commission I've had in two years. Closed right off the bat too. The club took the owner's first offer."

Mr. Bangs began to glow. Rupert was as innocent as a child, but that rumor of Mr. Bowker's accumulation of henchmen was red-hot. "But look here, Rupert! Do you call that a fair deal for the club? Why should we have to pay you a commission, anyhow?"

"You had to pay it to some broker, didn't you? Why not me?"

"I don't see that for a minute! I don't see why we should pay you ——"

"Why, I've got to live, haven't I?" demanded Rupert, ruffled. "Selling real estate's my business. The club wanted to buy some property I happened to be the agent of. Every agent in town had it. Bowker came to me and ——"

"But you're a director, Rupert, and Bowker shouldn't have come to you."

"And I took mighty good care not to vote on it too! You haven't got me there; not much. And I told the board exactly why I wasn't voting too. It's my regular business, and —— See here, John! Didn't you decline to be attorney for the club? Well, suppose they'd offered you a salary—wouldn't you have thought it over?"

Mr. Bangs cooled a trifle, but still sat on the edge of his chair. "Just the same, it isn't a parallel. The higher the price the club paid, the more your commission! And if your regular business and your club directorship conflicted, you shouldn't have handled this thing at all. And as far as I can make out from what you've said, you didn't even try to get a low price for the club. You let 'em pay the asking price—you said so. And the council distinctly advised us to buy only if the price was reasonable. Who owns it, anyhow?"

"New York parties," said Rupert shortly. "And if the club takes the first price that's offered, because the directors think it was reasonable, that's none of my business, is it? And as long as you're criticizing my way of running my own affairs I'll tell you right here and right now that some few people round here are wondering where you and Sugden get off."

"What?" exploded Mr. Bangs.

Rupert spread his hands in deprecation. "Oh, I don't say I haven't put in a good word for you. But you brought this man Sugden in here, and he's making two or three times as much out of it as he ought to, and you're old friends, and he's not so favorable to Bowker or any of the other officers, and some folks think it wouldn't be anything more than decent gratitude if he slipped you —— Hold on there, John! This isn't my say-so. Only you've been pretty frank in admitting, up to now, how you couldn't afford to own an automobile, and you're accusing me of I don't know what, and I'm simply telling you ——"

Mr. Bangs had risen abruptly, and his shoulders were cast in a military mold. "You bring me any man who's said that and I'll knock his head off! You come over to my house and I'll show you my check stubs. By George! I won't stand for it! If this community's got that sort of crackbrained shrimps in it I'm sorry I live here! Who said it? Name 'em! Name just one of 'em!" He waited, tense. "Go on—tell me just one of 'em, that's all! Who said it?"

Rupert was nervous, but disinclined to betray confidences. He chanced to occupy a rocking-chair, and now he rocked to soothe his nerves.

"Why, I don't remember any particular ——"

"That's damned nonsense, Rupert, and you know it!"

"No, it isn't either. I don't pretend to remember every time I talk with ——"

"Rupert, you're stalling!"

"Oh, no," said Rupert, with somewhat less assurance. "And anyway, I don't think it's quite right for me to repeat ——"

"You thought it was all right to repeat what you did, though. Are you going to tell me who it was—or aren't you?"

"Well," said Rupert, still more feebly, "it wasn't a man; it was a woman."

"Mrs. Bowker!" exploded Mr. Bangs, and turned purple. "Was it?"

"I sort of think," said Rupert apprehensively, "we better change the subject. Don't you think so, too, John?"

"I think I'd better go home before anything happens," said Mr. Bangs through his teeth, and with that he whirled about and stalked dignifiedly out of the house and across the lawn, meeting Sylvia at his own doorstep.

Sylvia, fresh from the Kelloggs', had a choice packet of rumors from yesterday's directors' meeting. Mr. Bowker had already begun to pull the wires which he hoped would land his son-in-law in Sugden's place after the next quarter. The majority of the board was pronouncedly Bowker in sentiment, and Mrs. Bowker was reported to have said that she intended to make a directorship the hall-mark of social prestige. Lukewarm Bowkerites were being conciliated by frequent little favors and, though there was probably nothing to condemn, there was certainly discrimination.

The mayor had hinted, under a thick veil of diplomacy, that the club was likely to prove a strong factor in local politics, that Mr. Bowker would be an able successor to him, and that steps should be taken very soon to prevent an uprising of the plebs who were opposed to reform.

Bowker himself had suggested that the club could do worse than to buy the Evening Herald, now on its last legs, and run it as the official organ of the club. It could carry all club bulletins and market announcements, and ought to make money. All the sources of the club's present supply of goods would have to advertise in it too. Somebody else had pointed out that every banker in Wellington, every lawyer, every city official of importance and e ry tor but one had joined the club, a o that the key to the labor situati r unequivocally in the hands of t torate. The directors had put then lv record as favoring the prompt us every member to aid or comfort, ir ny whatsoever, a striker.

Mr. Bangs groaned aloud. "T going too fast—too fast," he said mustn't do that! There's a doz stores on Main Street now. T healthy. They're running wild That isn't what I meant by co They're aiming at a worse union there is now. Social, political, cial—Bowker acts as though he tin god on wheels. That won't do a minute."

Sylvia handed him the usua bomb:

"But you were the one who w do it, Bruno!"

"That was before I knew how work out," he protested. "And t getting too big, anyhow—too It's getting to be somebody's m use like a steam roller. Well, thing to do, unless we want to inv is to get the petty graft out of it. to cut down the next manager's pe and we've got to have a rule that doesn't buy a cent's worth of from its own members, except of the council. Not the directo council. Bowker doesn't own the

re oerced. As always happens,
he lunged aggressive minority
y ompelled the others to fall
in line. I talked with a striking policeman who had been nine years on the force. He did not want to join the union in the first place, but he could not stand the ostracism which "scab" entails for a nonunion man and his wife and children; and though he was opposed to a strike, he could not leave the others in the lurch after they had decided to walk out.

"How many wanted to go on strike? Less than fifty per cent, but a lot were led to vote that way because they didn't want to desert the boys," he said.

Another member of the force, who had been with it so many years that he could have retired on half pay in another seven months, joined the union virtually under compulsion, and once in it had to walk out when ordered. And now in his old age he is out of a job and without means of support. What's more, it is doubtful if he could perform any work but that of a policeman, for when a man has put in many years on a police force he is unfit for most other jobs.

"I didn't join the union at first," he said. "But one day I went into the station house and opposite my name on the bulletin board somebody had written in red ink, 'Scab.' The kids at school yelled it at my children too. What is a man going to do?"

The Trouble-Making Minority

A minority jammed through unionization of the Boston police and a minority forced the strike, whatever the tally of votes may have showed. It is always the case. In New England less than twenty-five per cent of organized labor is radical, according to those who ought to know. The percentage grows the farther west one goes, yet men who have studied the subject doubt whether thirty-three per cent of the total membership of the American Federation of Labor belongs among the radicals; and organized labor constitutes only three per cent—or less—of the population of the United States. In other words, about one per cent of the American people is raising Hades for the other ninety-nine per cent and threatening to overturn the institutions in which they believe. It is the realization of this that makes the average citizen grow hot under the collar and sometimes long for command of a firing squad.

Well, the police formed their union and persuaded practically all the men of the force to join it. Charges were soon filed against nineteen of them.

"At the request of counsel for the men," says a statement from Commissioner Curtis, "I heard the cases myself instead of referring them to a trial board. The facts were undisputed. I found the men guilty and delayed imposing the finding, merely suspending them from duty. I did not discharge them because had I done so I would be without power to reinstate them at any time. Instead of taking the opportunity which was thus open to save their positions the majority of the force deliberately deserted and abandoned their duty and the city which they had sworn to protect."

Threats of a strike if the members of the union under charges should be suspended were freely made before their cases came up for hearing. In view of the gravity of the prospect Mayor Peters appointed a committee to investigate the trouble and act as mediators, and endless negotiation and argument and conferences followed. This committee did their utmost, but to no avail. Their executive committee succeeded in drawing up a plan to which the tacit consent of the policemen was given, but the commissioner could not see his way to accept it. The plan received Mayor Peters' indorsement, and the committee which presented it was composed of well-known Bostonians—James J. Storrow, B. Preston Clarke, George E. Brock, P. A. O'Connell, James J. Phelan, A. C. Ratshesky and F. S. Snyder. Briefly it provided that the policemen should give up affiliation with the American Federation of Labor but maintain a union within the department to deal with questions relating to hours and wages and physical conditions of work; called for an investigation of the police demands and grievances by a committee of three citizens, which should continue to act as a sort of court of arbitration; and stipulated that no member of the force should be discriminated against because of any previous affiliation with the American Federation of Labor—neither should there be any discrimination on the part of the policemen's union against any member of the force because of refusal to join.

The main objection to the plan, of course, was that it gave immunity to the ringleaders in the unionization of the police. Anyhow, the commissioner would not agree to it; the nineteen policemen were suspended; and after taking a vote about fourteen hundred policemen made good their threat to strike.

Everybody knows what happened after that. The spectacle of Boston given over to lawless mobs shook the whole country. President Wilson denounced the strike as a crime against civilization, and Elihu Root told the National Security League: "What does the police strike in Boston mean? It means that the men who have been employed and taken their oaths to maintain order and suppress crime as the servants of all the people are refusing to perform that solemn duty unless they are permitted to become members of a great organization which contains perhaps three per cent of the people. Now, if that is done that is the end—except for a revolution. Government cannot be maintained unless it has the power to use force. If the power to use force passes from the ninety-seven per cent of the whole people of the United States to this organization of three per cent, the ninety-seven per cent are no longer a self-governing people."

The ninety-seven per cent were quick to take alarm—and up to date they give every indication of maintaining self-government! The whole country blazed into resentment. If policemen could join the American Federation of Labor and go on strike, leaving their communities helpless, where would unionization end? The police in a score of cities were watching the outcome. Already many fire departments were affiliated with the American Federation of Labor; what if they should strike too? What of sympathetic strikes? And if the police could owe allegiance to a union, why not the Army? Where would it all end? In soviet government? A night of rioting in Boston woke the United States to the real nature of the menace.

The Governor's Reply

Even labor-union men condemned the walkout. They might uphold the right of the police to affiliate with the American Federation of Labor, but when the consequences endangered the safety of their own families and property and threatened to make them jobless through general demoralization of business they realized that it was carrying the thing too far. Tying up the public was one thing; letting anarchy loose was another.

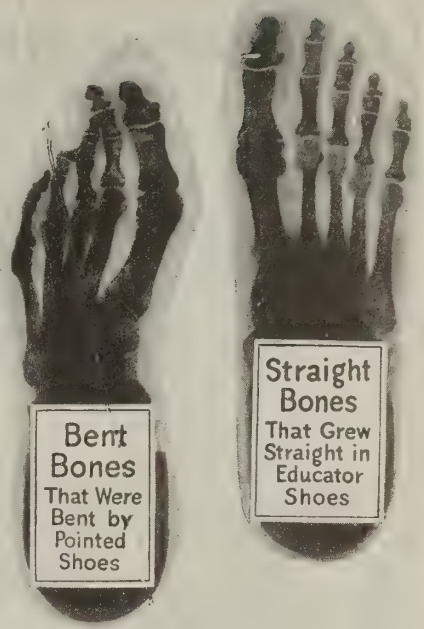
The bulk of organized labor disapproved of the cops' action. Only the newer membership of the unions supported them and favored a sympathetic strike. As a lot of new members had been admitted into the union of the carmen on the elevated a ticklish situation was produced, but aside from this union and the telephone operators, who voted to strike, organized labor blew cold on the proposition.

And what about the federation? Gompers realized immediately that the policemen's case was hopeless and sought to exert pressure to the end that the men might be taken back and all action against them suspended until after the labor conference in Washington in October. To this request Governor Coolidge of Massachusetts made a reply which struck a responsive chord in every corner of America and lifted him into national prominence overnight:

"The right of the police of Boston to affiliate has always been questioned, never granted, is now prohibited. The suggestion of President Wilson to Washington does not apply to Boston. There the police have remained on duty. Here the Policemen's Union left their duty, an action which President Wilson characterized as a crime against civilization.

"Your assertion that the commissioner was wrong cannot justify the wrong of leaving the city unguarded. That furnished the opportunity, the criminal element furnished the action. There is no right to strike against the public safety by anybody, anywhere, any time.

"You ask that the public safety again be placed in the hands of these same policemen while they continue in disobedience to



For Feet Made Healthy by Army Life

—the *logical* step is to step from the army shoe right into good looking Educator. To *keep* the same foot freedom—freedom from corns, bunions, callouses, ingrowing nails, fallen arches. You can't keep it if you put on the narrow, pointed bone-bending shoes that *caused* those terrors in the past.

Educators are broad-toed, sensible "civilian" shoes that let the feet grow as they should, and at the same time, give well-bred good looks.

The *whole family* appreciates foot comfort. Why not get them *all* into Educators! When buying, be sure the word EDUCATOR shows on the sole. There can be no protection stronger than this mark. It means that behind the shoe stands a *responsible manufacturer*.

IF YOU HAVE FEET, READ THIS BOOK

It is called "Bent Bones Make Frantic Feet." Tells things you've never seen in print before. Free. Write for it.

Waltham Grinding Wheels

And Dependability

We make grinding wheels that you can depend upon.

Every wheel that leaves our plant has been rigidly inspected. It goes to the customer correct in all specifications and carefully tested for balance and for safety.

Our service insures that it is the correct wheel for the work you need it for, and nearly half a century in making grinding wheels insures the high quality which has built our business to its present proportions.

Service—personal, expert grinding wheel advice.
Quality—no better wheel can be made.
Dependability—performance of the work guaranteed.

Let us help you in your grinding wheel problems. Write us. Catalog and information upon request.

WALTHAM GRINDING WHEEL CO.
Waltham, Mass., U. S. A.

Trailmobile

Trade-Mark Reg. U. S. Patent Office

A Trailmobile for Every Load

The Motorless Motor Truck

Thousands in Use

DIVISION No. 1 Light Four-wheeled Trailmobiles for use with passenger cars or light trucks, 1,250 lbs., ¾ ton and 1 ton.

DIVISION No. 2 Heavy-duty Four-wheeled Trailmobiles for use with trucks: 1½ tons, non-reversible; 2 tons; 3½ tons; and 5 tons, reversible and non-reversible.

DIVISION No. 3 Semi-Trailmobiles, 2 tons; 3 tons; 5 tons and 7 tons.

THE TRAILMOBILE PROPOSITION is as attractive to the dealer as to the user. Trailmobile dealers are doing an ever-growing profitable business. British and European representation is desired.

THERE are Trailmobiles for the farmer who wishes to haul stock, fruit or produce with his passenger car; for the bottler who uses light trucks; for the lumberman who hauls logs to the mill, or lumber from the yard to the job—for every kind of load that is hauled over the roads.

This 3½-ton four-wheeled reversible Trailmobile hauls logs to the mill of the W. J. Steele Lumber Co., at Martinsville, Ind. It is pulled by a 3½-ton truck.

Results have been extremely satisfactory. The truck now takes twice as large a load at every trip as it formerly did. The equipment cost 50 per cent less and 75 per cent of the operating cost of a second truck is saved.

Heavy duty Trailmobiles have exclusive coupling mechanism which gives them especial advantages in coupling and uncoupling, and in backing.

Write for booklet, "Economy in Hauling."

The Trailmobile Company
503–523 East Fifth Street **Cincinnati, Ohio**

Good roads are preserved by reducing the load carried on each wheel.

the laws of Massachusetts and in their refusal to obey the orders of the police department. Nineteen men have been tried and removed. Others having abandoned their duty, their places have under the law been declared vacant on the opinion of the attorney general. I can suggest no authority outside the courts to take further action.

"I wish to join and assist in taking a broad view of every situation. A grave responsibility rests on all of us. You can depend on me to support you in every legal action and sound policy. I am equally determined to defend the sovereignty of Massachusetts and to maintain the authority and jurisdiction over her public officers, where it has been placed by the constitution and laws of her people."

I asked Governor Coolidge whether he thought the American Federation of Labor had advised or sanctioned the strike.

"The federation has never advised a strike there was no hope of winning," he replied cautiously.

I asked one of their counsel whether he had done so.

"No, I advised against it," Mr. Vahey declared earnestly. "They had already affiliated with the federation before I was called in, but both Feeney and I urged them to give up their membership in it. We told them we could get more for them than they could through the federation. But they stuck. When their leaders were suspended the men had to stand by them."

Mayor Peters had received assurances that ample protection for the city would be available in the event of a police strike. Consequently the tangle was left to the police commissioner, and statements from the department persuaded the public that the situation was well in hand. He had at his disposal all the sergeants and officers of the force; also a hundred men of the Metropolitan Park Police, an organization distinct from the Boston department.

Such was the official force the commissioner could count on and it seemed adequate to him. For the protection of the banking houses and large business establishments of the city bodies of guards had been organized privately and these were supplemented by hundreds of volunteers who offered their services as patrolmen.

In fact big business and the larger mercantile concerns had prepared fairly well for eventualities. But Boston hadn't guessed a tenth of what those eventualities would be.

The police went out before six o'clock on a Tuesday night. Several hours later the scum of South Boston and the West and North End were on a rampage. Scollay Square, the district between Boylston and School streets, all along Washington and Tremont streets, echoed to the crash of glass as the mobs of rowdies and thieves looted where they willed.

The Shop-Window Raiders

A crowd of more than five thousand persons gathered in the vicinity of Broadway in South Boston and when charged by about fifty of the park police met them with a barrage of stones and sticks and bottles and eggs. The rioters rocked the street cars and stoned some loyal patrolmen of D Street station who had declined to go on strike.

Long before midnight the mobs held undisputed possession of the streets. With nobody to hinder, huge bands of hoodlums went prowling through the heart of the city, holding up any unlucky pedestrians who came their way and pillaging stores which caught their fancy. A swift kick on a plate-glass window, then a scramble for the spoils.

"At about twelve-thirty we heard a far-off sound of smashing glass," said a former newspaper editor, who was on guard at a fashionable specialty shop, "like the tinkle of a toy bell. After a while we saw a mass of people swing out of Avery or Mason Street into Tremont. There wasn't any noise. They were walking along at a moderate pace—perhaps two miles an hour—and saying nothing. All of them were young—mere boys—averaging from eighteen to twenty years, I should say. And they were entirely sober. We did not see a single drunk that night. There were no women, but a few waited on the other side of the road, perhaps out of curiosity. A large battered automobile was creeping along close to the curb.

"Suddenly came a crash of glass. They had demolished a window and were going after the stock inside. We could see them surrounding the store and ha in stuff. A taxi or two, devoid o ig numbers, stopped across the roa un inside them got their share o pl Quite a few taxis operated in t f during the night.

"Approaching us, the crow le sidewalk and took to the gutter a l of the road. They slowed dow p and we heard, 'Let 'er go! THE POWER OF WORDS

CONFUCIUS, philosopher, teacher, statesman, gave the world the first known version of the Golden Rule. His medium of expression was not art, architecture, science or ceremony, but words.

This principle by which men must live if they would succeed; by which nations must be guided if they would endure; this first law of all humanly controlled development is most clearly and forcefully set forth in words.

Words give strength and direction to deeds. The destinies of nations hung on the action generated by the words: "They shall not pass."

Words have been a mighty factor in the growth of industry. Words create confidence and desire. They are the point of contact between the mass of the people and the product.

The power of words is multiplied through repetition and magnified through distribution. Words open channels of trade; they make the people of a thousand communities hold in respect the same commodity. These great commercial values bound up in words are the rewards of advertising; for advertising has made an art of fitting words to business needs.

The development of advertising is the result of the last fifty years, which time also represents the age of the house of N. W. AYER & SON.

Many trade names, of more value than the great factories back of them, have been born in our house and established through our efforts. We have turned wares into words which have brought distribution wherever these words have been read. Experience is the basis of our operations.

Our half-century of ceaseless service has gained for us the title of "Advertising Headquarters." Our task is to so use the power of words that we "Make advertising pay the advertiser." This experience is available to organizations wishing to either establish or enlarge their fields of operation.

hose all set. It would have taken trained troops to storm the place.

For several days no goods were displayed in the windows or show cases of the principal stores. Retail trade was paralyzed. Owners of valuables stored them away in vaults or other safe places. It seems remarkable that no really high-priced stuff was looted the first night. Rich furs and dress goods, silks—all manner of articles which would tempt a professional thief with a knowledge of values—escaped. And they grabbed shoes and cheap jewelry and shirts and umbrellas!

Equally remarkable is it that there was no incendiarism—plenty of false alarms, but no fires. Boston began to speculate about a week later on what might have happened had booze been on sale in the city.

It would take too long to tell all that happened before order was restored, but as Bill Hamilton once remarked in an account of proceedings after a bum decision at a prize fight, "pantomime reigned." Besides old families and men and women of culture and breeding, besides safe and sane business men, a conservative professional class, and a labor population which is substantial and self-respecting, Boston possesses in considerable numbers a red-necked type which is always eager for a fight and packs a wallop in either hand. And these gentry had free run of the city.

Things became so bad that troops were called out and the Massachusetts State Guard took over the policing under Brigadier General Samuel D. Parker. The mayor is empowered in case of tumult or riot to take over the police department, which Mr. Peters did on Wednesday morning. He called out that part of the State Guard living within the city limits, but their number being totally inadequate, it became necessary to call all the State Guard throughout the commonwealth. Authority for this action rested in the governor and accordingly Mr. Coolidge took charge of the situation, reinvesting police authority in Commissioner Curtis and instructing him to obey only such orders as the governor might issue.

The State Guard is equivalent to the Home Guards and is composed of men who volunteered for duty to replace the National Guard when it was called into service during the war. Most of them are either above or below draft age or had disabilities which prevented their going into the Army, and they come from all walks of life. You can find wealthy men in the State Guard, and college professors, and boys just beginning to use a safety razor.

These troops were distributed about the city, with a strong force held in reserve for emergency. They patrolled the streets and did guard duty, kept everybody moving, permitted no sidewalk conversations and made scores of arrests. Also they killed a few who resisted the enforcement of law. In spite of their three-speed rifles—you have to cock them three times, but luckily there is no reverse—the State Guard proved themselves efficient troops and handled the troubles firmly.

The Cooper Street Riots

Commissioner Curtis told me that crime dropped fifty per cent below normal as soon as they brought in the soldiers to restore order. And I was able to see for myself the salutary effect the presence of the guard had on soap-box agitators and Bolshevik windjammers. They had been fond of street meetings, but evidently something told them that the time was not propitious for incendiary talk. You couldn't have found a soap-box orator with a search warrant after the troops got on the job.

Soldiers were quartered in Faneuil Hall, the Cradle of Liberty. But according to C. H. Eveleth, who was a schoolboy in Boston in 1863, it was not the first time the Cradle had been used for a barracks.

"In July, 1863, at the time of the Cooper Street riots," he states, "the Forty-fifth Massachusetts Volunteer Militia, a regiment just returned from North Carolina, was quartered in Faneuil Hall for a few days. Police patrolled the streets, while at night Latin School boys watched at the bridges to Charlestown and Cambridge to open the draws if any riotous mob attempted to enter the city. The above is a fact from my personal knowledge.

"The Forty-fourth Regiment quartered in Boylston Hall and with the Forty-fifth were kept to be used in a body if the police could not do the work in the streets. The only fatalities were on Cooper Street, when Major Jones gave the mob grape and satisfaction on their attempting to seize the cannon of the Eleventh Massachusetts Battery, just back from a nine months' tour of duty in Virginia."

Meanwhile amateur traffic cops were working up a perspiration at every busy crossing. How those earnest volunteers did step to it! Being new to traffic regulation, they made ten times more work of their tasks than the experienced policeman, but they handled the streams of traffic somehow and kept things rolling. I saw an aged white-bearded citizen on duty at one crossing, a marine at another, a captain of infantry directing on Tremont Street, an automobile salesmen and other such plutocrats galore. Taken by and large, the citizenry of Boston can always be relied on to show a fine spirit.

Reporters Not Popular

An amusing phase of the strike was the fashion in which the newspapers disappointed the police. The news writers of Boston organized a union, which became affiliated with the American Federation of Labor. In consequence the police fondly believed they would receive the support of the press in their efforts to unionize, little knowing the extent of reportorial influence in a newspaper establishment. And when the Boston papers with practically one voice scored them unmercifully for their action the policemen's chagrin and resentment knew no bounds.

I saw their feeling manifested at a meeting of the "El" men in Fay Hall, called to consider the question of a sympathetic strike. To this the police were invited—the reporters, not. Indeed the gentleman who presided made it plain at the outset that no reporters were wanted. He cautioned everybody to examine everybody else's card and make sure that no ringers or press representatives were present in the gathering. Then somebody in the smoke-filled hall, jammed to the last inch with breathless, coughing, perspiring humanity—some one of the two thousand present raised a yell, "Mister President, there's reporters listening out in the hall!"

"Throw 'em out! Throw 'em downstairs! Shut the door!" cried a babel of voices.

I began to suspect they didn't want me there and my chair in the back part of the hall grew stickily uncomfortable. However, the meeting went on and nobody paid me special attention. In about half an hour the doorkeeper—seized perhaps with a faint recollection of the kind of admission card I had showed—suddenly gave tongue.

"Mister President!" he bellowed.

"What is it?"

"I have reason to b'lieve there's a reporter at the back of this hall."

Frenzied shouts to chuck him out and "Lemme at him" and "Fling the pup out the window"—and I had gone to that meeting with the friendliest sort of feelings! However, though I might be conspicuous at a Newport function, there is nothing in my appearance to make me an outstanding figure in a motormen's gathering, so I let them yell and glare round, and in a minute or two the meeting got back into stride.

That is ever the way. My sympathies are always with the under dog; and often, after thinking over the way wage earners get gouged by profiteers and exploiters, and their real, their terrible grievances, I begin to see red and my heart goes out to the toilers. Then I go mixing with union men and my sympathy is chilled. They won't let outsiders be friendly.

I have in my time attended labor meetings during which they dropped chairs down the fire escapes in the hope of beaning any newspaper reporters who might be lurking about. And I respectfully submit that labor's attitude toward everybody not affiliated with them is marked by too evident hostility. They go on the assumption that the whole world is an enemy and treat the world on that basis. What hope of an amicable settlement of differences so long as this spirit rules?

If it could be banished and the old leather-head type of capitalist and employer painlessly removed by strangling or any equally effective method a long step toward industrial peace would be achieved.

An astonishing thing about labor is its frequent stupidity in bulk. A union man who displays—as an individual—balance and intelligence of a high order will often turn into a shouting, blithering io tense atmosphere of a stormy n permits a brass-lunged orator his living talking claptrap ar nonsense which would daze ev posers of national anthems—he professional agitators to sta into action which his better jud demns. But then, the intellig individual members of a crow higher than their collective i and the noisy ten per cent of m overwhelm the ninety who thin

I recall conversing with a before a meeting some weeks a eminently sound ideas. He th President Wilson ought to hav at home to straighten out ou domestic problems instead of f over in Europe with them Jugg such; and did I know that th lists printed in the newspapers were often higher than the pri could get at the stores? In formed an excellent opinion o ment when the speaker of the up on his hind legs and started my friend went loco.

Of all the old, stale, hell capitalism buncombe I ever speech was about the worst. have appealed to the reason o child of ten. But it went big with and to my unutterable dismay m ance shouted and banged approv as the rest.

After that first night the poli doomed. Aroused public opinio against them. Had every unio decided to go on strike to hel would have lost. Had the who the American Federation of L thrown on their side, they woul been beaten.

No Jobs and No Un

But the federation had no i backing so hopeless a cause. It been suicidal. There was much t eral sympathetic strike—many deal of acrimonious debate, of countercharges—but when the t for action the Central Labor proved the recommendation of tee of seventeen that no gen should be called. Various un financial assistance to the polic President O'Donnell, "for reas the committee does not care to n at this time your committee is make sure of its ground in case to call for a general demonstrati up the police in its fight and c We don't intend to give anybod to say we have not used good ju has been said of the policemen. pect that labor will go out on strike to-morrow morning and rioting. In this they will be dis as the committee and movement law and order, and the committ cided it is necessary to fight like tion, whose representatives spen weeks of the year in preparing to fight us."

Thus did the policemen's str out, flivver, perish as miserabl bitterest critic could have desi now they're out of jobs, withou

Some sentiment has been Boston recently in regard to ta the striking police. The argum vanced that the city needs the men, and since the union is beat of business and the police ha their lesson and now have their punishment of the ringleaders suffice. On the other hand, one Boston and all over the country should be no compromise—that t out the police vacated their jobs ner which prevents their rein under the law and if they were duty what would be their attitu those who had remained faithf posts? What would be their a case of trouble toward those uni had voted them financial help in

...hairman of the meeting having ...d his and the suave and experi... ...esident of the association and pre... ...ce of the evening having opened ...ted for discussion, a speaker rose ...enter of the table who was recog... ...the diners with some surprise as ...Clinkscales. It was clear at once, ...those who did not know him personally, that he was not a trained public speaker, yet all eyes were upon him as he passed directly to his main point.

"You're wrong!" stated old Clank Clinkscales without equivocation. "You're all wrong! Your proposition ain't worth a little lady cigarette smoker's damn!"

At this point Mr. Charles Barker, sitting at the left of the president of the association, leaned over, whispering some information, and the latter was seen to give a slight start.

"Not a damn!" reiterated the speaker firmly. "You're going at it all the wrong way—bucking them there in Washington. What'll they do? The first thing they'll do they'll dig up something from the Clayton Act or the Eight-Hour Railroad Law or the Espionage Act of 1861 and put you all in jail for combination in restraint of trade. They'll salt you down legally under the Interstate Commerce Act for less than that—for the rest of your natural lives in jail—and you know it!"

This sentiment was much appreciated by all the diners, but a specially marked snicker of appreciation rose across from the speaker—apparently from a frail, rather pale young man in a new and very elaborate dinner coat.

"Now I've got a proposition—right here," continued old Clank Clinkscales after stopping and apparently observing this young man for the first time, "that's worth ten of that! What you want to do is not fight them. What you want to do is to coöperate with them like I'm going to do. What do they ask you to do?" inquired the speaker. "To cut down the high cost of living, don't they? All right—we'll do it! We'll cut it down for them where it grows! We'll cut down the high cost of taxes!"

"Good idea," interjected the youngish member in the fancy dinner coat across the table, who at a banquet in less temperate days might have been considered somewhat inebriated.

"Now I've got the figures right here," continued the speaker after pausing a moment, marking him down with a cold corner of his eye. "What do they get out of this trade of ours here to waste in Washington? Out of this room right here—in excess-profit taxes alone? Twenty million dollars—you know and I know! Not a cent less! Yes—and more! Where does it go?" asked the speaker still more loudly—"that twenty million dollars and more? God knows! They don't—in Washington. They don't try to, even. You know that. All they want to do is to get in more and more and shovel it out faster and faster. They tell me"—he stopped to interpolate—"those who know, that they've got three bills in Congress—right now, to-day—to put in steam shovels into the Treasury Building to save manual labor for the poor overworked paying clerks in that department!"

"Good old boy!" said the youngish man in the dress suit, now waking up to the occasion. There was an occasional appreciative giggle elsewhere. The speaker, gazing at his unsolicited supporter with a somewhat more baleful look, pursued his argument.

"Three-quarters of it they waste," he stated, again resorting to statistics. "The other quarter—or half, more likely—they spend rushing round the country telling us, lecturing us, instructing us how to do our business. High cost of living! You know what it is! High cost of taxes—that's what it is! That's the whole trouble with the world to-day—taxes and the fellows that are spending them and the ones that are hoping to get them to help them stop having to work. And about two years more of this will bust us all wide open—you and me and everybody—if somebody does not stop it," asserted Clank Clinkscales.

"Taxes!" repeated Mr. Clinkscales. "The high cost of taxes! Somebody's got to start stopping them some time. So why not us—right here, now? I'll tell you one thing," he stated with a marked snort: "they don't get any more out of me unless they operate for them!"

"Some old war horse!" stated the youth in the peaked-lapeled dinner coat with critical admiration. His efforts produced one or two responsive snickers among the younger members of the trade, but there

The Kind of Clothes KAHN MADE TO MEASURE CLOTHES Gentlemen Wear

NOTHING that the most exclusive tailor puts into his clothes is left out of Kahn Made-to-Measure Clothes—excepting the high price.

Kahn Clothes are, by habit, fine clothes. For over thirty years—to be exact, since 1886—we have been consistently making fine clothes.

Our thousand skilled workers know nothing but fine tailoring—many of them left the best custom tailors to come with us. They live for their art—nothing could induce them to prostitute their experience and knowledge by making commonplace clothes.

Under our method the finest of made-to-measure clothes are produced at *reasonable prices*—a real inducement to the man who combines thrift with good taste.

Kahn Made-to-Measure Clothes—tailored-to-type of the finest and softest of pure wool, fast dyed fabrics—fully express your individuality.

For tailored-to-order clothes of real character, seek your Kahn dealer today. If you do not know him, a card will bring you his name—and the Kahn book of styles.

s said once before," he continued,
eady's got to stop this thing some-
e! So I propose this: I propose that
20 ne members of the Cardamom Seed
rs nd Refiners Association of America
themselves, here and now, to pay no
al corporation taxes—beyond the
nu required by law; no excess-profit
yhow, and as few others as we can
o and that a committee be appointed
t his thing through; and I put that
fm of a motion."

ir this, Mr. Clinkscales stood wait-
p his feet as if for remarks or a
di of his motion.

o understand you to mean," in-
i e suave and experienced presiding
, Mr. Pritchard, in the absence of a
l, Mr. Clinkscales, that you would
ay any Federal taxes?"

o that you don't have to."

o would you do that?"

y t earning them to pay them out—
eight per cent on your capital any-
Ad less—if we could fix it."

ten, as I understand you," inquired
ha man further, "you would forgo
ov profits in order not to pay the
n ent's taxes?"

ka ly so—all of them, so far as I am
rn l," said Clank Clinkscales, getting
ar more tired of all this unnecessary
qu stioning on a self-evident proposi-

He was getting irritable, he could feel
his duodenum was worrying him
li a dog. And he had a feeling now
he were all against him, no matter
of they talked. "And the sooner you
h said, "the better for all concerned.
It's not only better business in my opinion and better patriotism—it's both in the long run."

"How could the Government operate without taxes?" inquired a member.

"That's their business."

"How would we run—that's the question?" inquired another with a more commercial turn of mind.

"That's our business!" suggested another wit, and there was another slight ecstasy of laughter among the younger set. But many faces of the older men, remembering more clearly Clank Clinkscales' younger days, grew decidedly more serious. The suave chairman, Mr. Pritchard in fact, spoke carefully and seriously on the subject.

"I yield to none," he said, now rising and bowing slightly to Mr. Clinkscales, who had sat down, "in my respect for my old friend, Mr. Clarence J. Clinkscales. He is, as we all know, the grand old man, the nestor of the cardamom-seed trade. He has the full-hearted admiration of all members of this association—for his long-established leadership in our trade, for that enterprise, that iron courage, that initiative, that pioneering pertinacity which has marked in special measure the growth of this great American industry.

"But," he continued, again bowing to the subject of his remarks, "in this particular instance I cannot follow him. I feel that the proposition he advances from a business standpoint is scarcely normal, while from the standpoint of our National Government I could scarcely feel that it would be—as I understand he believes—an evidence of genuine patriotism for us as an association to withhold the taxes—the food of our National Government, so to say, upon which its activities must all be supported. And so ——"

"Question!" cried one of the younger members. "Question!" The resolution of protest was then passed—no one having even seconded the motion of Mr. Clinkscales.

Following this action, Mr. Clinkscales struggled to his feet.

"All right!" said Mr. Clinkscales. "Have it your own way! Have it your own way!" he repeated. "Hell's boiling!" he said suddenly. "If you don't want to come in with me, you don't have to! If you don't want to come along, I'll go alone! And I'll show you something new—and interesting! I'll show you something you never heard about! I'll show you some ruthless patriotism!

"You've heard about ruthless cutthroat competition—in the old days—when chewing tobacco was more stylish than perfumed cigarettes," he said, gazing more and more earnestly at the younger diners; "before we all put on silk socks and hitched up here in this men's sewing circle. Now I'm going to show you something like it—but a little different. I'll show you some old-fashioned competition in a righteous cause. I've done a little on my own hook in the old days," said Clank Clinkscales with dark memories in his voice. "And now, if it's necessary to strangle a few competitors for God and country—you watch me! I'm not like the man who can't do it—if it's absolutely necessary! And to do this right I'll now resign from this association."

"But, Mr. Clinkscales!" cried several of the older members simultaneously. But the speaker was going on.

"But—nothing!" said the excited man. His whole body from his duodenum up seemed to be now in flames. "I'll show you! I'll take a pleasure in doing it—for my own enjoyment! I'd kind of like it. I ain't had any real business excitement, anyhow, for twenty years—since these damned peace conferences began—with all the little pink-toed sons-in-law running them. But now you watch me!"

"But you don't understand, Mr. Clinkscales!" cried several of the members, speaking at once.

"I understand all I need to. I understand that I'm done with this association," said Mr. Clinkscales firmly. "And about the first of next week," he said prophetically, "you'll understand it too!

"And now," he concluded, moving suddenly and upsetting an unusually full glass of water on his trousers doing so, "I wish you good night!"

He then turned and tramped heavily out through the door, an anxious waiter following him, sopping the ice water from his dinner clothing. A deep hush now fell upon the gathering at the annual peace festival of the cardamom-seed trade.

"You see?" said Mr. Barker sadly, leaning over to the suave and experienced president of the association. "Just what I was afraid of. He's out! He's loose again!"

"All we can do now," said the chairman regretfully, "is to choose a committee to go and visit him."

"You know what it is, don't you?" continued Mr. Barker to the president. "It's this trouble with his digestion he's had this past few years. It drives him about crazy. He don't know what he's doing half the time."

But the president did not answer. He was rising to propose his committee.

At nine o'clock the next morning old Clank Clinkscales was in his office—located in the old-time Swamp wholesale section of lower Manhattan. His voice was curt and his manner businesslike.

"You got them ready?" he inquired of Mr. Grout, who appeared in response to his push button. "My figures?"

"Yes, sir," said Mr. Grout. His lower lip was not so prominent now. He looked and talked like an old employee whose spirit had been crushed by overwork.

"Give 'em here. I'll look 'em over. That's all!" said Mr. Clinkscales briefly, Mr. Grout then disappearing.

"Well, what is it?" demanded Mr. Clinkscales when he returned a moment later. "No, I don't want to see them!"

"They say they are the committee from the association," returned Mr. Grout, standing steady in spite of weariness.

"All right, show them in!" said his employer with an apparent change of purpose. "I'll see them if they want me to so much."

The committee of two from the Cardamom Seed Millers and Refiners Association then came in.

"Ha! Ha!" cried Mr. Charles Barker, who had been appointed because of his well-known personal relations with Mr. Clinkscales. "Ha! Ha!" he cried at once with a somewhat metallic laugh. "That was a good one you pulled on us last night, Clank—that high-cost-of-taxes stuff! Ha! Ha!"

His laughter was not infectious.

"What ails you?" inquired Clank Clinkscales, regarding him with the steady gaze of a skilled physician at a very sick man. "What are you ha-haing about? You sound like a lovesick jackass full of dandelion greens."

"What do you mean, Clank? What are you after, anyhow?" asked Mr. Barker, ceasing laughing.

"Mean!" exclaimed Mr. Clinkscales. "Haven't I told you enough times yet? I'm cutting out the high cost of taxes—from—the—cardamom—seed—trade," he said distinctly.

"Just what," inquired the other member of the committee, Mr. Pritchard, the skillful president of the Cardamom Seed Millers, "does that mean? What are you preparing to do?"

"That's my business!" answered Mr. Clinkscales definitely. "I gave you your chance to get aboard, didn't I, last night? All right! And you didn't want to! All right! That's your business! But after that what business have you got here?"

"You speak of cutting out the high cost of taxes," returned the president of the association, apparently not hearing his remarks. "I take it by that you mean to cut that out of the price of your goods to the jobber."

"You must be a mind reader," said old Clank Clinkscales unemotionally.

"How much, if I may ask, would that amount to? Or shouldn't I ask that?" inquired the other with no diminution of politeness.

"Certainly, ask ahead," said Mr. Clinkscales openly. "Why not? It will be public property in a day or two. I'm cutting all grades fifteen per cent flat day after to-morrow."

"Fifteen per cent!" exclaimed Mr. Pritchard; and Mr. Barker started nervously from his chair.

"What are you—crazy?" cried Mr. Barker loudly. "You're delirious, Clank! It can't be done!"

"Let me tell you something," said Clank Clinkscales, talking just as loudly. "I go and make you a reasonable, easy proposition—your association—to cut out just the excess-profits taxes over your eight per cent, and you insult me! All right—that's your privilege. It's my privilege to get out of the association and I've done so. Now then, what I'm going to do now is my business—not yours. But I'll tell you this much—as long as you're so anxious to know it. I gave you a chance to cut down your damned taxes—partially. Just the excess-profits tax. Now I'm going to cut them down and I'm going to do a good job. I'm going to cut them to the quick—for God and country!" he said as an afterthought.

"It will ruin you!" said Mr. Pritchard with decision.

"You watch me!" returned the older man.

"And the whole trade, too!" said Mr. Barker with even more feeling in his voice. "You can't do it, Clank—that's all!"

"Don't worry about me! I know what I'm talking about," responded Mr. Clinkscales. "I've got the figures right here."

"It will spell ruin, that's all," remarked the president, "for the cardamom-seed trade."

"All right," said Mr. Clinkscales briefly, "say it does. Now is that all you wanted to know?"

Mr. Barker groaned.

"For God's sake," he said, "Clank, don't do it! You can't!"

"You watch me—you may learn something."

"You wouldn't come back into the association, Clank?" asked Mr. Barker in a wavering voice.

"Not for a million dollars!" said Clank Clinkscales with enthusiasm.

"But," said Mr. Pritchard, starting out again after a time—"aside from that, is it fair—is it right?"

"Is what right?" demanded Mr. Clinkscales.

"Would you care to take away the revenue of our Government if you could do so? Would it be a practical, businesslike thing to do? Be fair now! Could this country get along without taxes?"

"You've got to think of these things, Clank," said Mr. Barker, again entering the conversation. "You can't let your personal feelings run away with you!"

But Mr. Clinkscales did not reply.

"You're right there!" responded the president with quick approval. "We've all got to do what we can these days. I'm no moralist, but as a practical business man we know there's a duty on all of us—to support our Government."

But still Mr. Clinkscales made no reply.

"There is such a thing as patriotism," said Mr. Barker heartily.

"Yes, there is," said Mr. Pritchard sincerely, "without nonsense."

"There is," repeated Mr. Barker again, in the slight ensuing pause.

"I won't undertake to advise you. But I will say this," said Mr. Pritchard. "You don't want to undertake anything lightly that will tend to cripple the country these days."

"Hell's boiling!" said Mr. Clinkscales, speaking at last and jumping clear of his chair. "There it goes again!"

For a time no one spoke.

"There's another bunch," said Clank Clinkscales at last, apparently talking to himself, "that I'm after!"

"Who? In what way?" inquired the president nervously.

"Patrioteers!" exclaimed Mr. Clinkscales, speaking now with considerable emotion. "These dod-gasted patrioteers! These resolution makers! These sweet-singing compounders of taxes! I believe myself they're worse than the others—the patriotic chipmunks.

"Hell's boiling!" he continued in the others' silence. "I wake up in the night and hear them warble in my dreams. Ain't they noble? Ain't they pure? One hundred and twenty-one per cent pure! All purer than a stone angel in a country graveyard. Don't give me any more of that stuff," he broke off, "that prepaid patriotism! It costs too much! I can't afford it!"

"Costs too much!" exclaimed Mr. Pritchard in unaffected surprise.

"They're worse a thousand times than the politicians, if you ask me—more expensive," Mr. Clinkscales went on explaining, "than the taxes. They come first, before the taxes are taken out, don't they? You know how it is," said the speaker, now talking freely, "in our own line. I don't have to tell you. The first over the top are the excess-profit taxes always—sweetly singing. But before that—years before any taxes come out—all hands have baled out every dollar they know how in their holdbacks and their refunds for unreasonable war work and their withdrawals for desperate depreciation and their special replacement fund for their wives' diamond earrings.

"What is it," inquired Clank Clinkscales heatedly—"all this stuff? It's just compound taxes, that's all—put on top of the others. Taken out of the population in the retail prices. That'll all come out—that'll come out," said the speaker, now smiting with his fist upon the figures prepared for him by his experts, "of the cardamom-seed trade. I've figured all that in my fifteen per cent. We'll squeeze that all out now with the other high cost of taxes, and I'll hear and see and smell no more of that!" cried Mr. Clinkscales, ending with great abruptness.

"No," resumed the speaker, when no one else spoke, "I'm not going into this lightly. No, I've got it all thought out to the last detail."

"Just what," inquired Mr. Barker finally in the succeeding silence, "are you going to do first?"

"The first move," stated Mr. Clinkscales with the apparent relish of an artist for his own work, "will be my Don't Buy Now Campaign."

"Your Don't Buy Now Campaign!" repeated Mr. Pritchard with genuine interest in his voice.

"Hell!" said Mr. Clinkscales harshly. "You don't pretend you don't get that?"

"You refer ——" suggested the president.

"I refer," said Mr. Clinkscales very distinctly, "to the Don't Buy Now Campaign—which is just the opposite of the Buy Now Campaign!" And suddenly, as abruptly as he had started, he now stopped speaking and swung about in his chair.

"That's all," he asserted, "for now! Good-by! Shut the door after you!"

And he was hard at work, apparently on his new campaign, as the committee filed out.

"Gone!" said Mr. Barker to his companion when they reached the street—and he tapped his forehead lightly. "All gone! Crazier than a female socialist!"

"You don't mean that, do you, literally?" inquired Mr. Pritchard solicitously.

"You know what I told you last night," returned Mr. Barker, "about his digestion—that duodenum of his, or whatever you call it; how every so often it gets started on him and drives him frantic. I've always said that some day it would drive him crazy," said Mr. Barker darkly. "He ain't really responsible for what he does in these fits."

"He can do a lot of harm if he starts to," said the president, "outside of the organization."

"He's started all right," said Mr. Barker briefly.

They walked in silence.

"Ain't it the devil," said Mr. Barker sadly then, "to have a whole industry ruined by a damned disease?"

They passed on together in apprehensive silence to their respective business offices, each wondering—anxious naturally concerning the details of this Don't Buy Now Campaign which Mr. Clinkscales was already, at that very moment, pressing forward to begin.

At eleven o'clock on that morning Mr. Henry J. Dingley, the editor of the Cardamom Seed Reporter, the leading journal of that trade, sat in his third-floor office on the edge of the Swamp mercantile district, preparing his weekly summary of market conditions. He was a lean man in loose-hanging clothing, somewhat swollen at the knees. Before becoming proprietor of the Reporter he had been a practical printer, and did much of the work of his office now.

"There has been a firm tendency in all grades through the week," Mr. Dingley wrote rather languidly. "Top-grade seeds, Miller's Favorite Number One ruled very strong. Middling Shorts found ready takers—government sales only slightly interfering; while the visible supply of lower grades down to Number Six Shunts is in constantly decreasing volume. The outlook to-day is undoubtedly for higher ——"

Having written this, Mr. Dingley hastily removed his feet from his desk, dropping his lead pencil as he did so.

"Oh, good afternoon, Mr. Clinkscales!" exclaimed the editor of the Cardamom Seed Reporter warmly.

"I got here," stated the man addressed with characteristic directness, "an ad I want you to run in your paper."

"Yes, sir," said Mr. Dingley in prompt deference. And Mr. Clinkscales seated himself heavily.

"What's this?" exclaimed the editor after a moment's pause, his voice shaken with genuine emotion.

"A full page, beginning this wek stated Mr. Clinkscales, blowing h no loudly.

"But what is it?" reiterated Mr. I gh a little shrilly.

"Till ordered out," the advertiser l lie "But first—if you please, Mr. fin scales," pleaded the other, "if you to mind! Won't you explain just w it means?"

"Can you read?" inquired the cu m growing somewhat redder. "Or can ro Read it then," he continued.

"'Don't Buy Now!'" read Mr. D le "Exactly!" said Mr. Clinkscales, a the first line across the top t page."

"'Why? Because,'" read the it finally going on.

"That's the second line—like you ot there," said its author.

"'On April first all cardamom-see ro ucts will be down forty per cent to t co sumer,'" continued the reader.

"'Signed, Clarence J. Clinkscales, co cluded that gentleman himself. "T w it is there. Separate—at the bott the page."

And he leaned over, pointing it ou something of the pride of authorship face.

"But—but—" inquired the edit a publisher with obvious nervousness, " o this—just what is your idea, Mr. in scales?" he asked impulsively.

"Ain't it clear enough?" inquire N Clinkscales with some irritation—d ic ing his eyes from the advertising p which he had taken back and was e n ing with care. "Don't it explain its "Well, yes," replied Mr. Dingley a general way—yes! But in de meant."

"I'm starting out with something w stated Mr. Clinkscales, finally de li with some reluctance to explain. Y may have heard of it. I'm out to cu o the high price of taxes in this tra this country."

"I heard something," admitted the t "yes."

"Well, this is a part of it—whe y come in," said his informant with a a accent on the "you."

"I see," said the editor, slightly fli at this statement.

"Yep," the other proceeded with warmth now, expounding his plan. is the first step in the campaign—the Buy Now movement in the card seed trade."

"Don't Buy Now movement!" the i echoed faintly.

"Yep," said its promoter firmly. know all about the Buy Now boys they soaked them all last summer and food and shoes and clothing. them, scare them, scare them—adver sending round word by the salesmen, pering it all round, how they'd be st or freezing to death in the winter. them all rushing in at once—fallin themselves! Then jam on the price them have it!"

"I heard they did that," said the cautiously, "in some industries."

"Yes," said Mr. Clinkscales in a h voice, "and right here in the carda seed trade—and you know it. And I them and you helped them—you papers—taking their ads, holding do your news stuff. Hollering against th cost of living and letting them say they wanted to—not sending out you men to look it up for yourselves."

"We don't admit that," said Mr. Di "Whether you do or not," said Mr. scales somewhat sarcastically, "I probably you know what I mean. took millions, hundreds of millions, b out of this country by it—didn't t he asserted lavishly. "And million billions went out of it, didn't it, int dod-gasted high cost of taxes—for down there in Washington? All then," he said, concluding, "this th mine is just the opposite. This is the Buy Now Campaign I'm bringing Don't Buy Now Till April First."

"But won't this tend ——" said Dingley, and stopped. Though nat a dark, sallow man, he had grown a as ruddy as Mr. Clinkscales during th few minutes.

"Tend?" inquired Mr. Clinkscales waiting for him.

"Won't this freeze the whole carda seed trade—entirely—till April first? quired Mr. Dingley finally.

es "what it says? Not to buy
n-ed products in any way, shape
r 1 April first?"

"Yes, sir; I see that."

"What's the matter with it then? Ain't it all right?" inquired the head of the house.

"It is, if you say so, chief," said his assistant loyally, and waited for his employer to go on.

"Now then," said the latter, doing so, "what'll we do now?"

"That's what I'm waiting to see, chief," said Mr. Hausinger genially.

"I'll show you," said Mr. Clinkscales, drawing a few of Mr. Grout's financial papers from his inside coat pocket and placing them on the table. "You know the general idea. I spoke to you about it once already. We are going to cut the high cost of taxes out of the cardamom-seed trade."

"Yes, sir."

"Now how much is it?" inquired Mr. Clinkscales, taking up one of his papers. "Forty per cent—just about—the way we figure it," he answered himself in the absence of reply from his employee, "for everything. For we are going to get it all out, you understand," he exclaimed, "every dollar of it now—excess profits, income, any kind of a tax these fellows have to pay; and then—on top of that, you understand—all the compound taxes they make themselves; all these private taxes on taxes—and all the pickings and hidings and bookkeepers' holdbacks we wouldn't have except for these dod-gasted taxes. We are going to clean up the trade, back to the time when we didn't have these damned larcenous Federal taxes. You understand?"

"Yes, sir—yes, chief," said Mr. Hausinger, hitching, however, a little uncertainly in his chair.

"So I put this ad first in here—and the other papers. You see what that does?"

"It seems as if ——" Mr. Hausinger ventured hesitantly.

"It ties them up—that's what it does," said his employer. "The public won't buy—till April first anyway."

"Yes, sir," assented Mr. Hausinger promptly. "I see that."

"I did that because I figured that the stocks in retailers' hands would be about cleared up by that time. Is that right?"

"I should say just about right, chief," answered the other.

"Now then," said old Clank Clinkscales, "I have tied them up. What's our next move? It's this, ain't it? We'll chip in our share of the taxes ourselves. That, I figure it, is about fifteen per cent on our gross."

"How can that be, chief—that's the point," said Mr. Hausinger, "when our net is so small?"

"Easy! Easy!" said his chief confidently. "With the taxes and the compound taxes together—all the hidings and special funds and little bookkeepers' mercies, which Grout and those fellows like him hold up. We'll get fifteen per cent there easy. And we chip it in—for our good—for the trade, for the country. Is that clear?"

"Yes, sir; yes, chief," returned Mr. Hausinger promptly. "But ——"

"But what?" demanded Mr. Clinkscales.

"But how about the rest—the other twenty-five per cent?"

"The jobbers and the retailers have got to ante that. That's their share, the way we figure it. They've all got to chip in like we do on the high cost of their taxes."

"But won't they kick, chief?"

"You bet they'll kick!" said Mr. Clinkscales heartily. "But what good will it do them? They'll all have to ante up their share just the same," said Clank Clinkscales confidently. "Because why? Because I say so! I've got it all worked out to a T. Grout's been on it now for three days. They'll pay—all hands—before they're through. I've got an old-time water-tight conspiracy here that'll work—a good working conspiracy in restraint of taxes."

"I see," said Mr. Hausinger—in the voice of one who still wonders.

"You see now, don't you?" asked Mr. Clinkscales—"as far as the millers and refiners are concerned? That they won't sell much till they come down to meet me at fifteen per cent off?"

"I see that, yes," responded Mr. Hausinger.

"That settles the miller, don't it?"

"Yes, sir."

"Well then, take the jobber. He won't sell much now till the retailer gets his shelves cleared out, will he? Not if our advertising is successful—about the drop on April first."

"No, chief."

"So he'll have practically all his present stock on hand April first, then, won't he—bought at the higher prices?"

"Yes, sir."

"Well then, you see?" asked Clank Clinkscales triumphantly.

"In a way—yes, I do. In a way," said Mr. Hausinger hastily. "In a way—yes." For he could see his employer was going on.

"I'll bust them, every one of them!" said Mr. Clinkscales. "Every man jack—if they don't come across with their share. I'll bust every one!

"For I've got an ambition," said Mr. Clinkscales to his employee confidentially. He was feeling good that morning, and more talkative than usual. "I've got a mark I'm setting for myself in this thing. I want, if I can, to have the influence of this thing reach outside of just our own trade. I want to make the cardamom-seed trade an example to this country."

"Yes, sir; I see, chief," said Mr. Hausinger heartily.

"And now," said Mr. Clinkscales, returning to the present, "let's get down to business. Let's plan about getting out our notices of our cut to the trade."

And they both sat down to work.

"The old man," said Mr. Hausinger to Mr. Grout, following Mr. Clinkscales' departure from the office after a long and exhausting afternoon—"the old man is gone!" said Mr. Hausinger solemnly, and tapped three times with his forefinger against his forehead. "He's gone! That's all! And he's going to rip up and drag down the whole cardamom-seed trade with him."

"He hasn't been right, in my opinion," said Mr. Grout bitterly, "for years!"

He was all worn out nervously himself. He looked like a man with black rings painted round his eyes.

"Mr. Pontifex," announced Mr. Grout to Mr. Clinkscales at his desk at nine-fifteen the next morning.

"Show him in," said Mr. Clinkscales promptly. His voice was vigorous and businesslike. Seeing him, you would not have believed him an invalid. He was the only man in the establishment who did not appear superficially to be worn out.

"How are you, Cornelius?" he said heartily, rising to meet the president of the Cardamom Seed Jobbers' Association. "What you got on your mind?"

"I've come to inquire," said Mr. Pontifex somewhat formally, "what is this thing that's all over the trade that you're going to do?"

"Sit down," said old Clank Clinkscales, "if you want to—and I'll tell you. I'm out," he explained then, "to cut out the high cost of taxes from the cardamom-seed trade—and the country at large," he added. "I'm helping the Government to cut down on the high cost of living in our trade—as an example. And I'm going to do it. I've got it all doped out. I'm forming a conspiracy in restraint of taxes, starting with my own customers first."

"That is to say," remarked Mr. Pontifex—and waited. He was a brisk, businesslike man. Even his waiting was brisk and businesslike.

"That is to say," stated Clank Clinkscales, "nobody will do business in this trade—if I can prevent it—till he cuts out this dod-gasted high cost of taxes."

"Then, sir," said Mr. Pontifex, "that explains your advertising that I've heard about?"

"Exactly! That's my first step," stated Mr. Clinkscales. "The Don't Buy Now campaign. Because on or before April first I'm going to have the prices of all cardamom-seed products to the consumer down forty per cent."

"Then I understand you to say," proceeded Mr. Pontifex with the voice of a man who wishes to be right first of all, "that you propose to cut out the payment of all Federal taxes from this trade?"

"Yes, sir."

"And you estimate these to be forty per cent?"

"Forty per cent—and more—the taxes and compound taxes both together," replied Mr. Clinkscales.

"What do you mean by that?" demanded Mr. Pontifex crisply. He was a precise man, in a precise blue-serge suit and a blue bow necktie with white round spots which stuck out with mathematical precision from below his unusually hard-looking collar. "Compound taxes—what does that mean to you?"

"It means," said Mr. Clinkscales, "just what it says. All the trimmings and hidings and special funds we all charge on top of taxes that we'd never get if they weren't there. It means the actual cost of these damned monstrous Federal taxes as we work them out in practice."

"Speak for yourself," said Mr. Pontifex severely.

"I'll speak for myself—and for you too—before I'm through," said Mr. Clinkscales, suddenly growing very red. "What I'm doing is this—if you want to know. I'm chipping in fifteen per cent from my taxes—my share, good and plenty! And the rest of you will ante up the remainder!"

"How?" demanded Mr. Pontifex in a hostile voice. "How'll you make us? You show me!"

"All right, I'll show you," said old Clank Clinkscales obligingly. "Take you jobbers. You won't sell much till April first, will you? Not if I keep on advertising."

"Say we don't," replied the leader of the jobbing trade, "for the sake of argument."

"All right," said old Clank Clinkscales, regarding him steadily. "And you won't sell much right off afterward, not unless you take up my proposition—not in competition with my dealers who do anyhow."

"Well," said the hostile Mr. Pontifex sharply, "what is your proposition?"

"I wasn't going to give it out yet," said the other, "but I guess I might as well—as long as the president of the jobbers is right here in person. Now the whole situation in a nutshell is this: You jobbers have got your shelves full of goods bought at the highest after-wartime prices, ain't you? All right. I advertise prices are coming down forty per cent to the consumer April first. All right. They all wait for it. Now then it's April first—the public is all out, suspicious, sore over what I'm advertising to them about the low prices they ought to have."

"An outrageous shame!" interjected Mr. Pontifex sharply.

"Now what'll they do? They won't buy any more than they can help, will they, except from one class of dealers—the ones that can give them the forty per cent off I promised them?"

"Who's that?" asked Mr. Pontifex sharply.

"My dealers—the ones that are coming in with me in my conspiracy in restraint of taxes."

"A lot, they will!" said Mr. Pontifex.

"They will," said Mr. Clinkscales. "And the beauty of that is—for my customers—that they won't have to wait till April first to start either. They can start cutting down the high cost of taxes and selling goods right off—next week. They can begin to sell their goods next week for forty per cent off."

"How?" demanded Mr. Pontifex, evidently disturbed at the idea.

"I'll show you how," said Mr. Clinkscales. "Their shelves to-day are full—my jobbers', like everybody else's—with goods that were bought at the high prices. All right. I go to them and say: 'I sold you those goods. Now any time you come in and join me and cut prices—and chip in your share of the high cost of taxes—just that minute I rebate you fifteen per cent on what you paid me for those goods.

"'Provided,' I say to them," continued Mr. Clinkscales, pushing his stubby finger into his desk, "'you chip in twelve and one-half per cent more—your share of these dod-gasted taxes and compound taxes that we're after.' And they'll do it, too," stated Mr. Clinkscales confidently, "when they know I'm in this thing to stay. They know me and they know I can tie this trade up indefinitely and go right over their heads—if necessary, right down to the retailers.

"And it ain't," said Clank Clinkscales—"I'll tell you this confidentially—it ain't as if I hadn't extended credit to a lot of these fellows either."

At this Mr. Pontifex apparently grew rather red.

"Oh, I've got all the elements of a good, first-class trade conspiracy right here in my hand!" said Mr. Clinkscales almost jovially. "And don't you think otherwise! I'm in this thing—right up to the hilt, and don't you forget it!"

Mr. Pontifex sat motionless for the time being.

"But even at that," said Mr. Pontifex finally—after some reflection.

"Even at what?" demanded Mr. Clinkscales.

Factories, Steger, Illinois, where the "Lincoln" and "Dixie" Highways meet

"Twenty-seven and one-half per cent—your fifteen and our twelve and one-half together—isn't forty."

"It will be when I get through with my retailers," asserted Mr. Clinkscales.

But at this Mr. Pontifex laughed a mirthless laugh.

"You'll have a nice time," he said, "cutting any profits out of them. You talk about your high prices—your profiteering by the manufacturer and the jobber. They've got one trick where the retailer has a hundred."

"They'll come in all right, don't fret," said Mr. Clinkscales confidently—"into our little conspiracy. That will be the second of the conditions we'll have in it. Do you suppose," he argued, "if I go to my jobbers and make them my rebate conditional on their selling to what retailers will chip in themselves—that will cut out their taxes, that other twelve and one-half per cent on the retailer's price—do you think for a minute that we'll have any difficulty in bringing in the retailer? You know better'n I do the credit most of them have to have from the jobber.

"And if that don't do," added Clank Clinkscales—"which it will—we'll make doubly sure with our advertising campaign. We'll put this thing through," said Mr. Clinkscales, "if I have to get out myself and sell cardamom seeds at the right price from the tail of a cart. And it ain't," he said threateningly, "as if I hadn't done it before—and couldn't do it again!"

Mr. Pontifex said nothing whatever. His bright eye gazed unfocused in the general direction of Mr. Clinkscales.

"Now then," the latter said briskly, "is there anything else I can do for you? Because if there isn't I've got to get busy. I've got to get out my second notices to the trade—get my second move going in my conspiracy. And lemme tell you something else," said Clank Clinkscales with some warmth: "It's going and it's going big! Not only in the cardamom-seed trade but all over the country, when they see what we do, there'll be conspiracies springing up in restraint of these damned high costs of taxes—following our example. You'll see!

"You're a customer of mine in some lines," he said. "Whenever you want to—when you've made up your mind about coming in—you call me up. I'll be right here on the job. But now," said Mr. Clinkscales, concluding, "you'll have to excuse me. I'm busy."

His visitor got up stiffly. His brisk clear eye was fixed in a rigid stare. His precise chin, fresh and white from the barber's, stood like stone above his mathematically arranged necktie.

"The fact about you is," he said with great distinctness, "your mind is gone. You are a madman," he asserted, "and we shall deal with you as such."

"I'm doing some of this dealing myself," returned old Clank Clinkscales—not rising as his visitor went out.

Mr. Grout and Mr. Hausinger watched him in silence, shaking their heads as he passed through the main office and out into the corridor.

On April 1, 1920, Mr. Clinkscales sat in his private office giving an audience to his old friend and competitor, Mr. Charles Barker. It had been a hard fight, hammer and tongs, day and night for ten weeks. And yet, superficially, Mr. Clinkscales, seated firmly at a right angle to his desk, his feet planted firmly on the floor, never looked less a mental or physical weakling in his life. Outwardly still, neither his mind nor his duodenum seemed ailing.

"I hope you're satisfied with what you've done, Clank," said Mr. Barker.

"I ain't though," answered Mr. Clinkscales briskly. "Not yet."

"For you certainly done it—whatever it was you wanted," continued Mr. Barker. "You certainly knocked the profits out of the cardamom-seed trade."

"I did what I told 'em I'd do, didn't I?" said Mr. Clinkscales in a warmer voice, with a slight intonation of pride. "I took the dod-gasted high cost of taxes out of the cardamom-seed trade!"

"You did," said Mr. Barker sadly—"and the profits too!"

"The compound taxes, you mean—the charges and hold-ups and taxes on taxes you were all getting," said Mr. Clinkscales somewhat more spiritedly. "I guess you ain't suffering yet—not if you've got a competent cost man like my man Grout to make your cost figures for you. I can always trust him for that. He'll always hold out enough to cover me—as he did h Clinkscales added. "You ain't any of you. I know that."

A short silence followed his de

"Look here, Clank," said M finally breaking it, "what were in this thing anyhow? What star

"I owed it to my country, d inquired Mr. Clinkscales in retur relied on my patriotism, didn't help cut the high cost of living? it out where it is—out of the hi taxes. I got up a first-class, copp water-tight conspiracy in restrai And it was a good one, too—a article, if I do say so," stated scales. "A novelty," he added trade conspiracy for God and co heard of in the United States."

Mr. Charles Barker contemp end of his cigar for a short spac

"On the level, Clank," he inqui "what were you after?"

"Was your trade ever in bet compared to other business, to-day?" demanded Mr. Clinks lengingly.

But his friend and competito answer him directly.

"I always knew you were a nu he said, still looking solicitously of his cigar, "but I never did were crazy."

"Crazy!" exclaimed old Cla scales, his voice registering a slig stimulus. "Crazy! Who's crazy? Ain't you seen it yet?" he de "when it's written on everythin the United States in letters ten f all over the world?"

"Seen what?" inquired Mr. looking up finally.

"Chipmunks! Wild men! A

"Seen which?" inquired M again.

"In glasses! Hollering with m night and day!" stated Mr. C now more lively.

His friend gave as yet no surfa tion of understanding.

"They're driving us! They're They've got us—if we don't loo spite of anything we can do!" Mr. Clinkscales, his color and rising simultaneously.

No light of intelligence yet ap his friend's eyes, he proceeded: "A The fellows that never did it, bu all to start with! Rapid-fire exp lows that wrote a book once—or Dod-gasted, four-eyed, cigarett amateurs! The world's alive wit busy as ants in a sugar bowl, round, hollering, waving their

(Concluded on Page 84)

Coal Saving, Red Hot Radiators

The Valve Should Get the Credit—and Why

EXPERTS tell us that steam heat can be a flexible, heat supplying, noiseless, leakless system calling for no adjustment, doing its work economically—extracting the last unit of heat from every lump of coal burned. But you, perhaps, experience just the opposite—putting up with little or no heat—leaky, "bangy" radiators—burning twelve tons of costly coal in a season while a neighbor uses but seven. There's a big difference between promise and performance.

Good architects and heating contractors learned that steam can only be a perfect heat if the air venting valve is perfect. That is why they demand and get only the best—Hoffmans.

Hoffman Valves remove steam heat waste and discomfort because they positively distinguish between air, water and steam and do it automatically. Now that doesn't mean very much to any of us, but by way of illustration—

Suppose there is a particularly balky radiator in your home that refuses to warm up. There's a roaring fire under the boiler—your gage shows more steam pressure than you were told was necessary, pipes are thumping and hammering, but still—no heat. That radiator is air bound—filled with cold air that cannot escape because the valve is out of order or needs adjustment. This cannot happen with Hoffman Valves.

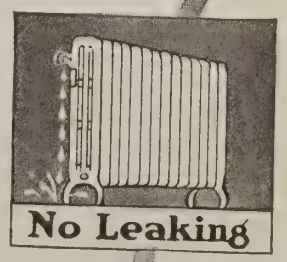
HOFFMAN VALVES

more heat from less coal

Hoffman Valves stay open to vent all the air in a radiator automatically and the instant the steam arrives shut up tight to keep it there. There's no bothersome tinkering with a penknife to try and stop hissing steam. Hoffman Valves are **built** and adjusted at the factory under the severest tests, then **hermetically sealed** so that no one can tamper with that adjustment.

Or suppose that balky radiator of yours leaks scalding water at times. A **Hoffman** Valve will end that trouble too. Just as it closes when steam enters it so does it shut instantly when water arrives.

Coal waste is eliminated because you get the heat you pay for—where it belongs—in the radiator.



Any Good Architect or Heating Contractor Knows All About and Recommends Hoffman Valves. There is A Special One For Every Type of Steam System.

FOR YOUR HOME—This is the No. 1 Hoffman Valve (as illustrated above) for use in single pipe systems—the kind you probably have. Send for one—it costs $1.90 parcel post, prepaid. Try it. Your heating contractor can then Hoffman-equip your entire home.

Send to our New York Office for our booklet "More Heat from Less Coal." It explains in a non-technical way how steam systems should operate, the reasons for their faults and how to cure them.

HOFFMAN SPECIALTY COMPANY, INC., 512 Fifth Ave., New York

Los Angeles
215 W. Seventh
Street

An Unqualified Guarantee

The satisfactory operation of Hoffman Valves is guaranteed for five years. If, for any reason, you are dissatisfied new valves will be furnished or your money returned, whichever you prefer—without quibbling.

(Concluded from Page 82)

country, for our share of it. Who was it ran the railroads for us? Lawyers and bankers and bankers' sons-in-law, didn't they? No railroad man, if you could help it. Now who's going to run them? Lawyers and brakemen! But always lawyers—they're trained specially for leadership in our new republic—they're educated specially to make the most noise first. And now they're loose—hollering and talking, the regular lawyers some, but now these new labor lawyers, these labor agitators! They've got the old ones beat a mile. They can holler louder than the old ones—and in thirteen languages.

"Crazy?" shouted Mr. Clinkscales, breathing harder and harder. "Yes, I believe sometimes I am—when I look out round me and see these things hopping up and down, running round and hollering. You wouldn't have believed ten years ago—nor five—that there were such things inhabiting the world, outside of a circus. And the worst of it is, I'm the only one that seems to see them. Nobody else seems to notice anything there but me. And that," stated old Clank Clinkscales, "worries me. That's a bad sign. That's one of the surest signs of insanity there is—when you keep seeing things that nobody else sees. You think after a while maybe they ain't there.

"I said that was the worst," continued Clank Clinkscales, in the absence of comment from Mr. Barker, "but it ain't! There is one thing worse—that makes me worry about myself more. It seemed to me all along lately that everybody in my own business had gone crazy themselves, and that's a bad sign for any man—an awful bad one—when you begin to see that everybody has gone crazy but yourself. I've worried a lot about that.

"But what is this thing that is going on in the United States now?" proceeded the speaker. "Where would all this I'm talking about show first if it was true? Where has it always shown—what's been the special feeding place of amateurs and politicians and government-ownership experts? Taxes, ain't it? Government taxes! Government expenses! That's the place you can watch them always. That's the register. And what were they last year—the government expenses, taxes and deficits together—for the year that started in months after the war ended? Eleven billion dollars! Eleven billion—that's all!"

Mr. Barker, looking, listening, had now let his cigar go out.

"What are taxes anyhow?" the speaker addressing him continued, now turning to economics. "What are government expenses? They're a deficit, ain't they—a deficit from what the Government costs over and above what it earns? Now that's where these new fellows come in. Deficit—that's their long suit. That's where they shine. That's their middle name—Reginald D. Amateur—D. for Deficit! They're the original deficit makers of the world—in everything they touch.

"But that ain't it," stated Mr. Clinkscales, now very red indeed. "That ain't what I'm talking about. That ain't any news to anybody. Everybody's known it and laughed at it up to date. They thought it was their weakness. But it ain't—not by a jugful. Not to-day. It's their strength, the tool they're working with to wreck and smash us all and take over the remains. Taxes! Deficit! General bankruptcy!

"Eleven billions—eleven billion dollars in government expenses—taxes and deficits in this year!" asserted Mr. Clinkscales. "Government expenses—only just one kind, the Federal Government—to say nothing of the billions back in wartimes and the billions coming on next year. You know the way they've been getting them and getting us used to their getting them these past few years? They've been taking over your property and mine in bigger and bigger chunks, ain't they, and calling it taxes? You know what it is, don't you? You know what's coming along next, after it, as a regular system?" asked Mr. Clinkscales in a distinctly warning voice, and paused for a reply.

"No," said Mr. Barker, slightly rousing himself.

"Confiscation!" cried Mr. Clinkscales. "Confiscation—for the deficit makers, for the amateurs and the politicians and the labor lawyers and the fellows that have discovered and are founding the new heaven on earth, where everybody can live along and always get more than they produce. How? By charging off what they don't produce to a government deficit! They've shown a deficit in the railroads and shipyards and wire systems—everything they've touched! And always, every time, every deficit they've made has made them stronger, all over, with the fellows they were paying it out to. And why wouldn't it? Why wouldn't it?" inquired Mr. Clinkscales.

"So now they're popular, naturally. They're on top—with the majority—and they're going to take it all over. So now," said Mr. Clinkscales, "they'll take it all over, and establish a general, permanent, operating deficit for all mankind—everybody producing less than they use up—following the fashion of those well-known mechanical experts who've shown the world how they build up that new industrial paradise in Petrograd. The greatest three-ringed exhibition of peace on earth, good will to man and scientific government by operating deficits since the stars sang together at the beginning of the world and Cain and Abel danced round the first Christmas tree.

"Who'll pay for it?" demanded Mr. Clinkscales now. "Who paid it in Russia? Who'll pay it here? Who always pays a deficit? The fellows, whoever they are, who've got something to pay it with, don't they? Who else? From John D. Rockfellow right down to the scrub woman in a black bonnet who goes into the savings bank with a yellow book every Monday. For they're democratic—these deficit makers for the whole people—you've got to admit that. Nobody's dollar is too humble for them to take.

"Crazy?" exclaimed old Clank Clinkscales, taking a fresh and still more enthusiastic start. "Me crazy? When I see these things whirling, jumping, howling all round me—giving plans and specifications of how to make something out of nothing! Crazy? And yet," he said, reconsidering, "they ain't the craziest by any means. They ain't a marker! They're mild cases for the foolish house, compared to us!

"What do we do," asked Mr. Clinkscales, "while this is going on? What have we been doing right here in the cardamom-seed trade? We've been compounding taxes, ain't we? Adding in all the extras we could think of for ourselves? Running up the general deficit for all mankind by adding to it for ourselves all that the minds of bookkeepers could figure and conceive? Eleven billion dollars taxes! It's twenty-two billion easy, when the fellows like us get through compounding it—getting our rake-off, collecting our special taxes on the taxes! And all the time, all round us, all these dod-gasted high priests of confiscation—standing with their knives shining and their mouths watering and their teeth gleaming and their kettles boiling—all ready to pop us into their pot like the cannibals round the old-time missionaries our grandfathers used to feed the South Sea Islands with!

"And these fellows—you and the rest of them in the cardamom-seed trade," cried Mr. Clinkscales, letting a personal note creep into his argument, "are the ones that have been out the past three months calling me crazy!

"Let me tell you something, Charlie," said Mr. Clinkscales with a somewhat lessened volume of sound—"let me tell you something. If this don't stop—unless more businesses take up my idea, unless there's more conspiracies in restraint of taxes springing up round this country soon than there are now, they've got you! They've got you! This country is a goner!"

And Mr. Clinkscales now finally stopped.

"Clank," said Mr. Barker, rousing himself from the hypnotism of Mr. Clinkscales' oratory and relighting his cigar, "you certainly are a nut! And yet," he added—and stopped contemplatively.

"The only way," vociferated Mr. Clinkscales, concluding—"the only way to do for any business man who can see beyond the end of his nose is to stop it—right here and now—unless he prefers a few years' big profits to holding onto his business at all! For the only way to beat these fellows is to beat them at their own game—the way I have here. Cut out the thing they feed on—cut out the taxes! Stop them right here on the spot! Get their job before they get ours, that's all! Hit them first! Serve notice to them in Washington that this thing has got to stop—because we won't pay for it! We won't finance our own funeral!

"That's my idea, anyhow. That's what I've done in the cardamom-seed trade," said Mr. Clinkscales somewhat less passionately. "There's one satisfaction, anyhow," he said now in an increasingly cheerful voice. "They ain't any of them living and fattening on the cardamom-seed trade any more—taking our taxes, spending our money and standing over us telling us how to operate—and that's worth something in itself. It's worth a quarter of a million dollars of any man's money," asserted Mr. Clinkscales liberally, "not to have that squirrel-faced expert—that Doctor Moon thing that was here—over me, telling me all about my own business—at my expense. That's one thing—that's one luxury I'm giving myself out of this," he said with a deep note of personal feeling in his voice. "I put him out of his pain in this line. There's one thing we've hurled back to its laboratory. I haven't seen him round here since we started in cutting down our prices, so I guess maybe we got his job anyhow. That's one great satisfaction, anyhow, to me!" he reasserted.

And just then, by a strange coincidence, Mr. Grout entered the private office, carrying a card.

"Hell's boiling!" cried Mr. Clinkscales violently, reading it. "Speak of the devil! Here he is now!" And then he remembered. "This was the day," he said, "I told him I'd show him what we could do—on April first!"

"I guess I'll be moving along," said Charles Barker.

But Mr. Clinkscales sat waiting, looking very red indeed.

"This is the day, as I recall it," said Doctor Moon, removing one glove and sitting down after greetings had been exchanged, "when you anticipated being able to show me results in the price of cardamom-seed products."

And he smiled rather encouragingly under his large round glasses.

"Oh, yes—yes!" said Mr. Clinkscales, raising himself in his chair with an effort. This man, he saw again, had a strange effect on him; just the sight of him in the room—odd as it might seem—appeared somehow to cause him pain in his duodenum. "I guess I did," he stated with a faint indifference. "I guess you'll find when I show you the figures"—and he reached out his thumb heavily toward his push button to summon Mr. Grout.

"Oh, no, no!" said the other, detaining him. "That will not be necessary. I have not time for that now—and I know all about it already."

"Uh!" said Mr. Clinkscales in something between an interjection and a grunt.

"It was beautiful," asserted Doctor Moon in a voice of genuine satisfaction.

"Beautiful?" repeated Clank Clinkscales, somewhat at a loss.

"What we did, as shown in our seasonal weighted-average chart," explained the scientist.

"Uh!" said Mr. Clinkscales again.

"The price curve," explained Doctor Moon, "from the seasonal weighted averages, telling exactly from the known data of production and demand what the normal price must be, if let alone.

"If left alone!" repeated the speaker very definitely. "Never," he said, "could there be a more beautiful demonstration! For from the very beginning—from the moment trade restriction was withdrawn, almost from the time of my visit here, the prices followed almost identically the course of the ideal seasonal weighted averages upon the chart which we had worked out in advance, thus showing with the nicety of mathematics that abnorm tra interference of every kind whate been removed."

At this Doctor Moon ceased s himself, momentarily fixing his gl Mr. Clinkscales. But Mr. Cli made no reply. It is doubtful if h have done so, for his weakness wa on him—his inability to translate exactly in speech under intense e And he could feel as well the unf irritation to which he was so subje reasserting itself in his nerves and ing and digestion. His duodenum had not been in such shape for m since the last time he had seen t before. So without expressing hi speech, he turned uncomfortably desk chair, waiting for the other to proceed.

"You may have noticed," he sai so, "that I have not been here s first visit. This was it—the reas explained. "For we could follow f chart exactly what was going on. predicted it, in fact. We had show tifically in advance what woul from a free uncoerced price move the cardamom-seed industry. It w tiful!" he said again with convicti ing at Mr. Clinkscales as if to er speech from him.

But the latter said nothing b mere mutter which soon died awa

"And so," continued Doctor Mo "knowing this with scientific cert had no desire to inflict myself on y now, too," he said, starting to pu glove again, "I must leave aln mediately—now that I am here. here in fact between trains, passing to Washington on a very special I'm merely here to-day because I wa and because I wish to thank y sonally for your loyalty, for your ism—your loyal policy, which I k yourself inaugurated in the car seed trade—the policy of rigid r ference with the normal, healthy, course of prices under free and trade conditions."

He stopped for a moment with Mr. Clinkscales seemed to giv curious sound.

"I fear," continued Doctor Mc getting up, when Mr. Clinkscales more, "that I must be going now to catch my train to Washington, a very busy man these days. But to stop just this moment, if no thank you, to felicitate you on w have done—negatively of course, the less effectively—in removing tion and pressure from the cardam industry. On what, perhaps I m he continued, coughing lightly be hand, "we have both done.

"For," he said, now moving to door, "I think possibly you may ested in another phase—another of this success here. Largely be it—because of my success with th industry," he stated now, "the ment has drawn upon my time- itself of my services in a larger fie may be interested to know that, l a result of our work here, I am sta day to act as one of a board of thr will from now on take charge of th grain and flour industry of the States; and possibly later—if w find the time—of that large allied the meat industry.

"I am on my way to Washing added, "for our first meeting n must certainly not miss my train

Saying this, glancing at his w passed hurriedly through the door Mr. Clinkscales standing awkward he had risen.

Sinking back after the closing of Mr. Clinkscales remained some scarlet silence in his swivel chair earnestly at the door through which ernment representative had disap apparently endeavoring to regain t of speech.

"They got us!" exclaimed ol Clinkscales finally. "They got country is a goner!"

And reaching out his thumb, h heavily again upon his push butto

"Grout," he said to that sub "find out what time the next tra for Mt. Manitou."

For he was back again where h January. He was in bad shape ag breathing was strained, his face c and it seemed to him as if his d would burst.

happened to run out to see me. The robbery interested her, so I brought her in."

The fat-faced detective with deliberation produced half a cigar and bit another inch off it. His fishy eyes sized Julia up.

"This the Miss Sinclair that mixes in jobs like this?" he queried pertly.

"The same," smiled Julia.

The other detective scowled over the window sill. "Never knew an amateur to butt in what didn't muss the cards," he declared at large. The fat head of his partner wagged in agreement.

Julia surveyed them. They bore the stamp of the six-dollar-a-day operative.

"Absurd!" Said Julia Bluntly. "You Don't Get Commissions Like That Once a Year. This Could Not But Stay in Your Mind"

Their antagonism was plain. She need look for no coöperation. Therefore she squelched them.

"Miss Cumerford was trying to be kind—to you," she said softly. "I did not happen to drop in, as she said. I came here expressly to mix in, as you so happily phrased it. I'm mixing from now on."

Cumerford waved down the detective who was about to retort.

"There is room in this investigation for anyone who may be able to lend a hand," he remarked testily. "If Miss Sinclair thinks she can ——"

"All right, all right," grumbled the sleuth, throwing up his hands; "let everybody butt in. But if you want your stuff back tell the amateurs to lay off. This is a regular job and it's gotta be done in a regular way."

"From which," interjected Julia cheerfully, "I gather that you haven't found much to work on. That sets us off about even, doesn't it? You won't mind if I go out and look at the footprints? These may mean something—if you haven't ruined them! I'll see you, Mr. Cumerford, when you are free."

With Miss Cumerford she backed out of the alcove while the two sleuths watched her with what was intended to be scorn. They were not so contemptuous as they made out, however. Police circles had not been blind to the exploits of Julia Sinclair. Though she never had worked against the police but on the contrary had helped them on occasion, the natural jealousy toward anyone who might gain some of the credit for solving a mystery had been created. From the standpoint of the private detective she was an even more unwelcome intruder.

To the two detectives now present she was notably distasteful because she had hit the nail on the head when she declared that they had made no progress. That was true despite the guarded footprints on the lawn and the fact that there were fingerprints on several vases. But the fingerprints were queer and instead of giving promise of a lead that could be followed they seemed only to add another puzzling complication. And the sleuths were fearful that Julia Sinclair in her quick, intuitive way might see the light which, though they put on a mysterious front and posed, they admitted in their hearts they could not see. Moreover, they were peeved because the newspapers would play the story big on account of the nature of the loot and Cumerford's position; and their agency already had been identified publicly as working on the case.

"We might's well quit now, Bill," opined the sleuth on the outside dolefully, resting his chin on the sill. "This dame'll come bustin' in at the wrong time and queer our case."

"Always breaks like that when you get off to a fast start," mendaciously asseverated Bill. He complained again to Cumerford: "Why don't you tell her to lay off?"

Cumerford considered them individually with dissecting eye.

"The thing that outstands to me is that the articles stolen from here are doubtless getting farther and farther away, with consequently lessening chance of recovering them. Get busy or quit—I don't care which. It's none of your business what Miss Sinclair or anyone else does. She is retained by me—so make a foot race of it if you can."

The man dropped from view at the window. Bill of the fat face glared at Cumerford, thought better of it because he liked his six dollars a day, and switched his glare to the several vases that had been set aside. He put on his hat and grabbed up a police department fingerprint index card, on which was a photographic reproduction of the tips of three digits.

"I'll take that." Cumerford reached for the card. "Miss Sinclair may make something of it. If you think you can, get another from the police."

He smiled at the grunt with which the other man departed. Though frankly he was not impressed by his sleuths, John T. Cumerford now could see an even break that he would get back his precious beads. He liked the atmosphere of capability which characterized Julia Sinclair.

Braving the displeasure of the detective who descended from the box beneath the window as she and Miss Cumerford turned the corner of the house Julia removed the coverings and examined the footprints. Not that she knew much about the science of footprints, but it seemed the proper thing to do and in her career as Opportunist she had found the most trivial items, of the intricacies of which she was ignorant, of high advantage. Why, then, if others could read something from these depressions made in the soil by a man in flight shouldn't she possibly see a meaning in them?

While she stood looking quizzically at the imprints, her left brow elevated, the right drawn down in a funny expression, Detective Bill came bustling round and joined his companion with a muttered word. With a sneer for Julia in her apparent perplexity they headed for the gate, but she didn't notice them. She was wrestling with the question of wherein these footprints were different from those which she or any among the thousands you meet in the street would leave.

She sought the opinion of Miss Cumerford.

"What's wrong with these marks?"

"Wrong?" Miss Cumerford laughed. "Nothing, I guess, except that they were made by a person who was wrong. I don't understand. Do you mean there is something peculiar about them?"

"Yes; but I can't decide ——"

Suddenly inspired she stepped onto the thick mold on which De Nutter had alighted and planted her feet firmly. Moving to the walk again she scanned the result with dawning light in her face.

"That's it!" she exclaimed, her eyes jumping from her own to the burglar's footprints.

"What?" Miss Cumerford bent forward. She was disconcerted by Julia's abrupt

"Rugged" white tread, extra ply fabri

QUALITY

Quality in a tire must be more than tread deep. Federal quality begins at the very foundation with the exclusive Double-Cable-Base construction. This prevents tire and rim rubbing. The wear that belongs on the road is not wasted on the rim.

Four firm steel cables, imbedded in the tire, grip the rim rigidly and prevent tire shifting. This eliminates pinching or chafing of the inner tube and fortifies the side wall of the tire against rim cutting and breaks.

All Federal tires—"Rugged" white tread (extra ply fabric), and "Traffik" and "Cord" black treads—have this exclusive Double-Cable-Base construction.

fa. Is there anything else?"
On this." Cumerford passed down
r ne fingerprint index. "The thief
le half a dozen vases, and this is the
t. he same three prints are on each
e ses."
Involuntarily the expression burst from
a soon as her gaze lighted on the
"What funny fingers!"
"h I thought," said Cumerford
pt. "But what is—funny about
?"
"he are odd, aren't they?" Miss
erford added her puzzled comment
Julia was silent. "I noticed that at
wln I saw the picture, but, as dad
wit is—funny about them?"
Julia Sinclair slanted thoughtfully. Sev-
in s she laid a corresponding number
r wn fingers over the photographic
du ion of the imprints that had been
n le vases.
Mmford drew out her thought.
"Trying to fit your fingers to them, Miss
Sir" he rallied her. "It might
be awkward."
Julia answered him absently with a ques-
tion. "There was no more than these three
?"
Shrewdly he considered her. He
te insight which she already had
ve: "The police—the regular police,
n spoke of that too."
Julia settled her third, fourth and little
fi on the prints. Cumerford smiled as
ec that in replying she took the atti-
he he had made a statement rather
rnark.
"The only way in which one can lift any-
wi only three fingers is to take the
b ween the fingers. This man did
n at; yet he leaves three finger-
— a row, as they would be if his
ha d had closed naturally over the
to ick them up."
Mr. Cumerford edged closer. Her father
f ther out of the window. Julia
l b, her brown eyes quizzically be-
ed
"What that so?" she demanded.
"Mr. Cumerford led her; "and then ——"
er —the Opportunist again was
e- "he did not pick them up!"
"The police were not so liberal in sizing
d urred Cumerford. "Why should
la of all persons, lay hands on any-
ha might take on traces which would
t m?"

Julia voiced the idea that had been shaping while she had contemplated the peculiar circumstance. "It might be his purpose to leave a mark," she suggested.

Cumerford gasped. In spite of the loss which destroyed the completeness of his collection he was almost glad that it had occurred. It was refreshing to see this girl tackle the problem on which the private detectives were submerged. Here was another angle that was new—the possibility that the prints on the vases had been made intentionally to mislead the pursuit. But he did not allow himself to be carried away by such ingenious reasoning.

"Since they say no two fingerprints are alike," he argued, "why should a criminal deliberately leave his? You don't intend to imply that he had some instrument by which he made false prints, do you?"

Julia looked down at the heelless foot tracks before responding. Between these and the prints on the vases, she was convinced, there was a close connection. That is, even as the burglar had been careless—heedless was a better word—in providing those who would hunt him with an outline of his footgear, so had he cared nothing about whether they sought to follow up the clew of the three digits. The brazenness with which these brands appeared was in itself suspicious. The footmarks might have been unavoidable, due to hurry caused by some alarm, some movement of the two servants who had been in the house; but the dangerously incriminating trio of whorls and loops could not be so readily explained. The latter had been avoidable; as witness the fact that there was no impression of thumb or forefinger. Here was the circumstance that set Julia's brain a-working most—the absence of a thumb print, for she could find no justification for the placing of only the third, fourth and little fingers on several objects in the manner in which the vases had been treated.

"Funny fingers!" she had said spontaneously, and the more she thought of it the more apt became the expression. Though one were to discount the nonappearance of a related thumb print by agreeing that the thumb had been covered—and why should a burglar protect the thumb and not the other fingers?—the general form of the prints was peculiar enough to demand attention. That they were so oddly distinctive, too, made them the more tantalizingly baffling.

Julia tried to visualize the person to whom such fingers should belong. In the first place, they were spatulate and short. Of the little one there was only the tip, but of the others there was a clear impression up to and including the bend at the first joint. By this she was enabled to determine the shortness; and further to see the remarkable characteristic of a digit with a top joint as broad as it was long.

"There didn't happen to be an understudy of Sherlock Holmes among the detectives," she smiled, "who could reconstruct the criminal from a measurement of how high he opened the window or anything like that?"

Her tone was frivolous, but Cumerford and his daughter sensed a serious idea behind it.

"No. Are you going to attempt that, Miss Sinclair?"

"I wish I could," she said ruefully, "but I'm afraid I'd go too far." The prospect was intensely irritating. Never had she seen anyone with hands like that. When they waited, expecting her to continue, she voiced the only conception she could conjure to fit such fingers—that of a dwarf—explaining meanwhile her latest observation of the prints.

"But," she hastened to argue against herself as the eyes of her hearers widened, "that is hardly consistent when you take into consideration the size of the feet. About an eight, I fancy, don't you? And small hands seldom go with big feet unless there is a deformity or the person is a freak."

Despite her tentative rejection of her own idea, however, Cumerford was impressed. His voice reflected growing appreciation.

"Come inside, Miss Sinclair, and let's hear the rest of your—your deductions. At this rate I believe we'll ——"

"The deductions seem to be rather moonshiny yet," interrupted Julia, her ready smile breaking. "I don't think the footmarks really can be counted of any value—they're too shapeless. The fingerprints present all there is to go on—their oddity should narrow down the search, but I'm

afraid you'll have to depend upon the police and their wide facilities for checking up. There doesn't appear to be much for my lone hand to do."

"Your lone hand, if you choose to call your head that, has moved farther in the half hour you've been here than the police got in hours," declared Miss Cumerford warmly. She felt cheap over having been offish with Julia, and was heartily glad that Julia had paid her back in kind. Moreover, it pleased her that she was not rebuffed when she slipped her arm into Julia's as they walked round to enter the house. She decided that she distinctly liked the Opportunist.

Julia took up the questioning. She quizzed Cumerford on the history and value of the Egyptian beads, the Hedwig glass and the kohl bottle, and caught him up when he dwelt upon the bit of colored glass which recorded that Queen Hatasu was "beloved of the Goddess Hathor."

"But a unique thing like that is worthless to anyone," she objected. "How could it be disposed of?"

Cumerford wagged his head and grimaced.

"You don't know the collector, Miss Sinclair. There are many among us who would be content to keep it hidden away for their individual gaze alone to feast on. Not all collectors exhibit their treaures, any more than everyone who has money is willing to have that fact known. There are misers in art as well as of gold, who gather rare pieces for none but their own eyes to see."

"Then"—Julia said it in passing, without expectation of striking fire—"then there must be men who would go to extremes to possess the pieces stolen from you—even to burglary."

"By Jove!" Cumerford's fingers snapped as he saw her point, and recollection came to him. Not even while he had been presenting to her the parallel of the misers had a thought of this significant lead recurred to him. "I'm thick-headed," he declared disgustedly, "when I have to be led like a baby to remember that not more than six months ago a persistent proposition was made for me to sell some beads, particularly the Queen Hatasu one, at a high figure." He beamed on Julia, then stabbed a finger at his daughter: "That new roadster you want is yours, Bob," he promised, "as a reward for bringing Miss Sinclair out to clear up this mess."

"I'll order that car to-day," she smiled promptly, and was hugging her dad when Julia tried to cast a damper.

"I wish I could be as enthusiastic about the outcome," said the Opportunist dryly; none the less her eyes were brighter. She had come upon what might well turn out to be a real starting point. "Don't the police know this?"

"Never thought of it till you gave me the cue," returned Cumerford cheerfully. It was not important that the police were ignorant of this detail—his faith was all in Julia Sinclair.

Julia pressed the small feathered hat tighter on her head. Her manner was brisk. She wanted to make good for mixed and, for her, unusual reasons—to get even with this really nice girl who had slurred the Opportunist, and to have the added satisfaction of refusing the check Cumerford would tender.

"Tell me who wanted to buy," she commanded, "and we'll get moving—the sooner the quicker!"

"And I'll go downtown with you and get my roadster," asserted Miss Cumerford gayly. She retarded an impulse to squeeze Julia, fearing the Opportunist might frown on such a sudden outburst of affection. "You'll stop with me a minute and if you like the car, why, then ——" Glancing at her father she stopped in embarrassment.

"Why, then, Bob," he completed for her, "you'll make the order for two."

The dealer who had approached Cumerford with the offer to purchase proved a disappointment to Julia. He was classed among the reputable, but he was bland—too bland for Julia's liking. He could not even remember who had retained him to negotiate with Cumerford.

"Absurd!" said Julia bluntly. "You don't get commissions like that once a year—with such prices for Egyptian beads. This was an unusual transaction which could not but stay in your mind."

The intimation that he was lying did not annoy him. He clasped his fingers before him. In the uncertain light of his shop, with its background of things from other ages fantastic and distorted in the shado seemed to have a setting peculiar suave oiliness.

"Not like that every day," his m continued; "no, madame. But—w many commissions—and, as I said, I remember."

Julia finally gave him up. As she shop she thought she heard a chuck she did. He had been chuckling less steadily, this man, since he ha of the burglary at Cumerford's.

Seeking another avenue over wh begin Julia went from the highest i deeper places of the antique bu scratching at length through Sixt Seventh Avenues and down in the over by Third Avenue. She did no in a day, of course, and the only cons she could gather was that the police ently were making no greater progr

The same reason that had caus Nutter to refrain from engaging a sional burglar dictated Julia's proce had been forced to act himself beca job had demanded expert knowledg restricted her search toward the l of a man versed in antiques who had fingers.

When she had completed the cyc hausted the apparent sources of in tion, a week had passed and she had nothing from the indistinct, mostly and sleek persons who constituted t eral strata of those who dealt in the ures of the past. They were a close-m lot, she found, polite and regretful bu fully clannish—like a Chinaman Italian who witnesses murder com two feet away but has seen nothing questioned five minutes later.

Irritated by this failure to get any admit knowing such a person as Fingers, she was headed across Centra when Miss Cumerford hailed her. T roadster drew up at the side of the dri and Julia stepped over to it.

"Beauty, isn't it!" enthused Miss erford. "I'll never get through ing ——"

"You should be indicted with the we can't catch," said Julia; "indict obtaining goods under false pretense

"No, no!" The owner of the new c splendid confidence. She opened th invitingly to Julia. "You'll get hi a while—I know it. What is new thing?"

"Nothing." Julia refused the inv to ride. "So very little, in fact, th going over to the Metropolitan to h spiration by staring at ancient bea camping among the mummies who g to the time the beads were made."

"What a pessimist!" ejaculated Cumerford with a gesture. She lea Julia and enunciated with perfect s ness: "Why, you can't possibly recover dad's beads. I've ordered yo It'll be here this week!"

Whereat they parted, Julia to g conference with some kings and quee other royalty of early Egypt, Miss C ford to speed home to inform her fath the Opportunist was making great way.

But the kings and queens and lesser of mummydom and an hour amor baubles they had worn and the vase had used gave Julia no help. She co no farther into the riddle of the funny and the man who had worn sandals.

Perhaps it was the sphinxlike sile the mummies that at length set her upon her way; they reminded her antly of the scores of clamlike a dealers she had interrogated. Perh was simply that she got mad on acco her firm belief that the dealer to Cumerford had sent her knew the n whom her quest centered. At any there was a sparkle of determination eye as she stepped smartly out of th seum and boarded a bus on the A Leaving that at Forty-eighth Stree walked westward to his place on Se Avenue. She purposed using thre arrest for complicity as a last des means of gouging information from

b on guard when he left the shop.

If she attempted to follow him he quite probably would give her the slip. Yet an inner consciousness urged her that the sooner she learned more of him the nearer she would be to the solution of the Cumerford burglary. She had to keep tab on him, and promptly.

"Nothing," she repeated as the silence continued, "except that I've been curious about the ruby in the tiger's paw. Is it intended to represent blood?"

"Perhaps." The dealer peered at her. He suspected a trick, a backfire in the question. "It might mean that."

"I thought so. The tiger just made a killing!" She nodded in sprightly fashion and again sent her words at De Nutter. "I know a man who made a killing recently, though there wasn't any blood in it. A man with—funny fingers!"

De Nutter straightened; his head jerked up an inch. Now it was he who understood the insinuation while the dealer did not. And it struck too close to home. His features tensed with his body. Then he grinned frankly as Julia searched him with her gaze.

"How do you mean—funny?" he asked.

"Oh"—she turned to the door; she had seen enough for the time being, said enough—"they are odd, that's all. Good day."

De Nutter gaped at her retreating figure. His countenance was puzzled, worried; he craned his neck to gain a last view of her as she passed into the street. His hands came from his pockets, to hang limply at his sides.

"Damn!" There was a fervency in the ejaculation that summed up his mingled feelings. "Well?" he demanded. "Where does she come in?"

"She's a snooper! What the hell did she have to show up now for?" The dealer was agitated, querulous. He related Julia's former visit, then flung his arms and turned angrily on De Nutter: "What the hell did you come here for, anyhow? I told you I wouldn't have anything to do with you till the case quieted down. Get out! Get out of here before some other fly cop comes blowing in and gets wise."

The outburst of anger had a contrary effect on De Nutter. He was tickled now, by Julia's remark about funny fingers.

"You're squawking like a dying fish," he sneered. "She may be a fly cop, but believe me she's running wide of the mark like the rest of 'em. And listen"—his voice hardened—"I'll give you just three days more to wind up this deal by paying me and taking over the stuff. If you don't I'll get next to Cumerford on a reward-and-no-questions-asked basis. Think that over and reckon what it'll cost your pocket. I'll come back in three days ready to deliver ——"

"No, no!" The protest was vehement and he clutched De Nutter by the arm. "Don't come here. I'll meet you ——"

"Here!" De Nutter shook him off and moved to the door. "Right here you'll meet me," he emphasized; "and you'll have the cash for me. Yah," he hooted, "you make me sick!"

On the doorstep De Nutter paused. Had he known the identity of Julia, the Opportunist, which the dealer had been unable to supply, he might have regarded her intrusion with some misgiving. As it was he was not alarmed, though for the instant she had jarred him.

Ignoring the dealer, who at his elbow begged that the appointment for three days hence take place elsewhere than at the shop, he leisurely surveyed the street. There was no sign of Julia. He headed across the Avenue and east on Forty-eighth Street.

In the shelter of a neighboring doorway Julia repeated her bargain with a newsboy.

"Here's five dollars for your stock of papers. There'll be five more—maybe ten—when you tell me where he goes, and his name. There he is now. I'll wait for you in that restaurant over there. You understand, don't you? Where he lives, and his name."

The youngster whom she had taken from his post on the corner with promise of the biggest day's pay of his life grinned knowingly.

"Gotcha, lady. It's a dee-voice case, ain't it?"

"Something like that," smiled Julia. "Hurry—he's going. And don't lose him."

She looked thoughtfully at the dealer, who continued to gaze after De Nutter. Even from this distance she could discern that he was uncomfortable by the opening and closing of his hands and his shifting of weight from one foot to the other. She waited until he had retired within his shop,

A Dignified Closed Car from Your Ford

A Coupé out of your Ford Roadster—or Sedan from your Touring Car!

With the Detroit Weatherproof All-Season Top you ride in closed car comfort all the year around. Easily opened for free vision and ventilation in summer, but instantly enclosed in case of rain. In winter a snug shelter from the bitter winds, the snow and the sleet!

Light, sturdy, *non-rattling*. Fits any Ford model from 1915 to 1920. Easily attached by yourself.

Write for name of dealer nearest you and interesting colored booklet with prices and full description of the patented sliding doors—a distinctive feature of Detroit Weatherproof Tops.

Detroit Weatherproof Body Company
Pontiac, Michigan, U. S. A.

Partly open for changeable weather.

Hudson Owners—
Write for Special Offer on Tops for 1916-1917 Touring Models H and J. Also made for Chevrolet 490 Touring, 1916, 1917-1918, and Chalmers 6-30 Touring Model 35A

All open—allowing both vision and fresh air. Changed back in a minute.

Detroit Weatherproof All-Season Top for Fords

Yours for leg comfort —Ivory Garters

Put it down in black and white, next time you're going to ask for Ivory Garters.

And, for your legs' sake, don't put off that happy day, for Ivory Garters are light and gentle above anything you ever knew. They have neither metal nor pads. Because they carry no unnecessary weight, they devote themselves entirely to holding up your socks. Makes no difference how your leg is shaped, Ivory Garters conform instantly and naturally without hitching, catching or binding. Out of sight is out of mind with Ivory Garters, all right. Don't need to think about your socks at all, once you have slipped Ivory Garters over your shins. At the price of a necessity they are a luxury you can afford to enjoy every waking minute of the day.

IVORY GARTER CO.
New Orleans, U.S.A.

Put it up to your dealer thus: say, "I want a pair of Ivory Garters," and he'll hear you the first time.

then went over to the restaurant she had indicated to the boy. It was too bad, of course, that she had not been given a chance to inspect De Nutter's hands, but once she had him placed that failure could be swiftly remedied. She was grateful to the mummies up in the Metropolitan; they deserved the credit for having sent her back to stumble upon the scene to which suspicion had been attached by the dealer's hurry to hide the money—to stumble upon the man in whom, she was sure, the clew of the funny fingers centered.

Three tedious hours later the newsboy, after an argument with a waiter, sidled up to her table in the restaurant. He fulfilled his part of the contract by furnishing De Nutter's name and the address of his studio on Thirty-fourth Street. Whereupon Julia rewarded him with ten more dollars and went to delve again into the shadier ways of those who deal in antiques to find whether the judicious application of additional dollars would open some of the close lips long enough to provide a line on Mr. De Nutter. Before going home she achieved her purpose in a scant and at once hopeful and discouraging degree. She discovered that De Nutter was a free lance and none too scrupulous—that was the hopeful part. But weighing against it was the inability of her informant to recollect anything queer about De Nutter's fingers!

Julia Sinclair stepped from under the cold shower. Eight o'clock was an unusual hour for her to be astir, but she had an elation that this would be a big day, fruitful in her pursuit of De Nutter.

Standing on the pale blue rug she tingled with robust vigorous health as her maid applied the rough towel with exhilarating strokes. Drawing together the robe that was laid over her shoulders she sat down while her feet were being dried.

The wet imprints her feet left on the rug, showing boldly on the blue ground, took her attention. They were reminiscent of a point in her problem on which she had been unable to make progress—the footprints at the Cumerford house which she was so satisfied had no insignificant bearing on the solution of the burglary.

"Felice," she addressed her maid dreamily, "why would a burglar wear sandals?"

Felice had been with her a long time and on occasions had given material aid and suggestions. The question therefore evoked no surprise. While she powdered her mistress' feet Felice pondered.

"I do not know, madame; unless"—she looked up at Julia nodding—"unless it would be so that he might quickly take them off to avoid noise."

Julia's head shook doubtingly. "I thought of that—but why should he put himself at a disadvantage, as he must be in stockinged feet if he had to flee, when he could be just as silent by wearing rubber shoes?"

"This is true, too, madame." With an expressive little gesture Felice pouted, "I do not know." She moved to get Julia's slippers.

Frowning at the wet traces of her own feet on the rug Julia stood up. It was aggravating, the persistent thought that here was a hint that she should be able to read.

Felice set the slippers before her and she tucked her feet into them. A couple of steps away she turned to look again at the wet marks on the rug. She stopped, her eyes puckering. The message was there in double form now if only she could translate it. Beside the dark stains made by the water were other pictures, of the soles of her feet outlined in powder. She kicked off a slipper and studied her upturned foot. It was twice wretched to feel, to know that she was on the threshold yet remained helpless to find the key.

"Madame will wear ——"

"The dark gray serge," answered Julia absently, and went on into her dressing room.

While being groomed Julia wrestled on with an elusive idea. Before her screamed another annoying insinuation—a grotesque little billiken that she treasured as a mascot.

When she was dressed she looked herself over. She glanced out at the sunshine, breaking through a morning haze. She sat down again and stretched out her feet.

"The ties, Felice, please."

"Madame said the boots," murmured Felice, kneeling to unlace the long suèdes.

"I know I did."

Julia checked the irritation in her voice. That she was so dumb she could not grasp a fact that was hammering for acknowledgment was not Felice's fault. Confound this constant association of ideas which refused to associate completely!

Sandaled feet and funny fingers! If the light ever came the two would dovetail perfectly. Between them they would leave no chance for the escape of—De Nutter! If the light ever came—if the light ——"

Julia Sinclair sat upright, her eyes dancing. With rare self-control she contained herself twenty seconds while the second shoe was tied. Felice smiled at madame's hearty laugh; she had feared the inability to find an answer was making madame cross, and crossness always made madame forget her meals and caused Felice concern. Now Felice recognized that the answer had been found as she followed madame into the boudoir and watched her settle at the telephone.

"Police Headquarters," said Julia; and "Inspector Gilbert."

Waiting for the connection she beamed on Felice. "I thought I'd lost the last of my brain," she sighed happily, "but I still have an ounce left. Felice, I —— Hello! Inspector Gilbert? . . . This is Julia Sinclair. . . . Yes. I want you to arrest a man named De Nutter for the Cumerford burglary. . . . I know you're in the Homicide Bureau, but never mind that. . . . Yes, you will! It's police business, isn't it, so what does it matter if homicide isn't involved? I don't want you to turn it over to any other bureau," she asserted determinedly, aware that Gilbert in the end would agree. "Have one of your pet sleuths go get him. Also, I want you to take an art dealer named Aaronberg for complicity. . . . Yes! Get them as fast as you can and let the papers know about it. They played the burglary big, you remember, on account of the antiquity of the Egyptian beads and the glasses stolen. Promise the reporters a crackajack story and"—he laughed at her rub—"tune up the department to blush modestly over another triumph! It will be good—and original, I guess."

She gave the address of De Nutter's studio and that of the antique shop, but she denied him more details. Having worked with Julia Sinclair before he was willing to take her word. Invariably she made good.

"Come out to the Cumerford house with De Nutter and a finger-print man," she concluded. "I'll be waiting. And, oh"—her glee rippled over the phone—"let me know as soon as you land him whether De Nutter has funny fingers! . . . Yes, that's right—funny fingers! . . . Wait!" She had another happy thought: "There are two would-be detectives belonging to the King Agency who've been on the Cumerford case. One is named Bill—you can find who they are. Bring them along too. They predicted I'd come bustin' in at the wrong time an' queer the case. I want them to see how well I do it!"

It discouraged Julia not at all when the police inspector telephoned her at the Cumerford home that De Nutter's fingers appeared to be quite normal.

"You'll be here soon?" she shot back. "No; don't bring Aaronberg. Lock him up. I don't imagine he'll like that and I've a score to even with his tight-mouthed fraternity!"

From Cumerford, and his daughter also, she withheld any disclosure of the arrival at the solution.

"Wait," she said, and warned him that she did not guarantee the recovery of his art gems. "I do guarantee, however, to put the burglar away," she stated. "You'll see him shortly—and I'll duplicate his trick!"

The private detectives reached the house ahead of Inspector Gilbert and his prisoner. Julia received them graciously.

"I'm still butting in," she cooed, "but only for a few minutes more. I'll abandon the case to you then—what's left of it."

Bill and his partner growled. Before they could retort the rest of the party arrived. Julia waved a hand at De Nutter.

"Your burglar, Mr. Cumerford," she asserted placidly.

Bill swirled, took a fast look and snorted.

"I knew it!" he exploded. "Didn't I tell you," he glared at Cumerford, "that this dame would ——"

"Very well; I'll leave him to you," said Julia crisply. "Now put it on him!"

In the silence, while Bill sputtered over the impossibility of carrying out his bluff, De Nutter sized up the situation. He recognized Julia as the girl who had come upon him and the dealer, of whose arrest he had not yet been apprised. He recalled that she then had made obscure reference to a man with funny fingers. If that was all that faced him —— He ceased going alternately hot and cold, and his breathing lengthened to about normal. This bogy about fingers did not frighten him.

"Go ahead—Bill!" chided Julia. "We're all waiting."

Bill refused to go ahead. Without further parley she did so herself. She nodded at De Nutter and produced the Bertillon card bearing the reproduction of the prints found on the vases.

"You don't mind letting us have your finger tips, Mr. De Nutter?"

"Not at all!" He held out his hands. He put aside a desire to be mean and said without evident rancor: "Before we go any farther, though, I give you notice that if you caused my arrest I'll sue you."

"All right; do that." Julia was not concerned. She motioned the finger-print man forward. "An ink impression will do."

Amusement large on his features De Nutter submitted. The roller was passed over his fingers and he set them down firmly on the paper. The result was clear as could be wished.

The inspector and his aid placed De Nutter's prints alongside the original exhibit in the case. The private detectives bent over and sneered. De Nutter merely glanced. Miss Cumerford exclaimed her disappointment.

"Why, they're not the least bit alike!" Even her untrained eye could discern that.

De Nutter sighed patiently.

"You didn't expect they would be?" he remarked politely. He looked disapprovingly at Julia. "I, ah—think something ought to be done to protect the public from such irresponsible happenings as this."

Julia was unflurried. She winked mischievously at the inspector and his faith in her returned. He foresaw trouble for himself if she fell down.

"I didn't expect there would be much resemblance," she admitted cheerfully. She contemplated De Nutter severely, mournfully. "If you hadn't gone too far you'd have got away with it. You shouldn't have worn the sandals!"

Her audience stood round in blank amazement—all except De Nutter. In him she saw an almost imperceptible squaring of the shoulders, a stiffening of the lip, narrowing of the eye.

"This ——"

"Let's cut it short," interrupted Julia. She stepped into the alcove which housed Cumerford's collection and came back with a vase. With a handkerchief she polished the glass and held it inside the linen so her hands did not come into direct contact.

"There can't be any finger prints on that?" she appealed to the expert for confirmation. "No? Wait here, then, and I'll make you some—funny fingers. Bring that please, somebody." She pointed to a deep leather chair and led the man who carried it back into the alcove. Three minutes went by.

"Come in," she called, and they trooped along to find her curled cozily in the chair.

She presented the same vase.

"How about it now?"

His heart pumping hard, his face flushed, De Nutter glowered at her while, taking the vase gingerly, the expert examined it. He still could not comprehend.

"The sandals gave your trick away," she repeated, and as De Nutter framed a retort the verdict was given on the inspection of the vase.

"Six finger prints—in sets of three. And"—the Bertillon man's brows wrinkled in renewed perplexity—"they are cramped like those we got at the start." He referred to the card again. "Cramped and stunted like the others, but they are not the same!"

"Of course not!" Julia laughed deliciously. "How could they be when I didn't commit the burglary?"

She paused to note De Nutter, in whose expression defeat fought with unbelief. He had been proud of how he had covered up his maiden effort at burglary—of how he had provided a false clew. The police had been unable to see through it, yet here was a girl ——

"You can't deny that I made these fresh marks." Julia resumed. "The vase was clean—I was alone. That much is granted. Now compare my fingers with them."

The ink impressions she gave were utterly dissimilar. They were oval, as any well shaped finger tip on a woman. The prints on the vase were squatty.

The inspector said it for everyo ring De Nutter:

"How the devil ——" he began, l more Julia interrupted.

"Look!"

She herself looked downward. F her vision they saw peeping out fro her skirt her right foot—bare!

"Fingers," she elucidated rather essarily, "which aren't fingers bu

Under his breath De Nutter swor ously. He tried to scoff at the re but his words were buried in a g vast amusement from the inspecto

"What a liar they'll say I a cackled, "when I give 'em the story a liar!"

"The senselessness of laying thre like that on a number of objects st at the beginning," Julia explained. and the freakish wearing of sandal a while I got the two facts relat leaving what appeared to be finge he concluded that that would el anyone whose fingers did not mat prints. Which let him out if he cam suspicion! There were only three pri cause the great toe is too much out portion to the others not to be dist and the little toe, aside from probabl crooked by the tapering style of affects, would have destroyed the by making the supposed forefinger of all! As it was, there seemed to pressions of the middle, fourth ar fingers. Is that not so, Mr. De N

De Nutter stood pat. He would nothing—there was always the off that a jury could not be convinced bizarre contention.

"I took the vase in one gloved went on Julia as he remained silent with the other held back the big an toes while I touched the glass wi three others. What's the use in being Mr. De Nutter? The sandals, of were worn so you could get one off to make your blind—isn't that rig would have been better had you sa another half minute." She nodded inspector: "It won't matter if th who saw him leave here can't identi once you print his toes."

De Nutter looked obliquely at spector close beside him. He smiled He affected lightness. "Why bother confirmation, Miss Sinclair, when yo the case built to suit yourself?"

"Aaronberg likely is weeping the story through the bars by now," sai brusquely. "Where's the stuff you s

De Nutter met her gaze evenly. H dered how Betty Winstead would g of it. There was a grain of comfort nothing was said about her. He hop would not be implicated.

"It was clever, wasn't it?" whi Miss Cumerford. It hurt her to s man on the way to prison. "Couldn let him go free, dad?"

The inspector decided that.

"Free, nothing!" he snapped. bird's too darned smart to be r round. Anybody't could dope out a like this is dangerous—real dange His mind went into the groove that b to the policeman. He cast a heavy, ac stare on De Nutter. "How many m these nifty jobs you done?"

Julia halted the degreeing tempo There still was the matter of recoveri loot.

"Don't you want to go through his inspector? You may get a line on th since he won't talk. Now—everybod side till I get my foot clothed again!"

Already Betty Winstead could h imagination the police thumping o door! In panic she bestirred herself. the topmost shelf in her kitchenette board she took down the Hedwig The beads with which the beauti ancient Egypt, including a queen, h decked themselves as much as four sand years ago, and the kohl bottle which a princess had darkened her lu eyes—still were in the tumbler a Nutter had put them.

Snatching up the paper in which sh read with trembling of De Nutter's she wrapped the lot in an ungainly pac With shaking hand she addressed it studio. Veiled and starting at every behind her she sped to the street and to Union Square to send the packa messenger. As a dabbler in crime De N was through for at least the years tha state would exact. Betty Winstead through forever.

ge me away. I was so ashamed. I
ntl to come back. Oh, Mack."
Henever stirred. His eyes were still
nk g in that damnable light.
"Mck!" He could feel her soft arms
nd his shoulders and her breath against
fe.
"Mck, you believe me, don't you?"
"I on't know."
"Ten you're through with me!" She
s lginning to cry. Her body was shak-
a inst his averted shoulder. "You're
oth with me! Oh, Mack! Where
l go?"
e urned and took the naughty peni-
t ild in his arms.
"Yu'll not go anywhere," he said
ghy. "I'll believe you. It's all right.
asdon't cry like that. Stay with me—
hig matters. It's all right."

An now for Amelia's tragic little lo e. Life went lamely with the acgwans out in West Denver. Old . airley died shortly after Amelia's rrge and left a few pieces of involved l ate which Macgowan sold to make t st of a bad bargain. Sextus Mac-va a kind ineffectual soul, kept about n ith the world and managed to put a y dllars into investments. His insur-e laved Amelia and her boy from p ism when he died in 1903. In 1907 ckn Prince, whose own child was then h eleventh year, received a strange ito
His ecretary brought in a card engraved h Macgowan, an ordinary enough ne indeed the lumberman was about e se himself when some vague memory l im that Amelia had a boy in school l at his name was Arthur. There-e avispy handsome lad of sixteen came n showed an adolescent bashfulness h ne announcement that his mother, s. extus Macgowan, was ill and desired se Mr. Prince on a matter of business. s as astonishing enough.
Mac called at the West Denver house t t same afternoon. In the emaciated o-red woman propped up in an inva-s cair he recognized with difficulty the el who had once, for his own good, us to marry him.
Mck," she said with a brave white le as she gave him her hand, "I uln't have sent for you. But you where are certain privileges we inva-enoy over well folks."
I' glad you did," he said clumsily, ug he spoke but the truth. "I have n anted to talk to you."
It about my boy," she persisted in her vice. "Of course I've had to tell him t nonsense. He thinks I'm getting e and I let him think so. But now the to admits—it doesn't matter. But I t tell you about Arthur. He has ke his way through high school and a ually made money. He's running s per agencies all over town. I wanted t study for the ministry, but I can't s eing that his talent is for business. ouse it would be better if he could have lke education. He has already passed ex ninations for Harvard ——"
Wy couldn't we fix it this way?" ken Mack, assuming rather a forced e cheartiness. "It would be nonsense ke him out of college. Suppose I ane him a little money—merely in the n a note. He could pay it back after du ion—any time when he felt able to dlit."
N thank you," snapped the invalid, m ith tightening.
It a purely business proposition, as as am concerned. It would be merely stg a sum of money in Arthur's ater."
I lve decided to develop his character g s own lines," she replied shortly. n ever so grateful to you, Mack. hu is born to be a money-maker. I t im to be a good and useful man, I sure he can do much good if he is h to use wealth properly. And he t egin his education—his business aon ——"
He aused, too weary no doubt to finish ar ment in her son's behalf.
I ould be only too glad to give him ar in my offices," Mack volunteered, r make some sort of reparation, yet eng that the boy would be of little co im.

"I should appreciate it," she declared in her tired voice. "That is what I wanted to ask of you."

"I'll take him on right away. Can he come to me on Monday morning?"

She nodded and gave him a thankful look out of her hollow eyes ere she turned them away, gazing solemnly into space.

Arthur applied for work at the Prince & Co. offices on Monday morning, but his apprenticeship was interrupted by the death of his mother, which occurred at the end of the same week.

II

IT WAS in the winter of 1917 that Macklin Prince's first chickens came home to roost and the bread of charity which he had cast upon the waves floated back to him in an inconvenient form.

The past ten years had fattened him both in body and in fortune. Quite without intent to profiteer or to batten upon the world's calamity he had found the war immensely profitable to him. The building of cantonments and wooden ships, his Pacific Coast interests in the spruce industry, the nation's call for timber everywhere had contributed to his material wealth and complicated his excess-profits tax.

Several years ago Bianca had persuaded him to sell his house on Capitol Hill and to build another and more pretentious home in a plutocratic suburb. The new place was French Gothic in style, quite palatial and divided into rooms which though they flattered his worldly pride always made him feel that he was living in a hotel and only remotely acquainted with the management. Mack Prince had no great natural taste. Modern decorations, tone harmonies, period furniture slightly bored him, yet he endured them and tolerated the expense because they pleased Bianca and gave her something to think about. Like many another man of fiscal genius his beauty sense was limited to an admiration of feminine loveliness; and in Mack's case feminine loveliness still meant Bianca and his daughter Marian.

It was in the evening of December fifteenth. Old Mack had stayed home that night, and for a purpose. Bianca and Marian—the latter having just passed her twenty-first birthday—were away at some sort of Red Cross entertainment. They had urged him to come, too, but he had furnished a ready excuse.

"They say they won't dance, but they will. And if there's anything I like less than dancing it's to watch dancing."

After they had gone he went into his library and selected a book. It was a fine room in which Mack Prince sat and read out of a book expensively bound to match the more or less genuine marvels of his large collection. There were good examples of modern masters hung on the wall above the low carved wainscoting and on top of the long bookcases stood several passable pieces of Chinese porcelain. His hand had fallen upon the Travels of Marco Polo and he set himself to smoking and absorbing the fascinating improbabilities of the quaint Venetian.

But the rich lumberman's mind kept skipping from the glories of the thirteenth century to the problems of the twentieth. Arthur Macgowan had asked for an interview this evening, and Mr. Prince was wondering what it was all about, half guessing and not quite liking the look of it.

Arthur, who was now twenty-six, had more than made good the dying Amelia's prediction. His talents were undoubtedly commercial. Precocious, energetic, serious, he had worked up from nowhere to a place of distinction in the firm. He had been Mack's right-hand man more than three years now; only his ridiculous youth had kept him out of the junior partnership which he was predestined to claim. He had tried to go into the Army directly after the declaration of war, but his poor physique and his usefulness in an essential industry had kept him a civilian. To do Mack justice he would have cheerfully relinquished his lieutenant to the country's service, but he was selfish enough to be glad when the boy decided to stay with the work for which he was so conspicuously fitted.

But the more Mack thought of Arthur's impending call to-night the more unreasonably it disturbed him. He had not the slightest doubt that Arthur would make a good husband for Marian. Had she been another sort of girl he would have presented no obstacles; would, to the contrary, have planned ingenious decoys to bring him into the family. Mack would have preferred a more robust specimen, possibly, to be the father of his grandchildren; but he would have been proud to have some of Arthur's spirit, some of Amelia's to strengthen the generation which was to inherit the Prince fortunes.

A flashing picture came back to him, a vision of the '90's. A girl all pink and white, her bodice cut rather low for the style of that period, was stepping out on a darkened veranda, the light of a ballroom glinting on her little laughing face, music humming round her like swarms of enchanted wings. Bianca! Romance and folly, excitement, misunderstanding, charm, disgust! All these years she had been a gadfly on his brow, an albatross round his neck. He had succeeded in spite of her. His headlong passion had killed the only woman who could have brought him peace, if not happiness.

Marian had grown to be so like her mother that it startled Mack sometimes out of the fat content which later years had brought him. Always charming, always selfish, clattering along with the same adorable foolishness that had come to him from Bianca's lips more than a score of years ago. But what had she to offer a man—a serious ambitious man—further than her superficial allurements?

Mack Prince threw down his book and shook himself out of his disloyal train of thought. After all he was her father.

It was a quarter after nine when a servant brought in Arthur Macgowan. From a raw boy he had grown to be a studious-looking young man, slender of frame, broad of forehead and narrow of chin. His handsome intelligent eyes, which he had inherited from his mother, were somewhat disfigured by amber-rimmed spectacles. Mack's first thought was, "What do the Biancas see in us fellows?"

Arthur took a chair, and as is often the case in such matters the dialogue advanced obliquely toward the subject at issue. They began with the afternoon's news and argued nimbly from the western to the eastern battle front. Arthur took the side of the waiting army at Saloniki; Mack stoutly held, as he always did, that the east should be given up as a bad job and all the force concentrated in France and Flanders. They sauntered away into business problems involved in the wide tragedy, and still amiably they disagreed upon the likelihood of peace within two years or three.

At last a man brought in glasses and a decanter, and after young Macgowan had helped himself Mack laid a plump hand on Arthur's knee and asked directly:

"Artie, what was it you wanted?"

"I guess maybe you know," said the young man, setting down his glass.

"You haven't passed your examinations for the Army?" Mack temporized.

"No. It's about Marian."

"Yes."

"I suppose you've noticed ——"

Young Macgowan hesitated for words, for he was never a fluent talker.

"I sort of thought you were going round a great deal together, if that's what you mean," said Mack by way of helping out.

"I've never taken a fancy to many girls," declared Arthur in his guarded way. "I'm very fond of Marian, Mr. Prince. In love, I should say."

He uttered the last phrase as if he were weighing it in his mind, a habit of his.

"How about Marian?" asked the candidate for father-in-law.

"You mean her attitude toward me?"

"Yes."

"She cares for me, too, I think."

"Hm. You think so."

"Have you any reason to doubt it, Mr. Prince?" inquired Arthur directly.

"No. I just wanted to know. You see she hasn't confided in me."

"I've asked her," confessed Arthur, reddening slightly. "She accepted me, but she wanted me to come round to you. Of course that's the right thing under the circumstances."

"Of course."

Old Mack chewed his cigar and sat looking over the applicant. The two men, facing each other, were a study in both contrast and similarity; Mack Prince, short, red-faced, three-chinned; Arthur Macgowan, slight, delicate, almost professorial in appearance. Yet they were subtly alike in expression. Mack had educated and molded the boy in his policy, which was peaceful assimilation. To the middle-aged man came again a flash of that vision, a tantalizing face framed in ballroom light. Had Arthur but known what was going on in that other mind!

"As a matter of fact," Mack drawled at last, "you and Marian expect me to do one of three things: To say it's a go or to say it isn't or to give some good reason why the match shouldn't be pulled off. Isn't that about it?"

"About."

Arthur's face was solemn, but his eyes smiled inside their shell frames.

"Well, Artie, I don't know of a living soul I'd rather have as a son-in-law—in one sense. You've got all the qualities that ought to make a woman pretty comfortable—happy, maybe. But the older I get the more I'm beginning to realize why our rich girls go round marrying Italian counts and English dukes. It isn't only the title. But these foreign fellows have got something that rich women like—leisure and fancy trimmings."

"Are you thinking of somebody for Marian?" asked Arthur, his pretended coolness poorly hiding his concern.

"Not a darn soul. And if Marian is in love with you, as I guess she is, there's no use throwing obstacles in the way. You're both of age and I have no legal right to interfere."

"I don't think she's the sort who would do anything without your consent," the boy declared eagerly.

"I suppose not." Mack tried hard to make his tone something more than dustily dry. Then he put it more explicitly: "Old-fashioned people call marriage a yoke; and that's about what it is. An elephant and a gazelle are both fine animals and they might care a lot for each other." Then he thought of another simile, one he had borrowed from Bianca: "There are deep-sea fish who might be crazy to play round with flying fish. The trouble is they're built to swim on different levels."

He paused and rubbed his bald spot.

"Artie," he concluded brusquely, "let me talk to Marian and see just how she stands."

Arthur Macgowan went away on this half promise, leaving Mack to resume Marco Polo's adventures in a moonstruck world. Twelve o'clock found him still reading—or facing a page from which he should have gathered much information. Why had he vacillated? Why hadn't he either knocked Cupid on the head or taken him on his knee?

It was after twelve when a feminine clatter was heard in the front of the house. Bianca's high voice could be distinguished from Marian's lower tones. Footsteps were ascending the winding stairs. Mack had slapped together the pages of his book and was thinking of following the bedward recession when Marian, still wearing her furs, appeared smiling at the library door. Mack Prince was again struck by the resemblance—Bianca coming back from her adventure more than twenty years ago, appearing as lovely as a rose between somber curtains!

"Daddy!" cried the girl, and rushed precipitately forward, the furs falling from her young shoulders as she advanced upon him and took her place on an arm of his chair.

She put her cheek against his and passed her hand over his bald spot before she said, "Artie's been here, hasn't he?"

"How did you guess it, Moll?"

"He came over to the benefit. What did you say, dads, to put him in such a funk?"

"I talked sense," he declared good-naturedly. "It often makes people sick."

"We're going to have a house of our own," she pattered on in her irrelevant way; "and after the war is over you'll give us another in New York, won't you, dads? And Artie's so crazy 'bout me! I don't know what I should do without him."

He held her off and looked into eyes so dazzlingly like Bianca's—or like what Bianca's had been in the wild days before she was broken to domestic harness.

"Are you crazy about him?" he asked after a long look.

AKRON

As you picture the large Goodyear-shod car plunging through these ruts, think what punishment was imposed upon the Goodyear Heavy Tourist Tubes. Built up layer-upon-layer of pure gum strips, these thick grey tubes hold air unfailingly and protect the tires which enclose them. More Goodyear Tubes are used than any other kind.

HEAVY TOURIST TUBES

A Blabon Art Floor of inlaid linoleum with a hardwood design—and with a small woven rug over it.

In home, in church, in office, in club, in public buildings and on the ships that sail the seas.

Glance back with us for a moment over 68 years! Born in a second-story room, dedicated to the ideal of superlative quality, this institution has grown from a one-man neighborhood business to a gigantic industry spreading over 16 acres of ground, where, in 55 separate buildings, a host of skilled and selected workers strive to satisfy the world's demand for Blabon Art Linoleums.

Year after year the world has found new and higher uses for our linoleum. From a product of utility, with a limited use, it has been developed to an object of art with a universal use. Today there is a type of Blabon Art Linoleum for every floor. Take, for example, your living room. The new Blabon Art Linoleums for such rooms are a revelation! Designed by masters in floor decoration, graced by handsome patterns of Orient and Occident, gifted with colors rich to the eye and warm to the sense, they are indeed works of art.

A genuine "Blabon" is always a masterpiece of linoleum-making. It is the product of the most finished artisans, the most perfect mechanical equipment, the ripest experience. And into every inch of Blabon Art Linoleum goes that devotion to superlative quality which has given "Blabon's" the character of a great institution—and which has carried Blabon Linoleum into the homes, the churches, the offices, the clubs, the public buildings, and on the ships that sail the seas.

Ask your dealer for Blabon Art Linoleums. Illustrated booklet on request.

Important Notice: Floor coverings (including rugs) made upon a felt paper base are not linoleum, and to describe, advertise or sell them as linoleum is a violation of the law. Felt paper floor coverings have a black interior which is easily detected upon examining the edge

"Positively!" she rippled. "I should allydie, dads. And think of having a uscall our own and trips all over the rld and Artie just adoring me all the e.

I e. Artie will adore you whether you rnim or not. After all it isn't a Cook's ou are planning."

Dis!" Her mouth came down to a ly little pout. "You're not going to ec or anything, are you? What's ng You know I've never really picked a body before. What in the world is tter with Artie?"

N hing, darling," he said wearily. sn't about Artie that I was think-

N about me, I hope!"

ose and took a seat across the table m.

Mll," he began, "are you sure you marry him?"

Dls! Don't I know what I want?" Y've seen children cry for dolls and row them out of the window."

Aie isn't a doll. Nobody could call at."

De," he smiled. "What does your say to all this?"

S's positively enthusiastic. You ow peevish she was when I wouldn't old Nat Penniford. Well, this o take that curse off."

k thought as much. Bianca, some- astened, but frivolous to the death, upon Marian's marriage as a shuf- responsibility to some man's shoul-

M dear," he growled, "there's too f this thing going on nowadays."

Merrying, you mean?"

N—unmarrying. A wedding ought to lot more than buying champagne kets for two. When you choose a ou want to be sure he's the one 're going to stick to—just as the r says, 'till death do us part.' You be sure he's going to be first in ind; or next in importance to the rl, anyway. Love, honor and obey old religious rule. It's a hard one thes, but it's the best we've found te. Have you thought of all this?"

I ink so."

e came a light into her pretty face have him a certain hope.

Wl," declared the puzzled father, "if other wants it and Artie wants it you want it ——"

You're just outvoted, old dear!" she d, nd again flew to his arms.

Huey, I wouldn't do anything to stand he way of your happiness. I only te to be sure, that was all."

Ar you're sure now!" she cried rap- usr, kissing him again.

I ink so."

he spake the weak giant, too fond to y hything to the girl who looked so h ce Bianca Melling.

III

MOST as soon as the marriage cere- my was performed Marian decided se preferred New York, and this ic, though it proved inconvenient to husband, exactly suited Mrs. Macklin ce who thereafter spent a great deal r me living in one hotel, then another, h married daughter. As Marian al- truthfully stated the case to Arthur: ight as well be in New York or London ll see of you. If I've got to be a walf the time, old dear, I might as b having as good a time as I can. es east of Oregon, isn't it? And as a you're on the train you might as c e all the way to New York. You t ant me putting on knickerbockers f owing you round the logging camps, ou"

Arthur wanted that, he didn't admit He got himself into the state of mind e e almost admitted that New York ue as near Seattle as Denver. Love st geography. For there was a bit se in what his pretty pleasure- n wife said. Naturally shrewd, u believed in getting his money's h rt of money, and despite the ingeni- x rtions of our boasted metropolis he d elaxation there, during his brief s, squandering for amusement.

t early spring of 1919 there was a y gathering in Chicago. It was a en f business with Prince & Co., and u summoned hurriedly from the , let his wife and his parents-in-law e ew and fashionable Gratz, where the elder Prince had already engaged half a floor and was waiting to pull Arthur into the lawsuit which had been an excuse for the reunion. The case, subject to the law's delay, was postponed two weeks; this gave the Princes and their children more time together than they had enjoyed, perhaps, since the first months of Marian's marriage.

"Banky," said the fat and comfortable Mack one day to his wife, a fashionable-looking person with dyed hair and a skin that was beginning to hang upon the cheeks, due to her willful determination not to become stout—"Banky, what's going on between Artie and Moll?"

"Going on?" she asked, looking up from a gossipy weekly she was studying. "I haven't noticed anything unusual."

"How long have they been quarreling?"

"They've been married two years," she replied, and went on with the only study that could ever hold her for half an hour.

"Who's this fellow, Foxberry?"

"Clem Foxberry?" she inquired, still smiling over some rare bit. "I thought everybody knew him."

"They don't know much good about him," he roared; and Mack was not the roaring kind.

"Mack," she exclaimed, "you ought to take more exercise."

"Foxberry isn't fit to be seen with decent people," he pursued, ignoring her hygienic advice.

"No? Well, he is—with very desirable people. The Anthrop Loages and the Percy Woodbans see a great deal of him."

"Huh. Probably they're not particular."

"Mack! Do you realize who the Loages and the Woodbans are?"

"I know a dog by the dogs he runs with." Mack brought his stubby fist down. "Do you realize that Foxberry has been kicked out of most of his clubs?"

"Why?"

"Not paying his bills and various irregularities."

"It's no disgrace to be poor. Clem hasn't been raised to worship the almighty dollar."

"Oh, that's it, is it?"

"And you shouldn't take him seriously. Nobody does."

"I do. I don't say that Moll is doing anything indiscreet, but it looks bad for her to be seen with him so much."

"Other people—real people—don't object to that," she insisted. And she named a long list of persons famous, at least, in the Sunday supplements.

"I don't know anything about society," was Mack's analysis, "but something tells me that decent people are cutting him out, and if they aren't they ought to."

"You don't get the idea at all, Mack," she told him ere resuming her textbook. "You won't ever learn. Probably you can't. People in the world don't have to behave the way they do in the second-rate towns."

"There are a few rules that are good in both Newport and Zululand."

With this Mack stamped away, determined to have a frank conversation with his son-in-law.

When Artie came in that afternoon Mack took him away to a private sitting room where—shall I say it?—they found a bottle, ice in a bowl and two glasses which someone through inadvertence had left sitting there. Arthur Macgowan had grown thin and prematurely old; Mack was always urging him to take a little rest, to lighten the strain somewhere. The eyes behind the shell frames were sunken and weary, there were deep creases running from the corners of his nose to the corners of his mouth. He was already beginning to grow gray. Regarding the young man for whom he felt so deep a responsibility Mack remembered that last picture of Amelia in her wheel chair.

Arthur was nervous and irritable. He began with an attack on the labor conditions which were threatening industry throughout the country.

"Artie, that's not what's worrying you," said Mack after listening quite a while.

"Well, it ought to worry anybody," challenged his son-in-law.

"We've gone through this sort of thing before," said Mack calmly. He might have been referring to labor trouble or matrimonial unrest. "It's Marian that's bothering you, my boy."

"I can settle that, I guess," replied Arthur, his sensitive jaw tightening.

"I know it's none of my business," admitted the elder. "But isn't it? After all I'm her father, and it's partly my fault, because I might have saved you both if I hadn't weakened. The fix you're in, Artie, if I guess the conditions, is a delicate one for any man. It's like meeting a rattlesnake on a closed trail—if you jump he'll bite you, and if you stand still he'll do the same, like as not."

Arthur sat perfectly still, his slender knuckles against his chin.

"Look here, son," said Mac, coming over and putting his arm round the slender shoulders. "You and I have worked together in harness for quite a while. I think we understand each other as well as two men can. The mess we're in is as much mine as yours—won't you help me keep it in the firm?"

"Mr. Mack," said Arthur, melting under the kindness of his patron and friend, "I don't suppose you know how bad it is."

"About Foxberry?" asked Mack, his face growing stern.

Arthur nodded and went on: "I don't think there's any name for that sort of crook. Blackmailer, possibly. He couldn't have worked his game anywhere but in the big society he infests. I haven't been letting his case go, Mr. Mack. He has a system like any other criminal—pretty talk, weeping sympathy, hard-luck story, persecution, a trick of pulling one wire against the other. It seems to get idle women. I don't mean the wrong sort, Mr. Mack—just women with nothing to do but to sympathize and admire his pretty stories. He dazzles 'em with his family connections, he buzzes about blighted ambitions. Great Scott, how they swallow him, hook, line and sinker! Do you know he's accumulated and spent nearly a quarter of a million dollars in bad checks and had every word of it hushed up?"

"Bully!" shouted Mack. "We'll put the rascal in jail."

"Will we?" asked poor Arthur desperately. "Do you realize that he has already stolen thirty thousand dollars from your daughter?"

"What are you talking about?" Mack Prince's fat face grew purple.

"Just what I know. You gave Marian six hundred thousand dollars on the day we were married. There are no strings on the money. Foxberry knows it. He's had her indorse two checks for him already, and when they came back marked N. S. F. she faced the music and said nothing. I don't mean to say there's anything wrong outside her feminine silliness. But he's a hypnotist. He makes people think that black is white."

"Good!" declared Mack with a sort of berserk mirth that bared his big teeth. "He can get from five to twenty years for that."

"Can he?" asked Marian's miserable husband. "Are you willing to air this case in court?"

"Hm." Macklin Prince sat in thought.

"Artie," he said at last, "have you gathered the names of other people he's been operating on?"

Without the least hesitation Macgowan mentioned several sufficiently illustrious to be at once recognized.

"His last job," he said, "was in the Mecklinburg family. Old Mecklinburg has always had more money than position, and he took pains to invite Foxberry into the family. He has a daughter—Antoinette, I think her name is. She was getting a divorce from her husband and she took up with Foxberry, thinking he'd be Number Two. He didn't sign a check in this case. He stole. When they broke ranks and Antoinette was done with him it came out that there was a diamond necklace which Foxberry had taken to be repaired and never returned. They didn't get it back any more than other people have got back the money he's been filching to keep him like a grand duke."

"We can wake her up all right," said Mack confidently as he touched a button and brought in his private secretary.

"Get Gaige Mecklinburg," he commanded, "and make an appointment for me at his office to-morrow morning if possible; if not, as soon as he can see me."

Mack Prince had never met Gaige Mecklinburg before, but when he entered the financier's private office next morning a great fat man with a face all seamed like that of a Chinese god rose and greeted him cordially. Mecklinburg was a size larger in the business world than was Mack Prince, but the Prince name was a sufficient ticket of admission in those days.

"Mr. Mecklinburg," said old Mack, almost without preliminary, "I am looking up the record of a man named Foxberry."

"Which Foxberry?" asked the Chinese god, never a muscle moving in his hard-baked face.

"Clem Foxberry."

"Well, what about him?" The long agate-colored eyes fixed him stonily.

"That's just what I came here to find out. I'm considering—ah—business dealings with him. I understand that you might help me."

"Who sent you?" came thinly from the thick lips.

"My son-in-law," admitted Mack, thinking this might serve as hint enough.

"I see." Mecklinburg's chin wrinkled into a hideously ornamental Chinese design, pulling his great face into a grin. "Well, Mr. Prince, I wouldn't exactly stand sponsor for Mr. Foxberry."

"You've admitted something," declared Mack, unable to restrain a smile at this miser's dole of information. "Now, Mr. Mecklinburg, to be quite frank with you, I have been informed of a case where this Foxberry has given bad checks to the amount of thirty thousand dollars."

"So-o-o?" drawled Mecklinburg. "As little as that? He must be going into the retail."

"The circumstances in this case"—Mack stuck to it, determined not to be roiled—"are such that it might be difficult to prosecute."

"I am not surprised at that. Now what do you want me to do about it?"

"I happen to know that you have had dealings with him."

"Oh. And being unwilling to involve yourself you want me to prosecute him for you?"

"Not exactly that. But if we could combine with others—other people in similar circumstances ——"

"You suggest a syndicate?" The idol's eye stared without the slightest glint. Mack stirred uneasily, feeling like a schoolboy in the presence of his superintendent.

"No, Mr. Prince," declared Mecklinburg finally; "I know of no other people in similar circumstances. In fact, Mr. Prince, much as I should like to help you, I am afraid I know nothing to the discredit of Mr. Foxberry."

"Thank you," said Mack with terrible politeness as he rose to go. "I am sorry to have wasted your time."

"You haven't, Mr. Prince, I assure you," protested Mecklinburg, making an attempt at beaming cordiality. He even went so far as to show his caller to the door.

This short talk assured Mack as well as a full confession would have done that what Artie had said was true. Mecklinburg would sacrifice anything reasonably within his great resources to save his daughter publicity. Upon reflection Mack couldn't blame him; indeed he had gone upon the present campaign with the avowed intention of punishing Foxberry through somebody else.

Next morning he left for New York, having first assured Artie—with an optimism somewhat strained—that the Machiavellian method would work out in the end. He spent four days in the metropolis, and in these days he presented his card at the doors of many prominent men. Some of them were in Europe, others indisposed to see him. The two whom he managed to interview were mental reflections of Mecklinburg, and like reflections, they were colder and less definite.

It was afternoon when he returned to his suite in the Chicago hotel. His women folk were out and his first act was to summon Arthur Macgowan to his private room. Artie's face seemed to have grown thinner during their brief separation; there were red rims round his eyes and he stooped in his walk.

"Well?" asked the son-in-law, throwing himself into a chair.

"It came out just about as you said it would," admitted Mack. "Foxberry has been working the hush system in a vicious circle. He's put a black-hand note into every pocket he's robbed."

"You needn't mind going any further," growled Artie, all hunched in his chair. "I'll settle this myself now."

"How?"

The question was superfluous, for Mack quite understood the look in Artie's eyes.

"I'm a man still, in spite of ——"

Artie checked himself on the point of a criticism unworthy and probably untrue.

Westinghouse

ELECTRIC WARE FOR CHRISTMAS GIFTS

A Different Christmas

No puzzling over what to give—no wearying shopping—no stretching of purse strings—that's the different kind of Christmas Westinghouse Electric Ware makes possible.

For Westinghouse Electric Ware is as good-looking as it is useful and as easy to procure as it is moderate in price. Moreover, it offers a variety of gifts to pick from.

You'll find it on sale by light and power companies, electrical, department and hardware stores. Look for the name Westinghouse in the window.

Pick Your Gifts from This List

Toaster Stove—A complete table stove that will broil meat, fry eggs, ham or potatoes, make griddle cakes and toast—in short do the work of a double-burner gas stove.

Turnover Toaster—Makes two pieces of toast at a time and turns it at a touch of a little knob, preventing burning of fingers.

Percolator—Not only convenient but also unusually satisfactory as a means of making good coffee. Several sizes.

Iron—Eliminates the changing of irons and innumerable steps. Three sizes.

Curling Iron—Requires no flame. Clean and economical.

Sew Motor—Attaches to any sewing machine and makes treadling unnecessary.

Warming Pad—Regulator keeps it always warm and makes it entirely safe.

Polishing and Sharpening Motor—Cleans silverware, puts a keen edge on the household cutlery and performs other services.

Cozy Glow—A handy little electric heater that directs the warmth right to the spot where it's wanted.

To the buyer of more expensive gifts, *Westinghouse Automatic Electric Ranges* offer a variety of styles. If your dealer can't supply you, write us.

(Concluded from Page 103)

"Look here, Artie," said Mack. "It's all very well to talk of making a scene and beating the man up. But you've got to consider physical chances. Do you realize that this Foxberry is a sort of hotel bad man?"

"I once saw a little peddler up in Telluride take a bad man's gun away from him and jam the muzzle halfway down his throat."

"Melodrama!" sniffed Mack. "I've just heard stories all over New York about the way Foxberry's tackled heavyweights and cleaned out barrooms without calling in the bouncer. He travels with a physical trainer and keeps in condition for—well, for the very sort of thing you're trying to start."

"Foxberry probably invented these stories himself," declared Artie impatiently. "He's a great novelist, that man."

"Possibly," conceded Mack. "But before we go any further let's consider ways and means. There are two ways open to us now—indirect action and direct action. We haven't tried out the first way yet—not by a long sight. If we sit tight and do a little watchful waiting something's bound to turn up that'll lock him up, and not a word said about Marian's case."

"In a year or two, maybe," objected Arthur.

"Most good jobs take that long at least."

"How about direct action?"

"A fool's method, whichever way you look at it. You can tackle Foxberry, make a mob scene, get well beaten up, both land in jail. Or you can take a shot at him and trust in a sentimental jury to turn you loose. Of course you come from the tall mountains, and that will be meat for the sensational papers. The case will ring round the world and be translated into fourteen different languages, including Finnish, Icelandic and Japanese ——"

"But it will get him in jail—in jail!" Arthur kept repeating, rubbing his whitish hair in a dreamy sort of way. Suddenly he came to his feet.

"I'll try it!" he shouted in a voice which his paternal friend did not like to hear.

"Artie, come out of the loco patch! You're a shrimp—can't you see what the man will do to you?"

"That's it!" The eyes behind the shell rims were flashing with a maniac thought. "Can't you understand? I'm wearing glasses. I'm going to make him hit me first.

"It's a criminal offense to hit a man with glasses. I'm going to make him hit me first. Come on, Mack! Foxberry's downstairs having lunch with a lot of silly fools. Are you with me?"

"Y-yas," drawled his father-in-law. "I'm willing to try anything once."

And together they took the elevator down.

Two physically insignificant men—one short, middle-aged, bald and growing stout; the other youngish, pale, anemic and spectacled—appeared at the Gratz ornamental dining-room door and ignored the head waiter's deep salaam. Quite evidently they were somebody in the world, for numerous captains of waiters joined in the reverence, and diners looked up from their plates to remark upon the rich Mr. Prince and his fortunate son-in-law.

The room was already full to overflowing, and at a table conspicuously centered sat the merry party toward which the head waiter instinctively led the newcomers. The dining room had been watching this well-placed table ever since its occupants filed in and took their seats. There were Percival Senningwell, world-famous and world-condemned amateur automobile racer; the subservient Mr. Pratt Nello and his somewhat vampirish wife; Mrs. Macklin Prince, Mrs. Arthur Macgowan and Mr. Clement Foxberry.

Of course it would be in the society columns next morning that Mr. Foxberry had entertained, and so on. Foxberry was of the type which people follow with cameras and subpœnas. During years of hard practice he had become skillful at facing the former and outfacing the latter. To-day he was brilliant as usual and adroitly flattering, having stimulated his natural talents from a pocket flask which he had christened Eighteenth Amendment.

He was sitting between Mrs. Macgowan and Mrs. Nello, delivering a comic narrative descriptive of a camel race he had once arranged during his travels in the Sudan. Mr. Foxberry had been a great traveler until the war broke out, when he discovered that his peregrinations had unfitted his feet for military service.

"I say, Clem," drawled Percy Senningwell, "who ever taught you to ride a camel?"

"I was born with the talent," declared this man of the world. "The camel, you know, is Nature's walking reservoir ——"

"Stop it!" commanded Percy, holding up his weak little hands. "Next you know you'll be telling us the one out of Noah's almanac about the camel's living forty days without a drink."

"How do they get that way?" giggled Mrs. Nello, who affected slang and made it a point to appreciate everything Percy said.

"Well, this little Sudanese camel ——" Foxberry was beginning his tale anew when somebody laid a hand on his shoulder.

As he turned an annoyed glance the whole table became aware of the intruders.

"Hello, dads!" cried Marian; but neither her father nor her husband granted her the least attention.

Mr. Nello and Mr. Senningwell had come politely to their feet, but there was something about the way the slender Macgowan's hand was pressed against Foxberry's shoulder that kept that astonished gentleman solidly in his seat.

"Won't you join us?" he asked with a coldly patronizing smile.

"I'll join you in hell," declared Artie, speaking close to his ear, but not so closely that the others could not hear.

"Let's make it a party!" Foxberry invited, raising his eyebrows and never relinquishing his smile.

Bianca's sagging cheeks seemed to sag a little more as she looked at Mack with appealing eyes. He thought she said something to him, but his mind was all on Artie's melodrama.

"Foxberry," young Macgowan went on in a tone which had become louder but fearfully matter of fact, "I haven't got any time to joke. I'm here to tell you about yourself."

"Splen-did!" crowed Foxberry, but his voice had become slightly falsetto. The innocent boyish face, which had served him so well in his profession, became clouded, revealing a white scar under the right eye.

"You're a blackmailer in the first place. In the second you're a thief—a common pickpocket. You're a forger and an unwhipped blackguard ——"

"See here, my fellow," broke in the receiver of these compliments as he half rose from his chair, "are you drunk? Do you realize what you are saying?"

"Absolutely!" Artie found himself smiling, a smile which pained him from his mouth to his ears. "I have made a careful investigation."

"Well," drawled Foxberry, turning for applause toward the astonished audience, "if it were summer I would say you were suffering from the heat."

"It's a cool day," Artie pointed out, "and I've got a lot more of the same to tell you if you care to listen."

"Don't trouble," Foxberry was so good as to beg.

"I'll cut it short, then," said Artie. "You've got everything that goes with a thief, a blackmailer and a cad. Of course you're afraid to fight like a man. I thought you'd be a coward when the time came ——"

"I say, my fellow!" Foxberry had risen to his feet and displayed his muscular, tall, graceful figure. "That's something that isn't said, you know."

"Mack!" Mrs. Prince was now calling quite audibly, but Mack stood firm as granite.

"You just heard me say it," came Artie's end of the argument.

David in nearsighted spectacles stood facing Goliath in the presence of the entire dining room. Foxberry's mouth was open, but no sound came.

"Do I need to say anything else?" asked the little champion, rising on his tiptoes in order to bring his nose on a level with that of his tall opponent. "Raise your hands, you cheap bully, and I'll give you the beating you've been looking for."

Foxberry declined the invitation apparently, though his right hand clenched hard. Old Mack, for once in his life a helpless spectator, cringed at the thought of poor Artie's going down, a mangled heap. But when the clenched hand came slowly up it merely rested on the back of a chair and Foxberry spoke, again looking round for feminine approval:

"This isn't the sort of thing to settle before ladies, you know."

"There's plenty of room on the sidewalk," suggested Artie. "Or would the ladies out there bother you?"

They stood just a minute, glaring eye to eye. Foxberry was no match for Artie here, because Artie's spirit was strong and Foxberry's was a poor thing. Finally the tall, well-groomed gentleman turned with a slight bow and, sans apology, started weaving his way among the tables and toward the door. His retreat—for retreat it had obviously become—was curiously lacking in the dignity it strove to maintain. The every movement of his proud back and hurrying legs indicated a nervousness quite alien to the fearless brawler of reputation. Halfway across the dining room he became jammed between two closely crowded chairs. It was an embarrassing halt in the line of evacuation; and during that pause little Artie Macgowan had found an open aisle and was fairly running toward the exit.

By now the whole dining room was in an uproar. Everybody was standing, some of them on chairs, every pair of eyes straining toward the grotesque race. Foxberry, bent on a strategic retreat, had apparently seen nothing of Arthur's strategic advance. It was not until he had gained the doorway that he looked up and beheld his enemy bearing down upon him at an angle.

Then came a decisive blow, one o ridiculously telling blows which ha wrecked a career more than once social history. Artie's leg went ou the suddenness of the leg of an eml jackass. The stroke landed squarel its objective and the elegant Mr. Fo seemed for a moment to be flying t space. Now there are four marble leading from the Gratz dining room foyer; and since man is not construc flying, Mr. Foxberry came down hard floor several feet below. He a with both a thump and a curse.

"The little one kicked him out!" high soprano shrilled through the room. A throng took up the cry an moment the wide space shook with pian laughter.

A house detective, who by some m was near the scene of disturbance, Arthur Macgowan standing alert ov body of his fallen foe. Seeing nothi to do the house detective laid a gentl on the assailant's arm and turning Foxberry scrambling to his feet suavely, "Are you hurt, Mr. Foxberr

"Is that any of your business?" co questioned the picture of bruised ele

"Who asked you to interfere in thi

Foxberry resumed his flight. His sers had been gashed at the knee, st of his long pompadour had rebelled their patent-leather smoothness and dangling over one eye. He didn't wa his hat, but strode majestically through the swinging doors.

Before a delighted audience could s round the eccentric victor old Mac out and linked his arm in Artie's.

"Let's go for a ride," he whispered as soon as they had ransomed their from the Grecian bandit by the rack went out by an inconspicuous entranc called a taxicab.

All during that terrible triumphal Arthur Macgowan sat silent, his thin sitive hand knuckled against his thin tive chin. Not a word between t Amelia had wanted her boy to grow be a good man; Mack Prince, turnin case over, examining it from every a concluded that Artie had always beh righteously within his lights.

Mack hadn't devised this trip as a cuse for a talk—that time was now Once he leaned over and spatted the y man a rough, hearty manslap on the Artie looked round and smiled w There was more hope in that smile Mack had seen there for weeks and mo

How had they settled anything by ridiculous low-comedy encounter? asked this again and again. The would get into the papers. It would nothing in the telling. Already, so far knew, reporters were pestering Bianca Marian for facts. Mack chewed at a st cigar as they rode mile after mile past lake shore's Italian splendors; now then out of the tail of his eye he rega the boy whom he loved as his own son

Would Artie go back to Marian and give her and be forgiven? The ques puzzled him only a moment, for he thinking of Bianca. He knew what A was thinking and enduring. And men Artie and Mack will forgive a great deal cause they love a great deal.

Social philosophers, I suppose, w label them both innate monogamists.

This Sign Is For Your Protection

The outside of a garage doesn't indicate the kind of service you get within.

But the United States Tire Sales and Service Depot Sign *does*.

Only good dealers are permitted to display it. In any of the thousands of places you find it—you can know that it marks a place where you should get good tires and good tire service.

And good tire service means not only putting on your tires, providing air, testing your wheels for alignment and reliable repair work,

—but straightforward, honest advice as to the tires best adapted to *your own use.*

United States Tire Sales and Service Depot Dealers are in the enviable position of being able to meet—*and meet exactly*—the individual requirements of our customers.

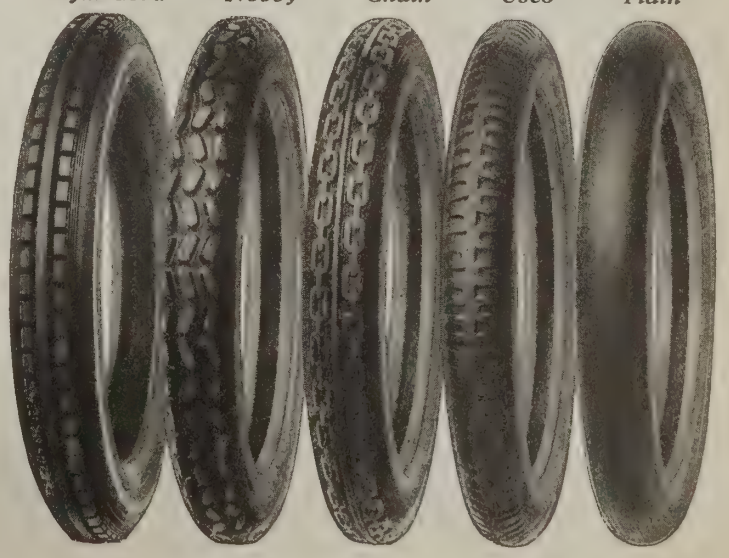
For the United States Tire line consists of five separate types, 'Royal Cord,' 'Nobby,' 'Chain,' 'Usco' and 'Plain'.

So the United States Tire Sales and Service Depot Dealer can be absolutely unbiased in the matter of advice.

Back of him and back of the tires he sells, is the good faith of the United States Rubber Company, the oldest and largest rubber organization in the world.

Consult him. Let him help you. Look for the United States Tire Sales and Service Depot Sign.

'Royal Cord' *'Nobby'* *'Chain'* *'Usco'* *'Plain'*



For passenger and light delivery cars—'Royal Cord', 'Nobby', 'Chain', 'Usco' and 'Plain'. Also tires for motor trucks, cycles and airplanes.

United States Tires are Good Tires

MAKING THE FILMS SAFE FOR PROVINCIALISM

(Continued from Page 23)

so our villains change with the national barometer. One year it is Japs, the next Germans, with the Mexicans good for any crime *ad infinitum*. However, we have one studio whose films circulate largely below the Rio Grande and it learned long ago that Greaser Pete was not popular in those parts, so in the Spanish titles the wicked pisano is always given an Italian name.

The filming of crime turns up some very curious idiosyncrasies of the censor mind. In some pink districts they will permit the most fascinatingly gruesome murder technic, provided only that the weapons be not visible at the moment of percussion. The plot may be worked out in its most educational detail, showing the purchase of the revolver, target practice on a large anatomical chart of the human plumbing which will register the most vulnerable spot to hit when the villain goes gunning. Then will follow the latest methods in abduction, and when the stage is set for the final meeting we see the villain sneak in, point the gun at the charted spot on the hero, and while we shudderingly watch a close-up of the finger closing down on the trigger—then, then, just as we are about to burst with excitement, darned if the old censor doesn't cut the picture, while the camera anticlimactically panorams round and shows the murderee slowly sinking to the floor!

It seems that the flash of the gun is too vivid for the highly attuned nerves of nice people, who may go right round the corner, if they wish, to view a melodrama where real people shoot actual guns and the flashes are accompanied by the most terrific and nerve-racking explosions. Leaving out the propriety of shooting the gun off, is it fair to refuse relief to our terrible suspense? It is like inviting distinguished guests to witness a hanging at San Quentin and then asking them to turn their heads away just as the gentleman springs the trap.

How do we meet this problem? Very simply. The easiest device is to place a chair, or piece of bric-a-brac, in line with the gun and the camera so that the sensitive spectator cannot see the exploding weapon. The usual method, however, is to cut the action into three parts. First, a long shot showing the fellow aiming at his victim; next, a close-up of the gunner pulling the trigger; and then just as we expect a flash, to cut to the victim receiving the bullet. Thus, without intending such a consequence, the censors drive us to a much more artistic filming of a shooting scene, for the forbidden long shot showing the whole completed action, even though it reveals the flash of the gun, is by no means as vivid as cutting quickly from close-ups of the shooter to the person shot and then to the whole scene.

Handling Poisons With Care

Another strange freak of the human mind is the censorial attitude toward the use of poison. In the Middle Ages poisoning was the fashionable method of murder and suicide; but the ball cartridge, with its deadly certainty, is now the favorite weapon among the destructively élite. Yet for some strange reason the censors regard poisoning as the most seductive course in the whole movie school of crime. And stranger still, it is not the act of poisoning that disturbs their equanimity, but the kind of poison used. They will let us show Romeo tossing off his deadly quaff, but we must not permit a close-up of the bottle lest it tip some susceptible spectator as to its contents so that he will run right off to the chemist's to order a dose for himself. Yet for art's sake we may wish to show the nature of the drug, or our unclassic yokels might think the romantic youth had taken ant paste.

The utterly absurd accusation that such scenes are lessons in crime is seen from the fact that the deadly drugs are known to every man, woman and child in America, only the blind being unfamiliar with the skull and crossbones that illumines the labels on them. I may state publicly and in the plainest English that strychnine and cyanide will cause instant death to man or beast, and that the always-available rat poison will do admirably if some of our household remedies are not accessible. But to repeat these common truths on the screen is regarded as highly immoral and likely to provide rare information to the murderously intent.

The most curious quirk of the whole mental process of the label objectors is the fact that while forbidding a close-up in the drama itself they will permit us to show in a title the same thing. For instance, if we wish to put over a modern society murder, using this archaic method, we register Bert and his wife Bertha at the breakfast table, and while the latter is reading the paper and totally absorbed in the bargain page, Bert may be seen surreptitiously emptying the contents of a small vial into her breakfast food. At this point we cut in with a title saying "Bert is a large stockholder in Greenwood Cemetery." And as we read this gruesome news there slowly dissolves in below the words a large bottle of cyanide of potassium. We may even omit the distress of Bertha after she has taken the dose and cut right to the funeral, and though we have obeyed the law, even a half-wit will know that Bertha's demise was not due to erysipelas.

In a certain crime story the modern Fagin, wishing to show his disciple how to open the safe without leaving the telltale finger prints, said in the title: "Here, this collodium is better than rubber gloves." And the censor cut the word collodion [as being criminally educational, so Jim had the title remade to read: "Here, this is better than rubber gloves." And then he dissolved a picture of a collodion bottle into the lower right-hand corner and it passed without further ado.

Stuff Dreams are Made Of

Though flippantly stated, the Bert-and-Bertha episode contains a very curious psychological complex. Many censors will not let us show the actual thing, but they will permit the registration of the thought of the thing. A censor who will cut out all scenes of drinking or gambling, for instance, will pass a title which says "John was again late for dinner," while down in the corner of said title we may dissolve in a scene showing John lit up like the front of a movie theater, with a bushel of poker chips before him. Thus it is that we are depending more and more upon titles to put over essential information, for if we cannot show the thing itself we can at least let you know our naughty thought.

The classic joke when Weber said to Fields, "Louie, if you knew what I was thinking about you could have me arrested," would have been spoiled in the films, for we would have showed what was in the mind of the comedian, and arrest would not have followed at all.

Besides thoughts, dreams and visions also are joyously passed by the literal-minded realists in the censor bureaus.

"You see, my dear," will say one of these curious persons, "the lady didn't really undress on the beach. The fisherman simply dreamed that she did and we have only seen the dream."

I trust that this reasoning is perfectly clear to the gentle reader.

Quite naturally the Jims of the motion-picture business take advantage of this mental paradox, so when they are in doubt about a scene going over they prepare for the emergency by shooting a few feet which will change the actual scene into somebody's dream of that scene. The distressing details of an actual murder might be cut out, but if one of the characters sees the murder in a vision, why, of course the murder hasn't really happened—the poor boob only thinks it has. Do you get it? When Jim was on the road for the company he saved many scenes by simply changing the title to say that the debacle was only a dream, after all. He has even rescued a whole story by starting it as a dream and having the dreamer wake up at the end of the fifth reel.

The same delicious complex holds true in the showing of nudes. A censor who is outraged at the exhibition of the human form divine will purr pleasurably when God's masterpiece is seen in a dream, with the result that even the classic dancers may be cut entirely or to mere flashes if the dancers are human beings, but Bacchic scenes or Dionysian feasts of the most utter abandon will pass unscissored if the artist chap attends them only through the smoke of his trusty meerschaum. Is it not strange that the nude or seminude reality will be cut, while the vision of the same thing will pass, as they are both rendered objectively in a photograph and were posed for by actual flesh-and-blood maidens who drew vulgar ten-dollar checks for their pulchritudinous display.

Again the size of nudes presents a very delicate task for film editors to determine. Besides distance lending enchantment to the scene it adds modesty to the dryads dancing about the trees, so that long shots of nudity are permissible. But the question is, at what point of the perspective does Eve become a thing of shame? Alas, we have no standards! It all depends upon the astigmatism of the censor.

Though Psyche's wondrous bath may be properly viewed only from the deep perspective of a mile or so, there is still another way we may beat this annoying limitation—a way which as yet has been barely recognized. I refer to the use of soft focus. We find that the censors will stand for a wonderful amount of sin and nudity if only it is astigmatically seen through a haze. Yet there are few directors who have grasped the opportunities of this wonderful technic, and of the few only one or two are using it with understanding and intelligence.

So far soft focus has been used mostly for art effects, whereas it is destined to occupy a large place in the psychological laboratory of the photo drama, as its greatest possibilities lie in portraying the subconscious mind. It much more nearly represents the stuff that dreams are made of than the sharp, hard, detailed focus so dear to the heart of the average director and camera man.

Edgar lies languidly by the seashore dreaming of his lady love and as he registers somnolence we gradually dissolve into the visualized theme of his amorous thoughts. For one short moment—during the process of dissolution—we get the illusive feeling of a vision, but as soon as the new footage sorts itself out and goes merrily on in the same hard treatment as the realism from which it dissolved we have to keep reminding ourselves it is a dream. On the other hand, when the scene starting from Edgar's sharply detailed realism gradually fades into a visualization of his thoughts in soft focus, one immediately senses a difference between the objective world of reality and the dream quality of unreality, for in truth our dreams—at least the memories of them—are always in soft focus. This differentiation will be doubly emphasized when the dream dissolves back into Edgar's sharply detailed objectivity.

Possibilities of the Soft Focus

A very interesting use of this new technic occurred in a picture wherein a girl recovers from a fainting spell and the audience was allowed to share her bewilderment of the objective world about her. When first seen she is lying on the floor, while the details of the room about her are entirely out of focus. As she raises herself to her arm and looks round vague indefinite spots begin to take on the form of familiar furniture, finally resolving themselves into sharp detail as she regains full consciousness.

But more pertinent to this article was another case where a young Armenian girl was being tortured, and as the strokes from the whip fell on her bare back the scene began to fade into soft focus until we saw the final blows blurrily as through tear-dimmed eyes. This was at once an artistic achievement and a successful circumscription of the objection to realistic torture scenes.

Thus we have a double life line by which poor old Art may be dragged up out of her prison and allowed for the moment to have her say, for when the dream and soft focus are both invoked we have met the strongest inhibitions of the censors—to realism and distressing detail. In such scenes we may go to daring limits without giving offense to the most sensitive. The bloodiest kind of murder can thus be softened down to a blur revealing a mere attitude, which will have more dramatic intensity than if we showed the bloody hatchet in all its hideous details.

In Millet's peasant pictures we see with what tremendous effect a painter uses soft focus, and by blurring out nonessentials, such as buttons, buckles and eyelashes, he can concentrate attention on the figure as a whole. The utter hopelessness of he Man With a Hoe is expressed in an atti le just as The Sower represents an attitu of tremendous power. Even Rodin, wo ng in bronze and marble, used a technic or responding to soft focus so as to give m ly the attitude or impression of the figure ad some day we shall have directors wh ill make whole plays in this impressio ic manner. Especially would the works a mystic like Maeterlinck lend themselv to such treatment. We are just beginni to show in the photo drama what the pai rs have taken four hundred years to lear

But let us get back to our censor p o- lems. Certain of these fellows while d v- ing a severe line at the nude will pass e picture if the lady has something on, whe s it is a well-known fact that the r st suggestive appeals are made by a f- dressed figure. A mere garter on a r e will achieve the most direful consequen s. But strangely enough many of the n t puritanical censors will pass nudes if t y have religious significance or form par f a sublime allegory. Statues or monum s also get by almost without exception. E e again we find that curious complex—e thought of the nude may be shown, but t the reality. I cannot resist, however, t ing one of our most delicious secrets—e that I am sure will stimulate the sale f opera glasses among the censorially c scientious. Many of the plastic mo mental nudes passed by the censors ar reality living, breathing women and stone at all!

Flesh-and-Blood Statuary

Only last week we did a most magnific garden scene in the center of which peared a fountain that would have gl dened the æsthetic heart of Louis XIV, the great bowl was supported by th beautiful kneeling figures, while it w surmounted by a Daphne that would ha glorified the name of Praxiteles. Its sh beauty and intent will carry it past t shallowest censorship, yet every one of th figures was a real person. And we did n do this as an impish joke on the censors—was a matter of business.

The cost of such a fountain with scu tured figures adequate to the purpose wou have been prohibitive, whereas the bo standard and the base were easily made that the whitened living figures could wa right into their several places. Of cours such a fountain could be shot only from o direction, for a rear view would have d closed the bent pipes that gave rigidity the bodies, and the alert observer would ha noticed that the water coming from th shell which the topmost figure held alo was supplied from a garden hose that ra up the lady's back and upraised arm.

The travelogue fellows are also great embarrassed in showing strange peoples an customs truthfully. I am sure, for instanc we are all interested in knowing how th Solomon Islanders live, yet the pink di tricts will never know the truth about the sartorial lapses—for, alas, these poor humar are clothed mostly in simple coats of tar and in the long shots these may be mistake for one-piece bathing suits! In the close ups it is necessary to provide panties fo even little cannibal babies lest the roug miners of Pennsylvania see something the hadn't orter.

A lady stood before a wonderful nud figure in the National Gallery in London "Mr. Whistler, don't you think that pic ture is indecent?" she asked.

"No, madam," replied the master; "bu I think your remark is."

The Bible furnishes another refuge from the censors. We have one board that wil not permit the use of the word "damn," but it passes "damned" because of its Biblical flavor. Though these folk will let us allegorically show heaven and hell in all their nakedness, they draw the line at many strange religious rituals. In a well-known picture by one of our greatest stars the little lady playing the part of a young Swedish-American lass prayed for a beau, and to her embarrassment her prayer was answered by a whole regiment of artillerymen. In her home province in Canada the prayer was eliminated because of its shocking impiety.

In many Canadian pink districts divorce is not permitted in the films as "the sacrament of marriage may not be profaned."

(Continued on Page 112)

(Scene from "Tom Sawyer")
No man "knew" the cave.

Let him slide. This better Washwear stands the strain

Tom Sawyer Washwear gives to real boys that well-outfitted, neat, tailored appearance which isn't lost even after good hard play.

Tom Sawyer Washwear looks well and "holds" its style because it's so well made from such splendid materials. The cloth is stronger and more lasting. Colorings are rich and even, and can't run or fade. Patterns are new—just what real boys like. Garments are roomy and reinforced where seams come. Able tailoring shows in the fit. Collars "set" properly, sleeves hang the way sleeves should, cuffs fit the wrist. Yokes are double. Waistbands are of sturdy material; buttonholes don't tear out. The good looking buttons are extra strong and sewn on to stay. Quality shows in the belts, ties, braid, trimmings—everything.

Tom Sawyer Washwear includes many styles, many colors, many patterns. All first quality—all guaranteed. Prices no higher than you usually pay.

SHIRTS—12 to 14 neck **RUSSIAN SUITS—3 to 8**
BLOUSES—6 to 16 years **JR. NORFOLK SUITS—3 to 9**
MIDDY SUITS—4 to 10 **ROMPERS—3 to 8**
ALL-IN-ONE SUITS—3 to 8

See Tom Sawyer Washwear at your dealer's. If he hasn't it yet, we'll tell you of a handy shop.

For dealers there's a miniature sample trunk. From it you can make stock orders unhampered. With it comes a mighty interesting sales story. Better request it right away.

"WASHWEAR" For Real Boys

(Continued from Page 110)

In such cases we must rearrange the relationships so as to omit this sacrilege, often with some very curious consequences to the story, but as the change is for the greater glory the censor's conscience is salved, even though Art is assassinated.

Like most women, I am glad alcohol has gone the way of opium; but one must be temperate even in his temperance, so it will no doubt be of interest to the average reader to see what an excessive use of soft drink is doing to the human bean. Since the curse of likker became generally known the downers of the demon rum have not stopped at driving him out of the real lives of the people, but have been doing it to their reel lives as well. There is something rather superb about utterly forbidding all drink in the films, for it shows a consistency of purpose if not of dramatic values.

When people disbelieve a thing to the extent of almost abolishing their most cherished art we must admit their valorous sincerity. Of course to complete their consistency they ought also to forbid the showing of murders, fires, making love to our neighbors' wives, gold bricking the farmers, spoofing the censors and other villainies, for few people believe in these things either. If they insist upon forbidding the shadows of life they'll have nothing left but the high lights, and their eyes will then become as blurred as their photo-dramatic standards.

Watson, Put Away the Needle!

In one great Middle Western state it is forbidden to show a hypodermic needle lest a peek at the naughty instrument make hopheads out of a robust peasantry. When Jim cuts for Kansas he makes his dope fiends snuff the "snow" artistically up their noses, which really is a much simpler lesson in crime than showing the complexities of the hypodermic syringe, yet the funny censors don't see the point.

Here is another item that will puzzle the sociologist: The only way for a Kansas hotel to maintain its honor and decency is to live right in the heart of the town. A hotel in the suburbs is always open to suspicion, and the farther it goes off into the country the more *outré* becomes its reputation. So true is this in the Sunflower State that a road house is forbidden in the films. In my childhood in Canada I remember charming places up and down the lakes and rivers where we could go for chicken, fish and frog dinners and quite cherish our respectability; and now in California these culinary charms are found all along El Camino Real, competing with the snappy enchiladas served by bright-eyed señoritas. It is true we sometimes dance jazzily at these jolly taverns, but we haven't discovered that their registers were falsified more often than in city hostelries. But it must be different in Kansas. A road house there is an outlawed wanton.

In shooting such scenes nowadays we never allow the word road house in the pictures, which permits us to alibi the location in the title. Of course in innocent states, like Texas, Oregon or North Carolina, we shamelessly call the place a road house, but when we are cutting for Kansas the title will say: "Night found them at Ye Rose Tree Inn in the dear little town of Wa Keeney." Kansas knows full well that nothing could happen at Ye Rose Tree Inn, especially if it was right next to the courthouse in Wa Keeney.

By cutting out rum and road houses Kansas has saved herself from much of the foul work of that old London actor-author, W. Shakspere. I have often wondered what the Sunflower censors would do with some of his tavern scenes. Falstaff, no doubt, would have to alibi his paunch with chocolate parfait, and while you are grinning at Kansas don't be too sure that your own local censor has not become addicted to two-seventy-five per cent buttermilk while he is cutting booze out of the films with his righteous shears.

As I say, there is something heroically sincere about Kansas' objection to all drinking scenes, even though it limits its photo drama to rain water. But what is to be said of places that permit the exhibition of liquor in all its most hideous consequences, provided only that the actual drinking is not shown? A wicked lumberjack may go to the cupboard, bring forth a bottle of red-eye, pour out a glass, raise it to his lips—cut—place glass back on table, then wipe his lips and grunt comfortably. You see, the real immorality of drink is not in looking upon it when it is red but in actually taking it into the system where it is likely to stir up your crime potencies. So in this scene the immorality was cut at the place where the poison was about to pass his lips. Or perhaps—who knows?—it may be that the censors feel that the mere working of the Adam's apple might stimulate thirst in the tummies of their bone-dry spectators.

In a recent photo play by one of our stars the highly moral motive of which showed a young girl's successful struggle against an inherited taste for alcohol, the drinking scenes were cut to smithereens in several districts—to the utter ruination of the picture and the weakening of the moral. But strange as it may seem, in most places where honest liquor drew an "out," a scene in which the beautiful young débutante became quite hilarious on cologne remained in, which would seem to be a most wickedly valuable tip to the alcoholically thirsty in a world so recently gone dry.

Perhaps one of the most absurd and at times annoying censorships comes from the Federal Government, and it is possible only because certain officials cling to the letter of a law the spirit of which no sane person could believe had been violated. I refer to the filming of money.

There may be some sense in forbidding still pictures of greenbacks so that if counterfeiters are found with such plates in their possession conviction can be obtained, but to insist that photographing money in a moving picture could by any chance come under the counterfeiting law has the same effect as silly speed limits that make lawbreakers of even hearse drivers.

Tails, He Wins

To be frankly truthful, few directors pay the slightest attention to this ruling of the Treasury Department, and when we use stage money it is only because we are guarding against theft. Suppose we are on location and the director suddenly says to the hero: "Bill, give the driver a two-bit tip." Do we send back to the studio to get some photographically legal money? Only one guess is allowed. Don Fairfax, who has kicked in more real money to the United States Treasury in the past four years than probably all of its officials combined, got into a fearful row with the department a while ago because he flipped a coin that—to the amusement of the crowd—appeared to be tails on both sides.

I have told how we must use the Biblical form of the thunder word "damn" in certain quarters, but that is quite mild when compared with the fact that the word "shame" is considered morally poisonous in a certain province of Canada. "Sinfully rich" only last week was removed from one of our pictures by a censor who evidently did not believe that one could be rich and sinful at the same time. And my, how the censors shy at the word "mistress"! Even those who have not the slightest objection to showing the relationship grow white round the gills when the lady's real status is thus proclaimed.

Another very amusing cutting decision we have to make in nearly every picture is how long a clinch may last without shocking the unkissed. As a rule, we ourselves cut such amorous scenes far enough to save them from a laugh, for should we show the dear children locked in a snuggley embrace too long some ribald lowbrow in the audience will begin to make funny noises which cause his neighbors to giggle and the sweet sentiment of the clinch will be gone entirely.

There are some censor boards, however, that have established legal lengths for the kiss supreme, these differing largely with the temperaments of the locality. In the warm, sensuous South we may linger longer in the sweet dissolve than in the colder northern climes. A frostbitten celibate of the bleak mining districts will write in the official bulletin: "Reel 2—cut kissing scene to three feet; Reel 5—cut final kiss to two feet before fade out."

The Clock Method

But suppose we really wish to get a humorous effect by having the turtle doves maintain their strangle hold for a long, long time, as doves have been wont to do since the dawn of love. Jim invented a wonderful device: first showing the clinch in a long shot, we notice the timepiece registering ten o'clock; then cutting to a close-up and holding it as long as the censors will stand for, he fades out and then in again, but in this view we see that the clock has advanced an hour. Thus when he finally fades out the spectator leaves the theater wondering just how long their true love will really run.

There are other methods of indicating a time lapse by cutting from the clinch to long collateral action and then back to the clinch. But the clock method is much snappier and gets by all the silly inhibitions of unromantic censors.

In the sprightly game of matching wits with one's natural enemies the wise combatant studies the weakness of his antagonist. Jim found a most interesting crack in the armor of certain Canadian censors. Many of these people are of French extraction, but having lived so long beside their British neighbors they have attained much of their attitude toward vice—so-called. Yet deep in their hearts they have so strong an affection for their mother country that they believe anything coming from Belle France must of necessity be of classic worth. How very, very simple! When Jim is in doubt he labels his story for the province "An adaptation from the French" and over it goes without question.

And this reminds me that in purveying photo-dramatic food for the multitude we are up against strange national and racial prejudices. Because of these prejudices the greatest Japanese actor, whose art is superior higher than mere racial boundary, is forever doomed to play nationalistic rôles with the heroine of his own kind, for the fans will not stand to see a Japanese take a white girl in his embrace. Curiously enough, however, the wife of this great Oriental actor may play opposite a white man, à la Madame Butterfly, without giving the slightest offense. Here again we see a fine example of rooster morality, for roosters are the same the world over.

I cite this Japanese prejudice to show that it is not only the official censors who edit our work but that public censorship is even stronger. But the best part of the people's censorship is that it is fairly well standardized and we soon learn to know their wishes. In one of the greatest tragedies the photo drama has brought forth the director who adapted the story from a well-known English author, has one of the characters killed with a knife rather than by a serpent as in the original story. This was done out of respect for public censorship. In the early days of the pictures the exhibitors soon made us know that their patrons did not care for snakes in the pictures, just since the bombardment within the last six months has said: "My patrons are tired of the war stuff; they want more romance." So it is easy for us to follow the taste of the multitude.

That I may be perfectly fair to the official censor let me state that nearly everybody is more or less censorial, and some are the greatest nuisances we have are right in the lot. The assistant director has notions and the cutter's sweetheart is offended at certain things, but perhaps the most terrifying prohibitionists are the wives of the bosses. Mrs. Emil Gatz has just taken up with some new religion or cult, and you bet we soon learn of it from Mr. Gatz, who thinks that he is free, white and twenty-one; whereas, as a matter of fact, he is not one of these things. And it is in pandering to these silly prejudices, official and unofficial, that we are compelled to water our art and that artists are driven to such hilarious hypocrisies.

Cutting Through All Obstacles

The absurd photo-dramatic cant that is forced upon us is best seen in the film attitude toward feminine virtue. As we cannot be honest and frank about the subject we are driven to all sorts of circumlocution. We would not, for instance, dare to show a simple, Thomas Hardy, rustic courtship resulting disastrously to the maid, because—you see—that would be highly immoral and the maid would have to pay the price. Yet parochial morality demands the ending shall be happy, which is quite impossible as the wages of sin is death.

On the other hand, we may dally along the primrose paths of sin, yet if the maid remains pure the ending is secure and our morality is not outraged. I recall a recent picture that passed nearly every censor board in the country. The girl was innocent—oh, so sweetly, filmily innocent—this happy fact being registered with the best cinema technic by her singing in the church choir, feeding the dickey birds, and by several perfectly beautiful domestic-happiness scenes. But the bucolic purity proclaimed by church bells and apple blossoms soon palled upon the dynamic young miss and she longed for the big city and adventure. So the director told her to throw a peekaboo waist and a hairbrush—the usual film equipment—into a hand bag, and thus provided she started for Gomorrah. Here the director obligingly procured for her a job by simply cutting to it.

In real life people climb over tremendous obstacles to achieve position and fame, but in the films we have only to cut to them—and there they are. During the second reel the young lady learned much about life—how to drink cocktails by making wry faces and shuddering from head to foot until she smilingly reaches the cherry. The wry-face-and-shudder stuff is our favorite way of registering what a terrible thing is liquor

(Concluded on Page 115)

(Concluded from Page 112)

th tummy of sweet innocence and how
e disapprove of the horrid stuff.
Not we see her salamandering the boss,
nd in the fourth reel she takes to dope;
t ill we are not shocked, for we know
t in the fifth reel Harold will arrive,
s her from the burning, and Myrtle
l saved just as her foot was slipping.
dhough we have taken a most delight-
oyage into the bypaths of sin, our
roine remained pure to the end. And so,
e, we may put over anything so long
rtue is conserved.
Ain, though we may not show the
tully happy arrangement suggested in
stic courtship of Thomas Hardy, we
ayven film the young girl's foot slipping,
oyled she is the innocent victim of a
and dastardly villainy; and though there
ra ly a fifth reel to life the censors com-
l it to add it in the photo drama so that
e raiden will be saved and we will all feel

Last night I went to the opening of a
oo play on the legitimate stage—by one
o leading dramatists—and spent a
ostdelightful evening in the romantic
mosphere of the underworld. Only one
ar ter in the piece—and he disappeared
th first act—was not a crook. Even the
trict attorney threw up his job and in-
lgl in a jail delivery so as to get a good
e acker out to help him on a job. Dur-
g ne three acts the jolly principals
nd to chloroforming, flimflamming,
alg, shooting off guns with horrific
dions, beaning a crooked banker with
alret, and altogether had a rare old
n al time, as in the melodramatic days
h late eighties. Everybody was quite
Ll and felt sloppily sentimental to-
rdhe crooks, for in this case they had
ne their wonderful technic of violence
th noble purpose of helping the poor.

In order to gain our sympathy the author naturally had to make his crooks kind, brave and witty. Who, for instance, wouldn't love a degenerate young yegg girl as bright as this one? When the sentimental judge in his chambers was trying to prove to her that crime didn't pay and she had answered by enumerating several homes and motor cars to her credit and admitted forty-three thousand dollars in the bank, he said with deep feeling: "But weren't you even interested in this holy war of democracy and decency that has just been won?" She replied: "Sure. I gave half of everything I stole to the Y. M. C. A."

Now I recite all this as an expression of freedom on the stage—an art uncensored. Yet in many places it would never be permitted in the films. Talk about a school of crime! At this play every spectator took his A. B. degree; discovered how to drug a victim, to deceive with changing make-up, to avoid telltale thumb prints and other technical achievements of society's moral anarchs. All this crookedness was happily rewarded in the end by a clinching fade-out that would have run over thirty feet of film. Yet the papers record no epidemic of chloroforming and bank breaking.

Ordinarily our villains are wholly wicked and our heroes and heroines wholly good, like the morality plays of the Middle Ages. It is true we occasionally have a villain reform in the fifth reel, but he can't just turn good; he must suffer ere the footage runs out and we can cut to a conversion. Thus we see that under the quaint old institution of censorship the films can never be so artistic as the stage, for with this fear our finest photo-dramatic purposes arrive stillborn.

I was talking with Jim about the problem last night after the show and he was all worked up over it.

"'Tis true, my dear," said he, "that we may conduct a bum school of burglary by drilling safes with egg beaters, but we offer a fine course in philandering—thanks to the monitors. The tragedy of the whole game is not the moralities that are censored but the immoralities we are driven to. A nice, clean-minded fellow like me is much more offended by what the censors pass than what they cut."

The truth of this epigrammatic estimate of Jim's is borne out by the experience of Los Angeles, a city of some six hundred thousand people from every state in the Union, including forty thousand from the highly moralized state of Kansas alone, yet we see the undiluted first runs of all the great studios, and since we gave up our censor board a few years ago not one film has been stopped by the police, nor has any public indignation manifested itself at any parts thereof. In the days of censorship the town was in perpetual turmoil over stupid rulings which were seized upon by pornographic panderers to advertise wares that wouldn't have drawn a corporal's guard without such publicity.

I'll say this much for my sex: It was a woman member of the board who finally spilled the beans—told of the peanut politics, idiotic wranglings and personal ax grindings that went on at their meetings and who finally urged its total abolition.

I have said that fear of the censors edited much of our stuff in advance so that the dwellers in the pink districts get a denatured art even before it arrives for local inspection. But this is mostly the work of the film editors, who cut in advance for the eccentricities of the various localities. The best and most courageous directors long ago gave up paying any attention to the variegated tastes and morals of particular places, and now go ahead and shoot their pictures right at the great majority and let the pink districts do their worst and take the consequences. So if the pink people ever expect to see the best pictures put out by the big responsible studios they will have to climb up out of the Middle Ages and get into the band wagon of artistic freedom.

But if there is still some reader unconvinced that helter-skelter parochial censorship is not a terrific blight upon the pictures and believes that someone ought to give our wares the moral up-and-down, let me relieve his qualms. In New York there is a voluntary, unpaid group of representative men and women of every shaped head indigenous to Gotham, chosen by The Peoples' Institute, who review more than ninety-nine per cent of all films shown in America and who act in an advisory capacity to the producers, and whose opinions are accepted as final with us. This board keeps us in touch with the changing public taste, soft-pedals our excessive enthusiasms and in every way works with us to make the films better. The imprint of The National Board of Review should be guaranty enough that a picture is acceptable.

Of course if you insist that storks bring babies, that strychnine is an unknown poison, that a home can be wrecked on buttermilk, that married folk all stick it out until death them do part and that policemen are intelligent devotees of Melpomene it is your privilege to enforce your notions, but for the love of your fillum favorite don't blame us if your photo plays are just jazz, junk and jabberwock! We'll make a lot better stuff if the busybodies will only lay off and give us a chance.

It is just like a lot of men to go all the way to Flanders to fight for freedom and then come back and vote away their freedom of choice in moving pictures. I once threatened to write a scenario with this pink idiocy as the theme, but what's the use? It would be censored in the places where it would produce the biggest kick.

THE GREAT ACCIDENT

; nd Routt after a moment could not
t em. He turned back to Kite, pro-
n Wint's innocence. Their wrangling
es angled in the silence. B. B. pretend-
o to hear, stared straight ahead of him.
Skner twisted uneasily where he sat.
os deep in his chair, was watching
t; and Wint's father was watching
t, bo, watching his son with a desper-
be eching look in his eyes.

Wint did not see; he was looking at the floor; and he was thinking of Hetty. He had not thought of her before; had not thought what this would mean to her. That which had come to her was already guessed at in Hardiston; now everyone would know beyond need of guessing. She would be outcast; no saving her; but one black road ahead. For the thing would be believed; he knew that. People had been ready to believe before this; ready to accept the mere rumor. His own father, his own mother. This had been their first thought when he wished to help Hetty. Joan—she had sought to question him. Yes, they would believe. Everyone.

He was not angry at them for their credulity; he pitied them, that they should now be so malignant and so blind. He was quite calm, not at all sorry for himself. Sorry for them. And most of all he was sorry for Hetty. He had always liked Hetty; a good girl, give her a chance. The stuff of good womanhood in her. Blasted now. He wished he might find a way to help her. Some way.

A word from Kite to Routt cut through his thoughts. "If you won't believe me," Kite exclaimed, "will you believe her?"

"Hetty never said this," Routt protested.

And Kite got up and went swiftly out into the hall, calling over his shoulder: "Just a minute, then."

Everyone looked toward the door, listening. They heard Kite open the front door and call "Lutcher."

A man answered, outside. Kite asked, "Is she there?"

The man said, "Yes."

"Send her in," Kite directed. And they heard the sound of moving feet.

So she had been waiting there all this time with Lutcher. Wint thought she must have been miserably unhappy as she waited. When he heard her step in the hall he looked up and saw her. Her eyes met his for an instant; and Wint was curiously stirred by the pitiful appeal in them, as though she begged him to forgive. Then her eyes left his. She came in and stood just inside the door. Kite said: "Sit down."

He gave her his own chair by the table. The girl moved apathetically across the room and took the chair. Kite looked down at her.

"Now, Hetty," he said in the tone of one who questions a child, "I have been telling them what you told me. They think I am lying. Am I lying?"

She shook her head slowly; and Kite looked from man to man triumphantly.

Routt cried: "Hetty, you don't understand. He said Wint was your—your baby's father? That's not true! It can't be!"

She looked at Routt; and there was a somber light in her eyes. She said in a low steady voice: "Yes. Sure it's true."

Her eyes remained on Routt. He stepped back as though she had struck him. Wint raised his head and looked round the room; saw Amos squinting at his pipe; saw B. B. ill at ease, and Skinner squirming; saw his father white and shaken in his seat.

Then Routt turned to him, exclaiming: "Wint, for God's sake! You heard what she said."

Wint hardly knew himself; he was, suddenly and surprisingly, very calm, and happy with an anguished happiness of renunciation. The old stubborn prideful Wint would have denied, have fought, have sworn. But Wint looked at Hetty; he was terribly sorry for her. He surrendered himself to a great and splendid magnanimity.

"Yes," he told Routt. "I heard."

"But it's a lie!"

Wint got up slowly, looked round the room, studied them all; and he smiled. "Hetty would not lie about me," he said. "She and I have always been friends. We are going to be married, right away."

He held them a moment more with his eyes; they were frozen, every man. And then he looked at Hetty and saw her eyes widen pitifully, and saw her face twist with anguish. And he smiled reassuringly, and he said: "It's all right, Hetty. Truly. Never fear."

While they were still motionless he turned and went quietly into the hall. Muldoon had been dozing under his chair; the dog scrambled up and followed him. Wint got his hat and went out of the house, Muldoon upon his heels.

In the room he had left every man was very still. Only poor Hetty crumpled slowly in her chair; and she dropped her head in her arms upon the table and began to cry with great gasping sobs. And she whispered to herself in a harsh whisper that every man could hear: "Oh, my God!"

XLVII

THERE is a dramatist hidden in every one of us. We like to cast ourselves as heroes, as heroines, as villains of the piece. Make-believe is one of the fundamental instincts. It is human nature to construct a drama about our lives; it is also very human to seize dramatic situations.

There was a good deal of the dramatist in Wint. When he left his home that night, Muldoon at his heels, he was acutely conscious that his life was broken. He had lost everything. He had lost father and mother; and he had lost Joan. They were irrevocably gone. Furthermore, he was beaten in his fight. There could be no question of this. Hardiston would overwhelm him. There was left for him in this world—nothing.

Wint was enough of a boy to take a keen delight in the tragedy of this; he was enough of a boy—or enough of a dramatist, for the two things are in many ways the same—to emphasize his situation, bring out the high lights, vest it in the trappings of drama. He did not think of himself as a hero for having sacrificed everything for Hetty; he did not think of that phase of the situation at all. He had done that because it was the inevitable consequence of events. It was the only thing he could do. He took no credit to himself for the doing. But he did picture himself as broken or destroyed; and as he walked, more or less aimlessly, it was natural that his thoughts should cast back through the months to those other days when he had fallen low. Thus he remembered the Weaver House and Mrs. Moody.

There seemed to him something appropriate and fitting in the idea of returning to the Weaver House this night. He had risen out of it; he would return to it. It was in such surroundings that he belonged now. He turned that way.

It was only nine o'clock in the evening—or perhaps a little later—when Wint left his home. The day had been fine; the night was clear, and there was a moon. It was pleasant to be abroad on such a night. Wint took a leisurely course that brought him through the last fringe of houses above the railroad yards; and he followed the tag end of a street down the hill to the flats covered with slack and cinders. In the light of day this was a hideous place, black and begrimed. But the moon could glorify even this. It painted blue shadows everywhere; it laid streaks of silver light along the rails; it touched a pool of water, a puddle here and there, and under the touch the water became quicksilver, alive and beautiful. A switching engine moved down the yard, and when the fireman twitched open the

e jewels—rubies and emeralds shining in
e non.
He ad to climb between two freight cars
hiway across the yard; and Muldoon
irr d underneath them. Wint grimed
h ds on the cars, and he rubbed them
ger, cleaning them as well as he could
ile e went on. He picked his way across
e t cks, past the roundhouse, where a
on tive slumbered hissingly, and on into
e fr ges of the locality where the Weaver
us awaited him.
It i the custom in Hardiston that when
e non is full, be it cloudy or clear, the
eetlamps are not lighted. Thus the
eetlong which Wint took his way was
inated only by the moon. On either
e t dingy squalid houses stood, with a
lo light from one and another where
se who dwelt there were still awake. A
le ater he passed a store or two and
ne a corner, and so came to the hotel.
Sor thing prompted him to stop out-
e ad look in through the dirty window
ss. It was so light outside and the
in side furnished such a meager illu-
nain that Mrs. Moody saw him at the
ndo; and she took him for some wan-
ering e'er-do-well and came scolding to
do r.
"B off!" she cried, before she saw who
vas "Get away from there!"
Muldoon snarled at her; and Wint said:
uie boy"; and to the woman: "It's
'int Chase."
She ame out and peered up at him; and
sa her horribly even teeth shine like
er etween her cracked old lips.
"Y , is it?" she exclaimed ag-
ssi ly. "Well, and you don't
d t come a snooping round here.
Tre awful folks here. And you
ow . So you can just go along."
He aid: "I came for lodging."
And she backed away.
"D " she asked.
"F lodging," he repeated.
"C ou give me a room?"
"Wat's the matter with you any-
?" she demanded. "You had a
ith your paw again?" She
sll aggressively and suspi-
sion on guard.
She ughed and said whimsically:
"C you wouldn't turn an old
dbut. Let me have a room."
She thawed, became her old,
ful ingratiating self. "Why,
Wy she protested, "you know
Mother Moody never turned a
aay. You come right in now.
Ge ght in where it's warm. Did
sa you'd had a scrap with your
?"
He went before her into the
the squalid hotel. Muldoon
ose to his heels; and Jim,
Moody's dog, growled from
at the table.
"Mrs Moody squalled at him:
"Jim, be still!"
He looked round him; it was curious
how the place so little changed. A train
ne past on the track that flanked the
l. He could almost hear the gurgle of
muddy waters of the creek behind.
Office itself was lighted, as it had
ys been, by a single oil lamp. It did
see to Wint that this lamp had been
he since he was here before. It stood
he square old table in the corner, where
wa benches ran along two sides. The
sle t under this table; and the boy—
sal e boy—was leaning his elbows on
ta e by the lamp and poring with
lon g lips over a tattered paper-
ect ale. This boy's clothes were still
sm ll; his wrists stuck out from his
ves his neck reared itself bare and
it bove the collar of the coat. There
a trange and pitiful atmosphere of
an experience about him.
He was one change in the room, as
saw when he had persuaded Mrs.
Mydy to leave him to his own devices,
she had gone to her chair behind the
counter that had been a bar. This
gave away in the fact that one of the two
checker players was gone. The other
on he wall bench in the corner behind
tab e; the disused checkerboard lay
re im. He was asleep, with sagging
his occupation gone. His white beard was stained an ugly brown below his mouth. Wint wondered if the other old man was dead. Perhaps.

He did not wish to be alone just then; he wanted companionship, friendly and impersonal. So he sat down beside the boy and filled his pipe and lighted it and asked amiably: "What are you reading, son?"

The boy was too absorbed to answer. He brushed at his ear with his hand as though a fly buzzed there, and turned a dog-eared page. But the sound of Wint's voice so near him awoke the old man; he stirred, opened his eyes, looked all about. And he reached across and laid a hand like a claw on Wint's arm.

"Play checkers?" he asked hoarsely. "Play checkers, do you?"

"A little," Wint said.

"I'll play you," the old man challenged. "I'm a good player. I always was. Played all my life. Played every night, right here at this table, with the best player in the county, for seven years." His skinny old hands were feverishly arranging the pieces, while Wint took his place by the board. "I beat him too," the old man boasted. "Beat him lots of times. He'd say so himself. He would, but he had to go and die." There was resentment in his voice, as at a personal wrong. He said curtly:

"Your move," and spoke no more.

"'You Go Where You're Going, You Old Buzzard'"

Wint moved, the old man countered. On Wint's fifth move—he was an indifferent player—the old man cackled gleefully. "That beats you!" he cried. "Heh, heh, heh! That beats you, now."

It did; and Wint lost the next game, and the next, as easily. His success put the old man in the best of humor. He laughed much between games, studying the board with fixed intensity while the play was in progress. Wint watched the old man as much as he watched the board; he studied the old fellow with a curiously wistful eye. This old wreck of manhood had been a boy once; a baby once, in a mother's arms. No doubt she had dreamed dreams for him.

He might be President some day. Might be anything. This is one of the things that makes babies fascinating: their potentialities.

There is no greater gamble than to bring a baby into the world. Wint considered this, thought of Hetty's baby, the baby that had died. As well, perhaps. Otherwise it might have come, some day, to playing checkers in the Weaver House. He put the thought aside abruptly. At least it would have lived. Even this old man had lived. No doubt life had been reasonably sweet to him, till his antagonist died. "Had to go and die."

The old man accused him: "You ain't trying to play, young fellow. Now don't you go easy on me. I'll show you some things." Wint gave more of his attention to the game. He was playing when the door opened and Jack Routt came in. He did not look round till Jack exclaimed behind him: "Wint! I thought you'd be here."

He looked up then and said "Hello, Jack," in a calm voice, and went on with his play.

Routt dropped on the seat beside him and caught his arm.

"Here, Wint," he protested. "I want to talk to you. Where'd you pick up that old duck? Listen. I want to —— Let's go outside."

Wint said: "Wait till we finish the game." The old man seemed unconscious of Routt's presence; and when Routt spoke again Wint bade him be quiet and wait. Only when the game was done did he rise.

To the old man he said: "Thanks. We'll have another game. I'll beat you yet."

The other protested jealously at his going; but Wint said he must. Then to Routt: "Come upstairs."

"Have you got a room?" Routt asked, amazed; and Wint said "Yes." He went toward the stairs, Routt following him. Mrs. Moody had given Wint that same dingy room in which he had spent the night of his election. They went there, and Wint bade Routt sit down. Routt sat on the bed; Wint stood indolently by the door.

Routt exclaimed at once: "Wint, I want you to know this wasn't my doing. You could have knocked me flat. I'm sorry as hell."

"Of course," Wint agreed.

"I want to know if there isn't some way we can fix it up," Routt urged. "There must be something we can do. Some damned thing."

"There's nothing to fix," Wint told him.

"Nothing to fix?" Routt shifted his position, reached into his pocket. "My Lord, but I'm knocked out. Shaky. I've got to have a drink. Mind?"

"Go ahead."

Routt produced a flask. He held it toward Wint. "Have a slug?" Wint shook his head. Routt drank, and again asked: "Sure you won't?"

Wint said: "No."

"If I were in your shoes," said Routt, with the flask still open in his hand, "I'd want to soak myself in it. A good stiff drunk. There are times when nothing else is any good."

"I used to think so," Wint agreed.

Routt took a second drink, wiped his mouth, screwed the cap on the flask and put it in his pocket. "If you want any, say the word," he suggested. "Now, Wint, what are we going to do?"

Wint leaning quietly against the wall stirred a little.

"I'm going to tell you something, Routt," he said.

"Tell me? What?"

"This," Wint went on gently, eyes a little wistful. "This: That I—know you now. At last."

Routt sat for an instant very still; then he got to his feet.

"Wint? What do you mean?"

"I thought you were my—friend," said Wint. "Stuck to that thought. People warned me. Amos, and father, and—Joan. Said you were not—my friend. But I believed you were. I'm not sorry."

"Damn it, I am your friend!"

"I'm not sorry I held to you as long as I could," Wint went on impassively. "It's a good thing to have faith, even in—false friends. But—I know you now, Routt. You've made me drunk, played on the worst in me, slandered me, tricked me, played your part in this black thing tonight."

He hesitated, and Routt started to speak, but Wint cut in: "Are you—responsible for Hetty, Jack?" he asked.

"Am I?" Routt demanded. "Why, damn you, you said yourself ——"

"If I thought you were," Wint told him evenly, "if I thought you had done that to her—she was a nice girl; clean—I think I'd take you by the throat, Routt, and kill you here."

Routt cried angrily: "You're crazy! What the hell? You said yourself that you ——"

"In fact," Wint told him, "unless you go away I am going to hurt you—even now—without being sure. Hurt you as badly as I can."

Routt started to speak; then Wint's eyes caught his and silenced him. He stood for a moment, staring at the other.

And Routt's eyes fell. He looked round gropingly for his hat, and he put it on. He went past Wint at the door; and he went past quickly, as though afraid of what Wint might do.

He went along the hall and down the stairs without speaking again.

Wint, left alone, stood still where he was for a time; then he stirred himself and began to prepare for bed. He moved slowly, indolently; stripped off coat and collar, sat down to unlace his shoes. After a while he crossed and opened the window. He felt somehow infinitely cleaner, healthier, since he had put Jack Routt out of his life.

He felt as though he had washed smears of grime from his hands.

Yet there was a certain loneliness upon him too; for he had lost one whom he had counted a friend.

After a while he went to bed and slept peacefully enough till dawn.

XLVIII

THE crowded events of the evening before had wearied Wint more than he knew; his sleep was dreamless and profound, and he might not have waked till midday if it had not been for Muldoon. The dog slept beside Wint's bed; but at the first glint of day he became restless; and when the sun rose Muldoon got up and walked stiffly across to the open window and propped his feet on the sill and looked out. The slight sound of his nails on the bare floor disturbed Wint and he turned in his sleep; and Muldoon came back to the bed to see what was the matter. Wint's arm was hanging over the side of the bed,

(Continued on Page 121)

The ideal way of washing delicate things is the way The Eden washes everything

If the Eden washed only "just as well as" the rub-board, it would seem to be asking enough—*but*—the Eden washes better, cleaner and at a great saving of clothes-wear, time and money.

When you are getting up the laundry each week, there are some things you sort out from the regular wash to be done up "special."

These are your hand-embroidered linens, your silk undergarments and your fine blouses—things that will not stand rubbing on the washboard or even rubbing by hand. Such things wait until you have time to dip them up and down gently in a bowl of warm, cleansing suds.

You know what the washboard would do to these delicately made garments—tear, wear thin, pull them out of shape. It does exactly the same damage to all other things, only it takes longer to rub holes in a sheet than it does in a georgette blouse.

Wouldn't it be ideal if you could wash everything by that saving dip-method? But of course you have neither the time nor the physical strength.

The Eden washes *everything*—not only fragile garments, but heavy woolen clothing and even blankets with that same up-and-down dip that has proven so ideally saving to your finer things—and washes them cleaner than you could by hand, at a saving of time, labor, worry and cost. With such ease and economy in the laundry, you can have an abundance of fresh, wholesome clothing and linens for all the family.

Five smooth wooden fingers within the sanitary zinc washing cylinder pick the clothes gently up and drop them back—up and back, into the hot soap suds just like human fingers do when washing those delicate things in a wash bowl. After numberless dippings up and down, the spotless clothes are wrung through the perfect swinging wringer—still without wasted time or effort on the part of the housewife or laundress—and Eden users have voluntarily sent in statements declaring that clothes last five times as long when Eden-washed as when rubbed to pieces on the rough, corrugated surface of the old-fashioned washboard.

We have an interesting and attractive booklet prepared especially to help the woman with her washing problem. Send for a copy—the request will bring a revelation to you.

THE BROKAW-EDEN COMPANY

in your own home on your own washing

We give you an opportunity of judging the Eden for yourself by actually doing one of your washings for you in your own home without cost or obligation to you. You can see how much it really saves you and how it pays for itself out of its own cash savings. We will also explain our easy-payment plan which has put the Eden within reach of every woman and has freed her from the hard labor and responsibility of wash day.

(Continued from Page 117)

nd Muldoon licked his master's hand, vhi woke Wint effectually enough.

H opened his eyes and at first he could ot remember where he was. The dingy oor He stared up at the cracked and rokn ceiling. At one place a patch of las r had fallen, leaving the laths bare. t to Wint some little time to recognize his urr ndings. But at last he remembered. Ie t up on the edge of the bed, rum- lin Muldoon's ears with his right hand, nd oked round.

T room contained, besides the bed, chr and a wardrobe. His clothes were n le chair. The sagging doors of the ar obe hung open. There was nothing sic the decrepit thing. His eyes an red toward the mantel. The cracked d irror still hung there. His eyes fell t t floor, and he marked the charred lac near the hearth, burned there that igh of his election, when at sight of his mage in the mirror he had smashed he mp in a fury of shame. He re- en ered that night now; and he smiled lit e whimsically. It seemed his for- ne were always to be bound up with is ingy room.

Muldoon, disturbed by Wint's long len , looked up at his master, and ark l under his breath uneasily. Wint ok he dog's head in both his hands and oo it gently back and forth.

"hat's the matter, pup?" he asked fec onately. "What's on your mind? Wh are you fussing about, anyhow? Wh have you got to fuss about, I'd like kn w? Come!"

Muldoon twisted himself free, and he ard. It was a part of the game. Then flu himself forward and pinned Wint's gh hand and held it, growling. Wint ok him by the scruff of the neck and te the dog onto his lap; and Muldoon's lit body accommodated itself to Wint's lee and he lay there, perfectly contented.

"Ou stuck round, didn't you, boy?" in sked, his voice a little wistful. "The st them didn't give a hoot for Wint; but u tuck round, eh? The rest of them dn care. 'Get out. Good enough for m. That's what they'd say. But not ou; eh, Muldoon? You stuck. Even ck Routt—even Jack only came to offer e booze. And the rest of them didn't mat all. Only you, pup. You and I, w. But we'll show them some things, ?"

Muldoon rolled his eyes up at Wint and id nothing; and Wint lifted the dog om his knees to the bed. "There, take na while I'm dressing," he said. "Then 'll be moving on."

Th dog stayed obediently on the bed; d Wint dressed, moving quietly to and . He did not hurry. He was possessed a easy indolence. There seemed to be th g in the world worth hurrying for. e was not unhappy; he whistled a little he ressed. But once or twice he remem- re that his father had let him go with- t word, and he winced at the thought. d nce or twice he remembered that Id no friend now anywhere, save ul on; and that was not pleasant ne bering. But for the most part he t good face on life.

"After all, pup," he told Muldoon, hin s can't be any worse. So they're un to get better. And we'll just play at unch for all it's worth. Why not? ?"

Muldoon had no objections; he wagged e stump of his tail and opened his jaws d ughed, dog-fashion, tongue hanging ppy. Wint grinned at him and sat wn to tie his shoes.

Sa for collar and coat he was fully ssi when he heard through the open or he voice of someone who had come o e office of the Weaver House down- irs The voice was unmistakable. The wner was Amos; and when Wint liz d this he stood very still, and his e turned a little white. He waited hat moving. There was nothing else do

He heard Amos and someone else com- u the stairs, guided by Mrs. Moody. "Right along here," the old dame was rin "Always the same room. I al- ys give him the best. That's the kind a gentleman he is, when he comes to old otr Moody. Right here, now."

n the doorway she said: "Here's the ngressman to see you, deary."

Sh stood aside to let Amos come in. nt saw that B. B. Beecham was with no on the other's heels. He watched them, steady enough by this time. He wondered what they had come for. To triumph? That would not be like B. B. Nor Amos.

Amos turned and told Mrs. Moody to go.

"And thank you ma'am," he said.

She went away a little reluctantly. She was a curious old woman; she liked to know what went on in her hostelry. But—Amos had, when he chose, a commanding tone.

When she was gone he turned and looked at Wint, head on one side, squinting good-humoredly; and he said, "Well, Wint, how's tricks?"

Wint hesitated; then he said, "Good morning, both of you."

Amos nodded. B. B. said, "Good morning."

Wint looked round at the sparse furnishings of the room.

"You've caught me early," he said. "I'm not dressed yet." And he added: "I can't offer you both a chair, because there's only one chair."

"Me," said Amos, "I'll sit on the bed. B. B., sit down."

Wint remained on his feet. "Well," he asked, a challenge in his voice, "what's on your mind?"

Amos leaned back against the wall and began to fill his pipe.

"Nothing much, Wint," he said slowly. "We come down here principally to shake you by the hand. Don't let me forget t'do it before I go."

His tone was friendly and reassuring. Wint wondered just what he meant.

He smiled a little and said, "All right."

"Thought you might be glad to see your friends," Amos added. And Wint said with lips a little white, "I would be."

"Well," Amos told him, "here's two of us."

Wint looked at the congressman; and he looked at B. B.

B. B. said quietly: "That was a fine thing you did last night, Wint."

Wint flushed, as though he were ashamed of what he had done.

"I don't understand this," he said a little impatiently. "What do you want? Out with it!"

Amos said: "Want to help you, any way we can."

Wint's eyes narrowed; and he flung out a hand. "You're too darned mysterious, Amos."

Amos lighted his pipe. "Well, Wint, I don't aim to be," he declared. "I'm talking straight as I know. B. B. and me are on your side; that's all. We're taking orders from you. We do anything you say."

Wint laughed—a sudden harsh laugh.

"I've heard they give a condemned man anything he wants—the last morning," he exclaimed.

Amos nodded. "Yes, I've heard tell o' that. But what's that got to do with this?"

"Plain enough, I should think."

"You don't count yourself a condemned man, now, do you?"

"I should think so."

Amos shook his head doubtfully. "And here I thought you said last night you didn't aim to quit."

"I don't. But I'll be snowed under—now. Of course."

"Well," said Amos, "that may be so. I ain't sure. Gergue will know, time he's talked round a spell. Prob'ly you are. Are beat. But I've seen men beat before that turned out pretty strong in the end." He added slowly, "Anyway, licked or unlicked, I'm on your side, Wint; and always was."

Wint stared at him with a curious threatening light in his eyes.

"What's the idea? You turned me down cold, in public. Now you come whining round."

"I'm not whining, Wint," said Amos cheerfully. "Do you think I'm whining, B. B.?"

B. B. smiled. "Congressman Caretall has his own methods, Wint. I know he seemed to be against you; but I also know that he's been secretly working for you, that every vote he can swing will go to you. He's been passing that word round for a week."

Wint hesitated, looking from one to the other. "I never caught you in a lie, B. B.," he said.

"It's true enough," the editor told him. "You see"—he looked at Amos, then went on—"you see, your father has no use for Amos. And Amos knew it. He also knew your father could do a good deal to help you win this election. But Chase would not be on your side so long as Amos was with you. Do you see?"

"I see that much," said Wint. He was thinking hard.

"But your father has been working for you since Amos pretended to have turned against you, hasn't he?"

"Yes."

"I don't suppose you ever thought of that," B. B. suggested; and Wint drew his hand across his eyes and looked at Amos, and asked huskily: "Is it true, Amos?"

Amos grinned; and he said: "I'm like you. I never knowed B. B. to tell a lie."

"But why didn't you tell me?"

"You can't keep a secret, Wint. You're too damned honest. Maybe you're too honest for politics. I don't know. Anyhow I couldn't let on to you without your father's seeing it in your eye."

Wint said, grinning a little shakily: "It hurt me a good deal, just the same."

"I guess you'll outgrow that."

"I suppose so."

He said nothing more for a minute; and Amos puffed at his pipe, and B. B. studied Wint, smiling a little at the young man's confusion. Wint was flushed; and he was happier than he had ever expected to be again. These two were true friends, at least. Not all the world had turned its back on him. He crossed abruptly and gripped their hands.

"Why, that's all right," said Amos, marking how Wint was moved. "If you hadn't run away last night before we could move I'd have told you then. I tried to find you, after. But no one seemed to know."

Wint nodded. "I just walked blindly for a while. I could not go home. This was the first place I thought of."

Amos blew a cloud of smoke. "Well, that's all right."

"How did you find out I was here, now?" Wint asked. "Just guess—or what?"

"Jack Routt is—spreading the word," Amos explained. There was a suggestion of something hidden behind his simple statement.

"Routt? Yes; he was here last night," Wint agreed.

"Yes; he said he was."

Wint caught the implication in the congressman's tone and he asked, "What's the matter? What does Routt say?"

"Well, as a matter of fact he says you were down here last night, stewed to the eyes and getting steweder all the time."

Wint's eyes narrowed; then he laughed. "Oh. Says that?"

"Says it frequent and generous."

"He came down last night and suggested that I drown my sorrows," Wint explained. "I ——" He hesitated. "You see, Jack and I—I've always counted him my best friend. But I seemed to see through him last night. I—don't count him my friend any more."

"We-ell," Amos drawled, "I can't say as I blame you for that. I'll say he don't talk friendly about you."

Wint, flushing, asked quickly: "You don't believe what he's saying?"

Amos shook his head. "I know a hangover when I see one; and I know when I don't."

Wint nodded. "I'm not starting in again on the booze at this stage of the game."

"No; I'd guess not."

Wint sat down beside Amos on the tumbled bed. "Now, Amos, let's get down to tacks. I said last night I was going to stick; and I meant it. I mean it all the more now, with you to back me. The thing is ——"

Amos turned his head toward the door. "Someone coming," he said.

Wint heard steps on the stairs, and Mrs. Moody's cheerful harangue. He got up quickly. His father stood in the doorway.

In the long moment of silence that followed the apearance of the elder Chase Wint put his whole heart into the effort to read his father's face. Was there anger there? Or shame? Or bitter reproach? Reason enough, in all conscience, for any one of these emotions. He stared deep into his father's eyes.

The elder Chase came into the room one stiff step; and he looked at Wint and at B. B. and at Amos. His lips twitched a little at sight of Amos, then set firmly together again. That was all.

Wint moved toward him a little.

"Dad!" he said huskily.

His father's eyes searched Wint's. The older man's voice was shaking. He said slowly: "Routt is telling Hardiston you are drunk down here."

Wint nodded. "Yes; I'd heard."

"I heard him telling men this thing."

Wint said nothing; the older man's face lighted fiercely. "I knew he lied, Wint. Oh, I knew he lied!"

Wint flushed with the sudden rush of happiness within him. He looked from his father to Amos.

"Dad," he said, "there's one thing—I know my friends now."

"Routt is no friend."

"I know."

"I always told you."

"Yes."

"He ——"

Wint laughed softly. "Forget Jack Routt, dad. I've other friends. Amos here."

Chase's face hardened; he said without expression: "Amos?"

"He and B. B. came to me when I thought I hadn't a friend in the world. You and Amos have got to make it up, dad. You've got to. Please."

The older man hesitated; then he turned to Amos. "All right," he said. "I—Wint's friends are mine."

Amos got up from the bed and took the other man's hand; and he smiled shrewdly. "I did play you dirty, Chase," he confessed. "I admit it. But doing it—I played a good trick on your son. Didn't I now?"

Chase said slowly: "Yes."

"Wouldn't you rather have him as he stands?" Amos asked. "Wouldn't you rather have him as he stands—than the way he was a year ago?"

"Yes, God knows."

Amos said slowly: "When you're sorest at me—just give me credit for that."

Chase exclaimed swiftly: "It doesn't matter. It's past. Done. All I want is—my boy. You, Wint."

Wint was beginning to believe all was right with the world. He said slowly: "Even—after last night, dad? Hetty ——"

"Yes," said his father.

"Mother?" Wint asked. "She'll—is she unhappy?"

"Why did you go away from us, Wint?" his father asked huskily. "Why did you run away?"

"I thought you wouldn't want me at home."

"We always want you."

B. B. caught Amos Caretall's eye; and he nodded slightly; and Amos understood. He said: "We'll be moving, Wint. See you uptown, by and by."

"Yes, I'll be up," Wint said.

"So long, Chase."

"Good-by," Chase told him quietly.

Amos and B. B. went out, and along the hall, and down the stairs. Wint and his father were left alone. For a little while they did not speak. Then Chase said gently: "Come home to your mother, Wint."

Wint asked: "Even—knowing this? What happened last night? You want me in spite of it?"

"Yes."

"In spite of—what I've done."

Chase threw up his hand. He cried: "Damn it, yes! What do we care? Whatever you do"—his voice broke huskily—"you're always our son!"

Wint could not move for a moment; he was choking. At last he laughed, happily enough; and he touched his father's shoulder with one hand.

"Wait till I put on my collar," he said. "I'll come along."

Muldoon, as though in his dog mind he understood, began to prance and bark about his master as Wint prepared to leave the Moody hostelry behind him. Wint was as happy as the dog. He knew his friends now; knew the loyal ones. And his father and his mother—they loved him.

All was well with the world.

XLIX

WINT and his father walked home in a silence that was little broken; across the railroad yards, up the hill. A new understanding of his father and mother was coming to Wint; some measure of comprehension of the completeness of their love for him. He marked that there had been no reproaches from his father, no questions, no scolding. That which had passed was to be forgotten, was to be ignored. He was their son; nothing else

The $7,00

ACTUAL SIZE illustration of a 3½-inch Firestone Special Molded Tire. The No. 2 Firestone factory is devoted exclusively to this 3½-inch tire and the tubes to match.

10,000 3½ Inch Tire

—or it might be called the $73,000,000 tire, for it is possible only because of the entire resources of the Firestone Company.

BUT $7,000,000 is what has gone directly into this new, vast Firestone factory that is devoted exclusively to the making of this tire and the tubes to match. The main plant is now concentrating on cords and big sizes.

16,000 TIRES and 25,000 tubes, all 3½-inch size, is the daily capacity of this new factory. This plant is years in advance in its mechanical efficiency. Into it have gone the thinking, the planning, the spirit of service that distinguish the entire Firestone organization. Its methods and machinery were developed by Firestone men.

FIRESTONE HAS STEPPED FAR ahead in engineering practice and you get the benefit. The labor saving equipment of this factory cuts costs on every operation from 10% to 30%.

FROM THE TIME special shipments of rubber and of fabric arrive at this plant, until the finished tire is loaded on the freight car, there is not a backward move.

AND THE MAN POWER of this plant is as far in advance of the ordinary as is the mechanical efficiency. The Firestone organization is the talk of men in big industry everywhere.

THE FACT THAT 90% of Firestone workers own stock in the Company is an index to their interest in their work. Their superior skill, their spirit of service, is stimulated by their financial interest in winning you as a customer.

AT EVERY TURN Firestone thinks and plans to give you the most for your money, knowing that this is the surest method of obtaining the greatest demand. Every move Firestone makes is toward this end—mileage at lowest cost.

NEVER HAS FIRESTONE, NOR ANY tire maker, offered car owners so much as they are offered now. Ask your dealer.

mattered in any degree. His father on their homeward way spoke of other matters once or twice. He said the day was fine; he said Mrs. Chase would probably have breakfast waiting. Wint took the older man's lead, ignored what had passed the night before.

When they got to the house his mother met him in the hall, and she put her arms round him and cried on his shoulder and called him her boy. Wint cried, too, and was not ashamed of it. He kept patting her head and saying: "There, mother," in an awkward way. She told him he must never go away from home again. Never; for anything.

He said, "I thought you would want me to go."

But she clasped him close, protesting.

She had breakfast hot upon the stove. The elder Chase had gone uptown as soon as it was day, to try to locate Wint. They ate together; and after that first moment in the hall they did not speak of what had happened at all.

When breakfast was done Wint went into the kitchen with his mother to help with the dishes. She tied an apron round him and laughed at him with a sob in her voice; and Wint laughed with her and joked her, till the sob disappeared. His father looked in on them once or twice, then left them alone together.

Once Wint broke a little silence by saying, his arm round her shoulders: "Mother!"

She looked up at him with quick anxiety; and he said, "I'm sorry, for your sakes."

She said, "You didn't lie, Wint. Any way, you didn't lie. There, dry that plate. So."

He smiled a little, whimsically. After all, he had lied. But they did not care whether it was true or false, these two. He was their son. The thought was glorious. He nursed it, treasured it.

When the work was done and the dishes were being put away they heard a step on the porch outside the kitchen. They both looked that way; and through the window they saw Hetty. She passed the window, knocked on the door.

Wint looked toward his mother; and he saw that she was white as death. But even while he looked at her she touched her mouth with her hand and steadied herself, and went to the door and opened. "Hetty!" she said pleasantly, gently. "Hetty! Well, come in."

The girl came into the kitchen. She was pale but she seemed very sure of herself. She looked from Mrs. Chase to Wint.

"I want to talk to Wint," she said gently.

Mrs. Chase nodded. "You wait here." She went quickly out into the dining room. They heard her speak to her husband. She was back almost at once. "Go into the sitting room," she said. "There's no one there."

Hetty went toward the door; but Wint at first did not stir. He was curiously ashamed to face Hetty. She stopped in the doorway and looked back at him; and he pulled himself together and untied his apron and followed her. In the sitting room she sat down on the couch, and Wint sat by the table. She looked at him steadily, smiled a little.

He said, "Well, Hetty?"

She laughed at him in a tender way. "Oh, you Wint!" she exclaimed, in a fashion that reminded him of the old careless Hetty.

He shifted uneasily. He felt as though he were guilty toward her. There was no accusation in his voice.

She shook a forefinger at him. "What got into you?" she asked. "Why didn't you tell them to go to the devil?"

There was no way to put it into words. He shook his head. "I don't know. It's all right."

"You knocked us flat; the lot of us," she said. "Wint, you pretty near killed me. You darned, decent kid!"

Wint stirred uneasily.

"I thought I'd die," she said. Her voice shook, though she was smiling. "I ——" She laughed. "You ought to have seen the others."

He asked awkwardly, "What happened? I haven't heard."

"Didn't your father ——"

"No. I stayed at the Weaver House last night."

She laughed. "Oh, you! Leave it to you to think of the fool thing to do."

He said soberly, "I was in earnest, Hetty. I meant what I said."

She nodded. "Sure you did! You're just a big enough fool to go through with it too."

"Of course."

"You've got a f-fat chance, Wint," she said; and her voice broke, and she was very near crying through her smiles. "I've waked up now. You've got a fine, fat chance of that!"

"I don't hold it against you," he said. "I'd—be good to you."

"Don't be a nut, darn you! You'll make me cry. I came near crying myself to death last night."

Wint's curiosity was awake. He asked again: "What happened?"

"Why, you knocked us all flat," she said. "I took it out in crying. Routt beat it after you. He was the first to move."

There was a curious hard quality in her voice; and Wint asked, "Was it ——" He bit off the question, furious with himself for asking.

She said slowly: "Never mind. That's past. I thought for a while I'd be better dead; but I know better now. Nothing can kill you unless you want to be killed. Nobody ever fell so hard they couldn't get up. I'm going to get up, Wint, and go right on living."

He told her quickly: "Of course. I'll help. Honestly."

She said fiercely: "You will not! If you think I'm going to let you go through with this ——" She broke off, laughed. "Well, I was telling you what happened. Routt beat it after you. The rest of us sat still, me bawling. Then your father got up and ran out to the front door and out to the street. While he was gone Kite began to stir. I looked at Kite. Believe me, Wint, he was squashed. He hadn't expected you to—do what you did. He looked like a dead man. He stuffed his things into his pocket and pattered out into the hall. Then he came back and he said to me, 'Come, Hetty.'

"I said to him, 'You go where you're going, you old buzzard.' And I went on crying. It felt good.

"I heard Kite go out the front door; and then your father came back. He says: 'He's gone! Wint's gone!'

"Then he looked at me, and I couldn't look at him. And he went out and went upstairs.

"The rest of them went along then. Ed Skinner went first; then B. B. and Amos together. Amos says to me: 'Don't cry so, Hetty. Don't cry so.' I told him to shut up; and he went along. When they were all gone I got myself together and went out. Lutcher and Kite were waiting at the corner. They stopped me; and Kite, he says: 'What are we going to do?'

"I hit him in the face, hard as I could. Lutcher grabbed my arm; and I told him to let go, and he let go. I went on and left them. Went home and cried some more."

She laughed a little. "I'll say I felt like crying, Wint. That was your doing. Darn you!"

He said, "You mustn't feel badly."

"Badly!" she echoed, and her eyes were suddenly hard. "Wint, I could cut out my tongue." She moved abruptly, hid her face. After an instant she turned to him again.

"There's no use in saying I'm sorry. They fed me up to it. Threats and promises. If I'd do it they'd give me—a rat of a man to marry. He said he'd marry me himself. But he'd said that before. He told me himself that he'd marry me if I'd do this. Marry me and take me away. I knew he was a liar, but I thought maybe he'd keep the promise this time. I thought I had to have him, to be able to look people in the eye. Oh, I'm not making excuses, Wint. There isn't any excuse for me."

He said: "It's all right. Please don't feel badly."

"The thing is," she said steadily, "how am I going to make it up to you? What do you want me to do?" He did not answer at once; and she told him humbly, "I'll do anything you say."

He shook his head. "Nothing. I'm willing to go through with it."

She rose to her feet with a swift furious movement.

"Damn you, Wint," she cried chokingly, "don't you say that again! Ain't I sorry enough to suit you? Haven't you poured coals of fire on my head till—till my hair's all singed. Don't rub it in, Wint," she pleaded. "You've made me feel bad enough. I'll say I was ready to quit last night. It wasn't worth a penny to live. Then I thought I might make it up to you. So I—stayed alive. Don't you rub it into me now. Don't you say that again. I tell you, Wint, I went through something last night." Her voice shook, she stretched out her hands to him. "For God's sake, Wint, don't rub it in any more."

There were tears in her eyes, on her cheeks; her face was the face of one in torment. He took her hands; and he said gently, "Please—I didn't mean to make you unhappy. You've—really, you've made me happy. I thought everyone would be against me. But Amos and B. B. came to me, offered me their friendship and their help. And father came to me. I never knew before what friends I had. You've done that for me already."

"I'll bet Routt came to you too!" she said, a terrible scorn in her voice. "He's a friend of yours, isn't he?"

"Yes," said Wint. "He came."

She was frankly crying now, her shoulders shaking, tears streaming down her face. Her lips twisted; she held out her clenched hands. "I'd like to kill him!"

"Don't cry," Wint begged. "Please."

She brushed her arm across her eyes and smiled at him. "All right. Now—what do you want me to do? It's up to you."

"I don't want you to do anything," Wint protested. "It will all come out right in the end."

"I'm not going to stand and wait."

"Please. You'll see."

She stamped her foot fiercely. "I tell you, no! I was the goat yesterday. They made a fool of me. But I've grown up overnight, Wint. This is my day. I'm going to tear things open—wide!"

For all the harshness of her speech there was a strange new gentleness about Hetty; and there was a new strength in her. Wint had never liked her more, respected her more.

He said steadily: "You're wrong, I think. You're excited to-day. I tell you things will turn out better than you think."

The telephone tinkled in the hall; and Wint said, "Wait a minute, will you?" And he went to answer it.

Sam O'Brien, the fat restaurant man, was on the other end of the wire.

He asked, "This Chases' house?"

Wint said, "Yes, this is Wint Chase. That you, Sam?"

O'Brien exclaimed: "Yes, it's me! Say, Wint—you're there, boy! You're a man!"

"Pshaw!"

"Say, Wint," O'Brien cut in, "is Hetty up there? They say at her room she started for there."

Wint glanced toward the door of the sitting room. "Yes," he said.

"Do me a favor?" Sam asked.

"Of course."

"Keep her there till I come?"

"All right," Wint agreed. "What ——"

But Sam had hung up. Wint went back to Hetty. He decided, for no reason in the world, not to tell her what Sam had asked him to do.

She asked as soon as he came into the sitting room: "Who was that? Sam O'Brien?"

"Yes."

"What did he want?"

Wint laughed uneasily and said: "He just wanted to tell me he was on my side."

Hetty nodded. "There's one decent man, Wint." There was a curious warmth in her tone.

"Yes, he is," Wint agreed.

"He's been fine to me," she said a little wistfully. Then she put Sam aside with a movement of her hand. "Well, Wint, you want me to go ahead my own way?"

He hesitated; then he said: "Hetty, you're all right. I don't blame you for anything. But I do want you to forget the whole thing. You'll see it will straighten out. Don't mix things up."

They heard his mother come into the dining room across the hall, and busy herself there; and they kept silent till she went out into the kitchen again. A matter of minutes. Hetty moved once, crossing from her chair to stand beside Wint and touch his shoulder lightly with her hand.

When Mrs. Chase had gone out of hearing she said softly: "I guess there's one person you'd like to have know the straight of this."

Wint's jaw set slowly with something of the old stubbornness; and he said: "No, she doesn't believe in me. She's made no move. I'll not."

She twisted her fingers into his hair and shook him good-naturedly. "You, Wint; you're as stubborn as a mule," she told him. "What would you think of her if she'd come running, when you'd did were going to—marry me? Wh she do? But she knows you're a ar the same. I'll bet she's just waiti

Someone came up on the porch ut and she looked sharply that way a as "Who's that?"

"I'll go," Wint told her; and h ve the front door.

Sam O'Brien was there. He ad pected Sam. But Jack Routt s him, and Wint had not expecte to Routt.

He looked from Sam to th o Routt's collar, he saw, was rump ; there were little beads of perspir o Sam's forehead. Wint hesitated.

Sam said huskily, "I know y want this skunk in your house, Wi is—she here?"

"Yes," Wint told him.

"Well, this thing wants to see h explained. "Speak up, you!" H o at Routt.

Routt said, "Yes." He ran fi round inside his collar.

Wint moved aside. "Come agreed; and they stepped into the

Then Hetty came out of the sittin ro She had heard their voices, heard w said. She stood very still, looking Routt with inscrutable eyes. Rout po from Sam to Wint furtively. T m looked at Hetty; and he moved tow d as though he expected violence. Tw p from where she stood he stopp fidgeted.

At last he said, "Will you marry ?

There was a parrotlike quality voice that made Wint, even in th ment, want to smile.

Hetty did smile; she said quiet suppose Sam brought you here?"

Routt looked at Sam; then he pr a "No. I wanted to come. Honestly

"You never wanted anything h e in your life, Jack," she told him; ar was as much pity as anger in her vo wouldn't marry you—I wouldn't k you—not if you were the last man world!"

No one said anything. They sto w still. Then Routt moved a little; d turned and looked at Sam O'Brien S had his hat in his hand. He droppe t leave his hands free. He opened th r door and stepped outside; and Ro lowed him as though at a word of com a Sam took him by the arm; th closed the door. Wint looked at He

ted Wint smilingly; said, "Good

"Hello, B. B.!" Wint rejoined and sat down. "Still fussing with that stove?"

B. B. amiably enough, said: "Yes. It's a good stove. Perhaps it doesn't look as well as it might; but it heats this office. That's the way with a good many things that don't look very well; they manage to do their work better than the fine-looking things. Did you ever stop to think of that?"

"In other words," Wint agreed, "beauty is only skin deep, even in stoves."

"Well, I'd rather have an ugly stove that would draw and give heat than a fine one that wouldn't," B. B. declared; and Wint said he did not blame him.

B. B. sat down at his desk, working and talking at the same time. This was a way he had; a way he had to have, for there was nearly always someone in the office to talk to him.

Wint said: "I almost forgot about my meeting to-night. Are you still willing to preside?"

B. B. said "Certainly."

"I thought you might have changed your mind."

"No indeed. At the Rink, is it?"

"Yes."

"Who are your speakers?"

"I'm not having any fine talent," Wint said, smiling. "Just a couple of good friends of mine. Sam O'Brien, and Davy Morgan. And if you'd be willing to say something."

"Oh, I always talk when I get a chance like that."

"Sure."

"Is your father going to speak?"

Wint shook his head. "No," he said frankly. "Dad's all right. He's been absolutely fine. But—he says he wouldn't know what to say. He's no speaker, you know."

"I've heard him do very well."

Wint laughed. "You probably wrote those speeches for him yourself." And B. B. good-naturedly acknowledged the corn.

"About half past seven?" Wint asked, as he got up to go; and B. B. agreed to the hour, and said he would be there.

When he had left B. B. Wint telephoned the furnace to make sure of Davy Morgan; and Morgan said energetically that he surely would be on hand.

"I've some few things to say also," he declared. "I can talk when they get me mad, Wint. And I'm mad enough to-day."

Wint said: "All right; go as far as you like. This is a fight. It's no pink tea."

And he dropped in on Sam O'Brien. But Sam was not in the restaurant. His underling told Wint that the fat man had been out all day.

"He went looking for Jack Routt," the man explained.

"He found him," said Wint. "Well, tell Sam I'm counting on him to be at the Rink to-night."

From the restaurant he crossed the street to Dick Hoover's office. Dick and his father were busy, so that Wint was alone for a time. Then he decided people might think he was hiding; so he went downstairs and out to the street again, and went to the barber shop for a haircut.

Jim Radabaugh was there; and Jim shifted the bulge in his cheek and shook hands with Wint and said: "You're there, boss! I'd say you're there."

Marshall, the barber, violated all the traditions of his craft by being a silent man. He said nothing whatever while he trimmed Wint's crisp hair; and Wint was glad of that. He would not hide, but he did not want to talk overmuch. When he came out of the barber shop he saw Amos and Sam O'Brien and Peter Gergue on the other side of the street. They were walking purposefully, coming uptown from the direction of Amos' home. They saw him, and Amos waved his hand in greeting; then Peter spoke to Amos, left the others, and came across to Wint, scratching the back of his head.

Wint said, "Hello, Peter."

Gergue grinned. "Well, Wint, you've started something."

Wint nodded. "I suppose so."

"You've made 'em talk, Wint. That never hurt a bit."

"I think you told me that once before," Wint agreed, laughing.

"Well, and it's so," Gergue insisted. He looked all round, took Wint's arm. "Let's walk along," he suggested.

Amos and Sam had disappeared. Wint said, "I've been looking for Sam. I want to see him."

"What about?"

"He's going to speak at my meeting to-night. At least I want him to."

Gergue chuckled; and he gripped Wint's arm as though he knew a thing or two which he might tell if he chose. "Oh, he'll speak," he said. "Sam'll speak."

"I've counted on him."

"You going to speak, ain't you?" Gergue asked.

"Why, yes. Naturally."

"Fixed you up a speech, have you?"

"Not yet. I'll—just say whatever comes up at the time. Anything ——"

Gergue shook his head. "I tell you, Wint," he said, "you better go on home and write you a speech. A good one, with flowers on it, and all."

"Oh, I don't need to ——"

"I've seen more'n one man get up on his hind legs and go dumb. Good idea to have something on your mind before you get up."

"We-ell, maybe."

"I tell you," Gergue said again, "you go on home and fix up something. Best thing to do."

"I want to see Sam."

"I'll see him."

Wint was more than half persuaded before Peter spoke to him. He had thought of going home; he was tired. He wanted to sleep. He said, "We-ell, all right."

"That's the talk," said Peter. "You go along."

"So long, then."

"Fix you up a good one," Gergue advised him again. "Fix it up, and learn it, and all. You'll maybe be interrupted, you know."

"If there's anyone there to interrupt," Wint said in a tone of doubt; and Gergue cackled.

"Lord, there'll be some folks there! Don't you worry about that. You go home and fix you up a speech. You'll have a crowd."

So Wint went home in midafternoon. He found the house empty. His mother, he thought, was probably next door with Mrs. Hullis. He felt sleepy; and he went to his room and lay down.

His father woke him at last; told him it was supper time.

At supper Chase asked Wint's mother if she were going to Wint's rally. She said: "I don't know. I said to Mrs. Hullis this afternoon that I wanted to go, but I didn't know whether women went. And she said she didn't know either. But I told her I ——"

"You'll have plenty of company," her husband told her. "From what I hear, the whole town is going to be there. Everyone was talking about it this afternoon."

"Then I'm going," she said. "Mrs. Hullis wanted me to go with her; and I ——"

"You go with her," Chase advised. "I'll be on the stage with Wint."

She said, "I'll have to leave the dishes. There won't be ——"

"I'll do them, mother, while you're dressing," Wint told her cheerfully. "Don't worry about that."

"Well, I don't know."

In the end Wint and his father did them together. Wint broke a plate, and Mrs. Chase called downstairs to know what had happened and protested that she ought to come down and do them. But they would not let her. In the end they all started uptown together, Wint and his father, Mrs. Chase and Mrs. Hullis, two by two.

It was dark; the early dark of an autumn evening. They met people, or overtook them, or were overtaken by them; and Wint thought there were more people than usual abroad. The moon was bright again this night, bright as it had been the night before, when Wint took his way to the Weaver House. That seemed more like weeks than hours ago.

As they came nearer the Rink they saw more people; and Chase said, "You're certainly going to have a crowd."

Wint nodded. He was beginning to be nervous. He realized that this was going to be hard.

But it was only when they turned the last corner and started down the hill toward the Rink that he realized just how hard it was going to be. It seemed to him all Hardiston was there ahead of him. The crowd clustered in front of the Rink and extended out into the street; and more were coming from each direction. Mrs. Hullis and Mrs. Chase, ahead, were lost in the crowd. Wint stopped; turned to his father.

"We'll cut through the back way," he said.

Chase agreed, and they turned down an alley and came circuitously to the stage door and went in. The minute he got inside the door Wint heard the hum and buzz of many voices. He could see out on the stage, with its stock set of a farmyard scene. There were chairs there, and a table.

Amos, and Sam O'Brien, and B. B. and two or three others were waiting just inside the stage door; and Sam gripped Wint's shoulders and exclaimed:

"Lord, but you give us a scare, Wint! Thought you wasn't coming. I was all set to go fetch you."

"Oh, I was coming, all right," Wint said nervously, one ear attuned to the murmur of the crowd. "Sounds as though there were a lot of people here."

"Every seat, and standing room in the aisles, and half of 'em can't get in."

Wint grinned weakly. "And I suppose they've got every rotten egg in town."

Sam stared; then he howled. "Rotten egg! Oh, Lord, Wint, you'll be the death of me. I'll die a-laughing. Rotten egg!" He turned on Amos. "Wint says rotten egg!" he cried.

Amos looked at Wint in a curious fashion; and he smiled.

"It's half past seven," he said. "No need to make them wait."

For tired, aching feet

Dr. Scholl's Foot Easer eases the feet, body, and nerves. A simple scientific appliance worn inside the shoe that distributes and equalizes the weight of the body. It gives a springy support to the arch; relieves tired aching feet, cramped toes, and weak arches; and prevents "flat foot". Dr. Scholl's Foot Easers are made in sizes for men, women and children.

There is a Dr. Scholl appliance or remedy for every form of foot trouble.

Sold by Shoe and Department Stores everywhere.

st od up and strode forward to the lip of the stage. There was a mo- s ush. He flung out one hand. ple' he began.

. i was as well that Wint had not d me in following Gergue's advice u a good speech; because on that or of his an overwhelming blast of stuck him full in the face. A roar, a bellowing, a whistling, a shrilling. Shouts and screams and cries. He stiffened, furious. They were trying to yell him down. He flung up both hands, shouted at them.

Everyone in the house was up on his or her feet. Someone threw his hat in the air. Order came out of chaos. A terrible rhythmic order. The blare of sound dissolved into beats; they pounded on Wint's ears; he shuddered under the blow of them. His anger gave way to bewilderment. He could not understand. He bent lower to see more clearly the faces of those in the front row, just beyond the footlights. Dick Hoover was there. And Dick was yelling in a fashion fit to split his throat, flinging his fists up toward Wint, shrieking. Beside Dick, Joan. Her face stood out suddenly before Wint's eyes. She was crying—that is to say, tears were streaming down her cheeks. Yet she was happy too; smiling, laughing, calling to him. She was clapping her hands, he saw. Then he discovered that others were clapping their hands while they yelled at him. All of them were clapping their hands.

Utterly bewildered Wint whirled round to look at the men behind him. And there was Amos, both hands upraised, beating time to that appalling roar that swept up from the house before them. Beating time, leading them!

Sam O'Brien and Davy Morgan—they were both yelling—yelling like fools—came swiftly across the stage to where Wint stood. They caught his arms. He struggled with them, not understanding. They swept him off his feet, up in the air, to their shoulders, swung him to face the house.

The noise doubled; then it seemed as though an army of men swarmed upon the stage. So at last Wint understood. They were not trying to yell him down. It is one of the most hopeful facts of life that all mankind is so ready to recognize and to applaud an action which is fine.

Wint was in the hands of his friends. He thought, for a little while, they would kill him.

When it was all over—and this took time, and left Wint sore and stiff from hand-shaking and back slapping—the people began to drift away. And Wint escaped off the stage into one of the compartments that served as green room for theatrical folks. His father was there, and his mother, and Peter and Amos and Sam.

Everyone seemed to be wild with exultation; they continued the celebration there among themselves. And Wint heard how it had been done. Hetty had gone to Amos with the story. To Joan first, Sam told Wint.

"I was with her," the fat man said. "You understand. I was with her."

Wint nodded, gripping Sam's shoulder. "She's fine," he said. "You're lucky. I understand."

And after she had told Amos, Amos arranged the rest, sent Wint home—Gergue was his agent in this—and spread the word through Hardiston. To-night had attested the thoroughness of his work.

Wint found a chance at last to thank Amos. They were a little apart from the others, and they talked it over briefly. Amos, Wint thought, was curiously subdued, curiously sad. He wondered at this. But he understood at the end.

He had said: "Wonder what Routt will say to this anyway? And Kite?"

"You don't have to—worry about Routt," said Amos.

Wint asked quickly, "Why not? Is he—is there something?"

"He took the noon train," said Amos. "And—Agnes went with him. She telephoned to-night. She says they're married."

Wint was so stunned that for a moment he could not speak; he could not move. He managed to grip Amos' hand; tried to say something.

"I've said to myself more than once," Amos told him huskily, "that I wished her mother hadn't 've died."

He began slowly to fill his pipe. Wint thought there was something heroic, splendid about the man. Facing life, driving ahead—and this to think upon. He was sick with sorrow.

Amos was facing the stage; he said slowly, smiling a little, "But forget that. Here's someone coming for you to see her home."

When Wint turned he saw Joan.

LI

THEY walked home slowly, Wint and Joan. The moon was bright upon them; the streets were still filled with the dispersing throng. People spoke to them, then went discreetly on their way and smiled back at the two. Wint and Joan said little, and what they said was of no importance. He told her he had seen her crying.

"I had to," she said; "I was so happy."

"I wasn't happy," Wint declared. "I was scared."

She said she didn't blame him. "It must have been hard to face them all."

He nodded. "I'll tell you; all that noise—it—made me seasick. Something like that."

"I know," she said.

When they were halfway home she told him that Hetty had come to her that morning. Wint looked at her quickly.

"Hetty's all right," he said. "She'll be all right. She's found herself."

Joan nodded. "It's going to be a fight for her."

"She'll win. Sam will help."

"I know. I saw that this morning."

A little later she said: "You—did the right thing. Foolish, maybe. But—it was fine too. Foolish things often are."

Wint shook his head. "But I'd like to pound Routt."

"Don't," she said. "Agnes loves him."

Wint told her then what Amos had told him; and she uttered a low pitiful exclamation.

"But—they may be happy," she thought. "Agnes is good. Loyal—in her way."

"You knew about them?"

"Yes. I've always known. Agnes has talked to me."

"I hope Routt does—settle down."

Joan said thoughtfully: "There is something strong in him. Misdirected, but ——"

"I liked him," Wint agreed. "I can't help it, even now. He was my friend."

"I believe they will come out all right. I feel it."

Wint laughed at her gently. "Intuition?"

"Yes. You men call it a hunch."

Silence again for a while. They came to her house. Wint thought the simple place was beautiful in the moonlight; he wanted desperately to go in.

But there was a curious diffidence upon him, and he stopped at the gate till she said: "Come. It's not cold, to-night. We can sit on the porch."

"You want me?"

"Yes, Wint." Her eyes said more than her words. He opened the gate, and they went up the walk to the house sedately enough, side by side. Anyone might have seen.

The moonlight did not fall upon the porch. There was a shadowed place there. When they came into this shadow Joan stopped and looked at Wint. Her eyes were very dark. Something was pounding in his throat so that he could not speak. He put out one hand in an uncertain fumbling way. Joan looked down at his hand and smiled a little and put her hand in his.

They stood thus for a little, hand in hand, facing each other.

Wint said huskily at last, "I've—tried, Joan."

Her voice was clear and sweet as a bell when she answered.

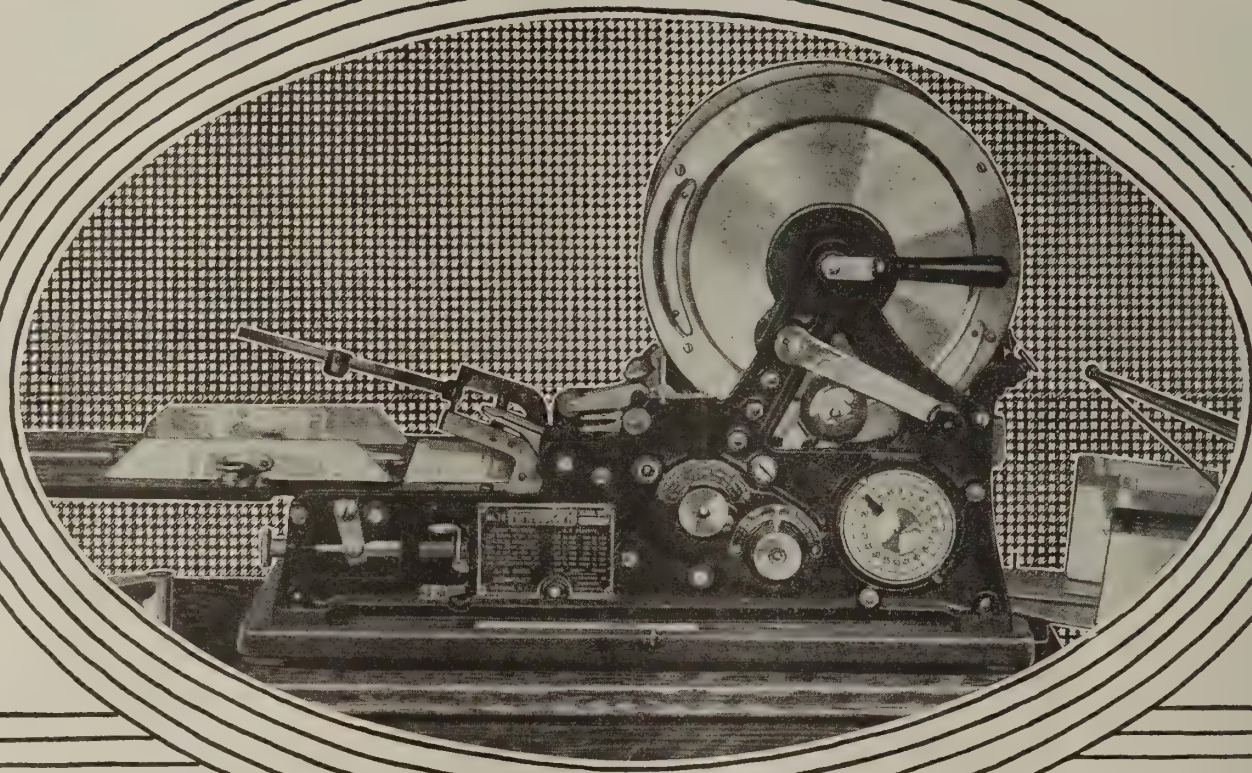
"You've done more than try, Wint," she told him "You've—won."

So, without either of them knowing or caring how it happened, she was in his arms. And he kissed her; and her lips answered his. No cool kiss of a child, this. Months of longing and of yearning spoke through his lips and through hers. Infinite promise of the years to come.

While they sat together on her shadowed porch thereafter they could hear for a long time the murmuring voices of people passing on their homeward way. Some looked toward Joan's house; but they could not see Wint and Joan.

It was as well; for it is the way of Hardiston to talk. The way of a little town.

(THE END)



An autocrat of accuracy! So quick in action is the Mimeograph that the dictation of a moment ago becomes the business-getter of the hour. A perfect glutton for work, an interpreter of ideas, an organization co-ordinator. But its *marked* quality is its *accuracy*. With fine exactness it reproduces letters, maps, diagrams, drawings, forms, bulletins and the like at the amazing rate of five thousand an hour. Hundreds of copies available within a few minutes. In thousands of American industries it is effecting essential economies. What it is doing so well for others it will do equally as well for you. Install it today—for its fine *accuracy* and speed. Or information and catalog "S" —from A. B. Dick Company, Chicago—and New York.

hen I entered the ballroom the
o ambition died, for all the male dancers were festooned with natty full-dress clothes like waiters, and kid gloves. The gloves, I afterward learned, were not rented.

"This is too damn bon ton for a river-man." I drifted into the night and landed across the street a block up, where Bill was kicking out a mess of handbills on the old pearl-jobber in his father's newspaper office.

"We could start a magazine like this Fra Hubbard thing, only better," I said. "You draw the pictures and I'll write a feature article, an essay, three poems, and whatever else it needs to make ten cents' worth."

"Have you fifty cents?" he agreed. "What'll we name her?"

"No," I said. "What do you want it for? We'll call 'er—outcast, outcast—call 'er The Pariah."

"Butcher paper f'r the cover. What does 'pariah' mean?"

"Outcast. Get fifty cents from the cash drawer. I've only got thirty and you and me eats at midnight. All Bohemians do."

Bill was O. K. on landscape, and he could put enough raiment on the people in his pictures so you couldn't tell Falstaff from the Hunchback of Notre Dame, but he sure was impressionistic with hands and feet and faces. We got round that though, through the courtesy of a gentleman guest in the Chester penitentiary who loved forgery and tobacco and who put the visible extremities on whatever Bill drew. I wrote an article, an essay, three poems beginning respectively: "Thou who wert," "O Sullen Sea," and "Dew jewels at dawn on the lawn."

The Pariah was launched.

She lived up to her name. Anyhow, it taught me never to fool with literature or writing pieces for the paper. The same parents I mentioned earlier in this treatise entered me in a college contest where you get a misleading diploma stating facts after four years of supreme effort; but I didn't thrive much on a straight educational diet. I escaped to Mexico, beating the gun, and sought the companionship of the native Mexican, or *frijole*, as he is so quaintly termed in the pure Castilian peonese.

Toying with the strenuous life of an engineer and contractor we now build bridges and railroads and power plants for fifteen years in full view of the audience, skipping meanwhile from place to place on a couple of hemispheres, finally landing with two index fingers knee deep in the keyboard of a typewriter having eighty-three characters, some of which are desperate, some public, and some yet to be introduced to the magazine world.

The United States went to war after my first story was published, so I went to France in August, 1917, with the 18th Engineers. I got back to San Francisco just in time to see it go dry. In spite of my old Kentucky home, where the rent is free, I am the most permanent living outcast in San Francisco. The outcast business is all run down now though, compared to what she was twenty years ago—us union outcasts has a hard time with the country so full of I. W. W.'s and Democrats and everything.

Some day I hope to write a story for THE POST worth a nickel, so that the week it is published THE POST will be only four pages thick and I can carry hundreds of sample copies to inflict upon my chance acquaintances.

I am very busy this season eating ripe figs and painting. I am painting a picture just now entitled Boy, How Come? in which I am in the foreground sneering at the president of one of our largest banks, who has just asked me to lend him twenty dollars until the spring checks come in.

For performance and economy Apex trucks have never been surpassed by any other trucks of their class and price. The name Apex was selected with an inward feeling that no other name would or could better describe the Apex truck. We firmly believe that our truck has reached the Apex—the high point of truck service to the truck user. The Apex twin frame construction combined with nationally known standard parts form the truck owners first definite insurance of truck life and service. Apex trucks are now equipped with Buda Motors. Made in three sizes—**1-ton $1395—1½-tons $1595—2½-tons $2450.** Ask your nearest dealer for catalog—or send direct to

APEX TRUCKS—HAMILTON MOTORS COMPANY—Grand Haven, Michigan

At the request of the Panhard-Levassor Company, Paris, France, we have relinquished the use of the name "Panhard," and since September 1, 1919, our truck has been known as "Apex."

HAMILTON MOTORS CO., formerly Panhard Motors Co.

THE BALD-FACE

(Continued from Page 38)

valley and found but a single tepee to mark the site of a once mighty nation. The white plague had ravaged the villages of Shoshone and Blackfeet alike. The remnants of both tribes had intermingled and now lived in a single village far down in the low country near the edge of the settlements.

These Indians told strange tales to the white men with whom they traded. They spoke of Tumwa-Ka-Tin—Three-Bears-In-One—the ancient chieftain who had stayed behind in the ancestral valley to rule his nation—a nation which now numbered but one lodge, that of his own grandson and his young squaw, the last of the full-blood Shoshones. They told too of a mighty bear, Logo, the grizzly king, whose tracks had been seen on the head reaches of the river since the day of Manitou, which was the beginning of all things.

But Logo knew nothing of all this. He merely knew the actual that unrolled before him from day to day. Long ago a thousand lodges had lined the banks of the river—now there was but one.

For more than a quarter of a century Logo heard no more of the crashing reports. The Shoshone chief was the only man whose trail scent was crossed in the hills. Logo came to accept him as a fixture—as one whose trail he would always cross the same as he would those of Saka, Tumwa and others of his friends. The chief's black hair turned gray, then white, but he carried his head as proudly as before and never once through all the years did he fail to flash Logo the hailing sign of royalty when they met.

Then Logo began to hear the reports once more, but with a sharper, snappier sound—the magazine guns of the whites. These became more frequent as ever-increasing numbers of white men penetrated the hills each year. Logo found the remains of many animals, his own kind among the lot, stripped of their pelts and left behind. He crossed the trail scent of men, but his habits were still the same. Nothing had occurred as yet to show him that he must change his ways.

One day he traveled with the wind at his back and the man scent came from behind him with great persistence. He could not seem to shake it off. He knew it was the body scent which he smelled, but not once did it occur to him that a man would deliberately take up his trail. He crossed an opening in the timber and turned to see a man come from the far edge along his track. Not until within fifty yards did the hunter look up and see the big grizzly standing just within the timber. Instead of retreating he threw something to his shoulder and peered at Logo down the length of it. There was menace in the move and Logo growled a warning.

There came a shattering report and something seemed to tear through his chest with rending pain. Logo rushed him with bellowing fury, but the man stood his ground. Twice more the roar crashed in his ears in rapid succession and each time the tearing pain racked his body. Then Logo struck him down. He seized the limp form by the shoulder and shook it savagely, then fled from the spot.

The man revived and crawled to his camp where he told the tale of the monster silvertip whose tracks measured twelve inches in length and ten and a half across. The hunter swore that his belly fur was yellowish and that his face was white. The Shoshone legend of the grizzly king was verified.

Logo was very sick and near to death. For weeks he stayed in the same down-timbered pocket lest traveling should reopen his wounds.

Logo now realized that he had found a fact which was beyond his comprehension. He had found that men controlled some mysterious force which inflicted hurt at a distance. They did not need actual contact with their enemies as did other animals. Logo was a very intelligent beast. He knew that a new order of things had come to pass; that the grizzly was no longer king.

His wounds were scarcely healed before another man was on his trail. His old dislike of the man scent had been intensified a hundredfold by this latest evidence of their treachery. He avoided the man who trailed him by the simple process of walking faster than the man could follow.

Twice more within a month men tracked him. For the first time in his life he knew vindictiveness. He had fought with other bears, but bore them no malice. When he had killed elk it had been for food. Now a dull rage seemed always with him. There is not a doubt but that many superior animals have pride. The springy stride and high-held head of the dog, transformed into an air of drooping dejection when in disgrace with the master, is evidence of this; the thoroughbred who runs his heart out to be first under the wire. There is that same pride and spirit, the desire to excel, in animals as in man.

Logo experienced a distinct sense of humiliation at being thus deposed as monarch of the hills. His placid good nature curdled under this treatment and he felt a murderous fury when the man scent came strong. And his was the dangerous anger of the powerful good-natured man who is suddenly engulfed in a berserk rage occasioned by some wrongful persecution. He met Saka and Tumwa and sensed in them the same deadly quality which had replaced his own even temper.

Then came the day when he turned on his tormentors. The wind carried the message that a man was on his trail. He turned in his tracks, his hair bristling as the fresh scent steeled his rage. But he knew the danger of the fast-shooting guns. He turned and walked straight ahead past a tangle of down timber, then circled swiftly back and crouched flat ten yards from his trail.

A man came swinging along on his tracks and Logo watched him come. As he drew even with the bear Logo's eagerness betrayed his whereabouts. He chopped his teeth rapidly together before he made his rush and the man whirled instantly and threw his rifle to his shoulder. He had time for but one shot as a towering beast intent upon his death covered the short distance between them. The ball plowed along Logo's jaw, shattering the outer surface of the bone and tearing along his shoulder, but he did not waver a single inch in his rush.

He tore the man down and mauled him. He seized the gun in his teeth and worried it. The barrel was hot from the recent firing and he dropped it and ran on. The pain in his jaw prevented him from eating his fill and he went into the winter in poor shape.

His fame had spread and all men coveted his wonderful pelt. When he came forth in the spring there seemed to be an ever-present menace hanging on his back track in the soft spring drifts. Within a week after coming from the den he was shot at once more. He whirled in a rage and forged down in the direction of the shot. It sounded again and there was a sickening snap and rush of air near his head. He altered his course and fled. He had learned to give trail for the magazine gun.

He found more and more dead animals in the hills and knew that they had been slain by the thundering rifles. He met fewer grizzlies each year and there were many old friends whose trails he no longer crossed. The bald-face tribe was slow to accept the new order of things and learn the lesson of the fast-shooting gun—and their ranks were thinned.

For untold centuries his kind had shared with the Shoshones the joint monarchy over all the hills. Logo still found their old-time hunting camps; their tepee poles, old and brittle, leaned against the lodgepoles in the timber; their old log bear pens still stood in the hills and would stand for a hundred years, but the Shoshones themselves were gone. And now his own kind had reached the beginning of the end.

Down in the lonely tepee Tumwa-Ka-Tin was also feeling the pressure of new conditions. The first of the whites, having small use for involved nomenclature, had arbitrarily rechristened him and called him Three-Bear. They had renamed the Stinking Water, calling it the Shoshone after this last man of the race whom they found living on its shores.

The ways of the white men were not his ways and he was too old to learn. He had steadfastly believed that the Shoshones, who had fled in time of plague, would one day listen to the call of the hills and return. His one hope had been that he would live to see the day when the smoke from a thousand Shoshone wigwams would once more drift above the valley. The white men told him that they would never come—that the last few of them had been confined to a reservation thirty sleeps away and that there they would remain. He felt the full burdens of his years and longed for the day when he could lay them down.

Among the white men who came to the Land of Many Rivers was Jacques Lear. From a long line of French Canadian forbears he had inherited wonderful strength, a stout heart—and little else. He fared down from the North in search of that wonderful place which lies ever just ahead—always just round the bend or over the next divide. Here he found untold variety of game and fur where the animals of the South meet and mingle with those of the North. There are antelope in the flats and white-tail deer in the low cottonwood valleys; elk and blacktail in the hills and bighorn sheep in the peaks. Bears—black, brown and grizzly—find shelter in the timber. Mink and otter follow the streams and there are moose in the beaver swamps of the Yellowstone. Red, cross and silver foxes travel the high divides. Ermine and marten leave their tracks in the timber where the lynx meets the bobcat, his Southern cousin. Badger and swift fox burrow in the bad lands and wolf greets coyote in the foothills. The wolverine of the North feasts on the victims wantonly killed and left behind by the mountain lion, slayer of the South.

And here Jacques Lear found his long-sought paradise of game and fur.

It was now only a question of the one best spot of all this good land in which to settle. He came out upon the snow combs of the Wapiti Mountains and looked down upon the green spring in the lovely valley of the Stinking Water. He plunged down across the white peaks and over the packed drifts of the spruce slopes until he came out at last upon the spring-garbed shores of the stream. Here he drove his ax to the eye in an aspen trunk and strode on, carrying only his rifle and a few of the finest furs of his winter's catch. It was his way of saying that it was to this spot he would return and build his home after trading his furs for supplies in the distant settlements.

A mile below Jacques saw a single tepee standing in a little glade on the banks of the stream. An aged Indian sat before it eying the approaching stranger. He noted Jacques' tall powerful figure and the easy swinging stride which spoke of strength and self-assurance. He called to someone inside and the tepee flap opened as a young girl came out and stood beside him.

"He has come," said Tumwa-Ka-Tin.

"True, father," Jacques smiled. "I have come."

"Are you not Saka-Tumwa, the silvertip?" the aged chief inquired.

"You mistake me, father," Jacques said. "I am called Jacques Lear."

"No matter," said the Indian. "You are the one of whom Pakatan has spoken. Many white men have come and gone, but you have come to stay."

Jacques looked upon the loveliness of the girl and bowed assent.

"Yes," he answered. "I have come to stay. My ax still quivers in an aspen trunk scarce a mile upstream."

"It is well you have come," the old man said. "The white men call me Three-Bear. I am very old. The grass has turned green on more than a hundred springs since that time when Pakatan made his prophecy. This is Meteetse, the daughter of my grandson. She is the last princess of the Shoshones."

Since her earliest infancy Meteetse had heard of Pakatan's saying. Whites had come to the banks of the Stinking Water and gone on, leaving her unmoved. Now she looked upon the comely strength of Jacques and knew that Pakatan had spoken well.

And Jacques, as he resumed his journey to the settlements, marveled at the miracle which had led him to strike his ax at that very spot.

In the settlements he heard of the great bear, Logo, whose pelt all men desired. He heard too the legend at which men laughed—the fable that allowed the Shoshone chief but three days of life after the passing of the grizzly king. But Jacques did not laugh. He knew that he must not kill this bear. In truth it seemed that no man was able to do that. The white men had sought his pelt for thirty years, but he still wore it about in the hills.

Logo had turned his feet to ne tra
He had the sagacity to know that h ts

n e spring he took up Logo's trail. e d Indian knew the habits of the ma of the hills as well as they did ms ves—better, for it is not within the vin e of beasts to know that the living thei daily lives is habit. He unerringly ked he one habit which Logo had failed ait.

n common with all other game but the ep used the low saddles in the ridges en ossing from the head of one stream the next in preference to selecting the ner ocky points.

The dges which separated the tributary eks vept back from the river and flared agai st the base of the main divide at t ngles. Near where each of these ed he parent range a deep notch or hea the crest of the ridge afforded an r ossing.

Bru-Bear selected one of these and tod or a drove of elk to cross. He ope a cow in the very center of the n ine on the crest of the saddle. His em was far greater than that of the tes He took up his vigil and prayed Manitou would send Logo to feed n t elk. Day after day he watched it n te rocky point which commanded o h.

ev eal bears came to feed, but not the h sought. Then at last he was re-lie Logo came from the timber and sec o the elk. He was very tired. If ive the summer through it would surely be his last. He heard a queer droning chant, but could not locate its source. He stood swaying from side to side, his massive head drooping below the hump of his shoulders as he listened to the sound.

Up above a single voice was crooning the death chant. It carried Logo's mind back into the misty past as if he once more lived in the good days of old. For the voice carried the old powerful boom and rang with triumphant certainty.

"Manitou, thy son is coming. Meteetse shall have her inheritance. Logo is about to enter the land of Manitou and in three more days the last chief of the Shoshones will sit round the council fires of his people."

Logo stood in the open lane walled in by heavy timber. He looked a monster as ruggedly hewed as the hills he ranged, king of a vanishing race. The dying sun shone through a notch in the range and cast a searchlight tongue of flame, the tip of it just reaching the bear and turning the white guard hairs of his coat to sparkling silver.

And from the rocky knob above the last chief of the Shoshones was looking down the barrel at the grizzly king. He made the hailing sign of chief to chief, but Logo did not see. Neither did he hear the sharp report. He sank quietly down to rest and as the echoes of the shot roared up against the cliffs and on across the high divide there traveled with the sound the soul of the silvertip.

CANNING OUR VOICES

(Continued from Page 14)

Si ce, please!" from the recorder. He ve the swinging zinc funnel and puts he smaller one in its place. With t re the test is run over and you n wh painful attention, standing close e rn. You note mentally that that w too bright with its flat a-a, it oo eep in the wax for the soft sounds e d after it. That high note came n r being a blast—I was too close. e ext high note I must have cramped pr body muscles as I swayed back, s nds a trifle flat in pitch. All these rs e carefully noted.

sli t shifting of the orchestra's sev-pc tions takes place, for the keen, ic ear of the master recorder has d at the flute was too dull in one , t brass too heavy in another. The tr gives his opinion, and the men hae left the room—showing small est n the first test—are called back. mch talk and banter they climb ar blow a few swirls and quirks on in ruments; the violinist jazzes the ly ou have just been singing and a al nile relieves everybody. We begin

h- say"—from the flute when he ed his introduction—"I did some-fu y." His top note has been a bit y, st like a prima donna with a frog t oat. The cut is stopped. There is oo on the wax for a twelve-inch d, we start again. We swim on:

omnis tu le pays."

g about a third through. The man e nchine holds up his hand. A hole e ax—no good. "A hole" sounds ncus; in reality it is a minute flaw, o seen by the naked eye, but the e s discovered it. Tiny as it is, it ffe the perfection of the record. A wa is put on.

e usicians swirl and toot again t-ndedly. I do a few mi-mi's, or per-eeng the fatal "master" approach-sh a moistening lozenge under my e. have not been nervous so far in eg e. Habit and knowledge that in ob ility it will have to be repeated l tnes have detracted from the sense oo ibility. Now I gird up my loins—pr bably the selling record.

er ct orchestral attack digging out e lence pleases everybody. The in master smiles where he stands n, ready to sway me back should I pull me gently forward should ec that. He gazes impersonally at e s, and I try to keep from thinking na ractive my black tongue—black ch succulent lozenge—must look to I and with my hands on my hips, ge nunciating clearly, every bit of ac trated on making a perfect record. it f phlegm, tiny, unimportant on on rt platform or operatic stage, where one may expectorate comfortably at will, seems to float across my chords. A burning rage seizes me. I look up and shake my head at the leader. He may not even have heard it, but he taps his baton—the orchestra stops. I say: "Isn't that maddening? A miserable frog—I'm so sorry!" No one pays any attention to me. The violinist says to the saxophone player: "You wouldn't move an inch, would you?"

"Well, what can I do?" protests the big Russian loudly. "He"—pointing to the recorder—"told me to stand here and you want me to get out. What can I do?"

He has been called Kerensky, Trotzky and Bolshevik during the course of the war and the latter name has stuck.

"The saxophone," jeers one of the woodwind players, "the joke of the orchestra, the lowest form of musical instrument!"

"Not at all," I take up the cudgels. "It's a marvelous instrument. It just has not been used properly. You will see Richard Strauss or some other tone master will use it some day and make it famous."

"He has already," chimes in the flutist, once a dweller in the Fatherland. "He has used it in quartet form."

"Well, I'm glad somebody likes it," says the huge Russian in a meek voice.

"Just the same you can move back a little," says the recording master, "even if it is wonderful, you big Bolshevik."

"Never mind the Bolsheviki—they're all right," growls the erstwhile smiling Russian. "You'll see in a month or two where they'll be!" His face, beaming good-humoredly the moment before, grows dark and menacing in an instant. A silence falls, an ugly thing has shown its head. The Americans—and strangely enough there are several of them—laugh after an instant.

"That's all right—you'll be in jail," says one of them. But ugly thoughts have been raised—the voice of the discontented foreigner menacing our free land jars in our ears.

They resume their tuning up and trilling while another wax is adjusted. Off we go again. By now a tinge of boredom has crept into everyone at the many repetitions. This is a blessing in disguise, as one is automatically less nervous on account of it and—at last we have made a master.

The almost perfect, careful singing you have done has put your voice in fine condition for the next number and you repeat the whole process. You are tired at the end of a session from standing so long in one spot and from the strain of trying to do your very best. You learn with every recording, and personally I always have a feeling of exultation if the general opinion is that my work has been good, as it is a difficult thing to master.

Sometimes I have made a master record at the second repetition. Sometimes it takes an hour to get one acceptable record.

GUITERMAN BROS. SAINT PAUL, U. S. A.
Originators and manufacturers of wind-proof and cold-resisting clothing.

I have heard singers laboring for hours to make a certain spot perfect, filling perhaps a whole afternoon, only to find the difficulty unconquerable.

When you buy a perfect record of some favorite singer you may be pretty sure that you may then hear that singer at his best. Rarely will he attain such perfection on the concert or operatic stage.

Voices record very differently, some qualities being too resonant, some not enough so. It is rare indeed to find the perfect recording voice.

A duet or quartet is, of course, even more difficult to make. There are certain horns with two mouths—one for each singer—that are sometimes used for duets, or each singer may have a horn to himself. It's most mysterious and wonderful to me to think that in that tiny groove are recorded the manifold gradations of sound, of tone color, of infinitesimal shadings in quality of perhaps four masculine and feminine voices, not to speak of the various voices of the orchestra.

I find English the most difficult language to record. We have so many impure sounds. Words like "must," "love," "think" are difficult to sustain. You may do as the music-hall singer does and say "theenk" or "laaaav," but it is not elegant. Our way of saying "thu" for "the," for instance, in "Way down upon thu Swanee River," makes a very difficult syllable to record clearly.

The singers of popular hits make their words much more clearly understood than we do, as they sacrifice everything to them. You hear, "Good-by, maw, good-by, paw, Good-by mulie with your old hee-haw," every word staccato and wonderfully distinct. But legato singing is an unexplored territory to them.

If I were to sing *Connais tu le pays* in that manner very little would be thought of my artistic attainments.

To oblige someone I once tried to make a popular record, but I could not bring myself to chop the words as they should be chopped, and so it did not have the proper stamp and was a failure. Some familiar element of style was lacking. I could have given an imitation of a vaudeville singer doing it and have done it fairly well, perhaps, but I did not quite see the sense of that; better leave it to an expert.

Italian, with its smiling vowels, its lovely open finals, its strong clear consonants and general flowing line is much easier to record.

"*Ombra mai fu di vegetabile, cara ed amabile, soave piu.*"

What could be more grateful, purer in sound? The mouth is open naturally, the lips elastic and unstrained, the tongue at rest.

Then German by contrast: Try to spit "*mich beschimpft Dein verdacht*" into the horn. You are all tied up in a second and the wax records an unclean sputtering that has little or no beauty when played in a red-velvet parlor.

French I have always adored singing in any shape or manner. You can polish and purify French to the *n*th degree; you can make it unbelievably elegant, resonant and rich. The slight nasal tone so often required is wonderful for the horn, the variety of tone quality most prepossessing. To me it is a brilliant delight.

Some companies record differen the one I have described. You see anything of the machine or me in some of them. The horn then p through a screen from behind which mysterious sounds. A face appe hole cut in the wall to give you d when to begin or leave off. Perh will have a horizontal bar firmly into the wall in front of you like rack, below the horn. This you m and it certainly is a great help in st one, and in swaying.

On the horn may be pasted a gasping hint from the management: ciate clearly." They hope that move you when nothing else will.

The master you have made is rolled in cotton and put into a m and sent to some mysterious factor good little records are born.

I once had the joy of stamping own records. I saw a square lump stuff like asphalt put between tw of metal. This was then slippe stamping machine and I pulled a l pushed a handle and a record was also saw the black stuff being prepa I suspect that was a secret and better not talk about it.

A master recorder who has reco over the world told me he was once ing in China. They had been wor some time, the Chinese musicians s utter stolidity round him, twang scraping when told to, laying asi instruments in the pauses, all with of interest or spark of enthusiasm singers would record impassively a same dull atmosphere, and the re manager began to grow discourage of the songs were supposed to be co he thought: "Well, they can't be v cessful or at least one musician wou a smile."

At last up stepped a little Orie began to sing. One musician smi other grinned—at last they were al ling, then roaring.

"Aha," thought the manager, "t is really good. At last I have comedian. We must do lots of his so make them especially carefully."

After the session he said to th preter:

"That last fellow was a good one he? He must be very funny to ma laugh so—a really good comedian."

"Oh, no," said the interpreter "they were laughing because he bad!"

At another time the interpreter c him at his request China's most song. A sort of counterpart of Ol Joe or Home Sweet Home, he asked song every grandmother and ever knew. He wanted to record th known melody in all China, and b beloved singer.

The singer arrived, the recording The singer began. He stopped. again, he stopped again. He stumb the musicians after him, he stopp more.

"What's the matter?" queried t would-be recorder of the best-know nese song. "Is he sick?"

"Oh, no," said the interpreter w movable suavity of manner, "h doesn't know the song."

Every notable was there in force: Vanguard Collins; Mr. and Mrs. Cnristopher P. S. Shoots; Mr. and Mrs. Anopheles Ricketts; Luscious Chester; Mrs. Spinola Reed-Chester; Belshazzer Elliott, Grand Magnificent High Potentate of The Sons and Daughters of I Will Arise; Mr. and Mrs. Quintus Weefalls; Lawyer Evans Chew; Dr. Vivian Simmons; Mrs. Dr. Elijah Atcherson and husband; Hammond Bias; Jerry Skillet; Mr. and Mrs. Isaac Gethers; Keefe Gaines; Cupid Baldon; Dr. and Mrs. Brutus Herring; Acey Upshaw; Ellick Pinckney; Semore Mashby, who had managed to work a pass from someone and then slip by the gate without paying his war tax; Reverend Wesley Luther Thigpen and his contemporary of the First African M. E. Church, the Reverend Plato Tubb; Mr. and Mrs. Simeon Broughton and—of course—Florian Slappey, misogynistically alone.

They were out en masse; the worth while and the worthless, the high and the low, aristocrat and proletarian, the degreed and pedigreed. The grand stand was a riot of vivid coloring—shrieking yellows, gorgeous reds, unctuous lavenders, palpitant purples, staggering blues. On the top row of the grand stand was the orchestra of Professor Alec Champagne, which worked overtime spurting jazzy music into the innocent summer air.

Out on the field the two teams disported themselves idly, languidly dipping after grounders and casually pulling in long flies, product of the fungo-hitters' skill. Then came the regular preliminary practice: an affair of brilliant stops, excessive comedy and rank errors. Team for team, exclusive of the battery superiority, Knoxville and Birmingham seemed a toss-up. But there was no forgetting the battery.

A stentorian-voiced umpire announced the batteries, and at the mention of Angel Nash's name a scream of delight rent the air. That gentleman rose from the dugout and bowed smilingly, showing a wide expanse of shiny white-and-gold teeth. And when he strolled into the box bedlam broke loose, and Lucreshus felicitated himself on the fact that he had not thrown away Mr. Rossler's money by betting it against this hurling phenom. It gave him his opportunity of helping his friend of former days—even against the latter's will.

There was something about Angel Nash as he faced the breast-protected and masked catcher which infused confidence. It was not precisely an indifference to his surroundings. Rather it was a contempt of them. The idea that this team from Knoxville should even presume to send batters up against him seemed amusing to Angel, and he wore a large golden grin. He lobbed three over the pan and signaled the umpire that he was ready.

The first Knoxville batter tapped twice on the rubber with his heavy bat, set himself, swung at two swift ones and then at a dead floater which seemed retarded in the air. He retired in disgust. The second batter swiped at two, concluded that the third would be wasted, discovered very quickly that he had made an error of judgment—and he too sat down. The third met the second ball squarely and slammed it in the general direction of center field. It hit the ground midway between the plate and the pitcher's box and bounced.

There was a resounding smack as ball struck glove and remained there. The batter started frantically for first. Angel Nash regarded the ball in his hand speculatively, allowed the runner a sporting start and then tossed the ball gracefully to the first sacker. Then Birmingham came in.

But Knoxville was on edge. It had played well against the team which had beaten Birmingham and it had no mind to lose two straight games. It played steady businesslike baseball, and the locals were retired in one-two-four order.

For six innings the rival twirlers gave masterly exhibitions. Neither allowed a hit, and only one man reached third. In the last half of the seventh the first batter for Birmingham fanned. Then Angel Nash strolled with rare insouciance to the plate, selected a ball and hit over second for two easy bases. And first among those who leaped up and screamed was Miss Zinnia Sanders.

Lucreshus was financially enthusiastic, but the exhibition on the part of his lady

True Shape

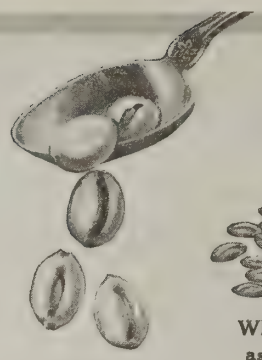
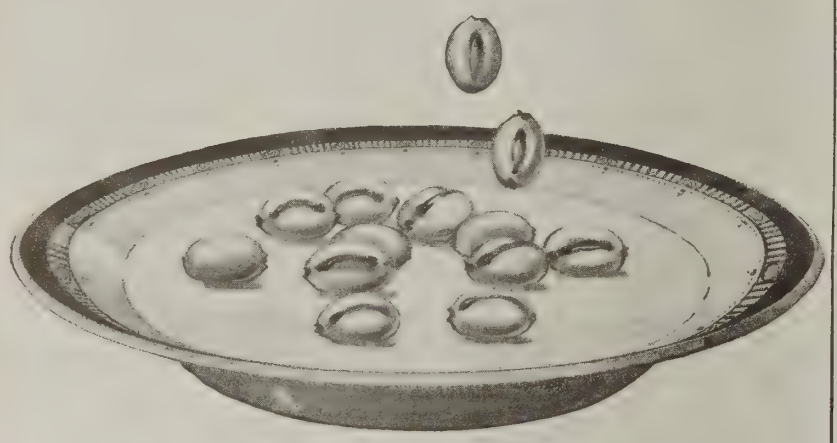
Actual Size
of Puffed Wheat grains is 8 times normal wheat—all due to steam explosion.



Wheat Grains as they grow



Witching Foods

But Also Scientific

These bubble grains—flimsy, flaky, toasted—seem simply tidbits to enjoy.

They seem to breakfast what dessert is to a dinner—a delightful garnish.

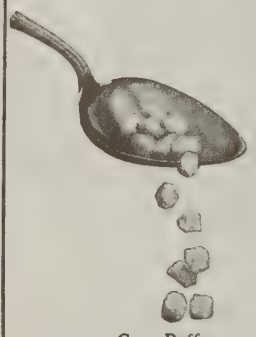
But that's a wrong impression.

Puffed grains were invented by Prof. A. P. Anderson—a scientific man. And there's deep reason for them.

To Make Whole Wheat Digest

Take wheat, for instance—a premier grain. Nature stores minerals in the outer coat, and other needed elements. Without them children suffer.

Yet that outer coat, under usual methods, goes largely undigested.

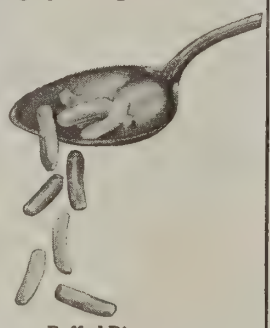


Corn Puffs

Prof. Anderson's method applies to wheat an hour of fearful heat. Then the grains are shot from guns. Thus 125 million steam explosions are caused in every kernel. And every food cell is so blasted that it easily digests.

Thus every atom feeds. This whole-wheat food means whole-wheat nutriment.

So with Puffed Rice—so with Corn Puffs. The food cells are all broken. The result is airy, nut-like globules — fascinating foods. But also foods which yield their precious elements.



Puffed Rice

Puffed Wheat

Puffed Rice

Corn Puffs

Also

Puffed Rice Pancake Flour

Like Nut-Made Pancakes

Our food experts, after countless tests, have made an ideal pancake mixture. And they mix in it ground Puffed Rice. The result is flaky pancakes and a very nut-like taste. The finest pancakes ever served are made with Puffed Rice Pancake Flour. Try it. The flour is self-raising, so you simply add milk or water.

friend ruffled his dignity and riled his feelings. He fastened strong fingers about her dimpled arm and caused her to reseat herself with extreme suddenness. She swung on him in fury.

"Take yo' han's off'n me, cullud man!"

"You is makin' a specktickle outen yo'se'f."

"I reckon it's my own specktickle—an' 'sides, 'tain't none of yo' business."

"Folks is lookin' at you."

"They is lookin' at sumthin' when they does."

"You makes me 'shame' of myse'f."

"Well, blame yo' own fat se'f for that."

Lucreshus became aware of the fact that he was pursuing a rather tactless course. "I ain't meant to make you mad."

"Ain't meant ain't ain't did."

"On'y jes' 'causen a man goes an' flukes a two-bagger ——"

"Flukes! Huh! I reckon you could of done it too."

"Ise a business man—not no ball player."

"Pity you is an' pity you ain't. Now you remove yo' han's off'n me an' lemme root liken I likes."

Mr. Angel Nash bowed response to the applause of the stands, kidded with a superior air the shortstop, who was covering the base, and languidly strolled from the sack for a long lead toward third. He noticed vaguely that the coach on the third base line was making grotesque gestures and uttering weird cries, but he didn't bother particularly.

The Knoxville pitcher whirled; the ball shot straight to second and into the waiting hands of the second baseman, who had sneaked up unobserved. And to Angel Nash came the greatest disgrace in baseballdom: He was caught asleep off the base.

His march in from the center of the diamond was not exactly a triumphal procession. And at least one man in the stands was chuckling.

"I reckon, Zinnia, that he is a swell base runner, also pitcher."

Zinnia's nose went high in the air. "You is entitled to yo' own reckons, Mistuh Mabry."

"An' 'tain't no harm to be 'spicuous by yo' rootin', is it?"

"I said it."

"Ve'y well." Lucreshus Mabry rose to his feet and his barytone rolled out across the field and thrummed into the ears of the chagrined Angel Nash: "Some ball player you is—not!"

The ninth inning came and went. In the tenth Knoxville scored and Birmingham managed to even things. The eleventh resulted in two large goose eggs on the scoreboard. But in the first half of the twelfth something happened.

It was plain that the first batter was ball shy. He stood back from the plate and refused to strike at an ice-cream ball which floated up tantalizingly. A chorus of hoots from the stands lent courage and he crowded the plate. And Angel caught the ball which his catcher returned, posed airily, wound up lavishly and let fly.

There was a sharp crack as the ball connected with the crest of the batter's cranium and bounced merrily over the grand stand. The batter looked round, grinned and trotted unconcernedly to first. Angel, hands on hips, shook with laughter. With no one down and a man on first the Knoxville manager sent in a pinch hitter, an enormously large and intransigently black gentleman who swung a Brobdingnagian bat over his shoulder. He had orders to play the hit-and-run game.

Angel chuckled good-naturedly: "Hello, Useless!"

The pinch hitter glared. He stood at the plate.

Suddenly the ball left Angel's hand. It cut the heart of the platter and the umpire announced a strike.

"You is 'lowed to hit at 'em," announced Angel sweetly.

"Shut yo' fool mouth!" grated the batter.

Angel ignoring the man on first wound up deliberately. The ball appeared to leave his hand with terrific speed. The batter swung, spun and almost fell. "Stri-i-ike tuh!" Angel laughed.

"Ain't you learn' to stan' alone yit?"

"Open yo' mouth ag'in an' you is gwine be a angel sho' 'nough!"

Angel speared the return. "Heah you is, Nothin'! Heah's one right over the plate."

"You woul'n't dare!"

"Watch this!" The ball shot in. But just before it reached the plate it broke sharp and wide. The swinging b it by six inches, and there came laughter from the grand stand. ceived his catcher's return and the batter aside.

"Go ast yo' manager ain't he g batter to send up heah."

The giant Knoxvillian starte ingly toward the box, swinging hi swearing elegantly. The adoring s left the face of Angel Nash. quietly fingering the ball.

"Cullud man," he remarked tionally, "my control is good an' is sizzlin'!"

The big man turned sullenly and to his dugout while Angel insp cleats of his shoes. He was as church deacon at an ice-cream f

The next batter up laid a pre down the first-base line, sacrificing ner to second. The man who foll shot one to third and the third sac wild to first, leaving first and th pied, with two men down. The f ville fans awakened and rooted.

The first ball went straight o bat met it squarely. It sailed like to center field. The center fielde himself for the catch. The ball hit hung uncertainly for a moment, oozed over the side.

There was a deep and hollo from the Birmingham stands as ner crossed the pan. That ende ville's scoring for the inning.

But the one-run lead was sufficie Birmingham runner reached sec there he expired. And slowly and the crowd rose to its feet and st the exits.

But Lucreshus Mabry did not ri for a weak remark to Zinnia: pitcher you is lovin'," he made no on the catastrophe.

He couldn't. The disaster beg scription. The ultimate cataclys occurred. With Angel Nash in backed by a superior team, Birm had yet gone down to inglorious It mattered not that the box score that it was Birmingham's game thr that Angel had twirled winning lost only by the combination of a fl an error—the stark fact remain every available cent of cash or cred Lucreshus possessed had been swe by black magic.

And then a poignant memory Lucreshus. It smote him hard an him frequent.

Mr. Al Rossler.

In the pants pocket of Lucreshus reposed fifty dollars belonging to Rossler, which at that moment shou blossomed forth as one hundred. I was the fifty which had been intru Lucreshus to wager for his friend chances of the Knoxville team. found himself hoist by the petar friendly effort to present his friend half-century note and perhaps re substantial honorarium in appreci his superior judgment.

Lucreshus Mabry was rapidly at realization of the fact that he against it about as hard as one color can be and yet continue to exist. E obvious warmth of his lady friend d to assuage the great gob of gri enveloped him. Every nickel he o was likely to own had been swept a the inexcusable bobble of a center

Eventually Lucreshus rose. Zinn his arm tightly. It was patent that stock had risen materially in the fa Nash defeat. But Lucreshus was ously unhappy. He was about as s tively unhappy as it was possible for become. They passed through the stand to the exit gate, the tail ende saddened sorrowful throng of erstwl thusiastic rooters. Near the gate the face to face with Angel Nash.

But it was a different Angel Na Angel stripped of his incomparable an Angel heroically striving to keep appearance which was his by rig which an error had stolen.

Angel bowed. "Evenin', Miss Zi

"Evenin', Mistuh Nash," came t sponse in a tone so cool that it woul mally have brought an access of exu to Lucreshus.

"That was a pow'ful hahd-luck wa'n't it, Miss Zinnia?"

Lucreshus sniffed. "Hahd luck? A man which cain't pitch an' cain bases gittin' to talk 'bouten hahd luc

enc fell between them, and Lucremirably passed up his most glorious rtunity for rehabilitation in the eyes la love. It was all that Lucreshus d to retain his veneer of dignity— ligity was Lucreshus' greatest asset. w sad at heart. Mr. Al Rossler ed p about as large as a mountain sfe some as a thundercloud. Thought fir he should have won for his white l was staggering. It was bad enough ve st every cent he possessed, but to ty dollars in the hole in addition) —
conceived wild and futile schemes for wi fifty dollars and turning it over r. Issler. There was no more chance s bng able to raise more than five s an there was of his marrying a tat night. He was buried deep in rth cavity of his own digging and any and painfully aware of the fa wa in a ferment when he left Zi tlyat the door of her own home. He d adly downtown, reflecting upon isa er which had come to him and ng eird and impracticable methods of e. A sudden and informal departure Birmingham was impossible for sev- easns, not the least of which was the ac of funds. He conceived the plan kir himself considerably scarce until re fair should have departed from me for another town, but he knew a too, was not sound. Mr. Rossler kil l and indulgent white gentleman he ot the idea that somebody was t put something over on him. —I creshus shuddered.
cle hed his pudgy fists and shrugged abl shoulders. There was plainly g r him to do but face the music; to Bessemer, turn the fifty dollars co r. Rossler and make a complete sid. He paused. Suppose Mr. Rossoul get the idea that he had wagered on nd was holding out fifty? Well— all hat was the smallest risk he was g.
hor later he alighted from a North nestreet car and made his mournful owrd the glare and glitter of the fai It stood out in blaring colorful st its sodden drabness of the morn-

stret was a blaze of light and thronged bla and white humanity. There is nin about a street fair in the South do more to bridge the social gap tin the races than any other one Cality white folks, laughing-eyed aveng in large joyous parties, rubbed wh their ebony cooks and washer- n. They crowded together at the g booths, chancing their nickels and on andies, live ducks, large and popoll Indian-blanket robes.

The riding concessions were doing a land-office business; one-third of the cars of the Ferris wheel were, for instance, being occupied by jolly care-free white people of the society crowd, who were doing the fair in large groups; the remaining two-thirds filled with their Ethiopian brethren. Ballyhoo men roared the quality of their wares—designating rows of flashily costumed, infinitely bored young ladies as proof of their contention of superiority. It was an anarchy of light, blatant music, high-pitched laughter, racial intermingling, general hilarity—a scene typically Southern and wholly bizarre.

But Lucreshus looked upon the surging laughing crowd, the glaring lights, the wholesome joy—and found little to lift his spirits from the slough into which they had descended. He headed for the concession belonging to Mr. Al Rossler at the far end of the midway, but there was a conspicuous lack of enthusiasm in his gait. He was headed for a conversational guillotine.

But even the worst of things must end eventually, and he came to Mr. Rossler's booth. It was suffering from a complete collapse of enthusiasm. No crowd gathered before the counter eagerly depositing nickels for three chances to duck the sad little negro who sat perched on the seat over the galvanized-iron tub. Lucreshus looked and understood. The person who pays his nickel and hits the target likes to feel that he is bringing distress to the duckee, and the little fellow on the platform could not possibly have looked more woe-begone than he already did had they heaved him into the middle of the Atlantic Ocean.

But the very dearth of business was disastrous for Lucreshus. Mr. Rossler being sans work found time hanging heavy on his hands and he spotted Lucreshus and summoned that melancholy gentleman to his presence. Mr. Rossler, his prophecy fulfilled, was grinning genially.

"Told you about that Knoxville team, Luke."

"Yassuh—you sho' did."

"I'm surprised it took them twelve innings to do it."

"So is I."

"Broke you, didn't they?"

Lucreshus nodded emphatically. "Broke is rich compared to what I is."

Mr. Rossler laughed. "Your pitcher friend was defeated; that ought to put you in strong with your mutual lady friend."

"I ain't studyin' 'bouten no gals, Mr. Rossler."

"Don't you worry, Luke. I'm fifty dollars ahead of the game, and—you brought my winnings down with you, didn't you?"

Lucreshus gulped, strangled, shivered—and then took the plunge. In frantic, adjectival, apologetic speech he explained to Mr. Rossler that he had known all along that Knoxville didn't have a chance to win and he couldn't bear to see fifty dollars thrown away.

"An' so, boss man, I ain't bet yo' money a-tall!"

"Didn't bet it?"

"Nossuh. Not on Knoxville n'r neither Bummin'ham." He fished the fifty from his pocket. "Heah 'tis, suh, an' Ise sorry that Knoxville won, an' ——"

Mr. Rossler was not precisely angry, but he most decidedly was peeved. It was exactly as though he had had fifty dollars taken from his pocket. He stared at Lucreshus for a few minutes and then commenced to speak.

His speech was more graphic than elegant. He started with the creation and said things which bore directly on the quality of Lucreshus' ancestry from the days of Ham to the present; none of which were exactly laudatory. Pausing only briefly for breath he started in with the forthcoming generations and damned them heartily even unto the days of the millennium. When he paused it was only because he had exhausted his vocabulary of descriptive profanity.

Through it all Lucreshus cowered and trembled. Gone was the exquisite dignity which had won him recognition in Birmingham, and there had crept into his heart a horrible fear, a terror of consequences. Visions of the county jail, known to the negroes as the Big Rock, loomed before him, and he quivered.

"Please, suh, boss man, I di'n't go fo' to do you no dirty trick. Please, suh, don' tell no p'lice 'bouten what I done. Ise gwine save up an' pay you back them fifty dollars an' ——"

"You're not going to do anything of the kind; you're going to take your medicine and you're going to take it now!"

A High Production Curve Means Faster Dictation

The factory must be kept supplied with written instructions. Every order for goods must be acknowledged. Every delay in shipments must be explained. If you are sold out months ahead, customers must be informed to that effect. The more you produce and sell, the heavier grows your correspondence, and the faster each letter and memo must be written.

With The Dictaphone always at your elbow, you stand the best chance of keeping both your factory and your customers promptly informed. Phone or write for convincing 15-minute demonstration in *your* office, on *your* work. Branches in all principal cities—see your telephone book.

"The Shortest Route to the Mail-Chute"

House Completely Warmed at Breakfast Time

DON'T get up in a cold house. Don't climb out of bed mornings and shiver in the cold while you open up your furnace.

The "Little Draft-Man" Furnace Regulator makes it possible for the family to get up and dress in warmth and comfort throughout the cold period of the year. All that is necessary is to set the regulator at the hour in the morning you want the furnace to start. The "Little Draft-Man" opens the damper and closes the check. All the family can remain comfortably tucked under the covers until the rising hour, by which time the briskly burning furnace has taken away the morning chill.

The "Little Draft-Man" is a simple mechanical device for opening your furnace at any time set and for controlling the furnace during the day.

To start or check the flow of heat, you simply turn the regulator handle in the "on" or "off" direction. It has no electrical connections or contacts and does not get out of order. It may be connected with any make or kind of furnace, old or new, in a few moments.

The "Little Draft-Man" commends itself to all who value the comfort of a practical and dependable furnace regulator. It will save its cost in fuel economy in a single season. It will protect the family health against exposure chilly mornings. Its comfort-giving is beyond price.

The "Little Draft Man" costs only

$15.00

East of the Rocky Mountains

Hardware, Plumbing and Furnace stores in every city carry the "Little Draft Man." If yours does not we will send you one post paid on receipt of price

Sahlin Manufacturing Company

"Nossuh! Please, suh, I ain't meant to ——"

Mr. Rossler transfixed him with a glare. He looked to the petrified Lucreshus like a man contemplating murder. What the overly ample and entirely elegant colored man did not know was that inside his red-and-white-striped shirt Mr. Al Rossler was laughing!

Mr. Rossler turned away and motioned to the little negro on the platform in the cage. That individual scampered down the ladder and presented himself before his employer.

"You've got a vacation this evening," announced the owner of the concession. "Here's four bits. Have a good time."

Lucreshus stared. A hint of the diabolical punishment in store sent a tremor of apprehension through him. He started to say something but Rossler cut him short and motioned toward the diving seat.

"Get up yonder!"

"B-b-but, boss man ——"

"Take your choice: that or the calaboose ——"

Lucreshus looked at Mr. Rossler, glanced at the seat over the tank of water and envisioned the Big Rock. He adopted the wisest course. He started to remove his coat and hat.

"Keep 'em on!" snapped Mr. Rossler. "You're going to bring me fifty dollars worth of business to make up for the money you failed to win for me. If there's a person on this midway who won't be willing to shell out a quarter for the chance of ducking you, then I'm no showman."

It was a thoroughly pathetic Lucreshus Mabry who again, after the lapse of many years, climbed upon the platform and gazed apprehensively into the yawning tub beneath. True, his plight was not nearly so bad as it might have been, especially since Bessemer, though only thirteen miles removed from Birmingham, is actually as far away as Jersey City is from New York. There was a minimum of chance that his disgrace would become public property to ruin him socially in the city of his choice. It was merely, then, a case of taking his wet and bitter medicine.

The stentorian voice of Mr. Al Rossler bellowed forth in impassioned ballyhoo. A party of white people drifted up, turned away, and then, noticing the sartorial elegance of the figure on the platform, planked down a dime and took six baseballs. Lucreshus braced himself for the sudden giving way of his seat and the plunge into the waters below. But the white men were poor pitchers and he was temporarily safe.

But meanwhile others had come up toward the concession and now a burly brown chap bought three balls and missed with the first two. But his aim was improving. The third ball went straight as an arrow against the target, the trigger gave, the seat ditto. There was a splash, a roar of laughter, and a terrible "Whoosh!" from Mr. Lucreshus Mabry as he became immersed in the icy shallows.

He climbed lumbrously and abjectly back to his seat, acutely conscious of the genuine amusement of Al Rossler and the now thickening crowd of patrons.

Another man tried his aim, and then another and another. The spirit of the thing became infectious and business picked up as fast as Lucreshus could climb from the water to the platform.

And then when he had been ducked a score of times and the numbing ignominy of his position had become bearable by familiarity much of his old professional aplomb returned. He was doused regularly and commenced to take it calmly, acquiring a contemptuous impersonal interest in the crowd which paid well for his discomfiture.

An hour passed; thirty minutes more. It had become a habit by this time. Lucreshus was distant and aloof. His disinterestedness dulled the earnestness of his tormentors and they gradually drifted away, seeking more zestful diversion. Once in a while a new couple ambled up and tried their luck. Lucreshus had become fatly and utterly indifferent. The ordeal was just about finished; his debt paid.

Suddenly he sat up very straight. His eyes seemed about to pop from his head, his jaw sagged and a low groan of unspeakable woe issued from between his lips. His eyes bored into the dusky throng of the midway and met another pair. In the clashing glances there was an admixture of amusement, surprise, fear and joy.

The other pair of eyes belonged to Mr. Angel Nash, pitcher for the Birmingham Colored Baseball Association!

And with Mr. Nash leaning confidi[ly] on his mighty arm was Miss Zinnia Sanc[ers]!

Lucreshus groaned again. The gha[stly] quintessence of disgrace had arrived a[ll] in a bunch. What had before this seemed [like] disaster now appeared bright and che[erful] by contrast. Angel Nash and Zinnia! W[hat] weird caprice of a malevolent fate ha[d] directed them to the Bessemer street fair [Mr.] Mabry did not know. All that he did k[now] was that they were there, that he re[al]nized in his misery that they were co[m]ing toward him, startled surprise in the ey[es] of Miss Zinnia Sanders and unholy gle[e] in those of Mr. Angel Nash.

For one brief instant Lucreshus co[n]sidered flight. Then he reconsidered. [The] damage was done. To him there ca[me] a feeling of morbid satisfaction. He k[new] what he was in for, and he was grimly [de]termined to make the best of it.

But he also knew that all matrim[onial] bets were off. By morning Birming[ham] would seethe with the tale of his degr[a]tion; the dignified Lucreshus Mabry a[r]get for baseballs, a huge human duc[k] three-for-a-nickel street-fair employe[e]. A cloud of grief settled about his shoulde[rs] a damp soggy mantle. He scarcely h[eard] the cheerful greeting of Angel Nash:

"Evenin', Mistuh Mabry."

Angel purchased a quarter's wort[h] balls; fifteen of them. "You ain't n[eed] tol' me you wuk'd heah."

Lucreshus hung his head in shame. [He] heard a low-toned remark made by A[ngel] to Zinnia, and sensed that it was not [com]plimentary to him. Then Angel spoke a[gain]: "How does you prefer to hit that w[ay], Mistuh Mabry, sittin' or lyin'?"

No answer from Lucreshus. His fi[gure] was slumped forward in piteous aband[on] an unkind fate. He awaited the sma[sh] the ball against the target.

Angel Nash took aim. He woun[d up] elaborately. Then he threw. He didn' [put] much speed, but he had plenty of co[ntrol]. The ball hit the target, but there was no [suf]ficient force behind it to release the tri[p]. The next time Angel used more smok[e].

There was a jar, a splash, a gurgle—[and] as Lucreshus emerged from the depth[s] heard the harsh biting laugh of Miss Z[in]nia Sanders.

He took his place doggedly, sull[enly]. Within fifty cents' worth of shots it be[came] plainly evident to him that Mr. Angel [Nash] was an exceedingly good pitcher. Life [was] just one damducking after another; a [re]cession of ups and downs—up on the [p]form, down in the water.

Mr. Nash was in fine fettle. So wa[s the] crowd, which was growing ever d[ens]about him. Lucreshus heard a man i[n the] mob address Angel, who was reveling i[n the] spotlight:

"Ain't you the pitcher on the Bum[ing]ham cullud team?"

"I is."

"Does you know that nigger yond[er]" pointing to Lucreshus.

But it was Zinnia who answered for [her]self and for Angel: "We ain't neither [one] knows him pussonal. I think he useter [play] in Bummin'ham."

Lucreshus gave it up as a bad job. [He] had pronounced the death sentence. [He] had nothing further to lose.

Angel shot one into the canvas. L[ucre]shus raised a sarcastic voice: "Did [you] say you was a pitcher?"

"I did, Mistuh Mabry."

"Then whyn't you pitch? What [you] ain't got is no speed n'r neither no cumi[.]"

"Ain't I? Ain't I jes'? You watch [me], cullud man."

Angel wound up elaborately, and [sud]denly out of the maze of arms shot a [ball], one, a fearfully fast one. It looked li[ke] was going to miss the target by six inc[hes] until it took a sudden break, and Lucr[eshus] kersplashed into the wetness. Zinni[a] the salvo of laughter which rang out [as] unimmersed himself and climbed g[ingerly] upward for another douse.

"Accident," he taunted Angel. "[You] cain't do it ag'in."

But Angel could. And what's mo[re] the point he did, the crowd applauding [and] greeting each precipitation of the p[oor] Mr. Mabry with laughter ever more [up]roarious. As for Al Rossler, he stoo[d] raking in the shekels with an avid ha[nd].

Angel showed every trick in his tw[irling] repertoire.

"Heah you is, Mistuh Mabry—a[nd] one!" Splash! "An' now, Brother L[ucre]shus, a slow out!" Flop! "A li'l insho[t] yo' health!" Slosh!

(Concluded on Page 149)

(Concluded from Page 146)

ucreshus almost glorified his job. A ne dignity sat upon his enormous martyred sh lders.

Huh! Pitcher, you calls yo'se'f, does yo' You ain't no pitcher—you is a farm ha:. You ain't never done nothin', Angel Na:, on'y pitch hay. Lookit what Knox- vill done to you this afternoon." Splash! Lu eshus shook himself and climbed up aga. "Li'l mo' speed, cullud man. You in showed none when you got beat t'-day; se ettin' you ain't got none a-tall!"

'peed?" Angel sneered. "Lis'en heah t a, Lucreshus. Tha's the on'y thing I in got nothin' else but. Try this heah ot curve, fo' instance. One—two ——" Kerop! Angel turned to Zinnia. "Ain't e mthin' to sit on a platform, Miss aners? Ain't he jes'?"

Zinnia laughed loud and ringingly. "You n'd worry 'bouten him. He ain't nothin' n a common lab'rer."

Te fun grew faster and furiouser. If he was any trick in Angel's bag which as ot produced for the edification of the ro no one would have guessed it. The re and delivery, the side-arm heave, the s am ball, the fast-breaking shoot—c did its share to add to the ignominy of e unfortunate on the platform.

B with each splash into the water c shus won new friends in the crowd. Ne emper of the mob veered; it com- en d applauding Lucreshus when Angel sa. And finally, after spending more an wo hours and a half before the stand d ithin two dollars and a half of his ri y capital, Angel Nash and Miss Zin- S nders moved away.

Lu eshus watched their departure apa- ti lly. He had plumbed the nether- st epths of misery and the future was a m of drab inconsequence. He saw Al as walking toward him and heard Al s.'s hearty voice:

'Tat's enough, Luke. You can climb d'

Lu eshus climbed, sore in body and sh l in spirit. Mr. Rossler extended he ing. "Here's a towel. Dry your- o"

The broken Mr. Mabry raised pain-filled s t the man who had caused his multi- in s downfalls.

Tvel!" he scoffed. "I don' want no el I wants a windin' sheet!"

The following day things happened. They pe ed steadily and consistently, and st rted in the third inning.

Du ng the first two innings the mighty g Mr. Angel Nash and his hypnotic e i the box combined to hold the Knox- l ters helpless. But suddenly with- w ning the fireworks started. When st ike cleared away seven Knoxville ne had crossed the platter following co secutive hits. Angel Nash was ge ingloriously from the pitcher's box an ther substituted.

Ig was finished and done for. So was ir ham's colored team. The game d ith a score of eight to one in favor nc ville, and the Tennessee team left el bearing with it much glory and a tu e of coin.

Ge Nash sought out Miss Zinnia San- as he was leaving the grounds. He ar ed with a 100% alibi. But Miss a anders would not listen. Words o thing, facts another. And the we that Angel had pitched two games ri ingham and that Birmingham had ne two games and the series. Angel th t it was his cue for a sudden and le exodus and he exodusted ex- on ly.

It was at night as Zinnia Sanders sat on th veranda gazing yearningly in the di irection of Morris Avenue, upon n row thoroughfare was housed the pr hich Lucreshus Mabry had worked faithfully for many years, a vision turned in at the gate and Zinnia straightened with an accession of tremulous expectancy.

The vision was Lucreshus Mabry. But what a Lucreshus! He wore a new blue serge coat and white serge trousers. His shirt was of the purest robin's-egg-blue silk, his flowing necktie a distilled blue of darker hue. His new shoes were white buckskin, his socks sheer white silk. Upon his head a soft white hat perched at a jaunty angle and he carried in his left hand a pair of white kid gloves and in his right a silver-headed snowy cane. Zinnia rose eagerly to greet him. He paused ostentatiously on the top step. There was a smile on his face—a smile of one who is well contented with the progress of his own particular evolution in the general scheme.

"Where Angel Nash is at, Miss Zinnia?"

"I ain't studyin' 'bouten no sech wuthless, no 'count, unpitchin,' grinnin' ——"

"I gathers, Miss Zinnia, that you disfavors Mistuh Nash at this pretickler momunt?"

She hung her head. "I is well salisfried with my presint comp'ny."

Lucreshus tapped the porch flooring with the tip of his new white cane. "I on'y jes' dropped in fo' a li'l explanationin'," he said slowly, "jes' so they woul'n't be no misunderstandin'. I soht of wan'ed you should understan' that I uses my haid fo' sumthin' mo' than hangin' a hat on.

"Fust off, the reason why I took that job down to the Bessemer Street fair las' night was causen Mistuh Rossler is an ol' frien' of mine, 'countin' I worked fo' him yeahs ago. An' I is always been a man to he'p my frien's out."

"Ain't it the truth?" she interrupted encouragingly.

He continued fixedly: "An' when I had done same he went an' give me this heah swell outfit I is got on jes' to show his gratitood. You might also remember that Mistuh Angel Nash is paid fo' mos' of it.

"An' to continue, lemme state that when Angel Nash stahted pitchin' at me I stahted thinkin' at him. An' I thunk thoughts which was wuth money. I knowed he was gwine pitch against Knoxville t'-day an' I egged him on. An', Miss Zinnia, I knowed that ev'y ball that man pitched at me las' night meant one less ball he could pitch in the game t'-day! 'Cause why? 'Cause them nickel baseballs will ruint a pitcher's arm quicker'n anythin' I knows.

"So when he wan'ed to stop I kept him goin'. An' then I tipped Mr. Rossler off an' he bet six hund'ed dollars on Knoxville to win t'-day, which same it done—easy. He give me two hund'ed dollars fo' my share, not countin' lettin' me off on fifty which I owed him. You see"—reflectively—"I soht of figgered Angel Nash's arm would give plumb out in the fo'th innin'. But he beat my 'ticipations by th'ee singles an' a home run."

Zinnia's eyes were glowing invitingly. "You sho'ly is the thinkines' man, Mistuh Mabry. Ain't you gwine stay an' spen' the evenin' with me?"

Lucreshus shook his head and turned elegantly toward the front gate. He delivered an elaborate bow. "Ise got a 'pawtant 'gagement t'-night with another lady frien', Miss Zinnia. I jes' stopped by to give you a chance to reflec', in the lonesome solisitood of this beautiful evenin', on a few of the hawss laughs you was kin' enough to waff in my direction down to Bessemer las' night when you was in the comp'ny of the mos' easies' mark, the mos' bigges' sucker, the swell-headedes' man which ever 'magined hisse'f a baseball pitcher."

Lucreshus started for the gate. There he turned, hat in hand. "An' b'lieve me, Miss Zinnia," he said impressively, "what I is said is sumthin'!"

And then triumphantly, with his pristine dignity unimpaired, Lucreshus Mabry blended into the darkness.

DIAMOND T

"The Nation's Freight Car"

Logging for FACTS in a Forest of CLAIMS

brings out the big timbers of transportation truth. We are not paying $14 per word for the opportunity to sermonize on service, even through the mouths of Diamond T owners.

Eliminate Diamond T testimony, and there still remains to you the same certainty with which the service-worth of a bridge may be gauged from the repute of its builders and the chemical analysis of its steel.

We have logged out for you both the Institutional facts and the Engineering facts about Diamond T and put them into such booklets as: *"Datalog of Diamond T Trucks," "Performance Par Excellence," "The Nation's Freight Car," "Earmarks of Expert Engineering," "The Famous Drive that Came from a Famous Gun,"* etc. They are full of big-timber transportation truth; every statement authorized by fourteen years' continuous success in automotive manufacturing. If you are logging for helpful facts, efficiency facts, let us mail you a single copy or the complete series of this live literature.

Complete Line: 1, 1½, 2, 3½, 5 tons

DIAMOND T MOTOR CAR COMPANY

Builders of "The Nation's Freight Car"

4519 W. 26th STREET CHICAGO, ILL.

DIAMOND T

THE PLIGHT OF THE TRACTIONS

(Continued from Page 19)

the Washington Government replied—through its War Labor Board—saying in effect:

"No matter what your financial condition may be, your employees are entitled to a fair wage. We are sorry for you, but if the administration of your city or state won't listen to our recommendations for your relief—well, that's your funeral, not ours."

The traction men groaned. How would you like it yourself if a big and all-powerful Federal board had gently but firmly ordered you to raise the pay of your men, all the while recommending that some other board—entirely individual and foreign and with pretty set ideas of its own—raise your rates of fare, while still another Federal board was ordering you to use a poorer grade of coal at a higher price than you had ever paid for the best, and doing no recommending whatsoever, and a third setting your fuel and material shipments back in railroad priority? No matter what had been the sins of your fathers, a pretty generous punishment was being meted out to you. No mistaking that.

And because some of even the most obdurate common councils and public-service commissions finally recognized the real force and fairness of these things fare increases were granted—in 1918 literally by the hundreds.

The pressure for these had begun long before. As far back as 1912 some of the interurban lines in Massachusetts were permitted to increase their fares to six and in a very few instances to seven cents, and for a time gained some slight relief in the situation.

But not for long. For a perfectly simple and natural situation evolved itself as soon as any radical increases in fare were adopted. You may invite a man to ride upon a trolley car or rapid-transit train, but you cannot compel him to—not unless the distance he rides is considerable and there is no other method of transportation available. And even in the crude days before the business had been thoroughly analyzed and understood almost any expert trolley man could tell you that in the long-haul rider was the skim milk of his business. The fellow—lazy or in a hurry—who boarded his car for a mile or less and still paid his nickel uncomplainingly was the real cream of the traffic. In fact it was he who made it possible for the road to carry the long-distance man—an individual loss in practically every instance—and still keep in business.

The Jitney in Newark

With the raise in fare the short-distance rider disappears almost automatically. The additional pennies generally are the factors that make him decide to walk that mile up the street or take a jitney if one be available. The jitney, where it has been established and survived in our American cities, has rarely ever been established upon a scientific transportation basis with proper portions of its revenue set aside for depreciation and renewals, for taxes and street repairs and for accident claims that may be made against it. But it, too, has gone far enough to know that there is no profit in the long-haul rider, and so leaves these to the trolley road while it chooses for itself the short and more profitable routes—routes upon which for a time at least it may carry five-cent riders at seeming profit.

Take Newark, New Jersey, a sizable manufacturing community, where the jitneys not only have obtained a hold but have succeeded in retaining it. Newark's streets even in her downtown sections are unusually wide and so in a sense adapted to this form of transportation. The official figures there show that from May, 1918, when the single consolidated company which operates most of the electric-railroad mileage of New Jersey still had a five-cent fare, until May, 1919, when the trolley system had a seven-cent fare well established, the Newark jitneys showed an increase of traffic of 107 per cent, while the street-car traffic had fallen off seven per cent. In the first six months of 1919 these same jitneys carried 16,000,000 passengers, or about $800,000 worth of business, which otherwise certainly would have gone to the street railroad. As to what the privately owned and operated automobile—not only in Newark but in many and many another American city—has cost the street-railroad company no one can estimate accurately, but any man is privileged to guess.

In Boston, because of the narrow streets and fearful congestion of its metropolitan heart, the competition of the private automobile is slight indeed, while jitneys are entirely out of the question. Inside of a year, beginning August 1, 1918, the Boston Elevated Railway—which holds a monopolistic but withal a very broad-minded control of the street railway as well as the subway and elevated railroads of that town—advanced its fare through three successive stages from five to ten cents, but in that time lost some eighteen per cent of its riders. There was no other method of popular transportation available there, but the thrifty, traditional New England conscience simply refused to pay a dime to ride the half mile from Scollay Square to the North Station or from Tremont Street to the South Station. It preferred, if you please, to wear out its shoe leather.

Here there is the chief problem about fare raising. It is easy to say that—common councils and public service commissions willing—fares may be raised to keep pace with wage increases. But it is not quite so easy to force men and women to ride at increased fares. It begins to look as if at ten cents the limit of increase had not only been reached but passed—and by quite a distance.

The Vanishing Short Rider

The miscellaneous noncompulsory sort of riding has ceased entirely. Women begin to take more to the telephone for their shopping or for chats with their neighbors; folks go less frequently to the movies or if they do go walk longer distances to reach them. The same thing is true of agents and salesmen of every sort.

These things are not theories. They have been proved by careful and searching investigation on the part of traction men who are studying the entire problem upon a broad and scientific basis. And these are the men who say that we can go no further—not at present anyway—in the increase of the flat fares in the cities.

Where then are they to find their relief? It is by no means a certainty that the peak of operating costs has yet been reached. And it must be admitted that there are certain obligations to the honest dollars invested in the traction properties that have been passed by in recent months but that are justly entitled to their delayed reward.

Where are the tractions to find their ultimate relief?

I do not, myself, think that this question is impossible of correct answer. It is a difficult problem, mightily complicated in all its details and ramifications, but still capable of intelligent solution. And in my mind this solution lies in two important things—better operation of the properties and a more intelligent and scientific working out of the fare scales.

Better operation?

A good many trolley executives will raise their hands to the high heavens when they see these two words. Doesn't he know, they will ask, of the steady progress and betterment in electric railroad operation that has been going on for the past twenty years—in fact ever since the electric railroad in America reached its earliest stages of development?

Of course I know. For a half dozen years I was intimately associated with a big traction company which passed through all of the vicissitudes of its kind—and then some more. I saw a vast and uncanny aggregation of horse-car lines and trolleys and elevated roads and cable roads and suburban lines and mule cars thrust willy-nilly into consolidation and from it evolved a six-hundred-mile city railroad that for a few brief years actually earned and paid dividends on its great issues of common stock; and I knew that those dividends could not have been earned if it had not been for uncommonly good operation.

It was common in those days to laugh at "operating a railroad by drafting board." The old rule-of-thumb crowd still existed in goodly numbers. But our road was "operated by drafting board," by hundreds of unsentimental but deadly accurate blueprinted charts on which were recorded by strangely tremulous but highly intelligent lines the rise and fall of power-house cost for each passenger who paid his nickel to ride upon our cars; his proportionate share of the oil that lubricated them, of the pay envelopes of the men who personally operated them—all the rest of the detail. If it had not been for those charts—for the very system that they personified—we should not have been able in a twelvemonth to go into the open market and buy nine turbine generators at a mere half million dollars each, to buy a thousand tons of coal a day for a single power house, to dodge bankruptcy for more than seven days.

We studied the charts and crimped the pennies; we bought new generators because they were more economical than old ones which were far from being worn out, great new cars because it meant that many more nickel passengers might ride behind the pay envelope of a single motorman and in front of that of a single conductor than in the older short-length cars. There was not an hour of the day, and hardly one of the night, when we were not studying economies.

On economies—on the skimping of the outgoing use of the nickel that came into us—our operating officials rose; on their lack of them they fell. We felt that in our day and way we were some little sharks in railroad operation.

And yet as I look back upon those days in the light of these I can see some things in which we failed. I shall not speak of our failure to gain the public confidence—that is too delicate and personal and moot a question. We put in big cars—I think that our road was the first to install a surface car seating forty-eight persons and an elevated train unit seating ninety-six—but we failed apparently to note two things in their use: the pound upon the track and pull upon the power that their very size gave to them.

Last spring I rode upon many trolley cars in London and in Paris, as well as in various other cities of France and of Great Britain. Before I had boarded the first of any of these—it was in Liverpool—I was struck by the fact that it wasted not one possibility of carrying capacity. It utilized its roof for seating purposes, just as I have seen our modern and wonderfully efficient motor busses in New York and Chicago so utilize their roofs.

In other words, in and upon a single-trucked four-wheeled trolley car, such as with us will not seat more than twenty-four at the uttermost, England seated twice that number. To put the thing in another way, she carried one-third the dead weight in car per passenger of that of the average American trolley line and in fully as much comfort and safety. And so for each individual fare she took in she made a great saving over us, not only in the initial investment in the car but in the power required to pull it and in the wear and tear upon the track and its roadbed.

Why Not Double-Deckers

Since I came back to the United States I have asked many trolley operators why such double-decked cars should not be operated here, and have not as yet had a single satisfactory answer to my question.

"Overhead trolley wires," said one man, but the cars upon which I rode from London out to Hampton Court and the other suburbs ran upon overhead trolley wires and in perfect safety.

"Our fearful American winters in the North," hinted another, but apparently failed to realize that the double-decked Fifth Avenue busses in New York and the Michigan Avenue busses in Chicago run each winter through blizzard conditions and have passengers for their roof-garden seats fully three hundred days out of the year.

I think that the real reason for the failure to adopt the double-decker cars in the United States is a purely psychological one—the reluctance of the traction men themselves to adopt a genuinely new thing, chiefly because it is a new thing. It is not so much because of their inherited fondness for bigness, which is quite a truly American trait—we love to prate of our big hotels, our big locomotives, our big skyscrapers—as it is this very element of novelty.

Sometimes we boast also of the appeal of the novel to us. Yet as a people I am beginning to think that in many things we are remarkably conservative, and the traction men are apparently no exception to this statement.

Take the so-called one-man car, w was illustrated in THE SATURDAY EVE POST a few months ago. Obviously would be great economies in its installa yet it has made very slow headway a the land. The reason for this is not ea understand. In other American indus labor-saving money-making appliances been welcomed warmly, and—if fo other reason—installed to meet the gressiveness of competitors. But our s railways have rarely had competitors therefore have shown little real enter in adopting radical improvement; gr timidity in facing both their employee their public.

As everyone knows, it takes two m run the old-style trolley car—one to it, the other to handle its passenger everyone does not know, the largest item in the operation of an electric rai is the wages of its motormen and co tors. It used to be twenty per cent; i is rapidly approaching fifty. It is ob that if this last ratio continues it w practically impossible for the average to continue to operate.

When Prejudice Ruled

Now along comes a scheme for cu down the manual labor in car operati that one man can combine the duti motorman and conductor and handl car himself—quite satisfactorily in all possibly the larger cities; not quite so a car perhaps—all folk are not slaves t doctrine of bigness—but cars seati least thirty-five persons; possibly half as many as that by the use of the d deck. Such cars, even though smaller the popular standard trolley car of to by reason of their great economy in power could be operated upon short tervals, which in turn would mean a net economy still as well as increasin frequency of service.

Did the average traction man jur this chance to give better service public? Honesty compels the answe he did not. The one-man car was first of the necessity of meeting jitney com tion and as a matter of fact for a long was used only in smaller communities the jitney had shown the utter absu of fifteen to thirty minute intervals be cars—in districts where if one misse car he might walk to the far end of th before another overtook him. The towns scorned the idea. Their tr managers said that the day of dinke was gone forever. Indeed it is doub it had not been for the courage and th sight of one of the big operating synd whether there would be a hundred of highly economical cars in service all th across the land to-day.

Here is a typical instance of the wa the idea was received: On a certain system operating local service in a nu of medium-sized towns and cities a interurban a local superintendent p out to his general manager the neces adopting a one-man car of some sort—are a number of different types. Th five years ago, when some of the smal systems were still making money. general manager pursed his lips, knitt brows and exhibited the other conven symptoms of executively deep though then turned down the proposal—col went a step further and told his bo directors that the scheme was no go

In the meantime the years have roll Expenses have gone up enormously a figures replace black upon the fin sheets. The one-man car has been in other small cities and has made That general manager is perplexed. ing taken his stand in regard to the car he does not dare retreat from it cannot acknowledge mistake. If he d directors will begin asking awkward tions and a new man will come to his

Lack of vision! Lack of imagin How often have we found those fine ties lacking in the steam-railroad sit across the land? The tractions seem fer quite as much. Not all of thi course—there are roads like the I Electric out in California, to take a instance out of several, which hardly be fairly charged with lack of either or imagination. But these are in the minority. And there have been fe

(Continued on Page 153)

(Continued from Page 150)

my cases where even if the operating heds have possessed a bit of real foresight it as not been recognized by those who contrled them.

For three years I have been begging my dictors for permission to buy smaller and me economical cars—cars that would be me economical of man power and electric per alike," a smart young traction man in a iddle-sized city told me. "I could have bght them three years ago at a fair pre—real bargains compared with the pres to-day. A local bank stood ready to me the necessary loan on my recommendaon. What did my bosses say to me? Thy said that I was nutty—just that word. Thy told me that what they wanted was ne fares and not another way of spending mey. Then I went back and sat down an waited for the receiver to come. He arned—just sixty days ago."

hen one hears of these instances he wders not that the street-railroad indury in the United States has collapsed ctly but that it held together as long as d.

ne other huge instance of traction stolidy and I am done. This concerns itself wi the all-important question of fares. At he beginning of this article I referred to e universality of the nickel fare in the Uned States—built up without any regai whatsoever for the cost of the service; no it was the alluring bait—along with the ree transfer—by which the traction ma pulators put through their top-heavy corolidations and how in these days it has bec ne the unit by which their torture has bee accomplished. I showed you how the obvus yet entirely unscientific method of rais g the flat fare to keep pace with the nc ase in trolley expenses might and did in away travel; how under such condiio the jitney took the cream short-haul rai or in the cases where there were no tm s people walked—and all because of stpid handling of the fare situation.

"ut we have got to make our income qu our outgo," wearily argues the tracnanager, "or else tear up our rails and cr our cars and quit."

I now that, Mister Traction Manager. al know that in 1918 so many miles of roly lines were torn up that had it not ee for certain extensions to shipyards and the war plants, which were built at the qust of the Federal Government and na ed by it, the total electric-railroad ilege in the land would have been far nar at the end of that year than at the gning. This year probably will see ar more miles torn up—the most of them ghy, for in the main they represent track ratever should have been put down; or newhich can be replaced more profitably motor busses, which is a whole story in sel It is enough to say here and now atthe traction company has been as achard in adopting the motor bus as a rrating factor as its big brother of the ea railroad—which is saying much.

Why Not the Zone Fare?

B, Mister Traction Manager, have you er onsidered the possibility of advancing nares without advancing the flat rate?"

"h, I know," he retorts with manifestaons of great disgust—"the zone fare!"

Wl, why not the zone fare? Is there vting so fundamentally dishonest in the ea iat it is not even worth your fair conlerion? Or are you going to dismiss it, e ie one-man car, without even a fair urn court?

Gloverseas for a moment once again: Great Britain, in Continental Europe, en n far-off Australasia—in fact, practilyeverywhere else except the blessed U S. A.—the policy of making a rider y or the exact quantity of street-car nsortation that he uses, just as he pays s am-railroad transportation or street kicrs or the use of the telephone or pcces and any other commodity whatev, has been so long established that it pa and parcel of the ordinary life of e mmunity. And the trolley car—the mir as they know it overseas—then bene of the largest use to the community. ma wishing to go but three or four ck but who is in a bit of a hurry to acmpsh the distance does not hesitate rent taking a car because of a certain or thrift rebellion at spending ten nts as in Boston to-day—or even six or ercents for so short a ride. He knows t will cost him but two cents—a mere thig—for the convenience given.

In fact, the very theory of the zone fare begins with the thesis that the street railway must be of the very greatest possible use to the public; that it must be in a position to offer its service at an attractive price to every man upon the street—whether he be going four blocks or four miles—and so seek to obtain once again those very short-haul riders who have so recently been weaned away from our American traction lines. These under the zone fares no longer are the sole cream of the business. One of the finest features of the system is that it so equalizes the revenue and the cost for each and every rider that the long-haul man becomes as welcome as the short hauler, which after all is only just and, to my way of thinking, most American.

Yet the zone-fare system is continually assailed as un-American. True it is that to gain any real idea of its working one still has to cross the Atlantic for facts and figures. They are there. Take Aberdeen, Scotland, as a typical example: The annual report of the Corporation Tramways of that city for the year ending May 31, 1918, showed that twenty-five per cent of the riding upon its cars was done by folk who rode six-tenths of a mile or less.

Objections to the System

What Yankee road could begin to show a record such as this? Not even Broadway, New York, with the richest short-haul traffic field in the world as its possibility. The Scotchman is a thrifty soul. Yet Sandy could not withstand the appeal of off-again-on-again traffic for a mere halfpenny. And as for Glasgow, more than sixty-three per cent of its passengers paid the halfpenny which until very recently carried them very nearly a mile and a quarter. Cross the Irish Sea. Consider Belfast. In that old Ulster town even a full penny—two cents of our money—would barely carry a man a full mile. Yet last year fifty per cent of the riders on its tramways system took that penny ride.

Talk about merchandising! Our traction folk have yet to learn its very rudiments. Perhaps it may be that they have lacked the incentive, and perhaps the reason may be this or that or the other thing, but the fact remains that they have made little or no attempt to merchandise their traffic—to create passengers. They made their cars big because that then seemed economy, but I cannot find many instances where they increased their attractiveness to their riders. The fact that most folk, when they trolley, prefer a cross-seated car seemed to weigh as nothing with many traction companies. When the old-time cross-bench open car became obsolete few of them made any effort to replace it with a summer car equal in attractive qualities. And I have yet to find a trolley company which ever invited suggestions from its patrons before it adopted a new type of car or laid out new operating routes. Yet these simple things are the very heart and center of good merchandising.

"The zone fare tends to intensify city congestion," whispers my friend, the civic idealist.

Does it? I will admit that this very problem of congestion is the chief argument that is urged against it, and then I shall call your attention to the fact that Glasgow with a population of 1,100,000 and the cheapest and most complete zone-fare system in the world has mile after mile of tenements, but at that nothing to be compared with the monster tenements of New York—New York with its more than liberal flat fare of five cents still remaining. And that Belfast, which we were a moment ago discussing, is a remarkably well diffused city. But all the arguments that the zone fare is responsible for congestion fall entirely flat when we consider Australia. There the cities are new, well spread out and as suburbanized as any community in America. Yet we find the same high percentages of short riders as in the older European communities.

Yet despite its many manifest economic advantages, the zone system has had scant serious attention in either the United States or Canada. Of course it has not been entirely unknown to our traction operators, but they have been more inclined to laugh at it than to study it. In the beginning they asked why they should go below the universal flat rate of five cents when they were making money—or thought they were making money—at that rate. To divide passengers into various classifications in accordance with the rate of fare that they were paying seemed to them to be a fearfully cumbersome and unnecessary business. Yet I sometimes have thought that the real joke was upon the American trolley operator. For if a more awkward scheme was ever invented than the so-called time-limit transfer I have yet to know of it. It was only workable when the traction companies gave up any thorough auditing of its use as entirely out of the question.

As a matter of fact, the collecting of fare and the auditing of a zone system are not particularly difficult. A well planned suburban road running north from New York City to White Plains has used it since the day of its inception a full dozen years ago. In fact there have been few interurban lines that have not been compelled from the beginning to use it in one form or another. But the plan of the New York, Westchester and Boston was so simple and so complete that one wonders why it was not used more by other roads. A man purchased his ticket on entering the station where he awaited the train for the zone which held his destination and deposited his ticket at the station where he left his train.

By printing the zone tickets in different colors it was a matter of only instant attention for the collector at the final station to make sure that the proper ticket was deposited. And the necessity of having conductors or ticket collectors in crowded high-speed trains was as completely obviated as in the elevated or subway trains of our very largest cities.

Until very recently the managers of the city tractions set their hearts and minds very steadfastly against the coming of the zone plan. Their rapidly growing operating costs, however, and the fact that radical increases in flat fare have driven their profitable short-haul riders away from them are gradually bringing them toward the light.

Milwaukee was one of the very first towns to come toward the European scheme. As far back as 1914 it adopted a rough plan of zone fares, with five cents as a basic fare in the heart of the city. Springfield, Massachusetts, and Providence, Rhode Island, followed in its path, and a little while after, Portland, Maine. Yet the plan as adopted in all of these towns was quite far removed from those of the British towns. In no case was the initial fare less than five cents and in one or two cases it was six. There was absolutely no appeal to the short-haul rider, yet a beginning was being made.

Short-Haul Riding

Pittsburgh was the first of our really metropolitan cities to come to the zone fare, even in this crude form. It experimented for a time with raising its flat-rate fare from five cents to six, and experiencing no financial relief finally marked off a single zone of from two and a quarter to two and a half miles from the center of the city. The fare in this inner zone was placed at five cents and in the outer one at the beginning at an additional two cents. After a year's trial the results of this crude and awkward zone system have proved anything but satisfactory. There the short-haul riding has almost entirely disappeared, while the canny Pennsylvanians have developed a habit of walking to the zone limits in order to save the higher fares. Both patrons and the company are disgusted with the plan.

It has been only within the past few weeks that a genuine zone-fare plan has been attempted on any sizable traction line in this country. In the middle of September last the Public Service Railway of New Jersey—one of the very largest of our traction companies, with its 850 miles of line and serving practically all of the cities of that important industrial state—inaugurated a complete zone-fare system with somewhat more excitement and commotion than have been seen since the last of the great Donnybrook fairs. There were riots and near-riots, head smashing and window smashing alike. For a time the company had to cease service on some of its lines. Yet when the tumult and shouting had died it was to be observed that almost all of the trouble had centered in two communities—Kearny and Camden. And practically all the rough-housing was confined to the employees of a single type of industry—shipbuilding—the highest-priced manual labor in America. A sociological problem which I leave to you to figure out.

However, it was a sociological problem that completely floored the traction company. Within a month after its wholesale adoption of the zone-fare plan and under a fearful political pressure at the State Capitol, it announced its withdrawal of the new plan and a return, for the time being at any rate, to its old flat rate in the cities of New Jersey of seven cents with a penny charge for transfers.

The trouble with the Public Service Railway seemed to be that it had not advertised its new plan widely enough. It also now seems to have been extremely ill-advised in attempting to inaugurate so sweeping and so radical a change in American traction practice on its whole great system in a single hour. It would have been far better to have begun with one city, or even with one line or group of lines in one city, and so effected a great change carefully and cautiously and scientifically. Moreover, its method of operation was extremely cumbersome. A person entering the front end of one of its cars was handed a slip by the motorman which indicated the zone wherein he had boarded the conveyance. This slip was the indication to the conductor, whom he paid at leaving the car, of the distance he had traveled.

On the British tramcars and omnibuses the fare system is infinitely simpler. The conductor approaches the passenger soon after he is aboard the car and upon being told where he wishes to alight quickly estimates the required fare and issues a punch check for the trip. The color of this check varies according to the fare paid and number of zones to be traversed. From time to time inspectors board the car or the omnibus and by examining these fare checks quickly discover where any passengers are riding beyond the limits to which they have paid. The system is simplicity itself and has worked these many years.

Boston Transit Facilities

Apparently the Public Service Railway did not have much faith in the honesty either of its employees or its patrons. Its elaborate safeguards to make sure that it got the full amount of each fare coming to it defeated the success of its entire project. Its fares seemingly were not out of complete reason. Three cents was charged for the first mile traversed and two cents for each mile thereafter. Here was an invitation to the short-haul rider of which, in the short month of the operation of the plan, he began to avail himself. He could feel that he is not being overcharged in order that the long-haul man can ride at less than the proper transportation cost. In other words, the traffic equalizes itself and so, despite the seeming utter failure of the zone-fare plan in New Jersey, I still am of the firm opinion that properly inaugurated and operated it will yet be found the only permanent and scientific solution of our vexatious traction problem.

Boston is almost the one town in America where transit facilities have not only kept pace but in many instances gone ahead of its development. It has always had an honestly managed traction company—and one which apparently held no little notion of its service obligations to the public, which is something that a good many American towns have lacked. Its company, however, was no exception to the economics of rising costs balanced against a firmly fixed fare. In fact the very plan and contour of the New England town with its narrow congested streets—one-third of its street-railway trackage is curved, which means a fearful expense in wear and tear and maintenance—have tended to increase rather than to lower traction costs there. Labor costs run high there, too, and the Boston system was almost the first to begin to pay its men sixty-eight cents an hour.

Already I have shown you how in a single year the universal flat fare of that city has been raised in three rapid steps from five to ten cents. That might never have been accomplished so rapidly and so easily if the road had not received direct state aid. When more than a year ago it found itself come from a state of comfortable competency to the very brink of bankruptcy it appealed to the commonwealth of Massachusetts for assistance. And the commonwealth of Massachusetts, moved not at all by the plight of the stockholders of the Boston Elevated Railway but very much moved by the possible future plight of the folk of its largest city, who were utterly dependent upon the service of that railway, came to the assistance of the company. Have we not just said that Boston was far ahead of other American towns in her transit development?

Smooth as her hands!

Do you enjoy every day the pride of a Smoother Face;—the comfort of a refreshed and silken skin;—the satisfaction of time saved;—the absolute content of a perfect shave?

You should;—you can;—with a Gem.

Gem Damaskeene Blades—keen as Damascus steel—are extraordinarily keen, tough, durable. They *do* give a silken skin, a happy shave,—the shave you have always wanted.

Why the Gem Gives Smoother Faces.

Patented processes developed during 39 years' study of the shaving problem have greatly improved the hardening, tempering and grinding processes of manufacture. These blades,—keen as Damascus steel—are keen-*plus,* tough-*plus,* vitality-*plus.*

And the Gem frame, which holds the blade against your face at the Universal Angle, that too is a vital factor in your shaving satisfaction. No adjustment is necessary to get a perfect shave.

Fit a Gem blade in a Gem frame and learn—to-day—the shaving content that millions of Gem users know. You will get the full service you can ask from *any* razor. You will get a Smoother Face.

GEM
DAMASKEENE
RAZOR

The plain facts about shaving and the recipe for the perfect shave are told in "Smoother Faces and How to Get One." Shall we send you a copy?

$1.00 The Standard Gem Set includes frame and handle, stropping device and seven Damaskeene Blades in compact, velvet-lined case. Other Gem Sets up to $10.

GEM SAFETY RAZOR CORP., New York
Canadian Branch: 591 St. Catherine Street, W., Montreal

The state aid in the case of her traction company took the form of the appointment by the governor of five trustees, men of large affairs and vision, who are paid a fair salary to give a considerable portion of their time to the affairs of the road, working a good deal as the executive committee of the board of directors of a large and busy private corporation works. In fact, the functions of these state trustees of the Boston Elevated resemble almost exactly those of a directors' executive committee. They hire and fire the road's officers, arrange for its permanent improvement and by specific legislative enactment are empowered to raise or lower fares as necessity permits or compels and in accordance with a carefully laid-down plan.

In Cleveland some years ago a long conflict between the city officers and the street-railroad company finally resulted in the formulation of a definite plan for sliding fares, which began with a flat three-cent fare and no transfers, raised to a three-cent fare and a one-cent transfer; as a third step to a four-cent fare and no transfer, and so on to a five-cent fare with a one-cent transfer—a limit now practically reached. This is the basic form of the so-called "service-at-cost" plan which to-day enjoys the favor of so many traction executives, but which is open to the very serious objection that it exerts little more than a moral obligation upon them to hold operating costs to the lowest possible figure. The Boston plan was not quite so arbitrary as that of Cleveland. The trustees being state appointees were intrusted with the problem of handling the fare sheets with honor and with due regard not only for the patrons of the road but for its stockholders, whose five per cent dividends are specifically guaranteed by the commonwealth.

It was these same trustees who raised the Boston flat fare in July last to its record of ten cents. But the trustees were powerless to compel the thrifty Bostonese to ride, and, as we have already seen, eighteen per cent of them ceased to ride. Now it is entirely obvious that any condition of affairs that shuts off eighteen per cent of the normal street-car riders of a town from using its transportation facilities is a mighty bad condition of affairs indeed. So Boston already is considering how it can bring these eighteen per cent of riders—in all probability the greater number of them short-haul passengers—back into its trolley cars and rapid-transit trains once again.

From the beginning the Boston traction folk have rather stoutly opposed the zone-fare system—at least as far as it affected their own property. They have argued—and not without reason—that theirs was different from any other rapid-transit system in the world. Its plan of having elevated trains and surface trolleys alike pouring into subways in the heart of the town and being propelled through it at very high speed, they assert, has made the zone plan practically impossible of adoption. Yet to-day some of the wisest of these Boston trolley men have come to see some merit in the zone-fare plan. A scheme already has been worked out in the rough providing for about a three-mile ride from the heart of the town at a six-cent fare, with eight cents charged for the run to the far ends of the system, some seven or eight miles at the utmost. About half the population of metropolitan Boston lives within the six-cent zone, so that the average fare would be approximately seven cents, and the thinking traction men of the town do not now believe that maximum riding can be attained at any fare above that figure.

Future Contingencies

"But suppose that operating costs keep climbing?" you ask. "Would not the irrevocable seven cents be quite as bad as the irrevocable nickel?"

The trolley operators are ready for that question. They assert in the first instance that if they are relieved of the considerable rental of the subways in the heart of the city—for Boston, like New York, builds and owns her rapid-transit routes but leases them to private operation—and atop of that their paying taxes, they can with the six-cent and eight-cent fares at least meet their present operating and fixed charges. If they should fail to meet these, or if wages and other operating costs should continue to rise, the communities should be prepared to assume deficit in their tax budgets.

This as definite policy at least is radical indeed. But the officers of the Boston Elevated, who advocate it, are prepared to defend it. In the beginning they point to the absolute dependence of metropol Boston upon their railroad. A short st of their platform men for a day or two summer all but completely paralyzed life of the community. Boston, like other large city, cannot work with street transportation facilities.

"Therefore," they argue, "the cont ance of these is as important to the lif the city as a continuance of its water su and its fire protection. Street-car ser at a price within the reach of the pock the poorest worker should be as impor to him as pleasure parks, and the should insure his receiving this vital tr portation at a not too exorbitant cost."

Concretely, they believe that the s trustees, in case the imminent neces arises, should be permitted to run a de whose extreme limits should be fixed, at five or six per cent of the gross rece of the property. If this limit was reac further relief would be automatic. order to keep within their income trustees would be forced to reduce serv and the hue and cry that would arise in s a situation would invariably fix a readj ment of finances.

At first glance this plan seems incredi at a second one it begins to seem q workable. It actually improves upon quaintance. It has many elements soundness. True it is that it introduces dangerous principle of singling out a si business and remitting its taxes, but on other hand it does protect the honest lars that took the risk years ago when supplying of rapid transit to Boston almost any other American town was bonanza. It seemingly avoids the w evils of public ownership by still keep the actual operation of the traction sys well away from direct political influenc

Confronted by Extinction

As to what would happen if the gover of Massachusetts were to appoint trus to this and other properties in the comm wealth who were not men of the high cl acter and experience now controlling Bos Elevated, I am not prepared to say. T point fortunately has not yet arisen. M over, the plan does not embrace the z system as thoroughly or as scientifically that of the Public Service Railway of N Jersey. This point the proponents of Boston plan answer by saying that e in its zonal form their scheme w against city congestion as compared w any which would multiply zones and s turn fare costs.

In my own opinion, the entire critic of the zone plan as tending to make congestion is rather far-fetched. I h tried to show how New York with a fare was one of the most congested citie the world and a city like Sydney, stralia—to take a single instance—wit complete zone system, one of the least

On the one hand the tractions are c fronted by extinction through the ste increase of their operating expenses o the slight increases in fare which they h been able to beg out of the hands of no too-willing service commissions and councils. On the other lie these rat certain avenues of relief. Not one of th can be set down as leading to an absol solution of the complicated and perplex problem, but it would seem as if some them should be worthy of at least pass attention, if not a bit of experimental tr

Some of these lead undoubtedly to very borderland of public operation. I as I tried to show you at the outset, t no longer represents the blackness of ut despair to the traction man. Indeed let assure you once again that public operat seems to-day to many of them to be only final, definite and permanent solut of their overwhelming problem. They ready for it at once.

Yet to have the public ownership a operation of our tractions—even the c tractions as distinct from the inter bans—come at once would in my opini be a great economic mistake. Our expe ment in sudden governmental operation all our steam railroads would seem to bid go slowly. Tradition and temperame have not as yet fitted our body politic become expert transportation operato Perhaps in a few years we shall do bett In the meantime it behooves each of to have a more thorough understandi of the entire problem—of its details and difficulties, as well as of the scientific p sibilities for its solution.

EVERYBODY'S BUSINESS

(Concluded from Page 44)

vin in different provinces. This is but ne f many forms of exploitation prac- cec n the Orient.

Bi here is the funny and rather puz- ingsituation that exists: To-day with lve selling at nearly 117 the American is pay 130 United States dollars for a 0-el piece. Several years ago, when lve was lower in price, the tael could be ugt for many less dollars. Now the nman recognizes this fluctuation in st e opposite way from the American or e Englishman. His belief is that the 100- el it is absolutely constant. The thing at tries therefore is gold, so he will say Goi has gone down," while the European American will observe that "Silver has ne p."

It not unusual for two Chinamen to gue or an hour over the details of set- ng transaction involving "5-cash," or -kf cent.

Bu when we consider that the rate of rein the central provinces of China is hes the lowest in the world, averaging me than ten cents a day, it is not sur- sin that the matter of a cent or two is we with such importance.

Speculation in Copper Coins

Hoever, the Japs, though possessing no ea degree of business acumen, often thir wider knowledge of world affairs out over the Chinese. Such an in- ne occurred during the recent war. e pce of copper had climbed to the un- al te of better than 25 cents a pound Th Japs saw an opportunity to do ne ry profitable business in buying up ne copper coins. The whole of China swept clean of these pieces of money, ch he Japs purchased at a ridiculous e. Later the coins were melted and a high prices to the urgent buyers of warring nations.

Ur ng to India, the country is not so rganized as China for the reason that naon and its people are the objects of a gle European ambition. However, Irians are the biggest factor in the r arket and it was their demands dythat sent the price of silver sky- et g in recent years. After the war eethe British needed all the supplies Ilia could send them. The British nded all their gold to provide a re- e i London, so that it was necessary to ne he British purchases in India with r. The people of India in selling their s emanded something more substan- th n the mere issue of government s / Great Britain, and as a conse- ce he British Ambassador in Wash- on ade an appeal to the United States er ent to help relieve the situation. Emergency bill was hurried through gre and in a short while the United es ad supplied India with 350,000,000 es f silver in dollars, while a large re- e the metal was still held in this tr subject to the call of the Indian rnent.

na has this doubling of the price of ne for India and China? First, it rctly enhanced the money reserves th countries. The stock of silver in a estimated to be 600,000,000 ounces. In an silver reserve is placed at 700,- 00 ounces.

or than 540,000,000 ounces of silver ov erted into coin in India during the Three years ago the chief coin of own as the rupee, was worth 33 ile at the present time the rupee th 44 cents. All of this has tended to na and China somewhat from the as ffects of the world-wide increase st The two great silver countries pr fited at the expense of the still ne gold countries.

"What is the lesson in all of this for America?" said I to Srinivas Wagel, silver expert in New York, a native of India and for years a resident of China.

"One thing principally," said he. "We must have a silver exchange here in this country. There has always been a time market for silver in other countries. London, Bombay, Shanghai and Hong-Kong have theirs. New York alone has had no time market at any period. The change in world financial conditions now makes it necessary and inevitable that New York in its own interest fix the price of the metal from day to day. There will be great national gain from getting the miner, smelter, dealer and consumer together, for no one need doubt that in the future silver will play a much larger part in the currency of the world.

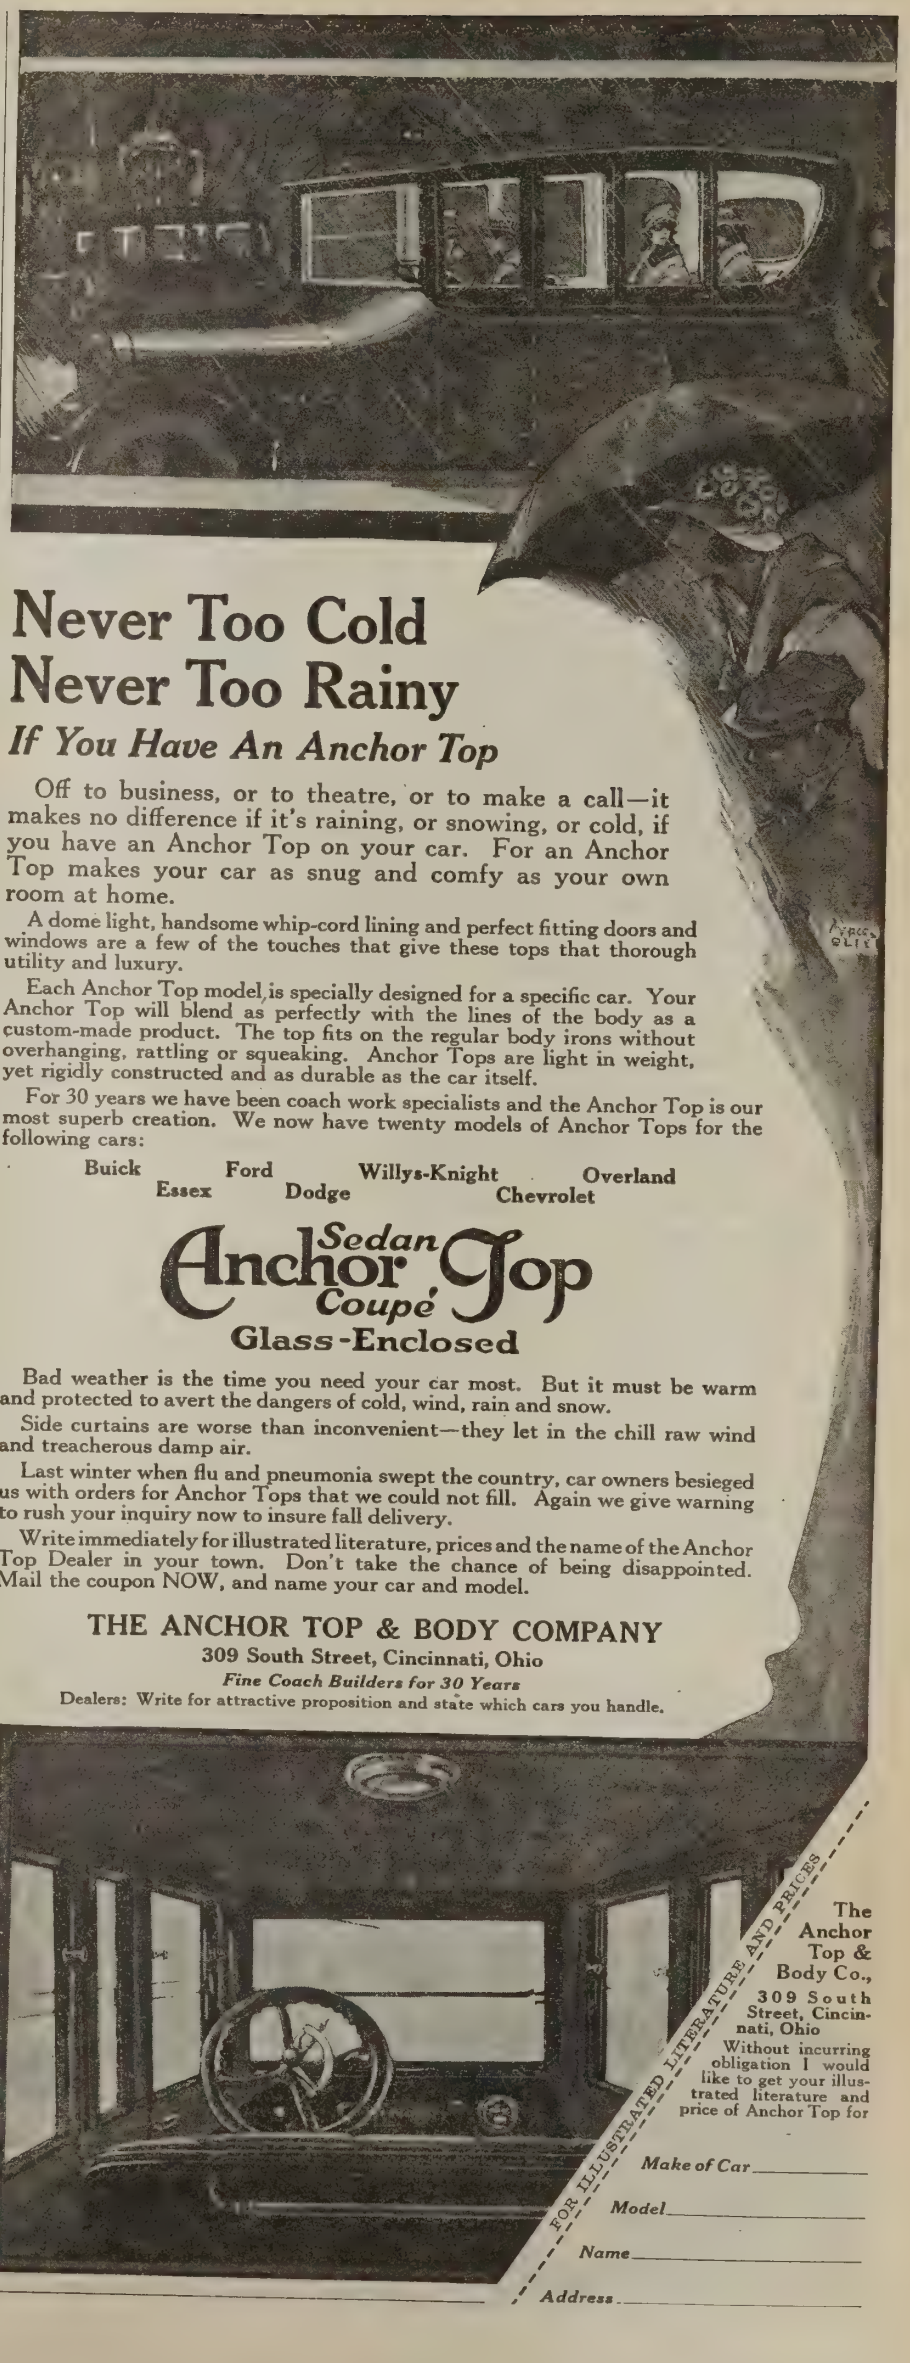
"The United States is not only the chief producer of silver, but controls practically all the silver-producing mines of Canada and Mexico. New York is becoming the financial center of the world. It is as near the silver-consuming centers as London. Due to war finance and the low production of gold, the demand for the white metal in the future will come from all other countries, as well as China and India. Prior to the war practically all of our silver was exported to London, from which center it was distributed throughout the world. For the first time in history we are in direct touch with the consumers in the Far East. Last year our exports to China and India were six times the total of our exports to Great Britain. We are hoping to sell goods in Asia, and let us not forget that though we may sell on a gold basis the Chinese dealer makes his calculation on a silver basis. The American exporter to succeed must follow the silver market just as the Englishman has done. It would be folly to return to the plan of sending our silver to London solely to benefit the shrewd British middlemen who have reaped profit and wielded power through their control of the world's supply of white metal."

India's Lack of Banks

"Why are there so few banks in India and China?" I inquired.

"Because the European nations have discouraged the general establishment of such institutions," replied Mr. Wagel. "In many parts of India and China there isn't a bank within a radius of a hundred miles. The people convert their wealth into silver jewelry, which they can always carry close to them. It is often possible to tell how much a native is worth by the number of bracelets and silver articles the man or woman wears. In China and in India, away from the big cities, the sum of two dollars will easily keep a man and his family in food and clothes for one month. The Chinaman has looked upon the American as his one real friend, for he believes that the citizen of the United States is the only national who has no territorial ambitions in the Orient.

"Concerning India," said Mr. Wagel, "I have little to say. But if you will look back to near the end of the eighteenth century you will find that India was the chief exporting nation of the world. To-day the inhabitants are relatively not so well educated as they were then, for there are few free schools in the land. The people have to pay to learn the alphabet. All of the native sons of India who have taken up permanent residence here in America and are doing their part in the building of this great republic are hoping for a better day when the ancient peoples of Asia shall be afforded such education as will free them from ignorance and superstition which now prevent their rise to a place among the dominant nations of the earth."



Never Too Cold Never Too Rainy

If You Have An Anchor Top

Off to business, or to theatre, or to make a call—it makes no difference if it's raining, or snowing, or cold, if you have an Anchor Top on your car. For an Anchor Top makes your car as snug and comfy as your own room at home.

A dome light, handsome whip-cord lining and perfect fitting doors and windows are a few of the touches that give these tops that thorough utility and luxury.

Each Anchor Top model is specially designed for a specific car. Your Anchor Top will blend as perfectly with the lines of the body as a custom-made product. The top fits on the regular body irons without overhanging, rattling or squeaking. Anchor Tops are light in weight, yet rigidly constructed and as durable as the car itself.

For 30 years we have been coach work specialists and the Anchor Top is our most superb creation. We now have twenty models of Anchor Tops for the following cars:

Buick Ford Willys-Knight Overland
Essex Dodge Chevrolet

Sedan Anchor Top Coupé
Glass-Enclosed

Bad weather is the time you need your car most. But it must be warm and protected to avert the dangers of cold, wind, rain and snow.

Side curtains are worse than inconvenient—they let in the chill raw wind and treacherous damp air.

Last winter when flu and pneumonia swept the country, car owners besieged us with orders for Anchor Tops that we could not fill. Again we give warning to rush your inquiry now to insure fall delivery.

Write immediately for illustrated literature, prices and the name of the Anchor Top Dealer in your town. Don't take the chance of being disappointed. Mail the coupon NOW, and name your car and model.

Jim Henry's Column

Let's settle this "rubbing in" question once and for all.

Of course, rubbing in the lather is part of the professional technique of a barber. No layman can do it the same way, any more than he can snap a cloth the way a boot-black does or stretch a mixed drink two feet between shaker and glass. Those things are scenery.

A barber would feel lost if he couldn't flutter those long sensitive fingers lightly across your upper lip. It's part of his art.

But it's also absolutely unscientific.

It is the lather that softens a beard and it's brushing that builds lather—not pounding.

When you rub partially dissolved, ordinary soap into the pores, the friction and the caustic in the soap raise a lot of tiny blood blisters which the razor slices off. Then you complain about your tender skin. Any skin is tender when it's burned raw and then sliced with a razor.

There are over a million and a half of us modern shavers who will tell the world that you don't have to rub in Mennen Shaving Cream to get a perfectly gorgeous shave. And none of us believed it was possible until we tried.

But we did try it. We took half an inch on a wet brush—cold water or hot—and brushed up a thick, fluffy, creamy lather for three full minutes. That one trial convinced us.

A 12 cent demonstrator tube will show you the difference between Mennen's and ordinary shaving soap—a 50 cent, giant size tube will make you forget the other soap altogether.

NEWARK, N.J. U.S.A.

THE MUSICAL RECORDING ANGEL

(Continued from Page 15)

in blithely beginning his criticisms thus: "Miss Alva Missozza, a newcomer in music, gave a concert yesterday in Bartlett Hall to get the criticisms."

It has been one of the many mysteries that my naturally slow intelligence has failed to comprehend how that man ever escaped with his life.

But it is not the newcomer alone who suffers. Sometimes it is new music played by an old-established artist. There is a story which I have on very reliable authority of a famous pianist who presented an entire program of American compositions in New York last year. The critics without exception, says the source of my authority, were lukewarm and in many cases antagonistic in their comments. The program was repeated in the other Eastern cities with similar results. When it was offered later by that pianist's management to several cities of the Middle West it was promptly declined because of the black eye given it by the New York and Boston critics.

In speaking of it later the pianist is reported to have said: "There can be no real appreciation or growth of American music so long as the Eastern newspaper critics maintain their present attitude of hostility to American composition and their servile idea of the unalterable superiority of Europe."

This is a considerable mouthful, however you take it, and puts a sad amount of responsibility on the Eastern critics. This story, as it has gone the rounds, has stirred up quite a tempest among the ardent champions of American music. Some of them have hotly advocated the suppression and even the deportation of these critics, alleging that their attitude savored of disloyalty. Though it was the misfortune of this meek observer not to hear that program, it occurs to her benighted intelligence that that pianist may have been unfortunate in his choice of American music.

There is a great deal of music making going on lately which attaches to its mediocrity the dignified name American. And perhaps those maligned Eastern critics felt that in order to encourage the good in American composition they did not necessarily have to burst into tears of rapture over the bad. Without wishing at all to appear to contradict flatly that noted pianist, I think it can be stated easily that there is no existent body of men who can kill with their indifference or antagonism that lusty infant, American music. Without wishing to personify a platitude, I should like to point out—as it has been pointed out before *ad nauseam*—that critics of another day were not able to kill the music of Beethoven and Wagner, and it is hardly probable that any modern music analyst can do the real American music any permanent injury.

The Musical Critic Under Fire

Regardless of the enormous influence—perhaps a trifle exaggerated at times—that these doughty wielders of the pen—or perhaps typewriter would be more correct—have in shaping the destinies of the music and musicians of a country, even their bitterest enemies will admit that the way of the traditional transgressor is a lollipop, flower-strewn, Persian-carpeted path lined with dazzling imitation-marble dispensaries of high-powered sirups for the thirsty compared with that tedious road filmed over with the acrid dust of denunciation and harboring the treacherous bombs of spiteful slander that lies crudely cut before the meek reporter of musicians and things musical.

The dramatic editor who reviews with such gusto the latest bedroom farce may attribute that gentle drama, The Blue Bird, to Mr. Shakspere, and yet be allowed to live by his readers. The society editor may describe Mrs. Marblehead's gown as old rose instead of sky-blue purple and get off with the mildest of rebukes. But let the hectored music reporter say that the quality of a favorite singer's voice is round instead of mellow and the editors of his paper will be the recipients of a score of letters from various musical duds stopping their subscriptions on the ground of the abysmal ignorance displayed by the paper's music critic. And they always close their epistles with the profound but virtuous regret that the deplorable lowering of the hitherto high standards of that particular paper has made this letter their painful duty.

Having ambled with a deal of dull verbosity thus far in these touching revelations concerning musicians and their critics, suppose we consider of what the duty of these last-named misunderstood mortals consists. Just why these men—I scarcely believe that certain clever and charming feminine critics will object to the exclusive use of the masculine in this sentence—some of whom have lived their allotted three score and are seeing the additional ten slipping rapidly through their fingers—are sometimes unresponsive, strangely lacking in bubbling enthusiasm over the latest would-be celebrity who may burst with a loud splatter resembling the arrival of an overly mature tomato on their musical horizon. Just why these patient souls, having seen a dozen geniuses blossom and wither, are not so prone to go into ecstasies as some of us would like.

Concerts in Bunches

This has nothing to do with the reviewer in the smaller cities. His lot is a comparatively easy one. Being generally the society or sporting editor in addition to his more æsthetic duties, he is determined to err on the musical safe side and his writings are always in the hyperbolic, entirely gushful vein, and he always makes a tremendous hit. His laudations have turned the feet of more than one sincere soul from the smooth macadamized road lying before the estimable teamster or the autocratic laundress to that shell-torn path which is the lot of the professional musician. But once in a great while one of his innumerable finds registers a sensation to the glory of her country's art, so here's more power to his effusive vocabulary!

But about this duty of the music analysts for the big dailies. Concerts—like measles—come in bunches. It is yet to be discovered by what harmonic thought rhythm, which is said to be the latest phrase for mental telepathy, artists decide to give their concerts not only during the busy season when the opera flourisheth to the devastation of the critic's beauty sleep as well as his mild and amiable disposition, but also at this frenzied time have the consummate gall to bunch them up on pet days—say, Monday or Thursday afternoons. One city got this habit to such an extent that on some Sunday afternoons between the hours of three and five there would be as many as ten concerts in full swing at once.

No one would raise any objection to this bunching of concerts if there were only a merciful definite system of subcritics as they have in most of the big European cities. In this country a critic sometimes delegates a portion of his work to someone else, but it is generally on his own responsibility. In case he persists in doing all of his work himself and by some oversight he does not cover every single one of the scheduled ten concerts, a few days later he receives an indignant letter from the neglected artist demanding the reason for his unpardonable act in ignoring one of the most important musical events of the season.

Take for example a cold December afternoon when the street crossings are carpeted with two or three inches of slushy snow, which has an insinuating habit of spatting up affectionately over one's shoe tops, you may find him with one or two of his fellow martyrs drifting into the hall of their first concert about two-fifty-five. This concert is scheduled for three o'clock. Several of the audience, inveterate concert goers, spy his entrance and point him out with all due elaborateness and certain embarrassingly pertinent remarks. Inevitable as this scrutiny is, he has never grown quite accustomed to it, and squirms, dons what he fondly believes to be an appearance of vast unconsciousness and wonders if his tie is everything a tie should be. For, being human, he has his vanities, conceits and prejudices like the rest of us—that is, he has if he is a successful critic.

He pulls out his watch. A strained, haunted look comes over his face. It is three-five. And this is the first of the possible ten concerts that he must cover in approximately two hours. He turns and looks anxiously at the door. He fidgets round and glares at the stage. Not a sign of life. By the time a large peeve entire world and this particular giver has tarnished his whole outlook other words at exactly three-eighte artist trips out upon the stage.

For the purposes of this chronicle a local pianist who has paid out from to five hundred dollars—depending pretentiousness of her concert—fo appearance to get the notices. Her at is frightfully determined and her dr been designed quite palpably to stun audience is composed principally friends, who may or may not have with the requisite admission fee, a remainder is made up of those wh been admitted on passes. Incidenta habit of papering the house, or the out of free tickets for their concer become so universal among musicia certain disgusted old-timers say tha presume that in time the only way can hope to get a crowd out to his will be to send taxis for his pros audience.

The pianist seats herself and eng a determined combat with the Sonat Minor of Schumann. As usual Mr. mann's sonata comes out with the it—or the worst, depending on whet startled onlooker is viewing the perfo from the æsthetic or the sporting an

In the midst of his marveling unique interpretation which she is ing the sonata the critic absent-mi recognizes her as one of that great of emancipated females who have a career with a capital C and wh taken the place of the simpering, maids of other days who went in for and china painting. The venerable of modern times does not simper painting is decidedly not devoted to But her determined—if sometime taken—musical enthusiasms are al decided stimulus to her city's musi velopment, and acknowledging this critic decides that encouragement s her lot. So as the last chord spatters keyboard he snatches his hat and c hurriedly makes for the door wh following ambiguous lines amble i mind: "Miss Hedda Frost, our well- local pianist, gave to the G-Minor of Schumann an interesting and dis individual interpretation. Her pr which was excellent, was enthusia received by a large audience of wa mirers."

Which goes to show that musica cism, like diplomacy, is a gift.

Too Busy to be Soulful

Promptly at three-twenty-six he with his harassed colleagues at the torium a couple of blocks away, w famous tenor is holding the hearts audience two or three thousand str the hollow of his hand. The critic himself to relax a few moments un spell of that luscious—see later par on the pet adjectives of music c voice and then hastens out to revi latest sensation in the way of fiddle arrives in the midst of the perform a group of pieces culled from the explosive violin literature and notes t fection of the artist's tone, technic, tion and interpretation, but he know for the good of this violinistic marve he must not be let off without a fe chosen raps. So while he is about it notes this artist's playing is cold, th poignant, gripping dramatic flavor th only come from the great and under ing soul is lacking. Just as if any m could make such a sky rocket flig have any time for the luxury of a s

As the critic slips quietly into h the violinist pounces gleefully on those inevitable stunt pieces that so violin literature, and energetically b his knees in perfect time with his p he proceeds to dumfound the audien his digital dexterity. Listening to t burst, your man of the press remembe that famous story of Doctor Johnson while not being a musician in the ac sense of the word, nevertheless had good idea of the sort of music he lik who despised all music devoted to boyant flourish or of the fireworks v and who on hearing a certain violinist of his day play one of thos

on hat she has chosen and he is only
yir the good work along.

ontary to popular belief, the average
c is a great sympathy for the young
st ggling artist, even when his per-
an affects the ear as the youthful and
es nt persimmon attacks the teeth;
hen the timid commentator o'
c nsiders it the greater kindness to
th dreams of that same youngster
hi pen. He knows full well the many
fic , the weary hours of tedious prac-
th struggle for the means to study,
na shifts of poverty that are the lot
e erage music student. And he has
in but sympathy for the awkward
ce ho steps out on the stage with that
funny pathetic combination of defiance and fear. But he could talk himself deaf and dumb and hoarse and never be able to convince anyone of that sympathy, for the world at large is firmly convinced that the average music critic spends his time lying in wait for the concerts of musical débutantes in order to pounce upon and devour them with ghoulish glee. To most he is an ogre whose favorite dish is made up of the broken hopes and dreams of novice musicians.

At four-fifteen he is sitting limply and apathetically listening to one of those mushroom orchestras which of recent years have sprung up in such appalling numbers all over the country.

Their avowed and advertised purpose is to bring good music to the unenlightened herd which wanders in the deep ignominy of musical darkness; their sole intent is to educate and uplift the crude artistic ideals of the so-called people.

As the critic watches the fussy wooden-armed conductor leading his misfit orchestra, its violins half a beat ahead of all the other instruments and one lone trombone braying contentedly in the background, cheerfully ignoring its fellows, he understands and sympathizes with the aversion on the part of the general public to the much-lauded classical music. He wonders how many thousand years longer certain alleged musicians, members of the League for Making Great Music Horrible, are going to keep up the pernicious practice of grabbing the public by the nose and forcing down its protesting gullet their miserable caricatures of splendid music in the name of æsthetic uplift, saying the while: "This is great art! Now take it! It's good for you!"

And when they stand back complacently to view the effect of their determined efforts and the disgusted public spews out the nauseous musical mess these pedantic souls are scandalized and fill all the surrounding atmosphere with their wailing about the gross ingratitude and unappreciativeness of the benighted people.

From Bad to Worse

In the midst of this orchestra's mauling of a helpless overture our humble scribbler for the press is obsessed with a burning desire to lead its officious conductor aside and inform him that the American public on which he has fastened the crass libel of a degenerate musical taste can be depended upon to appreciate and understand good music if it is only halfway well performed. He yearns to point out to this smug crusader the instances of great musicians, idolized artists, who have wasted no time worrying about the regeneration of the musical morals of the man in the street, but who, nevertheless, have held in breathless silence and unconsciously brought that notoriously unæsthetic animal very near the stars with their magnificent, virile performance of this same despised classical music.

But naturally our gentle music reviewer does not gratify his desire to tell this industrious conductor a thing or two. Nor does he indulge in any of the above reflections in his subsequent criticism of the merits of this orchestra. If he did its guarantors would pounce upon him and rate him soundly for daring to impede the progress of a great, philanthropic, educational work. He merely writes, "The worthy work of the National Orchestra in giving the best music to the people for a reasonable fee —— Their earnest and conscientious conductor —— The improvement of the string section over their work of last year ——"

And as he writes it he curses his unbreakable habit of easy-going ambiguity.

At his next stop he listens to the concert of a musician who is the saddest musical nut of all. An exotic driveler who raves about her soul, which she insists stands trembling in the presence of the subtle Orientalism of modern music. She is an irritating individual who blinks her eyes rapidly and murmurs in hushed tones of the atmospheric permeation of her subconscious ego by the whole tone scale. She does not mean anything by her garbled phrases, but she fancies she gives out a vast impression of what she dubs æsthetic intellectualism and is serenely unaware that the average critic and the real musician flee from her slobberings over her art as they flee from that other faker—the man who spends his time telling in mawkish detail of his great love, devotion and tenderness for his family.

Bring Me Last Month's Production Records

Important records systematically filed in Macey equipment, not only are fully protected but constantly at your finger tips.

Because Macey filing equipment renders this service its use is world wide.

All Macey Steel Files are of **reinforced trussed steel construction,** molded into solid steel by the oxyacetylene fusion process combined with electric spot welding. In all wood equipment laminated stock is used to insure against splitting and warping.

The Macey line includes filing cabinets of every description in wood and steel, for every business need; also steel safes, filing supplies, office desks, and sectional bookcases. Complete catalog of each line mailed on request.

Canada Furniture Manufacturers, Ltd., Woodstock, Ontario

Where the strain is most severe

Ordinary metal universal joint wears loose and develops backlash

OF all the shocks that heavily loaded trucks must stand under normal service conditions, none is more destructive than the shock of sudden starting.

You throw in the clutch and the tremendous power of the engine meets with the resistance of the entire weight of the truck. This results in a heavy pounding blow on the universal joint.

Metal universal joints intensify the shocks and jolts. Continued day after day they wear loose, develop backlash and rack the chassis.

New flexible universal joint cushions the shocks

The Thermoid-Hardy Universal Joint absorbs the shocks and strains of sudden starting. It prevents loosening and breakage of the differential, transmission and rear axle. It needs no lubrication—no adjustment.

The patented process by which the flexible discs are constructed, is the chief reason for their great strength and durability. The layers of fabric are built up fanwise, in the well-known Thermoid-Hardy formation, so that the strands of cotton in the various plies run in different directions.

Ask to see the universal joint on the next car you buy

When choosing your next car, ride in one equipped with Thermoid-Hardy Universal Joints. Start the car yourself, drive it slowly, speed it up, then reverse. You will find a smooth and even application of power.

Send for our new book, "Universal Joints—Their Use and Misuse." It will give you details of construction, records of performance, and opinions of leading engineers.

Thermoid-Hardy Universal Joints will make good—or WE WILL.

Her playing resembles in its frenzy her weird conversation and our critic—filled with utter disgust—finally escapes from the morbid atmosphere of this concert. And after taking in the performances of two débutantes, a composer pianist and a gentle songster who gives as an encore Mine Eyes Have Seen the Glory of the Coming of the Lord, the weary writer hies himself to his newspaper and endeavors to give in the space of a few hundred words an adequate, accurate, unbiased and fairly truthful account of the abilities of the various artists and the standards of musical performance maintained in those ten or so concerts on which he has passed judgment during the last two hours. It can't be done, but somehow he does it and in your next morning's paper you may find his noble effort carefully concealed between the obituaries and the society notes or a breezy article on how to raise hogs.

The ordinary mortal stands aghast before his heroic accomplishment, but one should not lose sight of the fact that in his apparently impossible and superhuman task he is closely aided and abetted by what are known among the facetious as the pet adjectives of music critics.

The Armory of Adjectives

Now consider "eclectic." According to our favorite dictionary it means briefly, "a choosing; a selecting—from that which is best." That is my idea of the original gay dog among adjectives. It exudes such an atmosphere of sophistication and broad-mindedness. The first time I ever encountered it was in my and its callow youth in things musical. It was included in an ecstatic write-up of a concert I gave in a certain small town before I regretfully came to the conclusion that, regardless of my entirely firm convictions concerning the divine quality of my musical genius, financially at least I had heard the wrong call in the choosing of a profession. I shall never forget the thrill that blasé adjective gave me. There are many examples of that indispensable part of speech—"sheer," for instance; "impeccable," "dulcet," "clean," "glorious," and "luscious," "matchless" and "peerless," but they all fade into insignificance before the gracious majesty of "eclectic." The critics who depend upon "magnificent" and "vibrant" are only ordinary mortals, but the man who can sling "eclecticism" round as carelessly as he would an old pair of shoes deserves nothing but awe-struck reverence from the multitude.

Then there is a good old phrase that always gets a hand. It is the one that qualifies an artist's performance as excellent "for one so young." Think of the deep delight that has given musical débutantes whose years are hesitating round thirty-eight and forty.

The most remarkable thing about these adjectives is that regardless of their inhuman usage they never seem to wear out. They are a direct refutation of that venerable wheeze that familiarity breeds contempt. It thrills a singer just as much as if it were a highly original and bright remark and hadn't been applied to all manner of singers since the Flood to read the morning after her concert that a certain mild-mannered kindly gentleman who writes for the daily press considers in vulgar print that she has a "beautiful voice."

Perhaps the only explanation that can be offered for that singer's naïve delight in that doddering old adjective is that it referred in complimentary terms to the dearest thing in life to her—her work. For regardless of the determination of certain half-baked sophists to label as the great vital motive power in man's existence such high-sounding things as love, ambition, honor or pride, these all become empty phrases when they are lined up alongside a man's work, that marvel which he has conceived in that queer thing he grandiloquently calls his brain and has brought to completion with his own painful efforts.

There is no getting round a man's insufferable pride in his accomplishment, whether it happens to be writing a music critique, singing a song or inventing a formula—or would it be a recipe?—for chewing gum. As long as you say that the performance of that song is beautiful, the criticism well written or the product of the chewing-gum formula—or recipe—is more elastic than any other, no matter in what trite terms you couch your flattery, you always get away with it. But let anyone insinuate that this same man's work, his accomplishment, which is his little god, is not per[fect] thing of beauty, a joy forever a[nd] greatest benefit to mankind that h[as] been discovered—just let anyone [in]ate that this little god might be [a] lopsided or be pigeon-toed, and its [ak]will leave nothing but devastation [in] wake of his righteous rage.

Take for example the sad tale [of] opera star who took umbrage at a sli[ght] remark a certain critic made in [a] guarded moment of this singer's pe[r]ance. On reading this particular cr[i]the singer promptly sat down and [wr]ing the paper through in places w[ith] irate pen put down in exceedingly [ha]language just what he thought [of] critic's mental deficiencies and any [th]trifling personal shortcomings that [ha]pened to recall. He finished the [le]opprobrium, put it in an envelope, st[am]addressed it and confided it with to[tal] faith to the care of the postal servi[ce] due time the critic received it, a[nd] being of the species which is war-wea[ry] therefore cautious, sat down and an[swer] in kind—only perhaps more so. Fro[m] time on the air was filled with scu[rri]remarks, threatening and scandalo[us] sinuations, retorts, slander and the[ats] for a dozen libel suits. The singe[r] thoroughly interested in the proce[ss] retired from his important post, l[eft] dismayed associates in the lurch a[nd] voted himself to the siege. He inform[ed] critic that from that time on he inten[ded] devote his time to "getting that [un]reporter's job."

The furious reviewer of musician[ly] music—being no slacker—accepte[d] challenge and proceeded to get in son[ne]ing strokes himself. The singer's ass[o]pleaded with him, wept and wrung[her] hands, but he was obdurate bef[ore] pleading. The editors of that par[ti]paper remarked *sotto voce* for his ben[efit] the suave and correct editorial idi[om] desist, to remember his dignity, to [re]heart and forget it, to cut it out—an[d] critic was deaf to command. Patr[on] music became hysterically excite[d] wailed about the terrible scandal. It [was] jolly row while it lasted. And the [re]have it. Though one of the comb[at]was a great artist and the other a b[ad] writer, yet because each of them ha[d] to comment adversely on the other's they were reduced to the undignified [le]of two small boys calling names and [ma]ing faces over the back fence. Of co[urse] was the critic's fault. He forgot th[at] sonal feelings have no place in the [life] a lowly music reviewer.

The Real Cause of Troubl

Perhaps the real cause of all the t[ro]that ever follows in the wake of t[he] corder of deeds musical lies in this [fact] that it is his business to analyze [and] write—whether with authority or co[n]ambiguous diplomacy—in a gentle[ma]bling, antiquated literary style or a[ny] brilliant caustic one of the artistic a[c]plishment, that worshiped god, o[r] highly strung, sensitive portion of the l[ar]race, the music makers, who are [the] people the least fitted because of th[eir] nature of their profession to take a[ny] criticism with equanimity.

But the critic who has proved h[im]worthy of that dignified title is able t[o] his own in the face of the threa[ts] storms of denunciatory letters and [he] get a little amusement out of their [ig]spelling and phraseology—neither of [th]belong in the list of accomplishments of the greatest artist, much less the s[ym]fry, who are the ones chiefly addic[ted] letter writing. He has weathered the g[ale] tions of natural-born incurable am[at]who consider great musicianship cons[ist] quoting opus numbers by the yard, [in]ing where every Tom, Dick and Har[ry] musician was born, lived and died a[nd] the choice bits of scandal with wh[ich] may have decorated his life. Regard[ed] the fact that your critic is often far e[n]past his callow youth to know e[no]about music to be able to have forgo[tten] little, he is generally able to hold his [own] the face of even this supreme wi[th]With time he learns discretion in answ[er] back, and with age he develops the [ne]tically impervious hide.

In fact, it might be ventured tha[t] last-named attribute has been the fir[st] most important requirement of any [m]ing reviewer of music since those r[ea]

(Concluded on Page 165)

(Concluded from Page 162)

ys hen the job of music criticism was st ivented by some officious music hound. ner is a story that comes from the dark es music reporting of a furious singer o pon hearing that a critic had ex- ss himself rather forcibly and too h lly concerning certain sins of omis- her singing, declared vehemently was an impious man.

F ," she concluded her lively remarks, ne God has given to a mortal so extraor- n a talent as I possess people ought o r and applaud it as a miracle. It is a to depreciate the gifts of heaven." r that time to this, when modern e threaten to "get his job" your re- e of deeds musical has had imperative his thick protective skin of ab- te ndifference to public vituperation. d i spite of his many and determined ei he remains the most powerful r f all in the molding of the musical ic of his country.

hi is no place for a harangue on the ie necessity of a great sincerity and re able sense of justice in these re- in angels of music. They possess as a a ntirely superhuman sincerity. Not a because they are any more virtuous t rest of us, but because the deadly in of music reviewing makes it much r r them to be sincere, to give an st pontaneous opinion, than to sprain t uns trying to think up a telling and y sincerity.

The Wiles of a Wily Star

f the ancient innuendo that every s his price, no frenzied denying of l er choke it into silence. Each and me a new star comes into fame, d perate years of sacrifice and weary d the world—including the crit- s her reverent homage there will e dark whisperings in the chorus her. Naturally, it is common ege that many a charlatan has risen and that there are those who have t their place for a season, but the la ongers carefully forget to men- t it is generally such a pitifully se on and the final artistic oblivion is n inious. For in the cynical, grin- awdust world of music with its a shams, its intrigues, its meanness s eatness, it is—oddly enough—only a hat endures.

his every critic has his price in so a he responds to the gentle kindly a the wee bit of judicious flattery. h ing been slurred as an ignoramus, g tled musician, a would-be artist n r had a chance and who in ven- e the muse for her scorning of him t mself up officiously to make life a n r her favorites, the average critic n enough to lap up thirstily all the w ds of commendation which may h way.

c ning that typically European cus- t te bestowing of personal gifts—the s rfpin and the useful cuff links— m ic reviewers by grateful or impor- t ists, it is only necessary to state w eed not lose any sleep over the i has wrought in the field of Amer- i ism. It is a crude and vulgarly s rick, even in its subtler forms, n of our music reviewers regard i se suspicion.

re as one hard-headed old chap in li who was determined that no one sa that his critical favors had been w th a neat if not gaudy scarfpin. ea y part of his career a famous and a singer noticed his advent into rl of musical criticism and also that t seem particularly impressed e art. Being wise she did not sit a wrathfully write him that she d "get his job." Instead she sent a nate bejeweled set of cuff links. g he fact that hers was a name to w ith among the laity, that hers n powerful influence in the musi- l nd he was nothing but an impe- s ibbler on one of the lesser dailies, t em back to her by return mail, w with the masculine equivalent of f hioned eternal feminine: "My d s not allow me to accept gifts of f m members of the oppcsite sex."

Several other futile attempts to in the singer apparently gave him h eless and the critic went round u ting himself on having taught r ular artist a thing or two. But i the midst of his self-complacency a would-be pupil descended upon him from a little town some eight hundred miles west. She regarded him with that delightful and rare reverence that is so seldom encountered in American music students, and after saying that this famous singer had heard her sing and had told her that this critic was the only teacher in America for her, she asked him with anxious trembling if he would consider accepting her as a student.

The nonplused music analyst glared at her with an overwhelming desire to wring her neck. He knew that since teaching was his profession he had no sensible reason for refusing her request. He knew, too, how the story of such a refusal would travel and how it would set the clacking tongues to going. So telling the anxious pupil that he must first consult his schedule, the tormented critic went out and bought himself a drink, relieved his feelings in a burst of classic profanity and came back and accepted the girl as a pupil.

From that time on pupils kept bobbing up serenely from all parts of the continent where that distinguished singer might happen to be concertizing. At last, delighted with the success of her strategy, this artist ventured to send him a photograph of herself autographed in the most flattering terms. It was then that the badgered reporter of music gave up the ghost and ceased to struggle.

As much as I should like to make out that all music reporters are maligned saints, candor compels me to state that there are some sadly earthly mortals among them to whom the clink of gold is the sweetest music, ancient or modern, and who will smirk delightedly at the alluring smile.

And one meets them when one is least expecting to. The youngster in his profession, eager for data about various artists and their work, will turn to one of these unctuous old frauds for confirmation of his adverse opinion concerning the artistic abilities of a certain henna-haired, insinuating feminine exponent of music and be amazed to receive a fatuous smile along with his answer: "Oh, but she is a very remarkable artist! You know she is the protégée of Mrs. Moneybags. Haven't you noticed the extreme sensitiveness of her interpretation? And the charm, my dear sir, that charm?"

The One Reliable Method

On the face of it, to become a successful and yet beloved music critic seems an entirely impossible task. But in my deliberate snooping round the corners of music criticism I actually found one music analyst who seemed to have achieved the impossible. Everyone, musician and layman, spoke of him as a man possessing great erudition, sincerity and an enormous sense of justice; who was broad-minded, could not be bought, who had no enemies and who was not—as this eulogistic category would naturally lead one to suppose—dead. On the contrary, he was very much alive, an understanding human sort with his entire share of quaint and foolish prejudices.

No one knew how he maintained his miraculous reputation year in and year out. And for all their cogitating, conjecture and lying awake nights fuming about it, no one got any nearer the explanation. At last someone—no matter who—inadvertently stumbled onto this canny critic's method. I submit it herewith humbly to all aspiring music critics as the only reliable and known method by which one may become a successful and universally beloved critic of the splendid art which had so much to do with putting Orpheus among the notables.

It seems that after wandering from concert to concert, or after a performance of the opera, this worthy gentleman goes to his particular little sanctum in the great building that hides from the world the dark, mysterious machinations of his newspaper and taking out his typewriter, seats himself before that trusty instrument, blindfolds himself and repeats "eeny, meeny, miny, mo," or some jingle, the while he pounds at random on its docile keys to the extent of some few hundred words. When he finishes the masterpiece he hastily signs his initials and turns it in without glancing through it for any errors of spelling, phrasing or punctuation. I would not go so far as to say that the result is literature or that it even makes sense, but it pleases everybody, the layman and the artist as well as his dearly beloved enemies—and what more could a humble music critic ask?

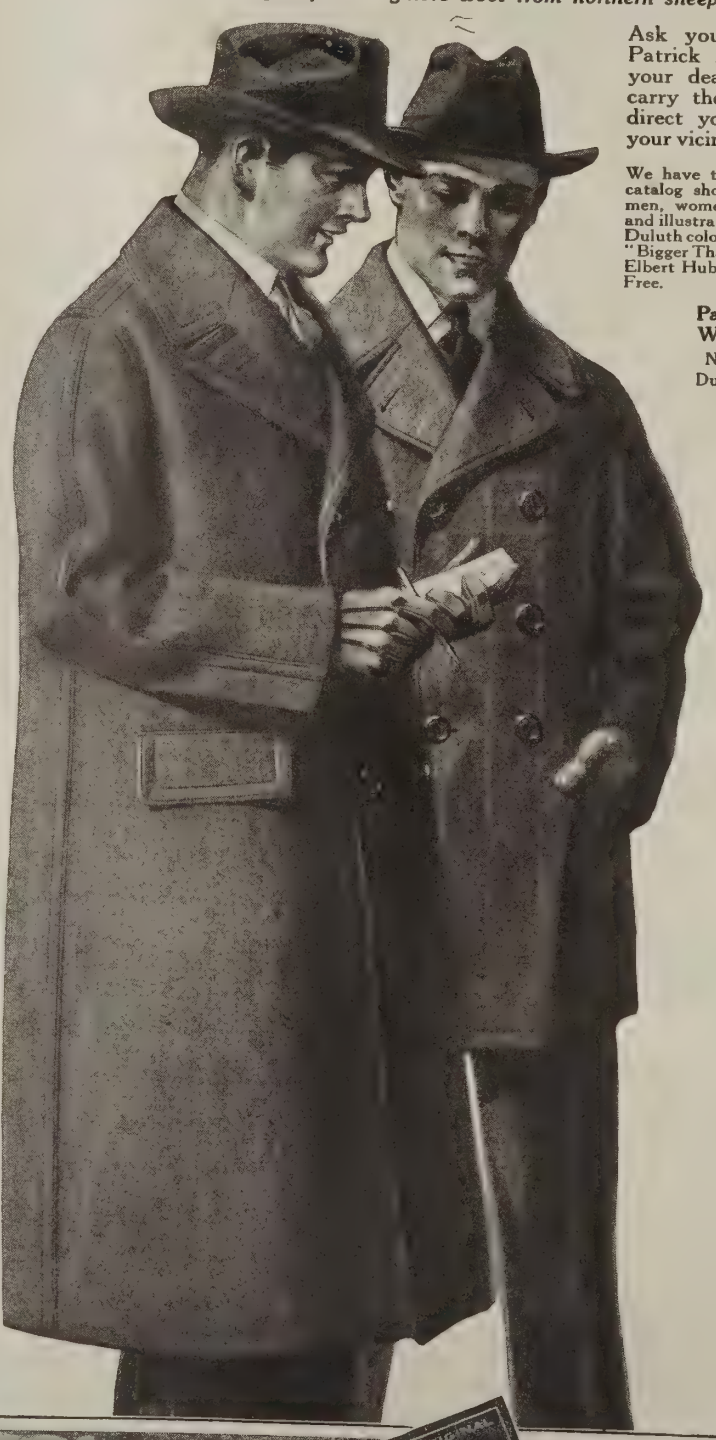
Patrick DULUTH
TRADE MARK REG. U.S. PAT. OFF.

"Bigger than Weather"

GREATCOATS & MACKINAWS

TAILORED from the famous Patrick Cloth, their fashionable lines supplement the satisfaction that every Patrick Product gives in warmth and service. There is no other cloth just like Patrick Cloth. It is essentially a north country fabric, made from the thick long-fibre wool of "sheep that thrive in the snow."

Every Patrick Label marks a garment—Greatcoat, Mackinaw, Sweater, Robe, Blanket, Cap or Stocking—which is made only of pure long-fibre wool from northern sheep.



Ask your dealer for Patrick Products. If your dealer does not carry the line, let us direct you to one in your vicinity who does.

We have two books: Our catalog showing styles for men, women and children and illustrating the Patrick-Duluth colors, and the book, "Bigger Than Weather," by Elbert Hubbard. Both are Free.

CHECKING UP OUR THANK OFFERING

(Continued from Page 32)

these foreign bonds? Seems to me we should keep our money for home use."

"No," replied the banker, "we are not able to spare the funds for this issue, but you are the one who should buy them. You farmers are receiving all the benefit from the buying of food in this country, and this money is spent with you. If anybody has a duty to perform in helping finance the Allies it is the producer."

This situation continued throughout the war and has lasted over the first year of peace. The producer has profited from the need of the world for food. Perhaps he has recognized it in instances, but many forget just how great has been the reward until they hark back to the prices for products in the early summer of 1914, even making allowances for the labor scarcity of these days.

At the interior primary markets in July, 1914, the merchants paid 16 cents a pound for country butter, 15 cents a dozen for eggs; wheat was 62 cents a bushel, corn 47 cents, hogs 8 cents a pound. In July, 1919, at that same market, the farm wife could bring in butter and get 50 cents a pound, eggs were 42 cents, wheat $2.05, corn $1.97, hogs 22 cents a pound. Alfalfa had risen from $7 to $30 a ton. It is not difficult to understand how the businesslike farmer was able to find a comfortable margin.

While these features of the season's history have been occupying the attention of producers of the year's plenty, there has been no lack of indulgence in the things that make for present-day enjoyment. One of the conspicuous shortages of supplies in the farming sections during the late summer and early autumn was that of motor cars.

"When are you going to get that car I ordered?" has been the greeting the dealers in the country towns met day after day. "I can't wait much longer for it."

For every twelve inhabitants in the Middle Western States is registered a car—almost enough to take the whole population on a joy ride. Dealers are called on for few demonstrations—people order a car as they might order a kitchen range or a sack of sugar. It is not enough for the well-to-do farmer to have one car—he has a second car for the young folks so that he can drive his own undisturbed.

The National Camping Grounds

Last summer a veritable hegira of tourists was seen in the Rocky Mountain resorts. Literally tens of thousands of families drove cheerily up and down the mountain roads and trailed in long processions over the prairies from and to their homes hundreds of miles away. On every vacant lot in the resort sections were scores of cars in which the owners had traveled and beside which they slept under improvised tents. There was an Oklahoma Day, and it seemed that all the state must have quit work and come to the hills. Then there was a Texas Day and another great showing. Kansas, Nebraska, Iowa—the whole Middle West—was there, and at least half the visitors were from the farm. An average of five hundred cars a day for two months passed under the arch spanning one of the highways on the Colorado-Kansas line—and that was but one entrance to the resort country.

And here is the fine aspect of it all: The faithful little flivver or the sturdy touring car, each running board loaded with tent and packs and dish pans and blankets, with bed springs teetering on behind, contains not only the bronzed-faced father and the pink-cheeked mother but every chick and child of the family. The motor car has opened the world to old and young. Pleasuring is a family affair—not as in the old days of special excursions for one or two at a time. Let the farm rest for a month, while the flowing road beckons and hill and valley, camp ground, village and city thoroughfare give their inspiration for the long winter days to come. Never before have the farmer and his family obtained so much from life as to-day; never before has the toil been lightened by so many relieving incidents.

Perhaps the farmer's bookkeeping does not show the great profits of which he dreamed, but into the ledger do not enter the joys attendant on modern poss

Th complaint of the producer is not on that he is failing to receive what he ns ers is a fair profit, meaning an equable ..rn t for the time he and his family en working in the fields. He sees the n acturer with a fixed price at which ished product is to be sold before the aterial is gathered and the machinery gin to turn. He thinks that he should ve ome assurance that when he has, for ce, borrowed money to buy a hundred nd has fed to them corn and hay and seed meal that will fit them for the rk, he should be certain that he will sufficient return to make his effort ble.

war taught him some of the advan- of unified action. He and his neigh- arned to place their affairs frankly in en, and they compared notes. The xing system taught them that there uch gained in knowing for what he ell the harvested grain—though he ver been satisfied with the figure ished. General price fixing is not at is scheme for the betterment of his on, because he argues that with the matter of common knowledge there dency on the part of labor to base ands accordingly. Rather he wants n the regulation of prices at the ing end, and looks forward to such ation of food raisers as will compel e believes needful to the prosperity arm and ranch.

growth of coöperative organizations en on a remarkable development in t two years. They range from the ialistic experiment of North Dakota anding together of farmers locally elevators and establish community Thousands of these organizations tered throughout the farming states eeds but a united action on the part embers—thus far unaccomplished— e a powerful influence that will af- h politically and economically the life of the nation.

ost-Keeping on the Farm

ng the agitation of early fall regard- h falling prices of beef cattle in the e stock raisers declared that the high- orn and costly pasture used to pre- e animals for market placed the r in a position to lose on his invest- t. This notice appeared in the cattle- 's principal organ in the Middle West: ares you in the face if you do not gether. The cotton planter has sully withstood the attack upon him. r duty by yourself and your neigh- l the livestock market is bound to e So keep your livestock away from kets."

ier words, it was an appeal to the to force higher prices by with- foodstuffs from the market and e consumer to time. This is the sult of the farmer's education in ping.

Is for the first time in history estab- cost system, and the demand that a showing on the right side of the likely to become more insistent as rstands fully just what is his ex- producing the food-stuffs which he nish to the world.

the season's return the producing has without doubt had a comfort- gin, despite the cross currents of sn. But there is always before the he question: "What is to happen ces get back to normal?" On the f the country towns, in the direct- ons of the country banks, in the ger offices and on the trains this always to the fore.

ation the whole much less saving has ce than might have occurred is the let idea. Of course we know there reds of millions of Liberty Bonds bank vaults, in bureau drawers and nder mattresses, forming in a de- nsurance for any period of depres- h may visit later. However, it is y the farm-loan brokers that the a debt has not decreased.

he verage borrower finds that he can s apital profitably," explained one. ows that with the rising price of security is ample. The average rtgage which used to be $2000 is e often $4000 to $10,000. The and banks have asked that their of $10,000 be raised to $25,000 in to are for the larger sums needed to e he land deals. But the loaning agencies are not carried away with enthusiasm over the new values. Regardless of what the price for which land sells, they have a limit on the amount they will loan—ranging from $67.50 an acre in states like Kansas and Nebraska to $100 or perhaps more in states like Iowa and Illinois. Land may bring $300 an acre in the market, but the companies are playing safe. This tends to safeguard the future both for lender and borrower, though the total of the borrowing steadily increases. The Federal land banks have loaned approximately $250,000,000 to nearly 100,000 farmers, while the total farm-mortgage debt of the nation is estimated at $4,000,000,000. But the old-fashioned mortgage that took the homestead has passed—to-day the farm loan simply represents new capital, enabling the producer to extend his operations."

Another outcome of the war training that was as intense in the rural township as in busy city ward was the development of new ideals of community service and helpfulness. Farmers' wives proved among the most faithful workers in the Red Cross.

"It is not difficult for the city woman to spend an hour or two at the Red Cross rooms," was the expression of a farm mother with four children and no help in her home. "She can drive in her car and leave the housework to her maid. We farm women must get the time between clearing away the dinner dishes and preparing supper for a family of five or six persons. We have to care for the milk, look after the poultry yard and mend the children's clothes. It is some task for us to find our hour for the Red Cross—but we find it."

They did, and never was there a chapter that did not receive from the country members every garment assigned. Now with the war over, the same community spirit, not before wakened, remains and the groups thus gathered continue to carry on deeds of helpfulness for their neighborhoods and for any world cause that may appeal.

Growing out of this unity of action and the greater neighborliness developed, country communities find new opportunities for the betterment of living conditions and are making their surroundings give a fuller measure of contentment.

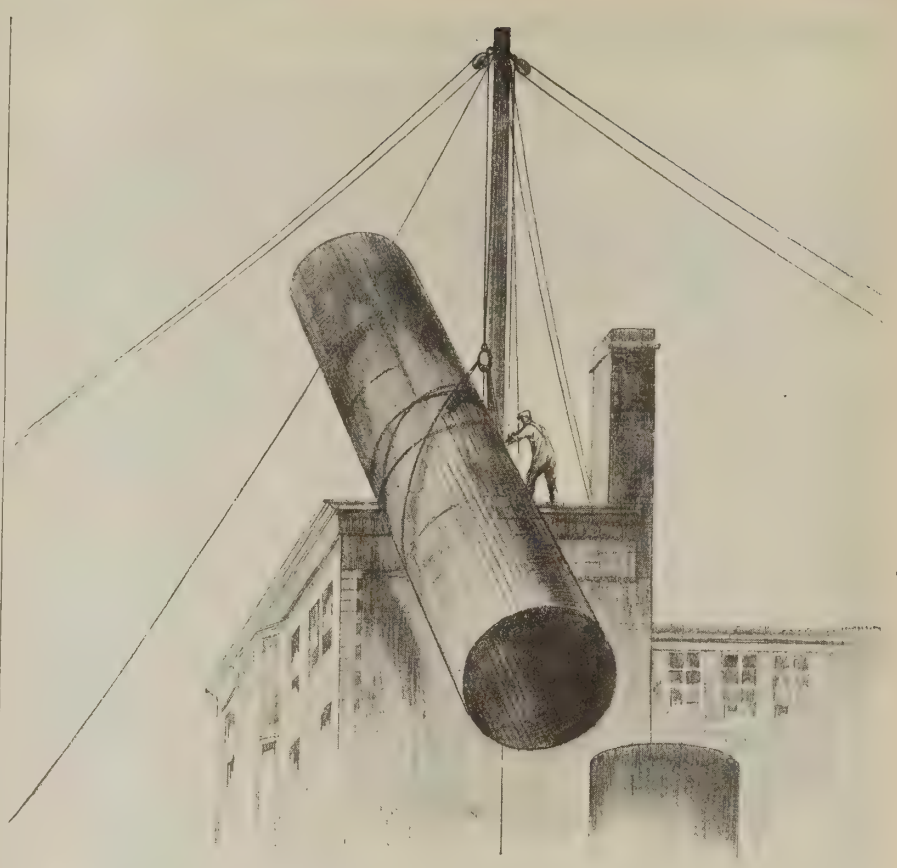
No year's harvest is uniformly pleasing. Here and there are localities and individuals who have failed to receive all the year's richness. But the important thing for the country is that the production of bushels and tons of foodstuffs has been generous. With six million bushels more wheat and three hundred million bushels more corn than in 1918 and practically the five-year average of all other crops we should in this year of peace find encouragement. We have no great surplus with which to feed the world, but there is something, and at least our own people are relieved from the limitations imposed during the days of stress. Progress has been rapid toward a resumption of everyday living.

A Year of Over-Confidence

American agriculture has undoubtedly received an impetus out of war experiences that will hasten its upward progress. The analysis to which its operations were submitted by the Government to determine exactly what we could accomplish for our Allies taught a lesson not to be forgotten. It convinced every producer that he was entitled to a profit, whether in war or peace, and he is now applying the precept. The elimination of reckless waste, the utilization of every possible acre, intensive tillage—all were urged for two years of earnest education. The great wheat acreage of 1919 sown in response to the country's call told of the acceptance of the new order.

Perhaps there has been too much confidence that we shall always ride on a flowing tide of high prices; perhaps there has been undue elation with conditions and a tendency to engage in speculation and spend extravagantly, but at bottom American farm production to-day is progressing toward system and efficiency. This will go far to make the agriculture of the future successful and to establish the farmer on a sound financial basis.

It is not fair to say that the producer is oblivious of the claims of the consumer. The popular idea that the farmer is selfishly caring for his own to the exclusion of those who must buy his products is wrong. Here and there is an utterance of defiance, but on the whole he understands that he must have a market for his production. One fact,



Fixing the Smoke-Stack

Hoisting sections of a steel smoke-stack, hauling giant logs from the forest, conveying slabs of slate from the quarry—thousandfold are the jobs of wire rope.

Wire—it's practically indispensable in industry and home. If it's Wright Wire, then the maximum service and reliability are assured.

Clinton-Wright Wire Company has been manufacturing steel, iron, copper, brass and bronze wire products for more than half a century. Its comprehensive line includes:

EXCELSIOR wire ropes, fence and netting, safety guards for machinery, elevator cabs and cables, window screens, trellises;

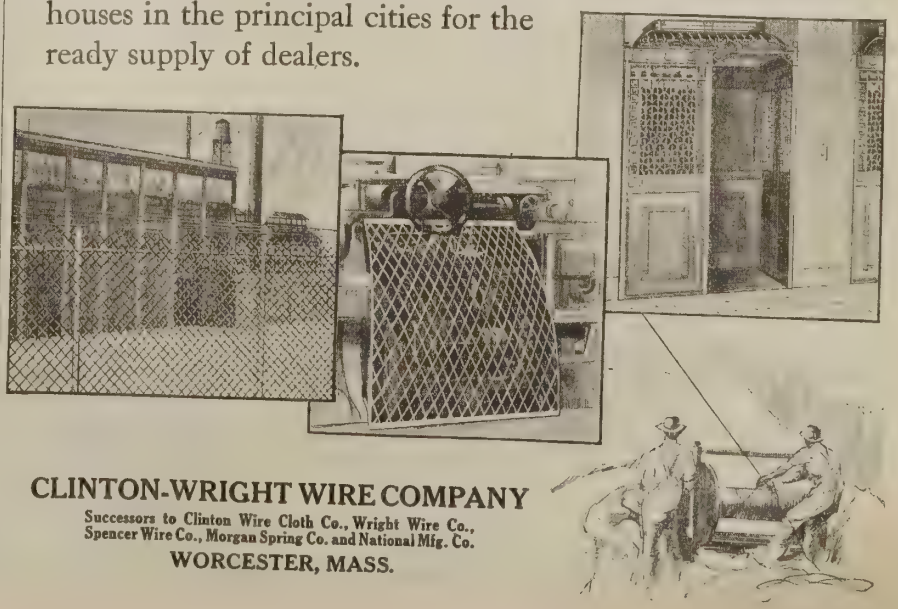
CLINTON wire cloth, welded sheathing for reinforcing plaster or concrete construction, welded wire fabrics, electrically welded wire and perforated metals;

SPENCER wire, cold-rolled strip steel, high-speed drill rods, and formed specialties;

MORGAN springs, special manufacturers' wire, metal stampings, wire nails and wire forms;

NATIONAL wire goods.

The quality of Clinton-Wright Wire Company products is known and appreciated throughout America. Warehouses in the principal cities for the ready supply of dealers.



CLINTON-WRIGHT WIRE COMPANY

Successors to Clinton Wire Cloth Co., Wright Wire Co., Spencer Wire Co., Morgan Spring Co. and National Mfg. Co.

50TH ANNIVERSARY—FIFTY YEARS OF PROGRESS

HEINZ
Spaghetti
Ready cooked ready to serve

FIRST the Spaghetti is made in the spotless home of the 57 Varieties.

It is Heinz Spaghetti.

Then it is cooked in the Heinz kitchens.

The original recipe was Italian but Heinz famous tomato sauce takes the place of the ordinary kind and with it is combined a special cheese of peculiar merit.

The result can only be expressed by the word "Perfection."

Keep the pantry shelves supplied with it, for experience has proved that, once tried, it becomes a permanent addition to the family menu.

It is delicious, nutritive and economical.

Some of the 57 *Varieties*

Vinegars
Tomato Ketchup
Baked Beans
Mince Meat

All Heinz goods sold in Canada are packed in Canada

however, should be recognized: He is feeling out his power and year by year is making more advancement in the mysteries of marketing. The politician who thinks that flowery speeches showing love for the farmer without intelligent action will win should revise his opinion. The old-fashioned candidate spent oratorical embellishments railing at "capital" and the "bloated millionaires"—and many rode into place and fame thereby. That day is past. Too many farmers take the daily papers and the magazines; too many of them have been educated at agricultural colleges or universities and are able to analyze matters for themselves.

Last winter internal-revenue officers spent weeks and months in the rural communities struggling with the accounts of farmers who were endeavoring to make an income-tax report that would pass muster. They found that seldom did one have such a systematic statement of his year's operations that he could without help prepare the report. Country bankers gave up valuable hours assisting their customers in the same work. They will have less of it to do next winter—the farmers have kept books this year in preparation for the annual inquisition. They have learned that they are in the same class with the merchant and must know what is their income and expense—something they were never before compelled to record. When they have set it down in black and white with an accuracy that can be sworn to before a notary they are usually surprised at their actual gains. It is one thing to talk on the street corners and quite another to satisfy the internal-revenue collector.

Plenty of farms are failures, but so are plenty of stores and professional establishments. Few of any class have been failures on the rising tide of prices of the p t
years. These closing days of 1919 a es
cially a poor time for judgment in t ag
cultural states, because the wheat h be
rushed to market as fast as the th sh
could finish the fields. When the r wa
could not transport it and the el at
were full it was dumped on the gr nd
mammoth heaps at the stations. m

So the autumn has been a flush
but there are the long months until ot
harvest shall come. Counsel for th t a
saving never had a more eloquent pp
tunity than now. Less than half th po
lation is rural; the other side has m ch
say as to its interests, and the p du
faces the consumer in a tense cont ve
in which neither is willing to give iv
tage. The former is to-day in the s on
position—hence the eagerness wit wh
he seeks to tread the path down t sl
of prices gingerly.

This first year after the world w
been a testing time for all the kn le
acquired when serious thought wa gi
to production problems by producer ad
the government agency.

That it has been graced with th
yields and with high price levels s
sisted the producer in readjusting m
to peace conditions.

In a few months the last of the w re
lations will cease. Wheat will be a in
the world market. The farm will n t
real test of its position and we shall e h
well has been organized the pr uc
system. Certainly it will not agai et
to the haphazardry of former days m
should in the end come to an est is
method that will insure business e
vancement for the producer on w m
all depend.

The Poets' Corne

Snacktime

DAWN was cool and gray with mist, sunlight streaming through,
Sweet with fern and still with shade, field grass drenched with dew;
Rioting of warbler notes, brooksides all atune—
Now it's burned to morning blue, and snacktime comes at noon.

Cicadas in sun-scorched grass echoing your reel,
Green of broad moose-maple leaves in your weighted creel,
Half its cool and spotted freight you'll be needing soon.
Sunlight's found the streamlet bed—and snacktime comes at noon.

Tiny camp fire's smoke thread curled, blue against the green,
Stealing through the sunlit rifts of birch and balsam screen;
One far wood thrush fluting soft—earth can grant no boon
Better than a wayside fire, when snacktime comes at noon.

Bacon sizzling in the pan, coffee fragrance blent
With the breath of brook and fern and sun-warmed hemlock scent;
One small brown and comrade brook through rocky ways acroon—
All the world's a long-loved friend, when snacktime comes at noon.

—*Martha Haskell Clark.*

Prisonered

I WOULD forget old tropic skies,
A dear land I know,
Tall palm trees by a singing sea
Where soft winds blow,
For the memory breaks the heart of me
That longs so much to go.

And I can shut the vision out—
The little bluest bay,
The stately liners anchored there,
The diving boys at play,
And the great sun, the glad sun,
Shining on the day.

The snakelike shore of silvered sand,
The tumbled little town,
The huddled houses blinding white,
With palm-thatched roof, or brown
Or red tiled roofs, beside the streets
That wander up and down.

But I cannot still the olden sound
The pungent winds that blow,
The coolies singing in the dark
Beneath the white stars' glow,
And memory hurts the heart of me
That, prisonered, cannot go.

—*Edmund L*

Heritage

SOMEWHERE hid in my vein is
blood of a lost sea rover,
Who did wild deeds in the Ind s
loved light loves in the South,
Who followed the call of his vagrant
trails of the wide world over,
And fought and slew for a purse
or the touch of a scarlet mouth.

How should I know the Southland
am Northern nourished,
Who beat my wings at the circl
and never have seen the sea?
How should I know forgotten soil
flowers of the dead years flouris
Were it not for him in the starlit
the tales that he tells to me?

For I know the scent of the warm s
faint spices of strange ports bri
The whir of the land crabs scuttli
edge of a fringed lagoon,
Palm trees black on a red-gold sky
molten shore tides swinging,
And the dip of a creeper-tangled
the light of an island moon.
I seem to hear in the quiet the
strange tongues talking,
A woman's laugh at a window—
of steel on steel;
A mule train's clacking footfalls
cobbled gateways walking,
An order slashing the silence—the
a spur-ringed heel.

How know I the jewel madness, I
die without them?
Or feel the lure of a woman—I
woman too?
Or the fierce sweet peace of the men
with the old wild life about them
Or the sea lust driving on and
far horizon's blue?

Somewhere hid in my veins is the
lost sea rover,
Who did wild deeds in the Indies
light loves in the South,
Who followed the call of his vagran
trails of the wide world over,
Who fought and died for a purs
and the touch of a scarlet mouth

THE ANTHOLOGY OF ANOTHER TOWN

(Continued from Page 46)

rover children are always in evidence, o they are very active and all through mmer play outdoors barefoot, which regard as a great privilege, except heir mother pesters them about wash- eir feet at night.

ir mother does not believe in letting ildren bother the neighbors, so they ways at home, and other children vith them. They are the most nat- human youngsters I ever knew and, y are healthy, they are noisy from the hey get up in the morning until they bed at night. Because of my open ws I know everything they do or say. I waken in the morning the roar in ove yard is going full tilt, but I only ut it, because I am fond of the Grover n. If I see company arrive at the r home I soon hear one of the chil- ay to the mother: "Where are we to sleep to-night?" And next day I ne of the Grover children put this n: "When are they going home?" Grover child that interests me most rley, seven years old. One morning ced that Charley was in disgrace. other had dressed him in girl's clothes ish him. This kept him in the house while, but soon he didn't mind the ress and played out in the yard, he was forbidden to go. Then his took his clothes off and thought ould keep him in the house, but in a while he was out playing with the hildren, naked.

his time I was much interested in y's crime and made bold to go to the nd ask Mrs. Grover what Charley ne.

ley had told a story. I recom- d to Mrs. Grover that she wash y's mouth with soapsuds and let it hat, but she thought it best to keep y in the house until his father came when a family council would be held harley's fate decided.

Grover told me of Charley's dis- With some other boys he had gone nd in the neighborhood and fallen hen he returned home his mother him how his clothes became wet. en Charley said he was up at his lannah's and in getting a drink out well bucket had accidentally spilled n his clothes.

ley had been warned not to go to nd, and I feared it would go hard m when his father came home. I nown Charley's father all his life, ugh a good, steady man now he was as a boy than Charley is. You ow parents take on about a child s told a story. We all tell them. w we are shocked if children are at it. We say a great big black man liceman will get them.

ed Mrs. Grover to put Charley in rge for half an hour and, as she like the children, she let me have st putting his sister Maggie's dress Then I led him over to my porch ured him.

rley," I said, "I don't think it very to tell a story, since I've told more probably than any other man in ld, unless it is your father, who is home presently to whip you. But a reason why you shouldn't tell nd it is a very important one. Who you?"

ndma Grover," the boy replied.

re you are," I said; "a woman you. And I venture to say that un hour after you told this story e caught."

ey corrected my figures—he was n twenty minutes.

t's the reason why you shouldn't ies—you are always caught and always caught promptly. The with me has possibly been above minutes, but I have always been And it is usually the women who e. Women are more truthful than boys and they seem to take special n catching them in stories. I know n't like to worry your mother by edging you had gone to the pond. don't know knee-deep from over d.

couldn't have been drowned in d if the other boys had thrown you in and sat on you. You knew that, but your mother didn't, so you should have told her the truth. You should always behave as well as possible, since that is really the easiest way, but above everything else don't tell stories. The reason I have already explained—you are always caught. Millions of boys are telling millions of whoppers every day, but every wretch is caught; if not by his grandmother then by his sisters; if not by his sisters, then by some woman in the neighborhood. Young as you are, you must have noticed the pleasure your mother, grandmother, sisters and the neighbor women take in catching you. But you will never know how a woman can actually enjoy herself until you marry and your wife begins catching you. Promise me you will never tell another and I'll do what I can to get you off. I see your father coming home to dinner."

The boy promised, and we went over to his father, whose name is George Washington Grover, but people called him Wash.

"Wash," I said, "our friend Charley is in trouble. The women have caught him in a story and they are waiting for you to whip him. Of course I know you never told one, and I confess I am myself greatly shocked at Charley's conduct. But he has promised me he will never tell another, and if you will let him off this time I'll go on his bond."

"Well," Wash said, "I'll go in and talk to mamma about it."

And he led the boy away. I knew mamma was all right, and in a few minutes Charley appeared in his own clothes.

The advice I gave Charley I give you. Don't tell stories, because the women will always catch you.

Thomas Lane Montgomery

BILL HART is a rich man, largely for the reason that many years ago he got the notion in his head that he wanted more land.

That was his passion—land. He thought of it during the day, dreamed of it at night, and went in debt, paying out as fast as he could; and now he is rich. Bill's neighbor, Thomas Lane Montgomery, also had an ambition many years ago. It was to print a book of poetry. He finally succeeded, but his book was not profitable. A man who bought land in the early days could not avoid becoming rich, but there is no possibility of a man making money by publishing a book of poetry.

Old George Bennett

OLD George Bennett, who had been a local character for years, was found dead this morning in a wretched old house where he has lived alone for a long time.

He had long been separated from his wife and she had made him a good deal of trouble, owing to some flaw in their settlement. She lived in Ohio with their only daughter, and every little while appeared here and started a new suit of some kind against him. And in addition she made the most terrible charges against him, which the neighbors repeated, though they themselves knew nothing against the man. He has never been a burden to anyone. Somehow he has managed to get along. I frequently met him hobbling to and from the shop where he worked at his trade. I inquired among his associates and they all spoke well of him. They gave him work when he was able to do it and said he was a good workman. For two or three years he had been aging rapidly and occasionally been ill. His wife died a year ago, and old George had had peace since then, but with it he had illness, old age and poverty.

But he did not want for anything during his last illness. Six months ago his daughter, who lives in Ohio, came to see him. When she walked into his wretched home I heard he said: "Well, Mary, here's where your father lives."

Just that—no complaint of neglect. And his daughter burst out crying. She had been hearing from her mother that he was rich and would do nothing for them because of meanness.

His daughter was not well off herself, but she did a great deal to make her father more

LEAD
OXIDE
—and why we make our own

One of the processes in oxide making in the Gould Plant. Among all battery makers, only the Gould Storage Battery Company produces its own oxide.

Lead oxide is the basic factor in plate quality. That is why we make our own oxide in our own plant. By being in sole and direct control of the manufacturing processes, a *uniformly* high quality is more certainly obtained than would be the case were the supply secured from outside sources. These processes are necessarily slow, painstaking and costly, but on the other hand, the assurance of uniformity is worth all it costs to the manufacturer who guards jealously the quality of his product. The Gould Oxide Plant makes doubly sure the rugged quality and enduring life of *the Battery with the Dreadnaught Plates.*

Gould STORAGE BATTERY
WITH THE TRADE MARK Dreadnaught PLATES

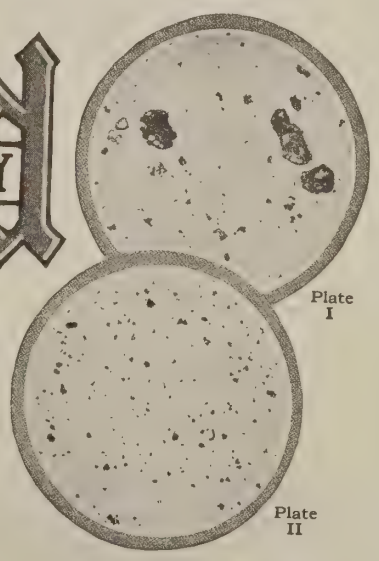

Plate I

Plate II

The Oxide Test

A uniformity test of lead oxide is reproduced here by greatly enlarged photo-micrographs, not retouched. The dark spots or fragments are oxide particles. Plate I shows oxide of the best quality procured in the open market. Note the lack of uniformity of the particles compared with Plate II, which shows Gould-Made Oxide. Dreadnaught Plates made with Gould Oxide give uniform resistance to disintegration. No weak spots, but even quality of the whole plate surface.

Over 2,000 Sales and Service Stations can supply a Gould Battery of the exactly right type and size for your car.

Gould Storage Battery Company

Quaker Flour

Made by The Quaker Oats Company

The Story

That Housewives Are Telling

All over America, women are telling women about Quaker Flour.

Their story won a million users before the Flour was advertised.

Today four mills supply the demand, with a daily capacity of 10,000 barrels.

Quaker cereals, by superlative quality, have won millions of friends the world over.

We decided to make for these quality lovers a Quaker grade of Flour.

So we built a model mill and placed it in charge of scientific millers. A laboratory was built to constantly analyze the Flour, and a bakery to constantly test it.

In this super-grade Flour we decided to use only one-half of the wheat kernel—just the choicest bits.

The result is a unique Flour, remarkably white and fine. It's the finest Flour that science can produce.

Housewives by the legions adopted it at once. And they spread the facts, until that one mill grew to four mills and the users to a million.

Ask your grocer for a sack. If he lacks it, have him get it. See how good a flour can be. You will always use it and get your friends to use it, when you know this Quaker Flour.

The Quaker Oats Company

Mills in Akron, O.; Cedar Rapids, Ia.; Peterborough, Ont.; and Saskatoon, Saskatchewan

In our Canadian mills, to conform to Government requirements, we use over one-half the wheat kernel.

3266

Quaker Biscuit Flour

We make another flour—this package flour—for dainties. It is made from special wheat in a special way for fine foods. The flour is self-raising and comes packed in sealed round packages with tops. Thus it keeps ever-fresh.

Use this special flour for biscuits, pancakes, cookies, cakes, doughnuts, etc.

Quaker Farina

This is inner wheat—just the choicest half of the wheat kernel—in granulated form. It is fancy farina—the finest grade possible—without a fancy price.

Inner wheat in this granulated form is delightful. Serve as a breakfast dainty or in fritters. Use in waffles, griddle cakes, etc.

comfortable. And after she went away a number of us sent him all sorts of things and said they came from his daughter Mary. He had become almost blind lately and I pretended to read letters to him from his daughter inclosing money in my care and making suggestions for his comfort. The neighbor men did it, but old George will never know. And the kindness of his daughter Mary always pleased him. The women said they supposed the old wretch should be taken care of in spite of his meanness, but the men contributed without comment of any kind, except that they had known him many years and knew no harm in him.

I shall always think less of gossip because of my acquaintance with old George Bennett.

Glen Barker

SOMETHING must be done about the band. For four years it has been practicing twice a week at the schoolhouse, and at least that often Glen Barker has taken up a collection to pay for new horns, new uniforms, new drums, and so on.

Glen Barker doesn't play in the band. He is the manager and devotes a good deal of time to the position. He never meets a citizen that he doesn't talk band finances and intimate very broadly that the town has no pride and no enterprise. He says the band plays in other neighborhoods and advertises us. His favorite expression is that the band has put this town on the map.

"What?" the manager screams to all of us with pathos in his voice. "Let the band go to pieces?"

Nearly every citizen is a craven coward, he has been abused so much for not doing more for the band; though all of us have done as much as we could afford to keep the organization together.

Last week the band played for the grocers' picnic and those present say its playing reminded them of a charivari. Instead of advertising us it causes us to be made fun of. We have long feared that the band didn't play very well, but it seems it can't play at all. Glen Barker, the manager, said to one critic: "Why, our band has twenty-five men! Mighty few country bands have that many."

To which the critic replied: "The larger a band like yours the worse it is. It wouldn't be near so bad if you had only seven or eight members."

And how Glen Barker, the manager, has pleaded with us to make one more effort to keep the band up to its full membership of twenty-five!

So we must do something about the band; and I am of the opinion that the calamity long dreaded by Glen Barker, the manager, is imminent.

Harvey King

HARVEY KING is hopelessly ruined at the age of thirty-six, though he comes of an excellent family and had every opportunity to become a useful and successful man. He attended school twelve years, but belonged to mandolin clubs and the school fraternities and wasted so much time that he would have been better off had he been learning a trade.

Soon after he became of age he married a good girl and was placed in charge of a profitable business through the influence of relatives, but he soon ruined it by neglect. He was given another chance, but his he not only ruined the business b ne but overdrew his account and as saved from disgrace by his relatio ra a considerable amount of money.

This has been his history ever s ce has been given opportunity aft o tunity and neglected them all.

Had this young man been br gh strictly as a boy he would have co useful man, as his father was. B h reared in the shiftless manner too in this town and his ruin is the r It

He had a very much better ch e the average and has made a failur pe he was not properly controlled a a He did nothing until he was almo o and depended on his father. F ll father died, and the modest fortu h was soon dissipated under the ma ge of an indulgent mother.

Harvey is bitter, but he has no ee victim of the slightest injustice. H h lacked the widest liberty and op tu Indeed he was born with a golde oc his mouth in a golden age. He w l treated—too kindly treated. He a advantage of good schools and a g l He is a wreck to-day because he ra properly brought up as a child.

Vic Walker

IT WAS lately decided that Vi W would be better off in the insan us I happened to be in the court ro n he was brought in and first rea d people thought him crazy. I n e quite so much astonishment as he sp when told that the charge agains i insanity.

"What?" he indignantly sai crazy? Why, I know more tha h of you!"

I suppose we all have that noti or less.

George Coleman

A COMMITTEE of farmers o Deer Creek neighborhood l vestigated the city scales. Th e have been noticing for some time h city scales gave a little better re t they had a load of hogs to sell a scales used by the buyer, so the h investigation in which they invit C Coleman, the mayor, to assist.

But it turned out all right. The e of the committee were fair and a unanimously that the difference w p bly due to optimism.

George Coleman says the man o ates the city scales has no interest of hogs except that he hopes the get as much as possible for it. o liberal in giving his figures; he y farmer a shade the better of it, so u can.

Same way when the farmer ret n his empty wagon. The city sc s makes the wagon weigh as little a o since it costs him nothing to b a fellow.

But it is different, George Cole n with the man who buys the hogs. e the load to weigh as little as pos o the empty wagon to weigh as u possible, and by the time opti s worked four times on one load of h s is a difference in weight that is t by the seller when he compares h tickets.

COMME SI, COMME ÇA

(Continued from Page 11)

"reat Scott!" said Lionel. "Let's get
tf this—what the devil ——"
d he slipped into reverse and took a
olbehind. There were five cars at our
and behind them the motor cop was
rully closing and locking the gate. He
d ome inside and—his duty done—was
ing cap in hand in an attitude of
ence. Ahead throngs of darkly dressed
ns, including Madame Cartiea, who
vore her weeds, and Eloise Dubois,
saucy brunette from my home town,
getting from their cars. But I was
t the moment thinking of my former
as expressed above.
Ot of a motor-hearse a coffin was being
e and people were sobbing and sniffing
er the place. *Sacré bleu*, but it was
y awkward! We got out, as there
seemed nothing else to do, and stood
e apart.
n the services began, the little crowd
nuine friends crowding about the
. Madame Cartiea and her compan-
ere among these and did not perceive
hey were evidently a real part of the
e and we had plainly made a hideous
er. We exchanged a horrified whisper
consulted our watches. Time was fly-
ace and the deceased lady appeared
ve possessed endless virtues upon
her pastor and several friends en-
dwelling at length and with repeti-
onfirmation.
"reat Scott!" whispered Lionel. "Will
never finish?"
eally appeared interminable and there
those five cars between us and the
ery gate.
"y Jove!" said Lionel, suddenly ex-
"There's a chap I know!"
"ho?" said I.
"y dad!" said Lionel. "Over there
g to the man in mourning—see!"
sure enough, there was the Old Boy,
in the bosom of this strange family!
bien, at length this—to us—inex-
bly dull ceremony came to an end,
he crowd began returning to their
ts. I anticipated, of course, that the
would at once be opened and that
eparture would be swift, but begin-
with the hearse each was in turn de-
by the motorcycle officer and
tted to pass only after considerable
ent. Madame Cartiea was still ahead
and we could see her gesture of pro-
to the policeman. The Old Boy had
ied into the family car. I began to
ence a strange sense of excitement
nticipation of something extremely
being imminent, and Lionel, *mon*
elt it too.
"hat the devil do you suppose the row
"e wondered aloud. "Everyone is
cs!"
Were soon put out of suspense as our
ar slid through the gateway.
"lley the car before ye," said the cop.
"It we are not going back to the recep-
-r—wake, my dear chap!" I protested.
"ception, me eye, yer pinched!" re-
he minion of the law.
noyable, n'est pas? Yet true. We were
ly under arrest, as was evident the
t we attempted resistance.
"It we are not even part of this affair!"
ted Lionel.
"r pinched—folley the car ahead!"
ed the officer savagely, and passed
he car behind us.
"y goodness! Do you suppose it was
der and they have only just found
?" said I.
"s something very strange," com-
ted Lionel. "Nothing to do but as we
d. I can't understand any of this—
that the widow has plainly misled us
more."
bien, we kept our place in the pro-
n until the head of it drew up before
courthouse of the little town to which
emetery belonged, where we were told
veral amateur policemen, whose only
ons were badges, to get out and go in-
It was a most amazing sight to see
burners herded in, and my alarm in-
ed steadily. What horrible thing was
to be revealed?
h prisoners, some twenty persons all
cluding the Old Boy and our lady
were herded before a magistrate
long beard, and the officer who had
e gate after standing cap in hand
e body was buried stepped forward.
Carge?" asked the clerk.

"Speedin', your honor," said the cop. "A funeral tearin' through the main street and not a one of thim movin' less than thirty miles an hour!"

Figurez vous our relief at this news. Of course the fellow exaggerated—I had myself noticed the speedometer, and we were making only a little better than twenty-five when we turned in at the cemetery gate. But these crude public officers are always inclined to make a good story. And the relief of paying the small fine which was imposed upon each of us was enormous. I for one was only too glad to pay it and escape. But not so the other members of the cortège. They made a most fearful row before they were through, and Lionel insisted upon remaining to see some of it and to speak with his father. The latter came over presently, in company with the bereaved brother, and we were both presented. Mr. Tungston, for that was the old gentleman's name, shook hands tearfully, and leaned in a broken way on old man McGuire's arm.

"So you are Tom's boy!" said the poor old fellow to Lionel. "I take it as most kind that Tom's boy should trouble to come to poor Arabella's funeral—young fellows don't often think of such things nowadays."

"Ach! Tom's a good boy at the heart of him!" said his father. And Lionel solemnly shook hands and mutely took every bit of credit, the cunning rascal!

"This shocking disturbance is too bad, too bad!" said Mr. Tungston. "I hope I shall see Tom's boy again under pleasanter conditions—I do appreciate a young man coming all this way, I do!"

And with this the Old Boy led him away, and I urged Lionel to take instant advantage of our freedom, as it was getting nearer and nearer to the hour of the auction and we were still miles away. He, however, kept dawdling first to light a cigarette, then to find his gloves, and I became exasperated until I perceived Madame Cartiea approaching.

"How do you do, Mr. Kentt?" she said. "Isn't this terrible? Hello, Mr. McGuire! I didn't realize you people knew the Tungstons."

I made a frantic high sign to keep still, but Lionel didn't see it, being all eyes for the widow.

"We don't know them!" he blurted out before I could stop him. "We are on our way to the Durand sale and this was purely an accident!"

"The Durand sale?" inquired Cartiea. "Not old Chester Durand? Why, I didn't realize he was dead! That ought to be an interesting old house. I believe we'll go along!"

There now! Wasn't that just too annoying? She hadn't even heard of the sale at which we hoped to procure something for her own client, and here that wretched boy had to go and simply hand the thing over to her. *Sacré bleu!* I perceived in a flash that I and I alone had any brains in my establishment and that somehow or other I must rescue us from the situation into which dear Lionel had so thoughtlessly precipitated us.

Grand Dieu, comme je deteste cette femme la! She didn't seem to know I was on earth! In point of fact, Lionel, without even so much as consulting me, invited her to drive with him, and in less time than it takes to tell I found myself relegated to the tonneau of the Roynton and the company of Eloise Dubois. Above the yellow fur about her throat her black eyes snapped and sparkled at me in that dreadful humorous manner of hers that makes me thoroughly uncomfortable. Eloise and I having been at school together, she somehow contrives to make me feel indecently transparent.

"Well," said she as we started off, "*parle vous le Française aujourdui.*"

"Who are these Tungstons?" I inquired, ignoring her gibe. "Not *the* Tungstons?"

"*O là, là! Comme il et droll, cette homme la!*" replied Eloise. "Of course they are the collector Tungstons. That's why we came, for though we have had no personal touch with him, she was a client of ours in a small way. The old fellow is self-made and did a rather poor job, don't you think?"

"Ah!" said I, and lapsed into silence. But I was amazed. Here I had met Silas Tungston, who stood second only to Morganthawl in importance as a buyer of

A Simpler Way To Prepare Your Face For Shaving

Shavaid, from the laboratories of Bauer & Black, turns an irritating task into a refreshing pleasure. You are invited to try this luxurious beard softener at our expense. The coupon brings a Free Trial Tube.

THIS is a message of supreme relief to men who shave. It means an end to old, slow, harsh ways. Shavaid brings real comfort. It saves time.

Shavaid prepares the beard properly for shaving. It softens the hairs quickly, and acts on the skin as a cooling, soothing balm.

It reduces the annoying and time-consuming preparation hitherto necessary. Now you need merely apply a thin coat of Shavaid to the dry face, then the lather—which need not be rubbed in—then shave.

The result is amazing.

Shavaid

Softens the beard instantly
—apply to dry face before the lather.

Saves time and trouble
—no hot water, no "rubbing in" of the lather.

Protects the face
—skin remains firm and smooth.

Removes the razor "pull"
—harsh ways age the skin prematurely.

Replaces after-lotions
—Shavaid is a cooling, soothing balm.

All In Shavaid

No need now, before shaving, to apply hot water applications. No need to give the face a mussy lather rub. Shavaid takes their place.

Hot water applications before shaving should be avoided, as skin specialists agree. Hot water makes the face tenderer. It brings the blood to the surface at the wrong time. . . .

Pores are opened abnormally. The skin is rougher. Natural oils are removed.

Shavaid keeps the skin firm and smooth—the pores remain normal during shaving. The razor gains a clean sweep. You can shave closer—*with real comfort!*

And without the usual abrasions and the frequent need of the caustic stick.

The coating of Shavaid not only softens the beard, but acts as a complete and scientific balm for the skin. The cuticle is protected. The face feels soft and velvety.

And during the shave, Shavaid keeps the lather moist and creamy. There is none of that dried-out stretched feeling to the skin.

Harsh treatment ages the skin prematurely and brings wrinkles. Men who shave daily should protect their skin against all irritating ways.

Tested and Proved

Shavaid comes to market after a long scientific study and countless experiments.

We realize, however, that what we say about it may appear almost incredible to men who have found no relief in years.

And so to further convince you, we want you to try Shavaid, and to give it a thorough test, at our expense.

We want you to judge it by comparing it with your present way. Then there is no question of its efficiency. It proves that it can save time. It proves its ability to make shaving easier, pleasanter.

Merely mail us the coupon and we will send a free trial tube, sufficient for this test.

Then after trying it, and agreeing that it is what you have long wished for, you can buy it at your druggist's for 50c per tube.

A Bridge from London to New York

Enough Sta-so was sold last year to surface a roll of roofing 50 feet wide and 3788 miles long

Sta-so crushed slate roof surface has made good roofing better because—

Sta-so has brought soft natural colors to thousands of roofs; a rich Indian red and a cool sage green.

Sta-so cannot fade; Sta-so color stays as nature made it. No need ever to paint or stain your Sta-so surfaced roof.

Sta-so resists fire; it is actually fireproof against sparks or flying embers.

Sta-so resists weather and wear; it is waterproof, absolutely.

Sta-so is economical;—it averages one-third the price of tile; one-half the price of solid slate; usually costs less than the best wood shingles.

You can buy Sta-so slate surfaced asphalt roofing in shingle or roll form. When next you buy roofing, look for and find the Sta-so label—for that label is a full guarantee that your roof will never fade or turn black.

These manufacturers of roofing products bought enough Sta-so last year to surface *one billion* square feet of roofing.

Amalgamated Roofing Co. . . Chicago, Ill.	McHenry Millhouse Mfg. Co. South Bend, Ind.

antiques, and had failed to realize my opportunity of making a good impression. In point of fact, I had been rather distinctly rude, having accounted him merely a troublesome old man who stood in the way of my reaching the Durand sale. No wonder that the remainder of the trip was accomplished under a pall of gloom which was in no way lightened by not being able to avoid seeing what an amusing time Lionel and the widow appeared to be having in the open car ahead. And then at length we drew in sight of the goal of our journey, and I was still utterly at a loss as to how I would proceed in my averting of the very possible cataclysm.

The exterior of the Durand mansion was what I may term typically auctionesque. In point of fact, it was the sort of place that dealers often use as a clearing house for their most unsalable junk by simply piling it all in pellmell, hanging out a red flag and feeding the trash to a fortunately transient public—mostly passing motorists. I had no doubt but that the Durand mansion would eventually be the setting for many such a sale. But at this first and genuine one it presented rather a forlorn, bedraggled appearance, the local auctioneer, a mere vulgar deputy sheriff, or some such low person, being all too evidently devoid of imagination in the setting forth of his wares.

Eh bien! He had no profit to make, so he should fret, as dear Lionel put it. Yet he might have shown a little discrimination in the arrangement of the old duffer's effects. The house was Victorian—or rather, late Grant, to be exact—and there was little in it of value, but any quantity of obsolete trash. *Mais il etait bien conneau* that oft among this so-called self-evident trash treasures have more than once been discovered. And it was in the direction of it that every professional in the crowd immediately turned an unobtrusive attention.

For the dealers were there—Atwood from East Sixtieth Street, Hodlow and Barrows, Joe Tweedhole and that horrid affected Eddie Wolkson of The Bijoutree. In point of fact, it was plain at a glance that this unknown, unadvertised sale in this inconveniently situated corner of the map, where nothing but broken black walnut and tarnished steel-framed mirrors and velvet tidies hand painted in oil were on exhibition, was being attended by every dealer of importance, or his representative, from Washington to Boston. There were practically no small dealers or local treasure seekers. It was a gathering of the clans, the members all furtively watching each other, and the sneaking, underhand things had got there without telling a soul they were coming—ugh! Disgusting, I call that method! I had come, of course, unannounced, but for the special reason of the Sully miniature. And before I had been on the ground fifteen minutes I became convinced, nay I knew that this supposition was what had drawn each and every last one of the others to the spot. I knew, for the very good reason that not a soul mentioned the subject of the miniature. At any other time and place this portrait and the mystery surrounding its whereabouts would have inevitably entered the conversation. But now? Silence! Utter silence! Even Madame Cartiea, to whom the very existence of the sale had been unknown but an hour since, knew of the miniature—that was plain. She made a casual, indirect reference to it as we inspected the broken lots of china in the gloomy dining room.

"There was an Arabella Durand, was there not, Mr. Kentt?" she remarked, holding aloft a perfectly uninteresting kitchen jug and eying it critically.

"Was there?" I replied. And so we deadlocked, each perfectly aware of what was going on in the mind of the other.

But search as I might, peering eagerly if furtively into every draw, every crannie, every vase and whatnot, I could find nothing of the least interest. Nor could I shake off Madame Cartiea, who—contrary to all precedent—clung to my company. And I, usually so anxious that she should—er—that she should—er—well, that she should, was for once anxious to be rid of her. She chatted incessantly in the most friendly fashion, asking my opinion on this or that and positively cooing at times. And had it not been for the fact that occasionally I caught a strange gleam in her eye I would have taken her seriously. It was not until we reached the library that I got the least chance to do any real hunting, and then at last Eloise and Lionel laughingly called her to inspect something in the room beyond and I made a stealthy dive for the l baskets which stood upon the long tabl And there I made a startling discovery.

It was undoubtedly the Sully miniatur Or at least so I had every reason to suppos

Voilà! Let me explain to the uninitiate When, as in the case with old Duran there is no one except a public official dispose of the effects, such papers, lette prints, tokens, and so forth, *les petits chos* in other words, which ordinarily the fami would destroy or divide as mementos of value to outsiders, were simply thrown in baskets or boxes and auctioned off, " is." One thing only is required by the law that is, that no sealed envelopes or box which, of course, might contain treasure, among them. And if any such be discover it is the duty of any person at t sale having such knowledge to tell t auctioneer person before the sale is co cluded. And in my apparently nonchala examination of a basket containing old l ters of no value, a few broken prints a steel engravings, the while my trained a sensative fingers were secretly feeling amo the lower part, I clutched an envelop sealed and patently containing an oblo object about five inches in length and fo in width, carefully packed in an out wrapping of some soft material—possib shredded paper!

Je vous assurez my heart almost ceas action at that moment. Fortunately the was a steel engraving of Lincoln on the t of that basket—not a bad thing, wor perhaps fifty cents to the dealer, as proper framed it might easily fetch ten fifteen dollars from a collector. I rivet my eyes on this the while my soul w positively glued to that miniature. Wh should I do? To announce my discove would create a furore, a panic, and send t price into the thousands, whereas if I we simply to buy in Lot Fifty-two—a bask of old scraps—I might get it for a dollar less! My heart shook at the idea. A ten to one not another soul in the place h found it! It was halfway down the he and it seemed patent that if anyone h examined the basket at all they had ab doned it in disgust before reaching t envelope. Making a bold decision I det mined to keep my mouth shut, and slid t packet a little further into the mass so th it was now three-quarters of the way dow and composing myself as best I could joined the others, as it was almost time f the sale to begin and people were taki their places on the camp chairs in the wi hall.

Oh, mercy! Never shall I forget t strain of that auction! From Number O to Number Fifty-two seemed an age, a once, after Madame Cartiea had absent herself for a short time I slipped awa unable to endure the tension, a entered the library to feel if my treasu was still there. And then, *voluntier*, nearly fainted, for the sealed envelope h been moved! It was no longer where I h placed it but now lay concealed almost the bottom of the pile. Someone else kne Heavens! But who? Madame Cartie Very possibly. I tiptoed back to my se which was across the hall from hers, a sat there in an agony of suspense. soon as the bidding began on that basket would know. And at length after a mirr and a kitchen stove had been disposed the deputy, a countrified person whose sh and tie were in the most abominable tas called "Lot Fifty-two," and the wh gathering—or so I fancied—leaned forwa and held its breath.

The asking started at fifty cents—liber enough—and for a moment nobody bi Then in as indifferent a voice as I cou muster I inquired if there was an engravi of Lincoln on the top of the basket.

"Gent wants ter know is there a pict of Lincoln on the top, Jim," repeated t auctioneer to his assistant.

"Yep!" said the freckle-faced boy.

"Sixty cents," I bid.

"Seventy-five," said Tweedhole quickly too quickly.

"Eighty," said I. Then Cartiea spoke and I knew she knew.

"One dollar!" said she quietly—t quietly.

"One dollar!" said the auctioneer. am bid one dollar."

"One twenty-five!" said I.

"Ten dollars!" squeaked a thin, fooli voice at the rear, and everyone turn round to look. It was Eddie Wolkson The Bijoutree. His face was white a hysterical looking. An audible chan

n over the crowd. The secret was out, Edie knew it, and we became wolves—
s vely!
"leven dollars!" said Madame Cartiea.
"ifteen!" I bid.
"wenty!" shrieked Eddie.
"wenty-five!" called Cartiea.
"hirty!" said Tweedhole.
d with that the fur began to fly. When
undred dollars had been bid Eddie
d and had to be carried out, his face
olor of his lemon-foulard tie. And
order was restored and the bewildered
neer had resumed the sale, prices
anew. When nearly one thousand
s was reached I laid down. What was
se? Suppose that after all it was not
ully? And then a bright idea flashed
my brain: Let her bid it in and then
hat I knew. In the event of its being
ully the law would require that the
e held over again, and if one must bid
gh, why not bid openly? The auc-
r called:
ine hundred and ninety dollars—I
d nine hundred and ninety."
s was my last bid and nobody stirred.
ntly the purchasers had come to a
ock. Perhaps the idea which occurred
had occurred to them also. It was an
moment.
ne, two, three!" said the auctioneer,
to the little feller in the green suit!"
before I knew it the basket was in
p and Tweedhole was shouting "one
and dollars."
oo late!" said the auctioneer firmly.
Fifty-three, what am I offered?"
aited to hear no more. Trembling so
could scarcely walk, I left the room
my treasure and sequestering myself
nook in the library fished out the
us envelope and without difficulty—
e glue was dry—opened it with shak-
nds. It contained old revenue stamps.
e center was a miniature case. I
d it and found—more old revenue
s!
d paid nine hundred and ninety dol-
a lot of old canceled revenue stamps!
ly feeling came upon me and a hot
of shame.
tomatically I slipped the wretched
back into their container and licked
ue of the flap. Then as I heard foot-
approaching I hastily slipped the evi-
of my chagrin into the depths of the
and sat there desperately striving
sent a calm exterior to the intruder.
Madame Cartiea.
"r. Kentt," she said tremulously, "I
ing to ask you a great great favor.
is something in that basket that I
ave. You know as well as I do what
a miniature. I will not attempt to
se from you the fact that the loss of
ht mean a great deal to one of my
lients. My negligence in not being
ed for this sale is heavy on my con-
e. I have just written you this check
to thousand dollars. Will you take it
—the basket? It's a great favor and
ill not lose by obliging me. Will
a moment—*une petit moment*—I

ned at once to the sale and touched
on the arm.
me at once!" I whispered. "Hurry—
ez vous!"
right!" said he, extricating himself
is place after a nod to Eloise. The
was nowhere to be seen.
nother moment we had left the house
re climbing into our roadster.
here is the basket?" demanded Lio-
What was in it?"
tell you later!" I exclaimed. "I
t you not to ask me now. We have
the deal of our lives. But I simply cannot explain until we get to town. Please don't tease me to tell!"

"All right!" agreed Lionel sulkily. "But I think it's mean of you after all that excitement. But tell me one thing—was it the Sully?"

"No!" said I.

"Whew!" said he expressively.

By this time we had left Durand's well behind and were speeding toward town. I heaved a sigh of relief. If I had been forced to tell the dear lad goodness knows but that he might have insisted upon my turning back and restoring the check or some such nonsense.

As we approached the little town where Miss Tungston's funeral had been held Lionel turned in toward that mansion at which on the outward trip Madame Cartiea had asked for directions.

"Do you mind if I stop at the Tungstons' for my dad?" he asked. "I told him we would on the way back and he has waited on. The old bird is a school chum of his and was glad to have him."

"Stop by all means," I replied. "I am only too glad to oblige your dear father and his distinguished friends. But I will wait out in the car if you don't mind. I am sure it would seem indelicate for me to intrude."

"All right, old thing," Lionel agreed, stopping under the magnificent porte-cochère. "I won't be long."

But in this he misled me. He was so long that after a time I became positively alarmed, and had it been any other establishment than the Tungstons' I would have honked for him. As it was, I had begun seriously debating whether or not I should ring and instruct a lackey—I am sure there were lackeys—to inquire for him, when the door at length opened and he reappeared in company with his rotund parent and little old Mr. Tungston—and will you believe it? Emerging from that house of mourning they were laughing! Positively! Lionel carried a small object in one hand and shook his host's cordially with the other. Old man McGuire was beaming on his son and Mr. Tungston patted him on the back.

"My dear boy!" he said earnestly. "I am only too happy to be able to help you. So few young persons trouble with their father's friends nowadays."

Nobody paid the slightest attention to me except to relegate me to the little third seat which sticks out most precariously over the running board. The old boy took my usual place and Lionel sprang to the wheel like a—like a—well, like a lion, and we were off.

"What is it?" I demanded after we got started. "What have you got?"

"I can't possibly tell you until we get to town!" replied Lionel, a peculiar glint in his eye. "So please don't tease me to!"

Çela va sans diere, I shut up after that, and when the seemingly interminable ride was over and we had left Mr. McGuire, Senior, at his hotel, put up the car and so forth and at length reached our gallery it was after five o'clock.

Lionel preceded me to the private office, and shutting out the inquisitive Walker, the second assistant curator, turned on the special lighting, drew up a chair, made me sit in it as though I were a distinguished client and told me to close my eyes.

"What bosh!" said I. But I obeyed him none the less.

"Take a good breath and open them!" said Lionel.

I did so, and there, as charmingly arranged as if I had been Morganthawl himself, lay a miniature case upon a fold of gold brocade. And in the case lay the miniature of a young woman in the period of about 1820. It was exquisite—undoubtedly a masterpiece.

"What——" I began faintly. "What is it?"

"Turn it over, old scout!" said Lionel, gleeful as a boy.

I did so, and there were the words I half hoped to see but scarcely dared to credit:

"Arabella Durand by Thomas Sully, 1822."

The next thing I recall was Lionel holding smelling salts to my nostrils and hearing somebody—possibly myself—murmuring *"Mon Dieu, Mon Dieu"* over and over again. It was a full half hour before I had sufficiently recovered to question him. And then I unearthed these astonishing facts. *Le Voild!*

It appears that Lionel, having been questioned by his father and Mr. Tungston as to where he had been, recounted the whole story of the auction and our quest for the Sully miniature—also of our hopes and

PELTERS
TRADE-MARK
Smart Utility

You Want a Pelter, Too!

Leather coats have come into their own this year—and Pelters are leading the field.

That's why you see Pelters everywhere—on the people whom you most admire. A Pelter is not only the best looking coat you could wear—it's cold-proof, wet-proof, wind-proof, and practically wear-proof. It keeps you good and warm on the coldest day—and looks almost as good as new its third season.

Pelters are reversible, too. "Gabardine and Leather, there's a side for every weather"—and just double the wear of a coat you can't reverse. The gabardine is "Cravenetted" to be 100% water-proof—leather is nature's own cold-proof material.

Pelters are made as well as leather coats can be made—carefully tailored out of finest, softest, most durable leather, to fit well, look well and wear well.

For men, women and children, $30.00 up. Look for the name on every "Pelter."

Go pick out your model at the store that sells Pelters. If you don't know one in your locality, write us.

fears about Morganthawl and what his patronage would mean to us—all, I presume, in that naïve outspoken manner of his, which has so often done us more harm than good. But not so upon this occasion.

"And when I got through," said dear Lionel in telling it, "the old bird, who hadn't let out a peep during the whole time, got up and left the room. When he came back he brought the damn thing with him. 'Young man, I like you,' he said. 'And while I don't think very highly of antiques as a business I'd like to help my old friend's boy along. If selling this will help you, do so. My late sister bought it from old Mr. Durand about twenty years ago and I think she fancied it because of the similarity of the names. Take it—and good luck attend you!'

"That's what he said, he did, God love him!"

"I'll be—be damned!" said I.

"Probably!" said Lionel briefly. "And now out with your own secret, you naughty boy!"

Looking at the miniature lying there safely upon our desk and thinking of Cartiea's check in my pocket, I began to laugh. And then when I could control myself sufficiently I told him of the tremendous joke I had put over on her. I was extremely dramatic in my recital, making it as vivid as possible and not—I trust—without humor.

And I was so absorbed in my story and so immensely amused by it that I really didn't notice Lionel's face until I had quite completed the tale. And then—*nom du nom!* You should have seen it! It was positively livid! I shrank back in my chair and grasped the arms.

"You—you shrimp! You little stinging lizard!" said Tom in a cold, metallic voice that I didn't like in the least. "You young scoundrel! Can you never be decent?"

"I—er—of course it's only a joke!" I said feebly.

"A joke! And equally of course you were not going to cash that check?" he went on, towering above me in the most alarming way. "Well, you bet your sweet life you are not!"

"*Mais certainment!*" I stammered. "I was going to—to—er—return it to-morrow."

"You are going to return it to-night!" said Tom, jamming my hat upon my head with quite unnecessary violence—the great rough thing! Then he caught up the telephone and called Madame Cartiea.

"But you must!" he said. "You must see us! We've got it and are bringing it right over—yes, the Sully. I know you wired him from the auction. Make Mr. Morganthawl wait. We won't be ten minutes!"

"You are not——" I gasped in horror.

"Yes, we are," he snapped, hanging up and putting the miniature into his vest pocket as carelessly as if it had been a spectacle case. "Come on this instant!"

Well, there was no good resisting, and I permitted myself to be dragged across Avenue and shortly thereafter into presence of Madame Cartiea.

To say that the presence was a cold is to put it mildly. She was like a Gr goddess, only blond, and stood like a mar statue or something while Lionel talked

"Madame Cartiea—we have come explain," he began, but she broke in on h

"There can be no explanation," she s quietly. "I made a fool of myself an can take my punishment. I bought t basket with the perfectly clear—though spoken—understanding that it contai the miniature. I even telegraphed for Morganthawl to meet me here. He is this moment in the other room with t basket of worthless papers. I was obli to show it to him and was just about tell him the whole story when your t phone call came. If you have really a thing to say about the Sully, please quick, as he is waiting."

"I have only this to say," replied Lio looking her straight in the eye: "And t is that the sale of it is a commission from Mr. Tungston. As Mr. Morganth is really your client you may consumm the deal, but we want the usual commiss and the mention of our firm name as hav procured the picture—that is business since you insist upon keeping it pu business—Blanche."

She was so astounded that she overloo the last word.

"Then you have actually brought Sully over?" she cried, as nearly disc certed as I ever hope to see her.

"Surely," replied Lionel, producing "And Kentt here has brought back y check."

She took the miniature with a glad li cry, and then before I could get out pocketbook a most amazing thing h pened: The door at the farther end of room burst open and in came Morganth himself in a high state of excitement. hair was rumpled and his collar and askew, tears of gladness were stream down his face—and in his hand was envelope full of old revenue stamps.

"You had them!" he cried to Mad Cartiea. "You had them and you ne told me! You left me alone to disc them! Ah! My friend! My benefactr The beautiful precious stamps that make mine the only perfect collection in world! How much? How much? Th thousand dollars—four thousand? N your own price!"

"Keep that check!" said Lionel, s denly seizing me by the arm. "Come o let's get out of this! I'm going to quit antique business and start a lunatic asyl Eventually I'll get exactly the same entele."

TUTT AND MR. TUTT

(Continued from Page 21)

'I:he punishment would do any good—
!'agreed Tutt.
'Vll, who knows?" meditated Mr.
.t. "I wonder if it ever does any good?
zybody would have to agree that re-
sibility for one's acts should depend
ne degree of one's intelligence—and
at point of view many of our friends
ely much less responsible than sheep."
Wich, as you so sagely point out,
ilchowever, be a poor reason for letting
ir milies punish them in case they did
ng Just think how such a privilege
ntbe abused! If Uncle John didn't be-
e himself as his nephews thought
nethey could simply set upon him and
.l beat him up."
Y, of course, the law even to-day
gives the right to exercise physical
ipie within the family. Even homi-
is xcusable, under Section 1054 of our
e, hen committed in lawfully correct-
a ild or servant."
T t's a fine relic of barbarism!" re-
ike Tutt. "But the child soon passes
ou that dangerous zone and becomes
ible to be tried for his offenses by a
r chis peers; the animal never does."
Wl, an animal couldn't be tried by a
r ohis peers, anyhow," said Mr. Tutt.
I' seen juries that were more like
nygoats than men!" commentated
. 'I'd like to see some of our clients
l juries of geese or woodchucks."
Tl field of criminal responsibility is the
Mn's Land of the law," mused Mr.
. 'Roughly, mental capacity to un-
tal the nature of one's acts is the test,
it applied arbitrarily in the case of
arbeings and a mere point of time is
n eyond which, irrespective of his
al ntelligence, a man is held account-
fc whatever he does. Of course that
ecttically unsound. The more intelli-
aperson is the more responsible he
idbe held to be and the higher the
itpf conduct demanded of him by his
ws Yet after twenty-one all are held
ll responsible—unless they're actu-
inne. It isn't equity! In theory no
o animal should be subject to the
r discretionary punishment on the
o another—even his own father or
er I've often wondered what earthly
v have to make the animals work
s-to bind them to slavery when we
re slavery as a crime. It would
fy s to see a human being put up and
at uction. Yet we tear the families of
alapart, subject them to lives of toil,
silthem whenever we see fit. We say
io his because their intelligence is
edind they cannot exercise any dis-
nation in their conduct, that they are
vsn the zone of irresponsibility and
vino rights. But I've seen animals
we shrewder than men, and men who
v tly less intelligent than animals."
igt-o!" assented Tutt. "Take
gs for instant. He's no more re-
ib than a chipmunk."
e rtheless, the law has always been
tut," said Mr. Tutt, "and has never
mated between animals any more
t as between men on the ground of
ngdegrees of intelligence. They used
'n all, big and little, wild and do-
cad, mammals and invertebrates."
h,ome!" exclaimed Tutt. "I may
no much law, but ——"
eteen 1120 and 1740 they prose-
inFrance alone no less than ninety-
nials. The last one was a cow."
ow hasn't much intelligence," ob-
'utt.
nchey tried fleas," added Mr. Tutt.
ne have a lot!" commented his
artner. "I knew a flea once,
—"
ne had a regular form of procedure,"
ul Mr. Tutt, brushing the flea
"hich was adhered to with the ut-
emical accuracy. You could try an
dul animal, either in person or by
f you could try a whole family,
herd. If a town was infested by
orxample, they first assigned coun-
n dvocate, he was called—and then
fedlants were summoned three times
yo appear. If they didn't show up
tird and last call they were tried *in*
aand if convicted were ordered out
country before a certain date under
y f being exorcised."
nahappened if they were exorcised,"
T t curiously.

"It depended a good deal on the local power of Satan," answered the old lawyer dryly. "Sometimes they became even more prolific and destructive than they were before, and sometimes they promptly died. All the leeches were prosecuted at Lausanne in 1451. A few selected representatives were brought into court, tried, convicted and ordered to depart within a fixed period. Maybe they didn't fully grasp their obligations or perhaps were just acting contemptuously, but they didn't depart and so were promptly exorcised. Immediately they began to die off and before long there were none left in the country."

"I know some rats and mice I'd like to have exorcised," mused Tutt.

"At Autun in the fifteenth century the rats won their case," said Mr. Tutt.

"Who got 'em off?" asked Tutt.

"M. Chassensée, the advocate appointed to defend them. They had been a great nuisance and were ordered to appear in court. But none of them turned up. Mr. Chassensée therefore argued that a default should not be taken because *all* the rats had been summoned, and some were either so young or so old and decrepit that they needed more time. The court thereupon granted him an extension. However, they didn't arrive on the day set, and this time their lawyer claimed that they were under duress and restrained by bodily fear—of the townspeople's cats. That all these cats, therefore, should first be bound over to keep the peace! The court admitted the reasonableness of this, but the townsfolk refused to be responsible for their cats and the judge dismissed the case!"

"What did Chassensée get out of it?" inquired Tutt.

"There is no record of who paid him or what was his fee."

"He was a pretty slick lawyer," observed Tutt. "Did they ever try birds?"

"Oh, yes!" answered Mr. Tutt. "They tried a cock at Basel in 1474—for the crime of laying an egg."

"Why was that a crime?" asked Tutt. "I should call it a *tour de force*."

"Be that as it may," said his partner, "from a cock's egg is hatched the cockatrice, or basilisk, the glance of whose eye turns the beholder to stone. Therefore they tried the cock, found him guilty and burned him and his egg together at the stake. That is why cocks don't lay eggs now."

"I'm glad to know that," said Tutt. "When did they give up trying animals?"

"Nearly two hundred years ago," answered Mr. Tutt. "But for some time after that they continued to try inanimate objects for causing injury to people. I've heard they tried one of the first locomotives that ran over a man and declared it forfeit to the crown as a deodand."

"I wonder if you couldn't get 'em to try Andrew," hazarded Tutt, "and maybe declare him forfeited to somebody as a deodand."

"Deodand means 'given to God,'" explained Mr. Tutt.

"Well, I'd give Andrew to God—if God would take him," declared Tutt devoutly.

"But who is Andrew?" asked Mr. Tutt.

"Andrew is a dog," said Tutt, "who bit one Tunnygate, and now the Grand Jury have indicted not the dog, as it is clear from your historical disquisition they should have done, but the dog's owner, Mr. Enoch Appleboy."

"What for?"

"Assault in the second degree with a dangerous weapon."

"What was the weapon?" inquired Mr. Tutt simply.

"The dog."

"What are you talking about?" cried Mr. Tutt. "What nonsense!"

"Yes, it is nonsense!" agreed Tutt. "But they've done it all the same. Read it for yourself!" And he handed Mr. Tutt the indictment.

"The Grand Jury of the County of New York by this indictment accuse Enoch Appleboy of the crime of assault in the second degree, committed as follows:

"Said Enoch Appleboy, late of the Borough of Bronx, City and County aforesaid, on the 21st day of July, in the year of our Lord one thousand nine hundred and fifteen, at the Borough and County aforesaid, with force and arms in and upon one Herman Tunnygate, in the peace of the

YOU MAY HAVE the best engine in the world in your car—perfect springs—the best transmission and clutch known—you may have spent money regardless to get the finest in all these things and yet that does not and cannot make your car a good motor car unless your Rear Axle is mechanically correct and physically perfect.

SALISBURY AXLES embody all the proven principles of Automobile Engineering applied with 18 years of practical experience in building standard, dependable axles for the automobile trade.

SALISBURY REAR AXLES built of our own special formulæ steel combine a high margin of safety in strength with simplicity of construction, easy accessibility, smooth, silent running and positive dependable brake action.

No axle leaves the Salisbury factory until it has passed the most rigid tests known for the highest type of physical strength and mechanical perfection.

Built for Automobiles weighing 2600 to 3200 lbs.

SNOWDRIFT
pure vegetable cooking fat

In air tight packages so that Snowdrift is sure to be pure and sweet and fresh

State and People then and there being, feloniously did willfully and wrongfully make an assault in and upon the legs and body of him the said Herman Tunnygate, by means of a certain dangerous weapon, to wit: one dog, of the form, style and breed known as 'bull,' being of the name of 'Andrew,' then and there being within control of the said Enoch Appleboy, which said dog, being of the name of 'Andrew' the said Enoch Appleboy did then and there feloniously, willfully and wrongfully incite, provoke, and encourage, then and there being, to bite him, the said Herman Tunnygate, by means whereof said dog 'Andrew' did then and there grievously bite the said Herman Tunnygate in and upon the legs and body of him, the said Herman Tunnygate, and the said Enoch Appleboy thus then and there feloniously did willfully and wrongfully cut, tear, lacerate and bruise, and did then and there by the means of the dog 'Andrew' aforesaid feloniously, willfully and wrongfully inflict grievous bodily harm upon the said Herman Tunnygate, against the form of the statute in such case made and provided, and against the peace of the People of the State of New York and their dignity."

"That," asserted Mr. Tutt, wiping his spectacles, "is a document worthy of preservation in the Congressional Library. Who drew it?"

"Don't know," answered Tutt; "but whoever he was he was a humorist!"

"It's no good. There isn't any allegation of *scienter* in it," affirmed Mr. Tutt.

"What of it? It says he assaulted Tunnygate with a dangerous weapon. You don't have to set forth that he knew it was a dangerous weapon if you assert that he did it willfully. You don't have to allege in an indictment charging an assault with a pistol that the defendant knew it was loaded."

"But a dog is different!" reasoned Mr. Tutt. "A dog is not *per se* a dangerous weapon. Saying so doesn't make it so, and that part of the indictment is bad on its face—unless, to be sure, it means that he hit him with a dead dog, which it is clear from the context that he didn't. The other part—that he set the dog on him—lacks the allegation that the dog was vicious and that Appleboy knew it; in other words an allegation of *scienter*. It ought to read that said Enoch Appleboy 'well knowing that said dog Andrew was a dangerous and ferocious animal and would, if incited, provoked and encouraged, bite the legs and body of him the said Herman—did then and there feloniously, willfully and wrongfully incite, provoke and encourage the said Andrew, and so forth.'"

"I get you!" exclaimed Tutt enthusiastically. "Of course an allegation of *scienter* is necessary! In other words you could demur to the indictment for insufficiency?"

Mr. Tutt nodded.

"But in that case they'd merely go before the Grand Jury and find another—a good one. It's much better to try and knock the case out on the trial once and for all."

"Well, the Appleboys are waiting to see you," said Tutt. "They are in my office. Bonnie Doon got the case for us off his local district leader, who's a member of the same lodge of the Abyssinian Mysteries—Bonnie's been Supreme Exalted Ruler of the Purple Mountain for over a year—and he's pulled in quite a lot of good stuff; not all dog cases either! Appleboy's an Abyssinian too."

"I'll see them," consented Mr. Tutt, "but I'm going to have you try the case. I shall insist upon acting solely in an advisory capacity. Dog trials aren't in my line. There are some things which are *infra dig*—even for Ephraim Tutt."

IV

MR. APPLEBOY sat stolidly at the bar of justice, pale but resolute. Beside him sat Mrs. Appleboy, also pale but even more resolute. A jury had been selected without much manifest attention by Tutt, who had nevertheless managed to slip in an Abyssinian brother on the back row, and an ex-dog fancier for Number Six. Also among those present were a delicatessen man from East Houston Street, a dealer in rubber novelties, a plumber and the editor of Baby's World. The foreman was almost as fat as Mr. Appleboy, but Tutt regarded this as an even break on account of the size of Tunnygate. As Tutt confidently whispered to Mrs. Appleboy, it was as rotten a jury as he could get.

Mrs. Appleboy didn't understand why Tutt should want a rotten jury, but she nevertheless imbibed some vicarious confidence from this statement and squeezed Appleboy's hand encouragingly. For Appleboy, in spite of his apparent calm, was a very much frightened man, and under the creases of his floppy waistcoat his heart was beating like a tom-tom. The penalty for assault in the second degree was ten years in state's prison, and life with Bashemath, even in the vicinity of the Tunnygates, seemed sweet. The thought of breaking stones under the summer sun—it was a peculiarly hot summer—was awful. Ten years! He could never live through it! And yet as his glance fell upon the Tunnygates, arrayed in their best finery and sitting with an air of importance upon the front bench of the court room, he told himself that he would do the whole thing all over again—yes, he would! He had only stood up for his rights, and Tunnygate's blood was upon his own head—or wherever it was. So he squeezed Bashemath's hand tenderly in response.

Upon the bench Judge Witherspoon, assigned from somewhere upstate to help keep down the ever-lengthening criminal calendar of the Metropolitan District, finished the letter he was writing to his wife in Genesee County, sealed it and settled back in his chair. An old war horse of the country bar he had in his time been mixed up in almost every kind of litigation, but as he looked over the indictment he with difficulty repressed a smile. Thirty years ago he'd had a dog case himself; also of the form, style and breed known as bull.

"You may proceed, Mister District Attorney!" he announced, and little Pepperill, the youngest of the D. A.'s staff, just out of the law school, begoggled and with his hair plastered evenly down on either side of his small round head, rose with serious mien, and with a high piping voice opened the prosecution.

It was, he told them, a most unusual and hence most important case. The defendant Appleboy had maliciously procured a savage dog of the most vicious sort and loosed it upon the innocent complainant as he was on his way to work, with the result that the latter had nearly been torn to shreds. It was a horrible, dastardly, incredible, fiendish crime, he would expect them to do their full duty in the premises, and they should hear Mr. Tunnygate's story from his own lips.

Mr. Tunnygate limped with difficulty to the stand, and having been sworn gingerly sat down—partially. Then turning his broadside to the gaping jury he recounted his woes with indignant gasps.

"Have you the trousers which you wore upon that occasion?" inquired Pepperill.

Mr. Tunnygate bowed solemnly and lifted from the floor a paper parcel which he untied and from which he drew what remained of that now historic garment.

"These are they," he announced dramatically.

"I offer them in evidence," exclaimed Pepperill, "and I ask the jury to examine them with great care."

They did so.

Tutt waited until the trousers had been passed from hand to hand and returned to their owner; then, rotund, chipper and birdlike as ever, began his cross-examination much like a woodpecker attacking a stout stump. The witness had been an old friend of Mr. Appleboy's, had he not? Tunnygate admitted it, and Tutt pecked him again. Never had done him any wrong, had he? Nothing in particular. Well, any wrong? Tunnygate hesitated. Why, yes, Appleboy had tried to fence in the public beach that belonged to everybody. Well, did that do the witness any harm? The witness declared that it did; compelled him to go round when he had a right to go across. Oh! Tutt put his head on one side and glanced at the jury. How many feet? About twenty feet. Then Tutt pecked a little harder.

"Didn't you tear a hole in the hedge and stamp down the grass when by taking a few extra steps you could have reached the beach without difficulty?"

"I—I simply tried to remove an illegal obstruction!" declared Tunnygate indignantly.

"Didn't Mr. Appleboy ask you to keep off?"

"Sure—yes!"

"Didn't you obstinately refuse to do so?"

Mr. Pepperill objected to "obstinately" and it was stricken out.

"I wasn't going to stay off where I had a right to go," asserted the witness.

"And didn't you have warning that the dog was there?"

"Look here!" suddenly burst out Tunnygate. "You can't hector me into thing. Appleboy never had a dog be He got a dog just to sick him on me! put up a sign 'Beware of the dog,' bu knew that I'd think it was just a bluf was a plant, that's what it was! And as soon as I got inside the hedge that went for me and nearly tore me to bi was a rotten thing to do and you know

He subsided, panting.

Tutt bowed complacently.

"I move that the witness' remark stricken out on the grounds first, that are unresponsive; second, that they irrelevant, incompetent and immat third, that they contain expressio opinion and hearsay; and fourth, that are abusive and generally improper."

"Strike them out!" directed Judge erspoon. Then he turned to Tunny "The essence of your testimony is tha defendant set a dog on you, is it not? had quarreled with the defendant, whom you had formerly been on fri terms. You entered on premises claim be owned by him, though a sign w you to beware of a dog. The dog att and bit you? That's the case, isn't it

"Yes, Your Honor."

"Had you ever seen that dog before

"No, sir."

"Do you know where he got it?"

"My wife told me ——"

"Never mind what your wife told Do you ——"

"He don't know where the dog came judge!" suddenly called out Mrs. T gate in strident tones from where she w ting. "But I know!" she added venom "That woman of his got it from ——

Judge Witherspoon fixed her coldly an impassive and judicial eye.

"Will you kindly be silent, madam? will no doubt be given an opportun testify as fully as you wish. That is a unless Mr. Tutt has some more questi

Tutt waved the witness from the contemptuously.

"Well, I'd like a chance to test shrilled Mrs. Tunnygate, rising in panoply.

"This way, madam," said the motioning her round the back of the box. And she swept ponderously int offing like a full-rigged bark and ca anchor in the witness chair, her chin and falling upon her heaving bosom li figurehead of a vessel upon a heavy h swell.

Now it has never been satisfactori plained just why the character of an vidual should be in any way ded from such irrelevant attributes as anatomy, bodily structure or the sh the cranium. Perhaps it is not, a reality we discern disposition from thing far more subtle—the tone o voice, the expression of the eyes, the of the face or even from an aura ceived by the senses. However that be, the wisdom of the Constitutional guard guaranteeing that every charged with crime shall be confront the witnesses against him was inst made apparent when Mrs. Tunnygat the stand, for without hearing a word her firmly compressed lips the jury taneously swept her with one co hensive glance and turned away. Stude women, experienced adventurers in mony, these plumbers, bird merc "delicatessens" and the rest looked ceived and comprehended that here w very devil of a woman—a virago, a sh termagant, a natural-born trouble-m and they shivered and thanked Go she was Tunnygate's and not theirs; unformulated sentiment best expres Pope's immortal couplet:

Oh woman, woman! when to ill thy n
Is bent, all hell contains no fouler fie

She had said no word. Betwee judge and jury nothing had passed, a through the alpha rays of that myst medium of communication by whi men as men are united where wom concerned, the thought was directly mitted and unanimously acknowledge here for sure was a hell cat!

It was as naught to them that she te to the outrageous illegality of the boy's territorial ambitions, the irasc of the wife, the violent threats of th band; or that Mrs. Appleboy had observed to mail a suspicious letter s before the date of the canine assault. disregarded her. Yet when Tutt

(Continued on Page 189)

(Continued from Page 186)

ss xamination sought to attack her di lity by asking her various pertinent estns they unhesitatingly accepted his plil accusations as true, though under r es of evidence he was bound by her ia.

e 1: "Did you not knock Mrs. lloy's flower pots off the piazza?" he aded significantly.

Never! I never did!" she declared ately.

But they knew in their hearts that she

e 2: "Didn't you steal her milk h?"

What a lie! It's absolutely false!"

e they knew that she did.

e 3: "Didn't you tangle up their ies and take their tholepins?"

Vell, I never! You ought to be ashamed sla lady such questions!"

h found her guilty.

I ove to dismiss, Your Honor," chirped ithely at the conclusion of her testi-y.

e Witherspoon shook his head.

I ant to hear the other side," he re-. "The mere fact that the defendant u a sign warning the public against e may be taken as some evidence that a knowledge of the animal's vicious e ities. I shall let the case go to the uless this evidence is contradicted or ad. Reserve your motion."

Ve well, Your Honor," agreed Tutt, himself upon the abdomen. "I will w your suggestion and call the de-. Mr. Appleboy, take the stand."

r. ppleboy heavily rose and the heart e fat man upon the jury, and par-ar that of the Abyssinian brother e back row, went out to him. For as they had known without being told t new Mrs. Tunnygate was a vixen, nlized that Appleboy was a kind, rtured man—a little soft, perhaps, h clams, but no more dangerous. er, it was plain that he had suffered w, indeed, still suffering, and they pi for him. Appleboy's voice shook solid the rest of his person as he re-te his ancient friendship for Tunny-ar their piscatorial association, their ne matrimonial experiences, the sud-cinge in the temperature of the yf Throggs Neck, the malicious de-tio of their property and the unex-ec ggressions of Tunnygate upon the nd the jury, believing, understood. erlike the sword of Damocles the m voice of Pepperill severed the al tmosphere of amiability: "Where ou get that dog?"

ppleboy looked round helplessly, ss ictured in every feature.

ly wife's aunt lent it to us."

o did she come to lend it to you?" asemath wrote and asked for it."

n Did you know anything about the fe you sent for it?"

our own knowledge?" interjected sh ply.

h, o!" returned Appleboy.

id't you know it was a vicious ?" harply challenged Pepperill.

your own knowledge?" again d 'utt.

l ver seen the dog."

wise rule," said Judge Witherspoon, g. "Excluded."

pell shrugged his shoulders.

wld like to ask a question," inter-d ne editor of Baby's World.

! exclaimed Tutt eagerly.

e tor, who was a fat editor, rose in pa assed manner.

"Mr. Appleboy!" he began.

"Yes, sir!" responded Appleboy.

"I want to get this straight. You and your wife had a row with the Tunnygates. He tried to tear up your front lawn. You warned him off. He kept on doing it. You got a dog and put up a sign and when he disregarded it you sicked the dog on him. Is that right?"

He was manifestly friendly, merely a bit cloudy in the cerebellum. The Abyssinian brother pulled him sharply by the coat tails.

"Sit down," he whispered hoarsely. "You're gumming it all up."

"I didn't sick Andrew on him!" protested Appleboy.

"But I say, why shouldn't he have?" demanded the baby's editor. "That's what anybody would do!"

Pepperill sprang frantically to his feet.

"Oh, I object! This juryman is showing bias. This is entirely improper."

"I am, am I?" sputtered the fat editor angrily. "I'll show you ——"

"You want to be fair, don't you?" whined Pepperill. "I've proved that the Appleboys had no right to hedge in the beach!"

"Oh, pooh!" sneered the Abyssinian, now also getting to his feet. "Supposing they hadn't? Who cares a damn? This man Tunnygate deserved all he's got!"

"Gentlemen! Gentlemen!" expostulated the judge firmly. "Take your seats or I shall declare a mistrial. Go on, Mr. Tutt. Call your next witness."

"Mrs. Appleboy," called out Tutt, "will you kindly take the chair?" And that good lady, looking as if all her adipose existence had been devoted to the production of the sort of pies that mother used to make, placidly made her way to the witness stand.

"Did you know that Andrew was a vicious dog?" inquired Tutt.

"No!" answered Mrs. Appleboy firmly. "I didn't."

O woman!

"That is all," declared Tutt with a triumphant smile.

"Then," snapped Pepperill, "why did you send for him?"

"I was lonely," answered Bashemath unblushingly.

"Do you mean to tell this jury that you didn't know that that dog was one of the worst biters in Livornia?"

"I do!" she replied. "I only knew Aunt Eliza had a dog. I didn't know anything about the dog personally."

"What did you say to your aunt in your letter?"

"I said I was lonely and wanted protection."

"Didn't you hope the dog would bite Mr. Tunnygate?"

"Why, no!" she declared. "I didn't want him to bite anybody."

At that the delicatessen man poked the plumber in the ribs and they both grinned happily at one another.

Pepperill gave her a last disgusted look and sank back in his seat.

"That is all!" he ejaculated feebly.

"One question, if you please, madam," said Judge Witherspoon. "May I be permitted to"—he coughed as a suppressed snicker ran round the court—"that is—may I not—er —— Oh, look here! How did you happen to have the idea of getting a dog?"

Mrs. Appleboy turned the full moon of her homely countenance upon the court.

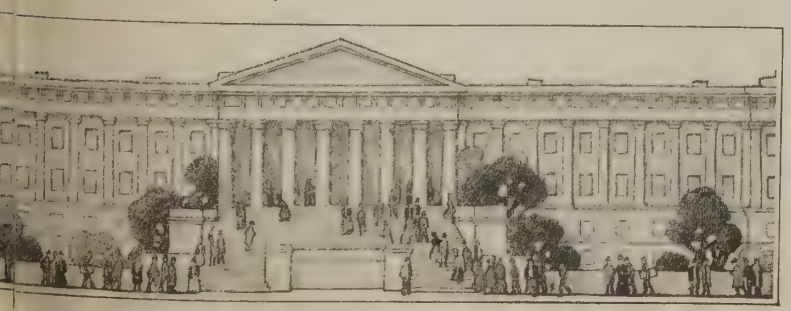
"The potato peel came down that way!" she explained blandly.

"What!" exploded the dealer in rubber novelties.

"The potato peel—it spelled 'dog,'" she repeated artlessly.

"Lord!" deeply suspirated Pepperill. "What a case! Carry me out!"

"Well, Mr. Tutt," said the judge, "now I will hear what you may wish to say upon



WHAT DO YOU EARN?

In a City?

Raymond Starr lives in one of the large California cities. Of course, most of his work is done among strangers. But he finds it easy to present a clear-cut business proposition in a businesslike way that often runs his Curtis earnings as high as **$400.00 a Month**

In a Town?

Harvey Stofflet lives in a small Michigan city. He hasn't so many prospects as Mr. Starr, but he has built up a reputation as a Curtis worker which, combined with his capacity for hustling, enables him to make, with only part-time work, profits of **$100.00 a Week**

In the Country?

W. C. Cowgill lives in a rural district in Oregon. Like Mr. Stofflet, he spends only part of his time on Curtis work, but the hours so spent bring big returns. He is helping his community by bringing in more good literature, and he is earning spare-time profits at the rate of **$1.50 an Hour**

Whatever you are earning now, here is your opportunity to add to your income. Men and women everywhere find a pleasant, easy source of quick and liberal profits in acting as subscription representatives of *The Saturday Evening Post, The Ladies' Home Journal* and *The Country Gentleman*. No experience is necessary. You earn money from the moment you start work.

If you want to MAKE MORE MONEY send the coupon *now!*

FOR THE MAN WHO CARES

The Florsheim SHOE

YOUNG men who want smart styles of the times, correctly designed, with comfort at every step, should see the new "Exmore"—Florsheims look better and wear best.

Consider the wear, not the price per pair.

Look for the quality mark "Florsheim."

The Florsheim Shoe Co.
CHICAGO, U. S. A.

Write for booklet "Styles of the Times"

The Exmore—

Don't Let Your FORD

shake to pieces!

Your Ford doesn't have to **rattle, shake** and **jar** every time you put on the brake—lurch, jerk or jump when you start or reverse. The Ford is made of good materials and assembled better than most cars.

The rattling and shaking occurs when the **plain linings** get a **hard, slick** surface from friction and oil. When the pedals are pressed they grab and slip repeatedly. This grabbing and slipping causes all the chattering—it loosens the whole car and makes it rattle.

The corks in Cork Insert lining take hold with a smooth, sure grip. Oil doesn't affect them. They never get hard or slick. They last three times as long as ordinary linings—keep your Ford running smoothly—save it from rattling to pieces.

Advance
CORK INSERT
Transmission Lining for Fords

Advance Cork Insert Lining will keep your Ford from shaking to pieces, and rattling from radiator to tail lamp.

Ask for Advance Cork Insert Linings; every garage or repair man has them or can get them, for every wholesale house carries them in stock. If you can't get them quickly, remit $3.00 and we will supply them ready to put on.

Valuable Book Free
It tells the story of the Ford Brake.

Dept. 200, 56 E. Randolph Street, Chicago

You Can Cut Metal as Easily as Wood

Be your own repair man in fitting metal fixtures. This hack saw cuts metal just as easily as a wood saw cuts wood. Convenient because it has a blade replaceable at small cost which does away with the necessity of sharpening. Will save its cost in two or three repair jobs.

MILLERS FALLS HACK SAW FRAME No. 1027 $2.00

(In Canada $3.00)

has a pistol grip that gives the saw just the right "hang" and puts the greatest force into the sawing stroke.

Back and handle strongly reinforced. Straining nut under the handle allows maximum stroke.

Blade can be faced in any one of four directions.

Send 10c for our Mechanic's Handbook

60 pages of mechanical information—valuable formulas and helpful hints. How to figure paint, shingles, board measure, brickwork and stonework and 50 other useful subjects. Pocket catalog of all Millers Falls tools on request.

The Millers Falls line also includes hand drills, breast drills, hack saws, mitre boxes and other boring and cutting tools.

MILLERS FALLS CO.

"Toolmaker to the Master Mechanic"

100 River St. Millers Falls, Mass.

the question of whether this issue should be submitted to the jury. However, I shall rule that the indictment is sufficient."

Tutt elegantly rose.

"Having due respect to Your Honor's ruling as to the sufficiency of the indictment I shall address myself simply to the question of *scienter*. I might, of course, dwell upon the impropriety of charging the defendant with criminal responsibility for the act of another free agent even if that agent be an animal—but I will leave that, if necessary, for the Court of Appeals. If anybody were to be indicted in this case I hold it should have been the dog Andrew. Nay, I do not jest! But I can see by Your Honor's expression that any argument upon that score would be without avail."

"Entirely," remarked Witherspoon. "Kindly go on!"

"Well," continued Tutt, "the law of this matter needs no elucidation. It has been settled since the time of Moses."

"Of whom?" inquired Witherspoon. "You don't need to go back farther than Chief Justice Marshall so far as I am concerned."

Tutt bowed.

"It is an established doctrine of the common law both of England and America that it is wholly proper for one to keep a domestic animal for his use, pleasure or protection, until, as Dykeman, J., says in Muller vs. McKesson, 10 Hun., 45, 'some vicious propensity is developed and brought out to the knowledge of the owner.' Up to that time the man who keeps a dog or other animal cannot be charged with liability for his acts. This has always been the law.

"In the twenty-first chapter of Exodus at the twenty-eighth verse it is written: 'If an ox gore a man or a woman, that they die; then the ox shall be surely stoned, and his flesh shall not be eaten; but the owner of the ox shall be quit. But if the ox were wont to push with his horn in time past, and it hath been testified to his owner, and he hath not kept him in, but that he hath killed a man or a woman; the ox shall be stoned, and his owner also shall be put to death.'

"In the old English case of Smith vs. Pehal, 2 Strange, 1264, it was said by the court: 'If a dog has once bit a man, and the owner having notice thereof keeps the dog, and lets him go about or lie at his door, an action will lie against him at the suit of a person who is bit, though it happened by such person's treading on the dog's toes; for it was owing to his not hanging the dog on the first notice. And the safety of the king's subjects ought afterwards to be endangered.' That sound law; but it is equally good law t 'if a person with full knowledge of the propensities of an animal wantonly exc him or voluntarily and unnecessarily himself in the way of such an anima would be adjudged to have brought injury upon himself, and ought not t entitled to recover. In such a case it not be said in a legal sense that the kee of the animal, which is the gravamen o offense, produced the injury.'

"Now in the case at bar, first ther clearly no evidence that this defen knew or ever suspected that the dog And was otherwise than of a mild and g disposition. That is, there is no evid whatever of *scienter*. In fact, excep this single instance there is no evid that Andrew ever bit anybody. T in the word of Holy Writ the defen Appleboy should be quit, and in the guage of our own courts he must be harmless. Secondly, moreover, it app that the complainant deliberately put self in the way of the dog Andrew, afte warning. I move that the jury be dire to return a verdict of not guilty."

"Motion granted," nodded Judge W erspoon, burying his nose in his hanc chief. "I hold that every dog is entitl one bite."

"Gentlemen of the jury," chanted clerk: "How say you? Do you find defendant guilty or not guilty?"

"Not guilty," returned the fore eagerly, amid audible evidences of sati tion from the Abyssinian brother, Baby's World editor and the others. Appleboy clung to Tutt's hand, over by emotion.

"Adjourn court!" ordered the ju Then he beckoned to Mr. Appl "Come up here!" he directed.

Timidly Mr. Appleboy approached dais.

"Don't do it again!" remarked Honor shortly.

"Eh? Beg pardon, Your Hon mean ——"

"I said: 'Don't do it again!'" rep the judge with a twinkle in his eye. lowering his voice he whispered: "Y I come from Livornia, and I've k Andrew for a long time."

As Tutt guided the Appleboys out the corridor the party came face to with Mr. and Mrs. Tunnygate.

"Huh!" sneered Tunnygate.

"Huh!" retorted Appleboy.

HE GIRL ON THE HILLTOP

Charity Stared at Him From Mocking Gray Eyes. "Your Name is George Washington!" She Said

By Kenyon Gambier

ILLUSTRATED BY HENRY RALEIGH

GE of those fairest of English counties which ie ong the Marches of Wales snuggles a village vhse one straggling street is guarded by a n led, scarred and riven oak. Its crown has ge this fifty years; its branches have been d ach generation; its trunk is a hollow playground for village children; but its l ves still come with the spring, and on summer afternoons its mighty shadow s ward the east. It is girdled by a circular bench hardened and weathered by time ai ed in a maze of initials, interlocked hearts and crude monograms.

ie ain road from the little market town of Castle-chepe is in winter a long-drawn di nave whose roof is composed of fairy fanlike tracery of meeting elm branches. mer it is a tunnel of green pierced by twinkling shafts and arrows of dancing he road seems to stop short at the oak tree, but in reality it turns sharp to the flowing the high wall of the great park; and thus the tide of traffic no more la the edge of the village green. Behind the sentinel oak straggles the village , sing sharply halfway along, and bordered by a clear little roadside runnel of ater which murmurs pleasantly in the day and splashes cheerfully in the more ni ht. Children, unworried by wagons, may safely launch paper boats; and cows, pe d by automobiles, may saunter along.

si rs stand on the stone slab which spans the runnel and knock, for the cottage ns re behind and the houses touch the street. Most of these houses were built t oak was young. Their shoulders are bent with age, their diamond leaded a blurred, and their lintels sag with the weight of years. In summer climbing bbm and wistaria hangs in clusters of mauve. In the autumn crimson creepers h timbered walls and overrun the thick patched thatching of the roofs.

e are one hundred and five houses in the parish, including the manor house t great walled park. Of these eighty-one are in the village, and most of the e nestling farmsteads, the largest farm covering nine hundred acres; the s sixty-one acres. There are twelve thousand acres in the parish. All these, o in adjoining parishes, and all the farm buildings belong to the owner of fr s Park. He is Lord of the Manor of St. Dyfrigs, owner of all the houses in the e St. Dyfrigs, except one, and of the advowson of the parish church. To him t the surface of the land, and all the coal and minerals which may be found th lown to the center of the earth, and all the salmon that may be caught in a two-mile stretch of river, and all the air above his land, and all the ether above that through infinite space. He is about to be deprived of one of the immemorial family possessions, perhaps without compensation. The government, finding private ownership of the atmosphere incompatible with the airman's rights, is about to nationalize the empyrean.

On the top of the park wall where the road turns by the oak is perched a gazebo or summerhouse or observation post, from which the lord of the manor may overlook most of his domain. It projects over the road, and from its window in an older day could be handed a letter or a packet to the guard of the passing coach. It commands the length of the village street except when the oak is in full foliage, and it once had a moral significance. It was no frowning tower or overawing fortalice, but it dominated. It looked down on the simple folk of the village, reminding them always of the overlordship of the great house and of the paternal beneficence of the great family.

On a summer's afternoon toward the middle of the nineteenth century it was visited by Lionel Saint John Mildmay Lingard. He had received an anonymous note in a lady's hand telling him that if he came to the oak tree at four o'clock he would see a sight which he would never forget. He came instead to the eyrie on the wall, whence he could see and not be seen. He peered through the lattice and descried beneath the oak a golden-haired lady of fashion—young, pretty, with a deep-hanging chignon, a pork-pie hat with a scarlet feather, and a sprigged dimity skirt which swayed gracefully above its supporting crinoline.

The lord of the manor grinned and stroked his long spreading whiskers between thumb and finger. This was the most brazen assignation to which he had ever been invited.

"Deuced pretty—yes! Does the little fool really think—— Why, the village is buzzing already! Damme, it's Charity Turle, my cowman's daughter!"

He raised his eyes at the sound of horses' hoofs. Down the road came his younger brother, driving those three matched bays all in a line, bowling along with their high knee action, their heads checked up, that long whip dexterously wreathed, keeping the leader at his pace and in his place.

The lord of the manor grinned. There had been a real bobbery, a thundering row that morning about this tandem team. The order had been given. It must be put down. It was too costly.

"I'll get even," the younger brother had threatened, swearing fierce oaths.

"With your allowance, I hope you mean," the elder had sneered.

The turnpike gate flew wide. The horses pranced through.

"Gad," muttered the connoisseur on the wall. "Roger can drive! The finest whip in England!"

The horses checked beneath the oak. The unseen watcher frowned and bent forward to the lattice. The smart little tiger jumped down and flew to the leader's head. The driver circled his whip thong in artistic double twist about the stock, raised his curved brimmed beaver hat to Mistress Charity Turle, then held out his hand. She climbed the high yellow wheel of the gig, her skirt ballooning wide.

The whip cracked, the little tiger darted for the step behind, the horses pranced.

The girl kissed her hand to the lattice.

"Good-by, brother-in-law!" she cried.

The lord of the manor flung open the shutter. He hurled a name at her, unprintable, infamous.

She kissed her hand again. The gig rocked as the horses pranced away.

The couple returned within the week, the bride waving her marriage certificate. They stayed at the cowman's cottage. Mrs. Roger Lingard, née Turle, climbed a ladder and stuck a small flagstaff into the thatching. On the flag was a boar's head, the crest of the Lingards. She led the willing bridegroom along the seldom used right of way through the park. They sauntered, laughing, hand in hand, flaunting their happiness. The countryside was on the broad grin.

Then they stated their terms. Charity's father, who had of course been served with notice to quit his home, must receive a gift of the cottage. Her husband must have two thousand pounds. These things done he and she would emigrate. They sailed for New York within two weeks on one of those newfangled vessels propelled by steam.

They came back eighteen years later, prosperous, shedding dollars. They were ignored at the manor house, welcomed in the cottage. They spent two thousand dollars in the reconstruction of the latter, and Charity furnished the parlor with beautiful old furniture which would now be priceless. The cottage surpassed every home in the village, even the vicarage.

They disappeared, this time for good. A new generation came. A languishing correspondence between cousins dropped. The three matched bays, the gig, the American Lingards faded into hazy village legend.

In the summer of 1914 a boy of twenty sat beneath the oak and looked about with shining, curious eyes. He had the bright skin of new threshed barley seeds and the golden-brown hair of a ripe wheat field. Eager interest marked his alert face and American accents marked his utterance as he said aloud: "The very spot!"

He was disappointed of course. Imagination transcends the possible and the golden haze of the dreams of youth is always more splendid than the most brilliant sunshine of reality. He had expected a unique unmatchable tree spreading great boughs. He remembered now that even oaks decay. He had thought to find the tree faced by a castle from which upshot a frowning tower. He saw a stone wall surmounted by a queer-looking kind of summerhouse shadowed by a lime tree, which he called a linden. He had pictured a village green covered with emerald grass. This one was brown from summer's sun, bare in spots where children played, and flecked with white feathers from a trespassing flock of geese. Still it was very pretty.

He recalled the family legend as it had come down to him: An oak tree; a castle tower—that was the summerhouse on the wall; three horses all in a line—how could anybody drive a team so harnessed? A toll gate—the gate was gone; but the house was still there, the only one fronting the main road; he knew it because the door projected like a nose, and windows in the nose looked either way. An heiress, beautiful, with golden hair, sacrificing all for love, torn from resisting relatives and their retainers—young Lochinvar over again, except that the bride was not swung lightly to the horse's croup, but lifted to a kind of two-wheeled buggy.

He pictured it all. The bride must have come to the tryst through that old oak door in the wall opposite him; the fight had been fought right here. His great-grandfather had won, single-handed. He thrilled to the story, never suspecting that his great-grandmother, dead years before he was born, had romantically enriched her tale. Her embroidery had the far-off result of making this descendant an exception to the general rule. Every American of British descent possesses an estate in chancery; but he had two.

He had only hours to spare in his short hard-won vacation, but he had solemnly promised his father to hunt up the titles to both the Lingard property and the Turle estate. Now that he was here on the spot he found himself more eager to find cousins than estates. He hoped that the properties would not be in chancery and that relatives would give him the glad hand.

The great oak door in the wall was flung open from within. Young Roger Lingard jumped up and crossed. He saw stretching expanses of velvet green dotted by oaks and elms and chestnuts. Red cattle with white faces browsed, all blocky and square framed and beautifully true to type.

"Hereford pedigree herd," he murmured ecstatically, for he knew about cattle.

"Some place!"

He was moved by the rich ordered beauty of the far-extending park.

Men close by were planting posts and putting up railings. In the distance he saw a gleaming orange-colored object—a girl on horseback, he thought.

Through the Open Door He Saw That the Old Man Had Pried Up a Hearthstone and Was Lifting Another Bag

A man came and curtly demanded what he wanted.

"Do the Turles still live here?" he asked eagerly.

He saw a sudden surly frown, a look that asked if he was perpetrating an offensive joke.

"Buy a guidebook," was the abrupt answer.

Young Lingard, surprised, affronted, stepped back a pace. He almost bumped into an aged man, who shook his head and muttered: "It bain't right; 'tis a right of way." The old man stretched an accusing finger at the workmen, then retreated to the oak, sat and took off his hat. The boy looked across at the thatch of white hair, the long white beard, the large chiseled nose; and he thought that such a noble-looking patriarch might perhaps just remember his great-grandfather.

He was about to go over and ask when an automobile came round the corner and was suddenly checked by the side.

"What a perfectly beautiful old man!" said one lady.

"Perfectly lovely!" the other agreed.

One got out with a camera. "Please turn your head a little. . . . Yes. . . . That's right." Click. "Now just look at me, please." Click. "Splendid!"

These commands had been pleasantly given in a soft voice and with an American inflection. They jarred on the boy. He thought the whole procedure an impertinence and was surprised by the obedience of the old man. He was shocked when the lady crossed with an open purse, astonished when the aged villager touched that saintly halo of reverend hair with his uplifted hand and said, "Thankee kindly, mum."

A girl came riding out of the park. Her foot in the stirrup brushed the boy's sleeve. She was hatless, gloveless, and a tennis racket was clasped under her arm. She wore a brilliant orange-colored sports coat of silk. Her skirt was white and so was the buckskin shoe in the stirrup.

Click.

The girl checked her horse in front of the automobile, turned, and laughingly addressed young Lingard with her racket. The man had so curtly addressed young Lingard came through the door at the imperious summons.

"This lady," the girl said, "has taken a snapshot of me."

"Oh, the nerve of her!" thought young Lingard.

Her pleasant, deep voice was slightly raised. Her manner was undisturbed. She had summoned a servitor as a princess might, to address one of the common people; yet the astonished lady with the camera was obviously a gentlewoman.

The girl moved her horse away and the retainer took her place in front of the car. She turned in the shade of the oak tree and calmly looked on, in the perfected aloofness. Meanwhile two indignant elderly ladies argued with the inflexible man who stood square planted in the middle of the road.

"The camera and your address," he demanded. "I'll destroy this picture and send the camera and the films developed to you."

They protested violently. This was a holdup. It was feudal. It was worse than brigandage. Such an outrage could never happen in the United States. But the man was inexorable. He proposed a compromise. They promised to destroy the picture themselves.

"I am sure you would," said the polite blocker of the way; "but such promise was broken, and I have my orders."

"A fair offer," young Lingard said impulsively. "Let them go."

"And what business is it of yours?"

Lingard leaped. His outstretched hands caught the other's chest and forced backward steps. The chauffeur thrust in his clutch. The car moved. Lingard squared for the inevitable. He was a good boxer, but fifty pounds lighter.

He had shoved the unprepared opponent almost under the horse's feet. He saw above him a bending orange-colored body, a dark angry face, an uplifted tennis racket; but it did not descend on his head.

"Bick, no fighting!" she commanded.

The man fell back, dropping his arms. A tense instant followed. The girl was looking down into the boy's eyes. The clear dark skin of her cheeks

s used underneath with a soft glowing crimson. f head was now smooth, but her dark eyes still me with the passionate anger she had so quickly erl. He waited, his eyes not wavering. He ex- d peech of course. The incident, the exchanged emanded it. But she drew on the curb, the horse dwheeled and walked away.

etainer retreated. As he reëntered the park he his shoulder: "The next time it'll be the pond, ug cockney cooky."

ed into the old turnpike house, which bore a n Teas—Mineral Waters. A stout woman whose eo breastpin lay horizontally and undulated and down gave him a glass of milk and gossiped in answer to questions. Her husband's father, had opened the gate to that randem team.

ld man as you was talking to," she said, "is the the cowman's daughter as a Lingard demeaned marrying."

sman, a toucher of the forelock for alms—a is heiress ancestress, the cowman's daughter.

The boy's illusion came crashing. But though the ancestral dream on the maternal side was rudely shattered, on the paternal side it was surpassed by reality. He listened with interest to the story of the splendor of the Lingards.

He left the turnpike house laughing. It was funny. An heiress! How did these stories begin? He thought that he should not tell his father. His father talked a lot about gentle blood on both sides. He had a new sense of vivid curiosity about the Turles as well as the Lingards. The village had been made human to him by this fat woman's voluble, cheerful gossip. He knew now that its name, St. Dyfrigs, rimed not with stiff rigs but with love rigs; and he rolled this softer pronunciation on his tongue.

He sauntered up the street, talking to everybody—to the woman sitting knitting in her doorway, with two children playing in the road; to the wheelwright, who gladly paused for a chat; to the old postmistress, who he did not know was a regulator of village clocks—every day, at four precisely, she removed from her bald head a straw hat to which was pinned a false front, and put on a smooth brown wig; to an aged man on sticks, who stood in the sun warming his old back against a hot stone wall; to a milkmaid, whose rolled-up sleeves disclosed round, sound, wholesome arms; to the road mender, who sliced evenly the turf by the roadside. He absorbed all that they told him, wondering at their frankness, warmed by their cordiality, exhilarated by his secret connection with both hall and village.

He did not know that his smile was sunshine and that the frank and genial comradeship which he felt in his heart was conveyed in his manner; nor had he learned that villagers love to talk to strangers from afar, who will be off in an hour and pass nothing along. Talk relieves monotony. There is the satisfaction of playing cicerone. There is the pleasure of hearing exclamations of surprise and interest. It is the amused and exuberant curiosity of the American tourist which leads cottagers to dwell on scandals in the neighboring great family.

But the boy heard only kindly, almost affectionate words about the Lingards, and wonderful stories of their constant, unremitting generosity. People were less inclined to talk about the Turles. He heard of Tom Turle and Charity—yes, she had his great-grandmother's first name—but there was a cool silence about them.

By the time he had passed the last house and stood on the hilltop he had formed definite impressions. He framed sentences for the night's letter to his father: "The Lingards are the whole bunch here. They have great family pride. There is a young lady, a little younger than I am. She is a wildcat one minute and a beautiful stone image the next. Their estate is like a parlor just dusted. The village is a little heaven. Wages are only $4.76 per week, but everybody seems comfortable. The Lingards are splendid landlords and most generous. The Turles are not so important as you thought. There is a young man a little older than I, and a girl about my age. I have not met the Lingards or the Turles socially. I may not introduce myself perhaps. Things are different here. I have not yet examined the titles to the Lingard estate. There is no Turle estate."

He looked down the steep green hillside at a soft red roof and an old church tower. Summer's full foliage of oak and ash and beech hid all the rest. This disappearing trick seemed to him delightful, and he thought that only an English village could hide away like this. He looked over the checkerboarded countryside, vivid green in irregular squares, with here and there a golden field of ripening grain. It was very pretty, he thought, but too completed and finicky and trim. He wanted real mountains and deep cañons, where slap-dash cataracts suddenly changed their minds and their courses, and carried off trees and danced bowlders about. He craved a general helter-skelter of Nature, which showed that there was still a lot for man to do. That was the way of Nature when one went on vacations in the United States.

He was leaning on a new gate, on the top bar of which the initials G. R. had been burned. A boy came driving a pig and opened the gate.

"What do these initials mean?" he asked, curious about everything.

"The King, sir. This be crownland from that there hedge. T'other side is the squire's." The boy pointed to the great park below, which looked, inside its circling wall, like a giant green gem set in a band of silver. "The squire," he said, "do live there. He have two legs, but he can't walk. His eyes be wide open, but he can't see naught. His lips do move, but he do grunt, no more, and they puts a cloth about his neck and do feed him same as babies is fed. He ——"

But the pig dodged into the opposite hedge, and the boy ran after it.

The astonished listener turned as a young man, powerfully built, broad of chest, came bustling along, swinging a sledge hammer as though it were a cane.

"A beautiful village," said Roger, falling into step.

The young man grinned. "Yes; its face washed, its hair curled, its pinafore starched. Did you smell a pig as you came along?"

The boy laughed and shook his head.

"The pig," said he of the sledge hammer, "is the support of man. He has been since the world began. What about the kitchen leavings and the cabbage stalks and the garden waste, and the fat side hanging from rafters in the kitchen come Christmas time, when the kiddies could do with some rich fat on their bread and the old uns with thick slices that stick to their ribs? But squire says no." He laughed, but his eyes were serious. "He might smell 'em if he chooses to ride through his village.

ON CHOOSING A PROFESSION

Is it Not a Delightful ge at Which the Imagin on Rides Freely as it it Even on Trains of Tho e?

By Harry Leon Wilson

ILLUSTRATED BY M. L. BLUMENTHAL

THE young man, who often tells me of his high ambitions, begged to be taken across the village street to the railway station for further entertainment. We were fresh from one treat; nothing less than a visit to the jewelry shop where hangs the choice cuckoo clock. We had hoped only to hear it strike twelve, but the kindly owner, perhaps pleased at our notice, had toyed with time like a god and made the thing do twenty-four hours for us. Ninety separate times the hidden bird revealed itself, bowed and was vocal, which seemed enough even for a confirmed cuckoo addict.

Indeed I was afraid one of us would not only become bored before we caught up with time again, but would allow this to be discovered by his generous host. Yet not so. Fain would he have had yet ninety other carols from the patient bird. He lingered before the counter expectantly, even too suggestively, until the secret hope was dashed. Then rather desperately he demanded to know the price of the marvel—and lingered still another moment, gamely dissembling the consternation with which he had been stricken when the proud owner named a certain figure in brutal dollars. For the delectable contrivance was remotely beyond his slender means. But I felt him secretly resolving that come what might he would one day have a cuckoo clock of his own. And I didn't blame him, because—as he has more than once pointed out—how can anyone be sure the bird behind that little flapping wooden door is not a regular bird and may not some day in the course of the hours fly right out and sing a long time?

The Great Men of the Engine

AND so when he now observed the small dingy train that comes down to us from the main line and rests awhile before it goes back, how natural that he should wish to stand beside it and advance his education as a locomotive engineer. Indeed as we crossed the street he confided to me that when he did become an engineer he would have a great deal of money and when he had a great deal of money he would spend it for a cuckoo clock. He debated returning to tell the jeweler this lest meantime some rich person buy the clock, but I dissuaded him, not wishing to build false hopes in the mind of the tradesman.

So we stood presently beside a locomotive that stewed thrillingly in its insides. Free were we to inspect its black wonders, to touch its puissant wheels, to identify bell and whistle and headlight and cowcatcher. And believe it or not, but the engineer himself descended into our very presence with a long-nosed oil can and a bunch of cotton waste and began to annoint and massage his vast treasure, while aloft on his throne lolled the fireman and looked lordly from his casement and ate rare foods from a shining bucket believed to be of silver. It was the first time we had ever been so intimate with a locomotive, the first glimpse we had been vouchsafed of this glorious monster in what might be called a domestic moment. Need I say it was ecstasy to loiter amid the ineffable perfume of soft-coal smoke and sprightly steam, watching a live engineer in blue jumper and overalls at his important ministrations—watching at his midday banquet a live fireman in a badly chosen derby hat, once brown but now enhanced to a royal purple by weathering millenniums?

Again the young man affirmed to me his resolve to become at once a locomotive engineer, doubly firm now because the emoluments would enable one to acquire a certain clock hitherto beyond the reach of any but persons of vast wealth. With one hand on a driving wheel he sacredly promised always to permit all members of his family to ride on his train without price, even in the dining car or out on the back porch where the folding chairs are, and it was further promised that perhaps on occasion I might be let to sit up beside him and watch him engineer. And if he wished to come home for a few days he assured me that they would keep his train for him. He said he would be able to take this train where he liked—to Chicago or San Francisco or Boston or Africa, where desirable wild beasts are; and he would have lots of allowance given to him for his engineering. In short there was now but one life, one career, to be considered.

It has not always been so. There was a time when to be a dentist seemed most lovely, but this has been put away as childish. And there has been strong talk of deep-sea diving. I have been assured that if I would but procure him a diver's suit he would go down on the bottom of the main ocean with a good pincher pick and catch fish. More than once he has declared that this would be his favorite pleasure. And I have had to concede that it sounded attractive. I especially like the pincher pick—it sounds so useful. There has been, too, some talk of a naval career and not a little of aviation, but just now we can see nothing but locomotive engineering as the occupation of delights and rewards. Possibly this ideal may alter—at six one's life work is seldom determined.

But to hear the young man talk now about the life and privileges and supreme importance of a locomotive engineer you might suspect that he had given valued assistance in the preparation of that joyous document named so modestly to us as the Plumb Plan. Indeed there are certain features of that plan which I can with difficulty conceive not t come from his own wi imagining. I am certa would cordially approv proposal to give him the and the track and the and the money paid hi grateful and admiring p gers.

Is it not a delightful a and the age of the Plumb gifted author, that age at the imagination rides fre it lists even on trai thought—when the gritty science of econon seen to be a lovely sch all take and no give? I believe that either of these th would be for a moment disturb a suggestion that the train tracks and depots are not th take—that they are the store of quite other persons. I do n lieve either of them would be al by the prediction that infantile paralysis dustry would waken them from their dre glorious taking. And I affirm confidently t least one of them would noisily rejoice t that cuckoo clocks had been nationalized knows of one he would love to nationalize

As in a Wavy Mirror

BUT in truth I seem unable just now to the young man on the choice of a v better than his own fresh instinct seems t taught him. For of course the old-fashione of this piece is not a very funny joke. Beca one at present would advise anyone for who fare he might feel concerned to choose an fession whatever. And, outside the profe what better career than that of the locom engineer or fireman—even the fireman of ble freight engine?

Could I conscientiously urge the youth in tion to strive for a statesman's laurels when t gineer now receives more pay for his service the average governor of a state? I am not say isn't worth it; undoubtedly there are in ou more highly skilled engineers than there are skilled governors—the standard of effectiveness to be higher. Our engines have to be run ju while our states are lucky to be run even so-s But we are here concerned with what the comin shall do to gain his daily bread and a coat upon to blazon his wound chevrons from the high living.

Why deny that I am puzzled by some asp the problem? When I gulp the headlines of a ing paper nowadays I feel as you feel when you into one of those cheap wavy mirrors—you kn kind. They make you look as if you must be If I now read with understanding, the world common conviction is that the only way to low cost of living is to raise prices. I believe I ar so far. The cost of living is high; wages must be above it. As wages are raised the process wi the effect of a descent in the cost of living. Fa logic apparently. Yet something warns me the catch in it. Stubbornly across my mental scre trudes the image of a running man in the su He is running as fast as he can. He is running ahead of his shadow.

But I remind myself that my vision is probably not
thetic—that a mere literary geisha can hardly from
sie lines so easily probe the mysteries of this mass
y. I tell myself that I would think differently if I had
ec cation of a union-labor leader. And I read on below
a azing headlines to correct—if possible—my own
isreasoning. There I learn that everyone is becoming
ned as fast as he can, and as fast as he becomes
ned he is striking for higher pay to meet the rising
c living—the mysterious figure that mounts so un-
u ably, so perversely, with mounting wages. So it
's so simple as at first I thought it must be, or the
nabor leaders, who are intelligent men, would see it
d
ay, the unionizing and the striking go merrily
-licemen, newspaper writers, school children, the
ce all girls of Leadville, scrub women, comedians,
ers coach drivers, egg candlers, tragedians, aviators,
orces, window washers, light-opera tenors, buttonhole
ers leading ladies, knife grinders, pants pressers,
y en. It is true the latter have not yet struck, but
a ion is threatened from more than one authoritative
ce and had my own life and training fitted me to be
his cloth I suspect their strike would not still be
-lya threat. Why should clergymen stay out of the
m e when the getting is good? We seem, then, to be
on the way to a complete unionism.
It's what I wish to be told—preferably by the wisest
n ader now engaged in leading—is what will happen
. see as plainly as they do that wages are raised and
i ns for certain workers bettered here and there by
es On broad impersonal grounds I applaud the wit
he New Hampshire corn cutters who strike for nine
ra day and win. I applaud the reporters of that
England city who struck the other day. I like their
t; didn't think they had it in them. Thanks to the
ng their union now gives them, some of them may
u out of the class of mere reporters and become book
ws or dramatic critics at a living wage. Possibly a
m even hope to become writers.

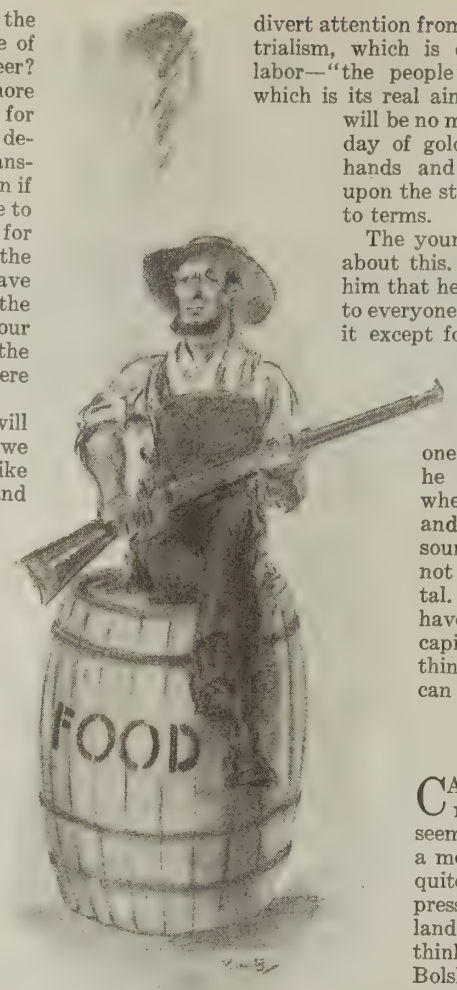
When the Big Union Comes

There is the new actors' union. We all know actors
wh are too good to need the bolstering of any union, but
ne ther hand it must be said of the majority of our
es a all kindness that they do need a union, even as
ament maker needs one, and I rejoice that they now
if I am only sorry their strike broke before certain
ei opponents—the managers—got a fraction of what
o ing to them in the way of punishment for having
se upon a particularly helpless class of only moder-
s lled labor. But again I wish to be told by the
la or leader what will happen when we have all been
ully affiliated.
Thus-far innocent bystander it would seem that
w are all one big union there will be no one left to
gainst. And if it be conceivable that we shall then
neso uncomradely as to strike against ourselves,
what labor leader will then decide when the shoemaker has by strikes raised the price of shoes sufficiently high to the striking engineer? Will the engineer continue to strike for more money to pay the ever-upward price for shoes—which the shoemaker must ever demand because of the mounting price of transportation? Not forgetting the farmer, even if we are not now in Congress and would dare to do so. The farmer, having to pay more for shoes and more for his coat and to ride on the steam cars and to ship his wheat, will have to have more money for his wheat. And the farmer is a mean man to annoy. Under our present wise laws he is free to do things in the way of combination that would get a mere manufacturer into very serious trouble.

So when the big union comes—and who will say it isn't on the way—shall we be where we started? Will the farmer then indeed strike against the engineer and the shoemaker and the rest, or will someone in authority call a truce, and if so, who? Or will the gladsome era of rising wages go on and on? Will it continue to be thought that if wages can only be raised high enough the cost of living will be left far beneath? In short, will it help matters to double the pay of all of us? Am I wrong in suspecting that the cost of living would also be doubled—and not by a miracle or freak of Nature beyond understanding? Would it be like doubling the price of chips in a game of cards called draw poker on the blithe assumption that twice as much money would then be won? And if so, have not expert statisticians demonstrated that—no matter the amount won in a given game—an equal amount is lost?

I am groping, to be sure, but I am curious about the behavior of the big union that will have affiliated us all by next year or the year after. Will it then be a matter of determining if the farmer is more important than the engineer or the steel worker? And would not this be a difficult problem? I can see a pair of hands declining to convey food to the mouth—going out on strike because the hands do all the work and the stomach is a mere fat ultimate consumer producing nothing. And I can see the eyes and the ears and the feet striking in sympathy with the hands to bring that slothful capitalist, the stomach, to terms. But are not these striking members in some measure dependent on the well-being of the stomach? And how long would they exist without the head above them all? I have not specialized in physiology, but one may gather, even from the Sunday editions, that without a nourished head the organism now known to us as human would deteriorate.

A young thinker, who delights to wear a cravat of defiant hue and whose emotions are generous but sometimes curdled, here tells me that I willfully confuse the real issue; that I am—and very probably for reasons not unconnected with the lucre of a venal press—seeking to divert attention from the one great crime of industrialism, which is capital. He says that when labor—"the people"—have taken over capital, which is its real aim and its only recourse, there will be no more strife; then will ensue the day of golden plenty for all, when the hands and the feet through pressure upon the stomach have brought the head to terms.



The Farmer is a Mean Man to Annoy

The young thinker is heatedly certain about this. It is so simply apparent to him that he believes it is simply apparent to everyone else and that no one will deny it except for a price. He declares that even these hirelings would no longer dare deny it if we had here a free press and the right of free speech. It is one of his curdled moments and he points valiantly to Russia, where freedom is now enthroned and capital is no more. And he sounds almost convincing, but not quite—especially about capital. For it does seem to me we have learned from Russia that capital is a peculiarly elusive thing that can be destroyed, but can never be taken over.

Inherent Rights

CAPITAL seems to be so much more than mere money. It seems to have qualities that escape a mere blunt talker. Nor am I quite persuaded about freedom of press and speech in that model land. I suspect this particular thinker could hardly be as anti-Bolshevist in Russia as he is anti-United States here, and get away with it. I doubt if his favorite periodical would flourish happily in Petrograd if it opposed the government there as it opposes the Government here.

Trustworthy reports from that center of enlightened progress indicate that critics of the prevailing régime are dealt with vigorously and without those more or less formal delays of the law guaranteed them under our own despotism. Still he insists that in Russia the people now have their inherent rights. And I cannot deny it; I can only retort that thus far they have not inspired me with envy. There the eyes and ears and hands and feet have struck against the stomach and withered the head—but can they survive the head's loss?

The thinker says that this is pitiful talk and only shows that even if I am not a hired minion of capital I am at least shockingly ignorant, inasmuch as it shows me not to have read Karl Marx, who explained everything clearly, regardless of how things may look in Russia just at this moment. He affirms further that labor has an inherent right to what it produces, which I am not prepared to dispute; I only wish to be assured that labor produces what it says it produces. I gather from this intellectual's handling of the phrase that our railway employees have an inherent right to the railways because they produced them. I also gather that my typewriter may at any moment strike to enforce an inherent right to what it produces. Is not this writing composed of words?

(Concluded on Page 85)

Stubbornly Across My Mental Screen Intrudes the Image of a Running Man in the Sunlight. He is Running to Get Ahead of His Shadow

THE CHANCE

By HERSCHEL S. HALL

ILLUSTRATED BY F. R. GRUGER

He Stopped and Looked at Her, and the Glasses Fell From His Hand, the Lenses Shattering to Pieces on the Iron Floor

STEELBURG MILLS had a new Old Man; the old Old Man had left, quit, resigned—gone to take a bigger, better job with a bigger, better company. That's what he had said, anyway. They all say that when they leave, quit, resign: "Going to take a bigger, better job with a bigger, better company." Sure! It's surprising, it's really astonishing how many bigger, better jobs with bigger, better companies there are waiting for bigger, better men.

Steelburg Mills was glad the old Old Man had gone. From Dick Sloddy, the pit-cover boy at the bloomer, earning his twelve cents an hour, to Jerry Crane, the assistant roller at the rod mill, dragging down his twelve dollars a day, Steelburg Mills was glad. Perhaps that is why the mills coughed up twenty-eight hundred dollars to buy the departing Old Man a present—because they were glad he was leaving. And perhaps that wasn't the reason. Maybe Lafe Murdock had something to do with it.

Lafe Murdock was assistant general manager at Steelburg Mills. Lafe didn't like old Teller any more than Clancy or Smith or Olinsky did, but to watch him a while you'd think he loved him—always dogging his steps, meeting him at the gate when he would come into the yards, whispering in his ear, taking him by the arm when he was crossing a dangerous spot about the mills, running to meet him with an umbrella when it rained, smoking the same brand of cigars he smoked, looking over his big gray car and keeping it rubbed down and in trim—he was a prize lick-spittle. The way Lafe Murdock hung round and honeyed round the Old Man made everybody tired.

Lafe knew that he wasn't going to be the new Old Man, not if he had been A. G. M. for ten years; ke knew that even the chances for his keeping hold of what he had at Steelburg Mills weren't very fat, with old Teller gone. So with an eye to the future—there might be a place for him with Teller in that bigger, better company—he engineered the raising and the spending of the testimonial fund.

Lafe was necked like a bull, lipped like a horse, browed like a rooster, eyed like a pig, mouthed like a hippo. He wasn't to blame for these physical idiosyncrasies of course, but he was to blame for the two rows of fourteen gold teeth that lighted up the front of his gape. He might have grown a beard, raised a mustache, affected the need of horn-rimmed glasses or worn a stand-up collar, but he didn't—not much! Lafe liked Lafe as he was.

With certain employees about Steelburg Mills Lafe had a way; and with certain other employees there he didn't have a way. It was from the first of these that he pulled the twenty-eight hundred.

He'd go up to Yakabowski, sledging in a slag hole or shoveling in a scale pit or digging in a sewer ditch, and say: "Look here, John, the big boss is going to leave us and we want to make him a little present. How much are you going to give—two dollars, hey?" And Yakabowski, looking up from his work, and catching a glimpse of those fourteen gold teeth, the bull neck, the pig eyes, and so forth, would say promptly: "Oh, shee-ure! Two dollar? Dot's all right, Meester Murdock!" And then he'd start in to cuss away and loaf away five dollars' worth of the company's time because he had to give up nearly a day's pay. Lafe had a way with fellows like Yakabowski.

But when he'd approach Jones, melting steel at the Open Hearth or rolling rods at the rod mill or heating ingots at the rail mill, and attempt to touch him for five dollars, and Jones would look him straight in the pig eyes, unscared by the neck, the lip or the gold teeth, and would bellow out "What's that? Me give my money to buy a present for that old red-necked something-or-other? Not on your life-belt!" Lafe would saunter on. He didn't have a way with fellows like Jones, somehow or other.

But he raised twenty-eight hundred dollars, for Steelburg Mills employs an army of men, and Lafe had a way with a whole lot of them, and he and Benny Bean and Joe Easley constituted the committee that went downtown to buy the present. Present? It was presents. For they found they were unable to spend twenty-eight hundred dollars on one present. So they bought a yellow diamond the size of a pullet's egg, to be set in a tiger's-claw ring, for twelve hundred; a big yellow-diamond shirt stud for five hundred; and then they wore themselves out buying gimcracks, kickshaws and gewgaws with the remaining eleven hundred. But they saved enough from it to purcha old Teller's wife a bunch of flowers so big it require men to carry it.

Lafe engineered the testimonial meeting, too, and ceeded in getting together a fair-sized mob, over i open yard back of the Bessemers, for not only those whom he had a way came but many of those with wh didn't have a way were there also. They didn't wa miss anything good. Lafe made the presentation sp and it was mellow as mush all the way through. Old made a mealy-mouthed rejoinder, thanking the mil their loyalty to him through the many years he had associated with them, wishing them good luck and speed, and promising all of them good jobs if they needed or wanted good jobs. Then Lafe called for cheers, and mighty sneery little cheers they were. which old Teller loaded up his plunder and departed the mob scattered.

Out of sight behind the blast furnaces, Jones, wh heading one division of the dispersing mob, stoppe held up his hand. "Fellers," he said, "I propose thi give three bustin' cheers and a tiger because the old necked something-or-other is gone!"

They gave them, and there was nothing sneery or about them either.

A shipping clerk hurrying by the place at the stopped and with enthusiasm joined in the lung exe after which he hurried on, crossed a depressed track up a long flight of stairs, hastily descended another flight, and rushed into the tin shanty of the stout, stout stock clerk of Susie Blast Furnace, Randolp Jackson, known about the mills only as Tootsy.

"What d'ye know about that, Tootsy?" demande shipping clerk, dropping into a chair by the stock cl desk. "Honest, now, Tootsy, what d'ye know abou Here I've just been over watching Lafe Murdock pr the present to that old stiff of a Teller, and say, it took cabs to haul the junk away! What d'ye know about t Honest—two cabloads! And a bunch of posies fo Teller that Benny Bean and Joe Easley could hardly

"Isn't it hot to-day? You see, old Joe Gay, a labor foreman, found Wally in a soap box in a car of pig that was shipped in here—a baby, you know, two or three days old. What d'ye know about it? He took him up to Vinegar Gully, where he lived, adopted him and raised him. He grew up to be the toughest little nut in the Gully. Gosh, they say he was so tough you could have made a straightening maul out of his head. He went to school a little, not much. Old Joe and his wife died when the kid was twelve or fourteen, and he lived up there in their shack after that by himself—does yet. Different from any kid I ever heard about. He worked all over Steelburg Mills—all kinds of jobs. Nearly got killed once at the rod mill.

"Then Ackerman took him and made a roustabout of him. I'll be durned if it wasn't a shame the way Ackerman handled him, but Wally didn't seem to care. I guess I was the first one to discover that Wally wasn't all dub. I found out that he could figure and write like a machine. Honest, Tootsy, the way he could handle the figures and sling a pen with ink on it was a caution—regular wizard. I spoke to Calla Lily, our cultured chief clerk, about giving him a chance in the shipping department, but Calla Lily said he was too coarse, too unrefined. What d'ye know about that, Tootsy? Wouldn't it give you a pain in the necktie?

"Take me, Tootsy. I've been working for this shebang for eight years and better. Why haven't I got somewhere in that time? Simply because I wasn't refined enough for Calla Lily. And I know the very day I stewed my gosling too. You know, Tootsy, how dirty that part of the yard is where my office stands, and how the dirt and dust is always blowing through the doors and windows? Well, I sent in a requisition one day for a little two-gallon sprinkling can, so that I could sprinkle the floor now and then and lay the dust. Calla Lily turned down the requisition and wouldn't let the storehouse send it over—said he had to keep down expenses. What d'ye know about that, Tootsy? Well, one morning I was busy at my desk, and I was shooting some pretty snappy tobacco on the floor—old Slobowsky had forgotten to bring back the cuspidors after sweeping out—when Calla Lily blew in. 'Robert,' he said, 'that is a most reprehensible practice of yours—expectorating on the floor. I shouldn't think you would countenance it.'

"I came back: 'But I sent you a requisition, Mr. Calla, for a sprinkling can to use to settle the dust round here, and you turned the requisition down. I've simply got to keep the dust laid in this dump or I'll choke and not be able to get out the work.'

"Tootsy, I've stood still as a tombstone ever since that day! What d'ye know about it? Just like Wally Gay—no more chance of getting ahead than a jack rabbit with three legs bit off by a bear.

"Well, Wally muled in that scale hole a long time, helping Nicker and Dicker, and one night he got sleepy or sick or something, and he crawled into a box car loaded with wire and went to sleep. Somebody came along, locked the door of the car, and it was shot out to the Midline. Wally didn't get out of it till the car was out in Dakota or Idaho or some place out there. Then a fellow heard him yell, busted open the door and pulled him out, nearly dead from hunger and thirst—all in. What d'ye know about that? This guy was a wheat buyer, owned an elevator or something, and he gave Wally a job. Just as I did, he found out that Wally was there with bells when it came to figures and the pen, and he had him help him out with his own work. Then the guy got sick and Wally did all his clerical work for him. Then the guy died or something, and another wheat gink blew in from Buffalo and offered Wally a job in Buffalo. Wally got on a train and started east, and when he got this far his train was blocked by that big wreck they had up here on the Midline; you remember it, Tootsy—that night Jim Foot got his head cut off. Wally got off the train to take a snoop round, and when he found he was in Steelburg he was tickled silly. He sneaked into the yard, went down to the scale hole and lammed into the work, scaring seven years of growth out of Nicker and Dicker, who thought he was dead; and there he is yet. What d'ye know about that, Tootsy?

"Well, I've got to go—got a raft of work ahead

The Madman Leaned Far Out of the Cab and Gazed Down at the Struggling Man on the Chain. "Hi, You!" He Yelled, "How Much for Chance to Get Loose? Two Dollar, Hey?"

THE PROWLING PRODIGA

By Hugh Wiley

ILLUSTRATED BY J. J. GOULD

Phœbe wuz a feeble baby bee.
Phœbe maybe sting you
Like she done stung me.

HOW come you niggers can't keep step past de office when cap'n looks out de do'?" Sergeant Vitus Marsden, the Military Wildcat of the Fust Service Battalion, A. E. F., preached at his gang on the way to work in the Mauvais railroad yards.

"When I columns you lef', you heads fo' de work an' not to'a'ds de kitchen. Column—lef'! Lef', I says! Lef'! Head dat squad roun', co'p'al! Follow dat mascot!"

The Wildcat's platoon scattered to the four winds of France. "Rally roun' Lily; rally roun' dat mascot!" After five minutes' work the Wildcat accumulated his platoon and headed them toward the scene of the day's work.

"Wuz sweat worth a nickel a quart to-day you niggers makes fo' bits apiece. Ah never seed such slew-foot triflin' outfit. Follow dat mascot—dat's all I tells you!"

"Sergeant, Ise lame. Kin I route step some?"

"Lemme see yo' laig—is you lyin' Ah'll lame you!"

"Kain't see is I; iodine whut de doctor paints me wif don't show. I tells yo' Ise same as a cripple."

"Ceptin' in de appetite. Ah seed you at brekfus'—wuz po'k chops swellin' you couldn't git into a box car."

The marching platoon passed a detail of German prisoners carrying railroad ties. "Rustle dem ties, white boys!" one of the Wildcat's charges called. "How is us gwine to win dis wah if you-all don't he'p us?"

Phœbe wuz a fliah,
Come f'm Ten-o-see.
Phœbe lit a fiah
Where she lit on me.

"Wisht I wuz in Ten-o-see 'stid of in dis wah! Wisht I wuz in heaven."

"Only way you'll git to heaven is wuz heaven a jail an' some white man knowed you like I does."

"Never seed such a lastin' job. Wondeh when de end of de wah'll be, Wil'cat?"

"Front end done been; hind end'll come when ol' Republicans starts winnin'."

"Some Democrats is all right; cap'n's a Democrat."

"How come you-all knows so much 'bout cap'n?"

"I knows. I seed him walk home f'm de banquet 'thout no he'p; rest o' de officers had to be carried. Lootenant's a Republican; had to wateh him an' bed him down like a mule. Cap'n sho' is Democrat; he's outdrunk ev'y officeh what showed up so fah."

"Cap'n sho' kin ca'y his gin ration; sho' kin ca'y a load."

"I'll say he kin; he may be old but he's got kid gloves."

"Detail—'tenshun! Detail—halt! Scatteh out an' see kin yo' earn yo' rations. Tie dat mascot in de vineyard an' leave him eat grapevines."

"Betteh tie him to de track an' see kin a train kill him. He et two pairs of shoes an' de linin' out of a ovehcoat yistiddy. Neveh seed such a goat f'r raiment lunch. Wuz he attached to ol' supply sahgent f'r rations he'd figgeh he'd landed in heaven!"

The platoon languidly began the day's work. The Wildcat figgered a little rest would help him some. He called to a waterboy. "Roust me out afteh Ise laid a couple hours." He coiled himself up in the shade of a pile of lumber and was asleep before his head hit the ground.

No sooner was the Wildcat asleep than several members of his crew gravitated about a push car which stood beside the track. In the group were Cube and the Backslid Baptis', De Witt Massey, The Lizard, Moon Eye, and half a dozen more domino gallopers.

"Us Sho' is Had Plenty, an' Then Some! Lily, You Mascot, See Kin Yo' Laigs Rattle a Gallop. Git Out o' Town. Le's Go!"

"Lemme see de dice; I knows you, Baptis'."

"Seven—li'l lady love—whoof!"

The Wildcat moved uneasily in his sleep.

"Ace an' a dooce; loses nuthin' but yo' money, Moon Eye. Roll 'em!"

The Wildcat sat straight up. In four seconds he had elbowed himself into action. "Gimme dem dice! Gimme dem dice! Shoots ten francs—whuf! Five an' fo' is nine—an' a six-tray. Lay dead. Shoots twenty—fade me is you reckless. Mawnin', seven; I lets it lay. Shoots forty—Lady Luck, I aims to run yo' ragged. Fade me, field han's, fade me! Money, rally roun'! Whuf! Two top sides says 'leven!"

"Ten-shun!"

The captain, fifty feet away, gazed calmly at the group.

"Wildcat, come here!"

"Cap'n, yessuh! Me an' dese boys wuz jes waitin' fo' ——"

"You won't have long to wait for what's coming t Come back to camp. Rest of you boys get to wor

The captain's voice was singin' low like a boiler fore she busts. The Wildcat began to worry about

"Cap'n suh, whut is it whut's comin' Ise ——"

"Shut up before I knock you loose fro ears!"

"Cap'n, yessuh!"

Black clouds obscured the four quadr the Wildcat's horizon. "Cap'n's foamin Lady Luck, whah at is you hid?"

Followed by the drooping Wildcat th tain entered the battalion office and ma way to a smaller room partitioned off corner of it.

"Come in here!"

"Cap'n, yessuh."

Five minutes later the Wildcat d his remains to his quarters and put to bed. "Wuz they one stick o' stov wif my name wrote on it cap'n sho it."

Cinnamon, the captain's striker, a New Orleans boy, drifted in with his "Wil'cat, you likes music; nex' time gits th'oo 'ith you I'll play at yo' fune

"Boy, snatch me Memphis Blue cap'n ain't hurt me none—'ceptin' I b voice yellin' so's he'd think so."

Having accomplished the first succe series of battles with the triflin' Wild captain proceeded to frame an ela series of charges, which his clerk incor in a court-martial.

"What date do you wish t him up?" the clerk asked.

"Right now—this minute—a as I can sign my name. I'll bre nigger of shootin' craps in public him! Send an orderly after hi we'll have his trial now."

Cinnamon, who had drifted office, was dispatched after the cat. "Cap'n says burn a shoe waitin' fo' you in his office."

"Hope he ain't foun' no mor wood—neveh seed such a heavy

Cinnamon laughed derisively. we gits a holiday to-morr'—an' an' marchin' an' ——"

"How come?"

"Funeral p'cession, Wil'c marches slow and you leads."

"Boy, you makes me sick. Wildcat started for his doom.

"'Fo' long you gits some readin' 'Rest from now on.'"

The court-martial was fast b "Guardhouse for three months, three months' pay, reduced fro of sergeant to private, effective t

In Washington, behind an elaborate mahogany bulwark, a quartermaster colonel calculated an intricate soap problem affecting the epidermis of several million men. "Ultimate strength of three million in the Zone of Advance, Watkins; put down three millions—multiplied by the number of days in two years. Say three million by seven hundred. What does that give you?"

"Twenty-one hundred millions."

"Very good. Say they use an ounce of soap a day—more than that up there where the insects are thickest—means twenty-one hundred million ounces. Get a requisition out covering that at once. Liquid soap—twenty-one hundred million ounces of liquid soap to be shipped immediately to the commander in chief, A. E. F., Hoboken to Cameraux, for distribution from the Mauvais Storage Depot."

"Yassir."

Watkins sought his own refuge and began winding the red tape about the soap. He discovered that the liquid-soap order amounted to more than sixty-five thousand tons of material without considering containers.

"Ten shiploads—sure is a big war."

And on a morning when everybody from the front lines to the base ports in France went hungry at breakfast time because the subs had sunk five or six shiploads of food the first four cargoes of liquid soap sailed from an Atlantic port bound for somewhere in France where the cooties grew wild. An order issued from G. H. Q. covering the theory that cleanliness is next to loaning money to the sentry at the pearly gates.

"Daily bath, hell! If I had water enough for a bath I'd drink it." The A. E. F. was thirsty.

At Mauvais open storage spaces and warehouses rapidly filled with steel drums full of liquid soap. The Fust Service Battalion detailed to unload the trains arriving from the docks near Cameraux sweated and heaved and grunted day after day at its endless task.

"How come so much soap?" Moon Eye complained. "Neveh seed so much soap. Wuz it sorghum sweetenin' they might be some sense to it, but us needs soap 'bout like a cootie needs wings." Moon Eye scratched himself and swung onto another barrel of soap.

Over at the captain's quarters the Wildcat was busy straightening up the site of a poker battle which had waged throughout the night.

Close in his wake followed the goat Lily, nominally mascot of the battalion but in reality the personal protégé of the Wildcat. Lily, munching contentedly on the nine of clubs and a shredded face card, gave forth a plaintive bleat.

"Shut up! No wondeh yo' insides hurts. When you eats th'ee socks and a cigah an' half a deck of cyards yo' has yo' mis'ry comin'. Leggo 'at papeh!"

The Wildcat finished his work and proceeded to the battalion office adjoining the captain's quarters. The room was untenanted at the moment, and while the Wildcat swept the litter that lay about into the dark corners of the room where it might accumulate unnoticed, Lily grazed here and there at will.

"Neveh seed such a ol' goat f'r eatin cigahs. Lay off 'at long one—I aims to smoke 'at cigah myself afteh me an' Cinnamon eats us a li'l' snack." The Wildcat stowed the half-smoked cigar in the left pocket of his shirt and made his way to the kitchen, leaving Lily safely confined behind closed doors. "Stay theh an' walk yo' post whilst I 'cumulates some rations."

Lily walked a staggering post for a few minutes until a neatly cultivated garden of service records attracted her attention. In the midst of the alphabet she found a menu to her taste. She browsed lightly on the documentary evidence covering the military biography of Moon Eye and the Backslid Baptist. Of Vitus Marsden, the Wildcat, she ate all but the two wire staples which bound his folio. She gorged on Cinnamon, Lizard and young Cube Calvin. From the captain's desk she partook of a cellulose dessert

"Gimme Dem Dice! Gimme Dem Dice! Lady Luck, I Aims to Run Yo' Ragged"

World Trade and Our Ships

By Edward Hungerford

DECORATION BY EDGAR F. WITTMACK

FOR more than half a century Great Britain stood as the undisputed mistress of the seas. In all that time her foreign policy has been dominated by the necessities of her merchant marine. Because a coal-burning steamship can rarely go more than five thousand miles without refueling—more frequently not more than four thousand—her imperial policy provided British strongholds—British coaling stations if you please—at intervals the world over of not to exceed four thousand miles. For these she schemed and fought and treated and garrisoned. They formed, in truth, the very foundations of her national prosperity. And because at this late day it was physically and politically impossible for any other nation to gain footholds the world over at four-thousand-mile intervals England's immensely valuable supremacy of the seas seemed, as late as five years ago, to remain forever undisputed. Even the restless and growing commercial genius of Germany could not overcome the political advantage which the long-sighted vision of British commercial ability had taken—some of it more than a century and a half ago.

The average Briton is more than frank about this.

A Merchant Marine With Oil Fuel

"WE SIMPLY are compelled to have the commercial supremacy of the seas," he will tell you, "because with the single exception of Japan we are the one nation that is absolutely dependent upon the lanes of the ocean for our mere sustenance alone. So it is that the moment that supremacy is threatened England's very existence is placed in the balance."

So it was, too, that England in the long ago became a land of seafaring men, that she showed a remarkable facility and progress in the craftsmanship of the sea. And when a little less than sixty years ago our own dominance of the sea began slowly but surely to wane, our far-famed clipper ships to disappear, the yards which had wrought them to fall into decay, Great Britain regained the ocean mastery which we had wrested from her hardly two decades before. She deserved to regain her power, for she it was who first perceived that the commercial ocean carrier of the future was the steamship, and she it was who translated her vision into definite and permanent policy, and changed her imperial foreign policy so as to obtain and hold for herself not merely trading stations but coaling ones.

Now the scale has changed once again. England no longer is the undisputed mistress of the seas. She still has the largest tonnage of merchant marine, but a new fleet born overnight has risen to challenge hers. It already has grown to more than eleven million tons gross, as compared with her registered tonnage of about sixteen millions; and the gap, despite the frantic efforts of Great Britain to get her disorganized labor at hard work again and her shipyards into quantity production once more, is gradually being lessened until the probabilities are that the newcomer—unless the entirely unforeseen shall come to pass—will reach the size of the British merchant marine in another two years or so.

The new fleet to which I refer is ours—the new merchant marine of the United States, born of war emergency, and because of the possibility of future war emergencies to be retained as a permanent and important part of our national establishment.

"But," you interrupt, "how about the coaling stations? Have you not just said that the imperialistic policy of Great Britain for more than half a century past was based upon her necessity of obtaining and protecting her coaling stations? And that so she had succeeded in obtaining a commercial advantage that even the business enterprise of the Germany before the war could not wrest from her?"

I said that very thing, and meant it. But I shall presently show to you how the great commercial advantage that England long ago gained in the establishment of her coaling stations all over the seven seas works no disadvantage to us whatsoever. For our new merchant marine is to be free of coaling stations—forever it is to be hoped. Our American fuel is of a different sort—fluid, flexible, self-feeding. It is oil.

With oil in her bunkers a ship may sail easily ten thousand or twelve thousand miles without refueling. She may sail across the Pacific from San Francisco or the Canal Zone to our Yankee port at Manila without stopping for a moment's worry as to her bunkers. She may cross from New York to the Mediterranean, gath
a few hours in our newest little dot of th
just off the coast of Northern Africa,
go on to Manila without further del
similar purpose. These are performances out of
tion in a coal-burning ship—even of the most mo
the most economical type. They are the perf
that will enable our ships—our new merchant
please remember—to come back; to come back st
due time we shall consider them in considerabl
But first let us give thought to the thing that com
the ships themselves.

"How about those ships anyway," you d
"those wondrous craft that were to come droppin
launchways each calendar day?"

Is American Shipbuilding a Lost A

HERE is a question that creeps up now and
again these days. It has a rather unpleasant
insistence. And one frequently can detect the no
irony in the way in which it is put. Nor does the
of the great war-emergency plan of the Unite
Shipping Board end with anything so delicate
refined as mere irony. Frequently it becomes
brutal.

A man backed me up into the corner of a hotel
few weeks ago and expressed his mind with utter fr

"They're rotten. I know that they are rot
reiterated. "Some of them were so rottenly built
only God's mercy that they did not founder—with
coming within gunshot of a submarine or floating
an even moderate mid-Atlantic gale."

The man in the hotel lobby was right; and als
wrong. Some of the ships were rotten—as muc
imagined, and then probably a good deal more. In
place we had all but ceased to be a nation of ship
The cunning and the great skill in which our gran
had fashioned the clipper ships and swift-sailing bri
seemingly had departed from us forever. We had
at the beginning and learn it all over again. With
world aflame and beseeching us to come to its salv
had to combat ignorant and reluctant labor. No

MELANCHOLY MALLARD

By WILBUR HALL

ILLUSTRATED BY ERNEST FUHR

THE San Lucas Desert country leaned to the opinion that Bodie Mallard was a trifle underweight intellectually. In Two Buttes, the town of his legion, the opinion was supported in a measure by the outstanding facts of his career there. Even his rival, five or six years before, had been subnormal, in a manner of speaking. He had walked in from Sandoval junction, a distance of seventy-eight miles by the narrow gage. Taken by itself, this fact is inconclusive; when you consider that every superheated foot of that distance was and naked desert you must agree with Two Buttes that there is something missing about a man who will walk when he does not have to. Apparently Bodie had not been under any compulsion, for immediately after his rival—as though to forestall old Phil Nuss, the town [illegible] and a hard man on penniless transients—the [illegible] had gone into Charley Dick's barber shop, bought [illegible] and then engaged Charley to operate it.

The barber was almost tearfully grateful for this quixotic business venture on Mallard's part. Mrs. Charley had been ailing for a long time and badly needed [illegible] to the coast. Probably the barber had conveyed [illegible] information to the newcomer while the latter was [illegible] shaved. Dick was not the complaining sort, but he [illegible] garrulous as any of [illegible] and topics of con[illegible] in Two Buttes [illegible] sometimes limited in [illegible] and number. At [illegible] the deal, which [illegible] had proposed on [illegible] motion and with[illegible] or warning, put [illegible] barber into a con[illegible] of delight bordering [illegible] and Mrs. Dick [illegible] Two Buttes a few days [illegible] a little when [illegible] to say good-by [illegible] you to Mallard. [illegible] gazed at her [illegible].

"There's some mistake [illegible], he said in his melan[illegible] voice. "The shop [illegible] bargain at the price, [illegible] our husband is a [illegible] and at a shave and [illegible] ut, ma'am. Hope [illegible] fine luck. And [illegible] you'll excuse me [illegible]. Got a hen on and [illegible] keep moving."

He was the longest man [illegible] Buttes had ever [illegible] long-legged, long[illegible] long-framed, long[illegible] His movements [illegible] low and taken as [illegible] only after due de[illegible]. Certainly he [illegible] handsome, though [illegible] a certain mark of [illegible] on him. But [illegible] characteristic [illegible] him was his sad[illegible]. He was chronically [illegible]. Even when [illegible] a kind and gener[illegible] he did it ab[illegible], lost in dolor, [illegible] sometimes the recip[illegible] his favors were [illegible] guiled of appreciat[illegible]. Puzzled people [illegible] he did not seem [illegible] with a tragic [illegible] down by some [illegible] sorrow; merely he [illegible] temperamentally [illegible]. If he had [illegible] to his neighbors [illegible] have become a [illegible] since he only reg[illegible] grief he became [illegible]. There was [illegible] flavor about his [illegible].

[illegible] was notable that [illegible] drew children to [illegible] some mothers of [illegible] it was an obstacle to his acquaintance with young women. They thought him a harmless and gloomy fool and very old. He was thirty-two.

Why he chose Two Buttes as his habitat no one ever knew; it is doubtful whether he himself knew. But he stayed. He had no regular employment and yet he was busy. In the background somewhere there was always some project engaging him—he spoke frequently of "having a hen on." But no one fathomed this. The outward and visible signs of his enterprises were strongly confirmative of the first impression people had of him, namely, that he was slightly off, for he went into one venture after another that was foredoomed to leave him profitless. For example, just after Charley Dick bought back the barber shop at a discount Jeff Bridger's partner absconded with the partnership funds and left Jeff high and dry with his teaming contract for the borax company. Bodie Mallard heard of Bridger's trouble and offered to buy the Manson share in the business. Bridger accepted hurriedly before Mallard could change his mind, and this saved the Bridger family from total financial wreck. In time the teaming contract came to a profitable end and Bodie Mallard was compensated for his interest, whereupon it became known that Dixon Steele, owner and editor of the Two Buttes Bugle, always hard pressed for cash but now on the verge of dissolution, had been successful in a two-hour interview with Mallard and that the melancholy man had become part owner and associate editor. Someone remonstrated with him. Mallard heard him through with sorrowful gaze fixed on the floor of the Eagle House porch. Then he said:

"Maybe you're right, neighbor. But I always wanted to own a real paper."

"You got deceived twice in one deal then, Mallard," his counselor snorted. "You've sunk your cash and you ain't connected with a journal that comes anywheres nigh that description."

"You can't tell," Bodie objected sadly. "Maybe all the old horn needs is a little silver lining. I guess she'll blow up a pretty good tune from now on."

Marvelous to relate, the Bugle did indeed sound clearer notes thereafter. The associate editor took no active part in its management, but he was generally in the office, and something about his big drooping frame, his slow, mournful voice and his dry, almost lugubrious comments worked magically on Editor Steele. The Bugle improved from issue to issue both in form and substance. Eventually Bodie Mallard was repaid dollar for dollar and given a double-leaded two-column editorial encomium on the first page besides.

Judge Stillhouse Brown commented on this matter at the evening meeting of the Eagle House porch habitués.

"Time for some other wreck to be washin' up out of the eternity of space for Bodie to salvage now," he concluded.

"Yes," Constable Nuss agreed, "he's fattenin' up to be plucked again."

But Luke Simonson, cashier of the Fay and Stowell Bank, interrupted. "You old leather jaws don't want to go away with the idea that Bodie Mallard is an easy mark. He may be foolish, but you may have noticed that he only backs men that need a chance to make good. If some more of us were built the way he is Two Buttes would be pulling up into notice some day."

"Well, Bodie won't never get to ownin' Borax, Incorporated," Phil Nuss observed.

"He won't," Simonson agreed. "But where he's got the advantage over a lot of you front-porch experts is that he hasn't any ambition to own it. If he would put his money into mortgages and talk nonsense about national politics and spit tobacco juice all over the sidewalk every evening Bodie Mallard would be one of the leading citizens of Two Buttes and well thought of."

"You ain't gettin' personal, are you, Simonson?" Judge Stillhouse Brown rasped, giving his wide hat an angry tilt.

The Man in the Wide Hat Flung Himself on Them. He Was Like an Avalanche. He Smothered Them

"Well, judge," Simonson retorted, "if my powers of description seem to be failing I can mention names."

Whereupon the judge turned his back on the cashier, thus summarily closing the debate.

Gradually Bodie Mallard came to be looked on as a fixture in Two Buttes. For the most part he was dissolved into the atmosphere of the place by reason of his colorless nature, his habitual quiet and calm and his unobtrusive but perpetual sadness. He was not a misanthrope or a hermit. He knew everyone and newcomers usually met him within a few days. One of these, a very sick young man, once told Bodie that the desert country needed organization—suggested a chamber of commerce and trade. Bodie absorbed the suggestion. Presently he passed it on to Cashier Simonson, the Bixel boys, and Moganstern, of the borax company; and when he agreed to finance the institution until it was a going concern they gave it their approval and the chamber became a reality. Bodie fitted up a part of the Bugle offices for headquarters and presently Two Buttes found young Albright, the sick stranger, installed there as secretary and manager. A good deal to the surprise of everybody, including Bodie Mallard probably, the chamber proved a useful institution and Albright a notable addition to the population. Someone tried to compliment Bodie on his astuteness and public spirit.

"Me?" the melancholy man inquired pensively. "Wasn't my scheme. Albright's. Wouldn't have struck me."

"Anyway it was a grand idea," his interlocutor persisted. "You put up the money, Bodie, and you ought to get the credit." This impatiently.

"Credit? No use to me. Have to be going, if you'll excuse me—I've got a hen on. So long!"

Thus always Mallard avoided acceptance of any reward for himself. He had proved several times that he had no wish to make money out of his enterprises; now it seemed that fame had no fascination for him. Then the day came when the powers in the county seat decided that Two Buttes—for political reasons—must have the naming of the next representative for the county in the legislature. The Bixels, leading merchants and cattle men, Moganstern, of the borax company, the La Due boys and some others met the two county-seat men in conference and spent three hours canvassing the field. At the end of that time, with absolute zero marking their progress, Billy La Due yawned and said:

"Well, that checks off everybody in the county but Bodie Mallard."

He had made the remark wearily, being tired of the subject, but before he had spoken the last word he realized that he had said something. The Two Buttes men all sat up.

"By Jupiter," Moganstern cried, "he's just the man!"

"Mallard! Why not?" said Simonson. "He's got sense enough to keep his mouth shut, anyhow."

"That would be a distinct novelty at the capital," Falk Bixel declared. "You can put me down for him."

"Who is this Mallard?" the visiting politicians demanded.

"He's the saddest man in the state," Simonson answered. "Don't ask me what makes him sad, because I don't know. But he is popular and he has more dignity than the undertaker standing on the front steps. He would be a credit to the county."

They agreed on that and the matter was settled. But when a committee went to Bodie's two-room cabin on Arapahoe Street—with most of the citizens of Two Buttes trailing along—to notify him they met with a surprise.

Bodie came out to meet them in his nightshirt, standing beside the prickly-pear bush that grew at his doorstep. He was more long-legged than ever, with his one scanty garment flapping about his thin shanks, and he seemed unusually lugubrious. They told him the news and raised a cheer. He gazed at them sadly. Then he said in his slow, mournful voice:

"Well now, folks, I'm much obliged to Senator Billings and Dix Steele and everybody, but I ain't going to the legislature. 'Tain't in my line. There's a cactus needle in my heel—so I'll say good night."

And without further eloquence he withdrew.

Judge Stillhouse Brown was the first to speak.

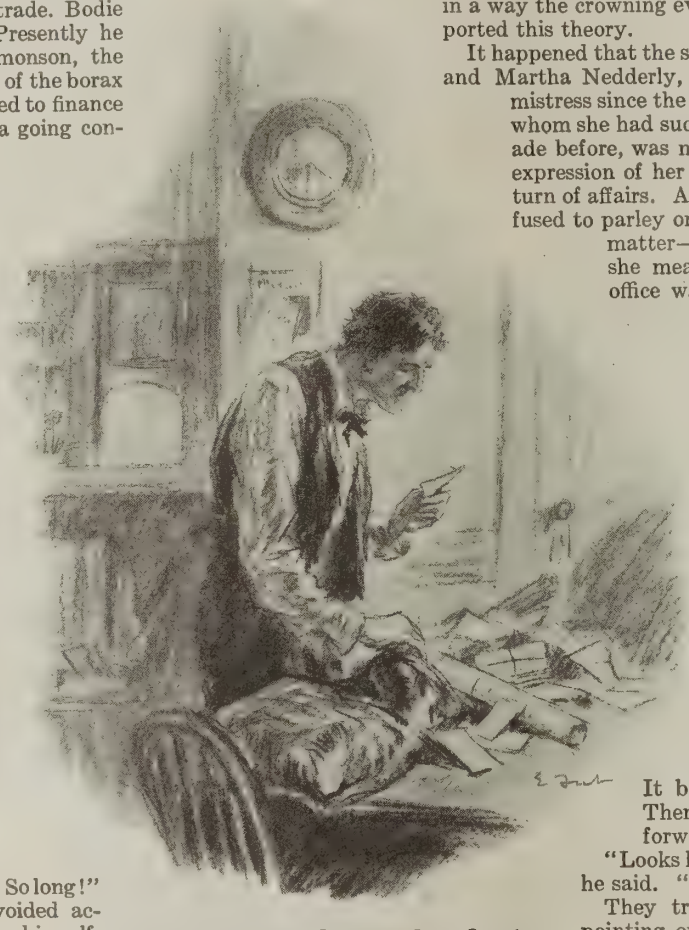
"Why, it ain't in nature not to want to go to the legislature!" he cried. "Drag Bodie out here again and I'll reason with him."

"Shucks, judge," Bert La Due interjected, "you might as well try to reason with a bull calf. Let's go home."

This incident seemed to dispose of the theory that power was what Bodie Mallard craved. The only reasonable assumption as to the motives that prompted him in his social intercourse with his neighbors was that he couldn't be induced to do anything except kindnesses for others.

Unusual as such a course is, Two Buttes began to believe it was Bodie Mallard's. And in a way the crowning event of his career supported this theory.

It happened that the state went Democratic and Martha Nedderly, who had been postmistress since the death of her husband, whom she had succeeded at least a decade before, was moved to resign as an expression of her indignation over this turn of affairs. Also the widow lady refused to parley or temporize about the matter—when she said resign she meant resign. The post office was closed and locked. And then the subject of a fit person for the place became a burning one.



Almost the First Envelope That Caught His Eye Was Addressed to Himself

At first no one would have it. Two Buttes was a ninth-class office, or thereabouts, and the salary attached was negligible. The two mail trains each day were fourteen hours apart, which meant that the postal agent of the community was hard worked as well as underpaid. It began to look serious. Then Bodie Mallard came forward.

"Looks like just what I want," he said. "I'll take it."

They tried to dissuade him, pointing out the obvious disadvantages of the position. Bodie was not to be convinced. And Two Buttes was relieved. Now at last the post office would be swept and mail distributed on time and postal cards would go out when deposited in the bag instead of lying over until such time as the officer in charge could get to read them all. They sighed with satisfaction and gave Bodie their unanimous indorsement. Within a few days his appointment was returned and he took office.

There was no new excitement in Two Buttes for months thereafter—not until Nes Wallace defaulted with a hundred dollars belonging to the narrow gauge and disappeared. This, in fact, was scarcely more than a two hours' sensation, for Nes Wallace had been mouthy, offensive and unpopular. The only person in Two Buttes who did not forget the young freight clerk within a few days was Bodie Mallard, and that because Nes, it proved, had been a very liberal patron of the post-office department. He was one of those youths who answer advertisements for free information. Such always get free information, usually in loads. Nes was no exception. His mail accumulated rapidly. Such of it as he could, Bodie Mallard returned to the senders. But some of it began to pile up under the counter. There it was an eyesore and a nuisance. Bodie could find no rules for his guidance in the premises, so he adopted the eminently safe course of doing nothing. Weeks went by, and months. Occasionally a circular or a booklet would add itself to the collection awaiting communication from Nes Wallace, and meantime the routine of the post office went forward smoothly and Bodie Mallard began to rust in his rut. Then that happened which was destined to happen.

II

ADDRESSED to Nestor J. Wallace, Esq., Two Buttes, there came one day a letter marked "Urgent" in staring red letters.

Postmaster Bodie Mallard picked it up a little crossly, stamped "Not at this address" across the face and threw it over toward the mail bag for return to the sender at such and such a post-office box, Chicago. Early the next morning in placing the empty bag under the letter drop for the day's business Bodie found a letter and envelope lying on the floor. He picked them up. The envelope, which had been mailed unsealed in the first place, probably through carelessness, was the one on which "Urgent" had been so prominently printed. The inclosure—a t written sheet—had slipped out as Bodie had tossed piece over toward the bag on the previous aftern Usually Bodie had no curiosity, but that red-star "Urgent" piqued him. To be brief—no matter what think of his culpability—he succumbed and read. It began:

Dear Sir: The rapid growth of our business in territory compels us to open a detective office there ir diately and we are considering appointing you as man

If you will send us five dollars we will mail you an e gency appointment as one of our detectives and send instructions.

As we have written you before, the public police other officials are very jealous of this agency, therefor must insist that you consider all our negotiations c dential and tell nobody about your appointment.

In the meantime we will expect your favorable actio this matter at once.

Yours very truly,

ROYAL DETECTIVE AGENC

Per J. D. Rath, M

If Bodie had had compunctions about reading anot mail—and he had—he palliated his offense with those lines of the letter. The Royal Detective Agency wa organization for the frustration of crime and the ap hension of criminals—obviously—and conditions such in Two Buttes that an office and a manager the were required immediately. The letter said so. H considered. He had heard that the borax company lost upward of a thousand ore sacks several months be there was that matter of a heifer belonging to the boys; and Bud Heffner had said in Bodie's hearing he himself had recently missed several worn casings a miscellany of tools from his garage. The year befor desert had given up a mystery—the death of a lo prospector, who might have been murdered or who n have died of extreme old age. It was an undeterm question. And in Gould Valley there had certainly two or three fights between the Portuguese and the m over water holes. Bodie had not considered these un nected incidents in this light before, but when all summed up it appeared that the situation might rea ably be called grave.

In such emergency action was called for. But Wallace—irrespective of whether or not he would been the proper person for the management of an ag to deal stringently with the criminal classes—was g where no man knew. The need of an appointment evident—*prima facie*. Bodie pondered the subject all In the evening he sat down, sucking a reluctant pen, composed a letter to the Royal Detective Agency, se forth all the facts and frankly confessing his own de tion in the matter of that violated message ma "Urgent." His effort seemed to him to meet the crisis sent it off special delivery, inclosing a money orde five dollars.

In the course of ten days his answer came. The R was pleased and relieved to hear from Two Buttes. It quite apparent that they were at last in touch with very man for them. They were inclosing Mr. Malla emergency certificate as a detective and his appointn But:

We must call your attention to the fact that this pointment cannot be made permanent until you taken our regular training course and have our dipl This course takes nine weeks at the rate of five doll week. However, in view of your emergency appointr we will make you a special rate of twenty-five dollars if enroll in our unparalleled training department within days.

And trusting to hear from him promptly, they si themselves truly his.

On thinking the thing over Bodie decided that the req was reasonable and mailed the amount demanded u the special offer. His lessons arrived promptly. seemed a trifle sketchy—even to him—but he puzzle way through them faithfully. Before the last of the co instructions reached him there was a new sugge made—namely, that he should equip himself for his with one of the agency's special outfits, comprising nickel-plated revolver, ten dollars; one pair best handcuffs, two dollars and fifty cents; one high-g leather-covered slung shot, one dollar and fifty ce one manual of detective procedure with special appe covering the serving of papers, one dollar; and Royal Detective Agency star, two dollars and fifty ce total, seventeen dollars and fifty cents. For cash immediate order, fifteen dollars. Bodie sent the amour

This equipment came. Bodie had some familiarity revolvers, though not much. His outfit seemed to hi have a tawdry and tinny look that discounted its w materially. Nevertheless, he remembered that in c men might look on these things differently—a sor magnified pea shooter like this .32-caliber revolver, example, might be to them a creditable arm. The h cuffs looked as though a healthy child would injure t beyond hope of repair in play, and the billy, or slung s had a fragile appearance that weakened its claims

dly weapon. On the whole, however, Bodie felt that he
equipped now, even if somewhat inadequately, and
ue on with his course of training, hoping for early
its.

ot ng developing, he wrote at last to the agency ask-
h—in their opinion—he would be in a position to be-
ro. Their reply, prompt and courteous, suggested that
n ten dollars for a special examination as to his
ci s, assuring him that his successful negotiation of
gr le would start him on the way to fame and fortune.
tey recommended his subscription—at ten dollars a

hood. Bodie sent ten dollars for the special ex-
aon and ten for the service-bureau information.
elt that now a career was opening ahead of him.

e nfamiliar with the matter might have said that he
it—that the preliminaries were now completed.
or would have been mistaken, as it turned out. It
ar I that learning to be a detective in these modern
s as not what it once was. Preparing oneself for
in enterprise of detecting crimes and capturing
ins was much more complex than all that. So far the
ets alone had been disclosed; now the fine points
tbe touched upon and revealed—at an additional
sto the learner. There was, for example, a study of
isy, a course in which would cost twenty dollars; and
curse, without which any detective might find him-
wa ing all his reward money in paying damages for
k. he had made; and finally a course in the science
di; and recording and comparing finger prints—an
ufly essential branch of detective work without
n man could even hope to make a start. Twenty-
dcars would cover this course—if mailed immedi-

Bodie growing a little weary of this perpetual
ml pursuit pricked up his ears now. He had heard
e e of the finger print in the pursuit of the lawless
isaking of this bait was prompt and cheerful.

e araphernalia consisted of an ink pad, a cheap
if ng glass and a set of one hundred cards for regis-
nf prints; also there was a booklet on the subject
g-print taking and its potency in detective work
wi more interesting than instructive. Bodie learned
bur how to make a clean-cut impression of the
fints of his own hands, but it took him many days
vi a system by which he could get what would be
uy indispensable to a detective—the finger prints
e taken without their knowledge. At last, combin-
irs from the booklet and the results of his own
ints, he found that if he could get a little oil
th finger or thumb of an intended victim and
n print from that oiled digit it was easy to bring out the configurations of the mark by dusting lampblack over it and blowing off the superfluous powder. Patiently he set one trap after another, getting the finger prints of half of Two Buttes and giving himself infinite satisfaction with each successful effort. His next step was to lay traps for strangers—though there were but few such passing through the desert town—and he worked out a method at last by which this could be accomplished. Then he began to burn midnight oil in earnest.

For he had discovered, or thought he had, that he could tell a man's occupation or profession or trade from his finger print. This surprising and interesting theory resulted in a similarity he thought he saw between the finger prints of Will Zedd, the hardware man and plumber, and of Bud Heffner, the garage owner. There seemed a resemblance, too, between the lines on the thumb pad of Luke Simonson, of the bank, and of Charley Muir, cashier for the borax company. Something in common he believed he could make out in the prints made by the fingers of Miss Sterner—procured by trick and device—and those made by the hand of old John Nixon. Now Miss Sterner taught the Two Buttes grammar school's lower grades and John Nixon had once been a college professor. The study developed in Bodie Mallard latent tendencies for the fine distinctions, the close scrutiny and the intolerance with undemonstrable conclusions that stir in the minds of true scientists—he became obsessed with his theory. When it did not prove out he went patiently at the task of reconciling contradictions. The two Bixel boys, for example, though partners in merchandising and the cattle business, and as like as two peas to the casual eye, had finger prints widely variant. This seemed to be explained when Bodie learned that Falk Bixel had always been a business man, while his brother Basil had once had leanings toward the arts. And Bodie was triumphant when a Sunday newspaper supplement brought to his eye a finger-print story in which was discussed—with pictures—the thumb prints of famous actresses, all of which seemed somewhat similar and with one of which he found a family likeness in Basil Bixel's print.

After that the mere business of being a detective—or for that matter the mere business of being postmaster at Two Buttes—palled on Bodie Mallard. He was not conscious of the scientific urge; he only knew that he had found something that fascinated him. As a matter of fact, the criminal business in the desert country was exceedingly slack. Criminals appeared to be avoiding the town. The Royal Agency, finding Bodie cooler, began to lose interest in him. Tentative appeals to his cupidity or greed for rewards failed to rouse him. After a general follow-up campaign covering two or three months they dropped him. Bodie did not care. He had decided that they were small potatoes anyway. But he did develop a growing appetite for a field in which to operate with his new pastime. Outside of criminology the subject seemed to have no call. At last he decided to write to two well-known detective agencies asking them what possibilities there were for finger-print experts. His claims for himself were modest; what he wanted was an opportunity to show what he could do.

From the Sterns Agency he heard exactly nothing. But the Pendleton Detective Bureau, famous in four continents, was more responsive. On impressive stationery Bodie received a prompt reply. It was so prompt, so enthusiastic and so encouraging that it would have made a more sophisticated countryman suspicious. Not Bodie. He took at face value the Pendleton letter, which assured him that men of his stripe were very much in demand and that a place would be made for him on the staff at the earliest possible moment. Meantime it urged him to pursue his studies locally and to forward to the offices of the concern any prints he had of Two Buttes people who might be considered in any sense suspicious characters. It even added that the mayor of Two Buttes might himself be the man who was wanted in Canada for counterfeiting Bank of England twenty-pound notes. Bodie studied that suggestion thoughtfully, but saw no guile in it. He only answered, first, that Two Buttes had no mayor; second, that it was exceedingly unlikely that a man as clever as the counterfeiter would waste his talents in so isolated and unpromising a spot as the middle of the San Lucas Desert.

This reply delighted the Pendleton agency—or so it seemed. His keen mind was revealed in his letter, they said. His powers of deduction were unquestionably superior. All he appeared to need was training of a practical nature. If he would be good enough to forward his certificate of graduation from the detective school he had mentioned in his first letter ——

To be brief, someone in the Pendleton Detective Bureau kidded Bodie Mallard into a state bordering on excitement. He lost some of his wonted sadness. He forgot his melancholy. He was even heard to whistle now and again. He whistled very badly—but he whistled. And Two Buttes marveled.

And well they might. Bodie Mallard was becoming a changed man. His career was made for him. He was almost happy. All he awaited now was the chance passing of some desperate criminal, a moment with some internationally famous murderer, the finger print of his own capturing of some notorious desperado—and then, ah, then he would show them!

Judge Stillhouse Brown shook his head sagely at the evening gathering on the Eagle House porch along about that time.

"'Tain't in nature for Bodie Mallard to be so upriz," he said sagely. "Somethin's wrong—you mark my word.

(Continued on Page 141)

In the Morning, Almost Without Words, the Two Started Back Toward Burstow, Driving the Pack Burros Before Them

MYSTERIES OF MAKE-UP

By Kathleen Howard

HE WAS small and very Jewish in type; his back was bowed in a chronic stoop, though he was young. His eyes were a wonderful translucent green, with their racial hint of tragedy, but his nose was terrific. He had to play the young dashing Barber of Seville, and a lesser man might have been bothered by the handicap of his distinctly typical nose. Not he! He was an Austrian with the traditions of his country's stage and he knew that he could paint it out. Players of his type think you can paint anything out with grease paint. So he blackened the long bulbous tip three-quarters of an inch from the end and went on the stage quite happily, sure that his profile was perfectly Greek, the black nose tip a mere saucy shadow.

Make-up has grown to hold an exaggerated place in the actor's mind. Many of them think a heavy coat will do just what they want it to, if exaggerated enough; and they lose the fine sense of proportion—if indeed they ever possessed it—which tells them just how greatly the distance between themselves and the audience and the brilliant footlights will aid or handicap them in getting the most out of their facial expression. The idea of painting the face is as old as Time. One finds it in all countries—chiefly as an adjunct to beauty. Cleopatra and the Pharaohs certainly used it, the women to enhance the beauty of their skins and accentuate the brightness of their eyes, the men braiding their hair and beards and anointing their faces. There are ancient sheep's-wool wigs in European museums, said to have been worn by Egyptian queens, who perhaps preferred the golden hair of an *ingénue* to their own vampire locks.

The masks of ancient Grecian times were worn to give a desired facial expression and to suggest the passions and emotions of the actor. It was unmistakable to make an entrance wearing a huge mask painted to simulate an enormous grin—the naïve audience at once was in the mood for comedy. Our tragic and comic emblematic masks with their huge gaping mouths are relics of these times.

But the Greeks seem to have used masks only at the time the decadent Roman influence affected their stage. In the beginning of the fourth century the costumes were designed to give great freedom in action. This is shown in the vases and sculpture of the period, also in reading the plays of the fourth and fifth centuries, with their passionate, emotional moments of grief, rage, love, mourning—all the triumphs and despairs to which their art was harnessed.

The high-soled boot, almost like a stilt, was used in the Roman period, as were the huge masks, the chest pads and stomach pads which were all part of the tragic costume worn by the Greeks under the Roman influence.

Joseph Jefferson's Grease Paints

THE Greek theaters were so enormous that neither mask nor make-up could be seen probably and in the huge Athenic theater it can easily be imagined that much of the facial expression must necessarily have been lost.

The Chinese and Japanese also used these masks in their dances in much more recent times, some of the Japanese masks being seven feet in height and ranging from that to the size of the ordinary face mask.

The first actors, we read, to leave off the Grecian masks were some strolling Roman players. Whether because they had their baggage stolen or pawned it or just naturally got tired of lugging them round we do not know. They then concocted dyes and stains from leaves and berries and used these as make-up.

The monks in the Middle Ages used paints of some sort to give a semblance of naturalness to their religious and allegorical plays. These were at best so stilted that they employed all the limited means at their control to aid the illusion.

Shakspere's first interpreters had no make-up to aid them. We read of their attempts to find some practical way of disguising their features, but they were unsuccessful. Even the costumes worn were all of the period and the stage must indeed have been natural to the point of everydayness, but the plays of the young author were distinctly good, and the public seems to have been attracted. To be sure Pepys does say in his immortal diary that he had seen "Midsummer Night's Dream, which I had never seen before, nor shall ever again, for it is the most insipid, ridiculous play that ever I saw in my life." But then he didn't even like Romeo and Juliet, so perhaps he considered Shakspere highbrow.

In Sheridan's time make-up was used by both men and women, the young fops of the court using it freely and the women making the best of what few cosmetics they had. White wigs were very trying unless one was touched up, and a tiny bit of court plaster, black and clinging, cut in shape of a heart, a crescent, a tiny coach-and-four, or even a simple circle, did much to help beauty's eyes flash.

From then on the progress of the art of make-up was very slow. American actors of fifty or sixty years ago had very little means at their command. Burnt paper was rubbed on the face to simulate a beard and burnt cork was the chief stand-by for black. Lines were made by holding a hairpin or some such instrument over a candle to accumulate black enough and then applying it to the eyebrows.

A ball of chalk, a paper of Chinese vermilion, a stick of India ink, were the contents of the actor's make-up box. These he applied with a camel's hair brush or any pet tool of his own inventing. James O'Neil says he first saw grease paints when he was playing with Joseph Jefferson. Someone had sent him a box from Germany, and Jefferson was showing them to the curious company, who were not much impressed. Years later Jefferson said of grease paint, "I never use them—they destroy expression. I had a box long ago, but I threw it away." He used red, black and white, carmine, burnt cork and chalk. He was right, of course; they do detract from facial expression. But the lights have grown in intensity since the great Rip Van Winkle, and we are forced to use something or look like victims of recent illness.

Richard Mansfield was famous for his wonderful make-up and was largely aided by his talent for drawing and painting. It is much easier for the actor who has some skill in that way to paint his face realistically.

Grease paints are said to have been invented in Germany by Carl Baudins, or Baudin, a member of the Leipzig theater and an admitted master of character make-up. At first they were bad for the skin, containing oxide of lead. Now they are made of vegetable dyes and fats and are absolutely harmless. In using them a good rule is to use as little as possible. Some are much more transparent than others, and experience is needed to find out just which ones look dead and which lifelike in surface.

In making up for a small theater one must never forget that the people in the front rows are almost on the stage with one, and therefore the amount used must be small, the art with which it is put on correspondingly great. In our great Metropo Opera House it is almost impossible to use a tle, suggestive make-up. Exaggeration is sary. But it must be gauged to a nicety or its intensity makes it ridiculous. For a burlesque one let one's fancy fly and wallow in broad effects, but then subtlety counts largely, and the further you get from anything typical and obvious the better your w

It is most interesting and helpful to study physiog wherever one finds oneself—in the subway, on corners, in audiences.

If you have a part to create, think yourself into character deeply and see what face and expression u sciously occur to you. Then try to create that with paints. Did you feel that your mouth should be larg loose, make it so; did you feel that the eyes were natu squeezed up at rehearsal, the mouth pinched, make so. The make-up must come from the brain, not the p Study mouths and how feelings shape them—the se mouth, the bad-tempered one, the hundreds of vari Choose the one most suited to the character of the p you must portray.

The contents of a make-up box are infinitely fascina In mine are grease paint sticks, thick and capable loo among them, pale pink, creamy white, white, ye white, sallow, healthy color, middle-age sallow, middl hearty, gypsy, Egyptian, sunburnt—all for foundat I have powders of all these shades and then some m have mixed myself. Personally I never use that d heavy German pink so generally accepted as beautif To me it is utterly dead and disfiguring, and hid change of expression. Then I have trays of lining pai little sticks of gray, of brown, red-brown, blue—light dark—black, scarlet, old red. Artists' stumps are useful for making lines and I always have a supply.

The Box of False Noses

A BLOCK of dry black with a little brush, generally for eyelashes, I use for wrinkles on my hands, as it not rub off. For this I use also the brown in this for metal pencil is full of spirit gum and I stole it when at Covent Garden. It is used for applying false eyeb I have a rabbit's foot for rouge, cakes of which are there. Tightly braided strands of crêpe, in gray, whit brown, are waiting to be unraveled and used for eyeb Beards I suggest on old women with a heavy stick of paint. Scissors, of course, are there, and soft old tow Turkish and plain—sponges for applying liquid mak One dark brown from the stain, one still white fro liquid white for arms and shoulders. I never use the as I don't have to. Little *batons* of lip rouge, scark beauty, dark red for middle age, lie beside a button and nail file. A nongreasy cream for wiping off the before I begin to make-up is beside a tin of luscious creaminess, which I slather on before I go home t move all the paints and stains from my skin. Nose is in a little tin box—a treasured old soft bit with a grains worked out long since has made me many a False noses I keep in a pasteboard box, and the se pairs of specs I use for different periods.

The usual woman opera singer does not need hal equipment, but it has been my luck to play a tremen range of parts and I revel in it. If she is a soprano sh merely need everything to make her beautiful; a usually has the same and ranges from typ dark magnificence to blandness.

The barytone and will need more brains more make-up, for the sometimes swarthy vil or fair heavy fathers are apt to run into diff racial characteristics o ture.

The stage is so n You couldn't be nice i were hideous—all the ence knows that. Su I put on a make-up for I won't turn myself i beauty, because if yo believe me that is nearly so difficult sounds. I'll go throug steps of a rôle I cre last year at the world mière of Puccini's Gi Schichi.

Your Headdress Will be Seen From All Angles and Will Undoubtedly be the Most Noticed Part of Your Costume, If You Spend Time and Thought on It

THE HAPPY SPENDERS

By Edward G. Lowry

UNCLE JAMES, who lived down in Gwinnett County, which is a mighty fine county in Georgia named after old Button Gwinnett, one of the signers of the Declaration of Independence, discovered just when the Civil War was coming to an end that he didn't have enough money to go down to Augusta and buy a pair of pants and a coat, which he badly needed, but he did have enough to paper his dining room. And after the surrender he did the whole room with Confederate bills. I disclose this bit of family history to show you that this is not the first time prices have been high.

Let us take it for granted that you are interested in the present prices we have to pay for things. One of the reasons why prices are so high is because there are so many people here in this country who do not care whether they cost much or little or whether the quality of what they get is good, bad or indifferent. They do not think of the price; they just buy. They are happy spenders. The busy marts of trade and the retail stores are full of them. Some of them are women and some of them are men. Quite a little while ago I told in the SATURDAY EVENING POST about the plight of the ultimate consumer, who could not buy—though wishful—because his salary had not kept pace in the upward flight of the cost of what he had to buy. His lean pocketbook kept him on the side lines and out of the scramble of purchasers. Though the ultimate consumer was temporarily out of it, all the retail stores everywhere were full of people buying. The whole list of commodities from anchovies to zinc was in demand. In the face of the high prices, and because of them, retail buying was never more brisk and more lavish than it is just now. I went out and got some illustrations and incidents. They were easily found. One town in Connecticut, where numbers of girls were employed in a factory that during the war had been turning out war material, one hundred and fifty girls receiving a weekly wage that averaged about $15 bought fur coats at one fell swoop. They made small cash deposits when they got the coats and agreed to pay a dollar a week. At that rate it will take nearly five years to pay for one of the coats. The buyer apparently figured that it was good business, even if the girls did not complete their payments, to rent the coats at a dollar a week.

They are Making More Money Than They Ever Dreamed of Making Before and They Have Got More Money to Spend

Tangible Symbols of Prosperity

The other day a colored workman, apparently from one of the shipyards near Baltimore, came into a first-class clothery shop in the city and asked to be shown some silk shirts. The clerk showed him the cheapest silk shirts he had in stock. The price, I think, was about $4.50. The colored man scarcely looked at them. He said he wanted better ones. The clerk showed him a shirt that was priced at $9. The man said that he would take a dozen of them and counting out $108 took his parcel under his arm and walked out as if such a transaction was entirely familiar with him.

Early last spring a girl employed in one of the departments in Washington doing temporary war work bought a fur coat for $65, paying for it on the installment plan. The coat is not fully paid for yet. At the end of September she decided that she must have a nice coat for the winter. She chose one—and she only looked at the best—that was priced at $175. She bought it on the installment plan too. She made the first payment she gave the storekeeper a five-dollar Liberty Bond.

A blacksmith in a small West Virginia town came into a store of "gents' furnishing" store and said without preface, "Show me some of your ten-dollar silk shirts." The shopkeeper showed them and plenty of them. In 1913 the highest-priced shirt that he had in his place sold for three dollars. The blacksmith looked over the lot that were displayed for approval until he found ten whose color and design appealed to him. He paid down his hundred dollars and walked out with the shirts under his arm. Neither he nor the shopkeeper saw anything unusual in the transaction.

Now there are two distinct types of these happy spenders. One of them I understand and have every sympathy for. The others have a streak of yellow in them and are ashamed to say they cannot afford to buy. Here are cases. A jeweler told me this story:

"We put a silver set in the window, an old-fashioned sort of thing in one way. It was a silver pitcher, six silver goblets and a silver tray. The whole thing made a complete set. We used to sell a lot of such things, but in the last ten years they have rather gone out of fashion. People don't buy them so much as they used to. One time silver goblets and a silver pitcher were quite the thing. They were used for ice water and lemonade. To own a set was a symbol of being substantial. We had had this set in stock for some time and I put a price of $400 on it.

"The other day a woman came into the store and asked to look at it. She was very simply and plainly dressed. She did not even have on a hat, but wore a shawl over her head. That meant, of course, that her husband was a working man and she was not claiming or reaching for any social standing in the community. But the clerk got the pitcher and the goblets out of the window and showed them to her and was mighty polite about it, too, because you never can tell these days who will buy the most unexpected things. We have been surprised too often.

"The woman looked at the goblets and at the pitcher. She handled them all. I could see that she wanted them and that it was the sort of thing she had wanted a long time. But she went out of the store without buying. She said she wanted to talk to her husband first. She came back after the noon hour and her face was all lighted up.

"'My husband says I can have them,' she told the clerk, and out of her purse she took four hundred dollars and paid for them. We marked the set with her initials and sent it down to her house. I found out that her husband was a first-class riveter and was making probably twenty or thirty dollars a day—maybe more, for all I know."

Now that is the sort of extravagance I can find it in my heart to approve and understand. The woman had wanted in her house some symbol of prosperity, something that was not necessary and that gave her pleasure. A social value attached to the ownership of a silver pitcher and silver goblets that was worth more than she had to pay. She got a deep inward satisfaction out of the mere ownership of such luxuries, and if the worst came to the worst she could always sell them for a little less than she paid for them. The mere silver had a certain substantial value.

But there is another type of spender for whom nothing can be said. The other day in Chicago a doctor on foot was making his way across a downtown traffic-congested street to make a call. He was in a hurry and he was dodging between the trucks and the wagons and the motor cars. The roadway was wet and muddy. A passing truck spattered him from head to heels. He reached the curb and found that he hadn't a handkerchief to wipe the spots off his clothes. He went into a haberdashery store on the corner and asked for a handkerchief. The first one the clerk showed him he liked. It was of generous size and good texture.

The doctor said, "I might as well have a dozen of these. I am always needing handkerchiefs."

Not until the clerk handed him the parcel did he ask, "How much?"

The clerk said, "Thirty-six dollars."

"But," said the doctor, telling this story afterward, "I was game. I never said a word. I took them."

Now, to my way of thinking, he wasn't game at all. He was a plain sucker. He could not afford to pay $36 for a dozen handkerchiefs and he knew it. But he lacked the moral courage to let the clerk know it and to ask for cheaper handkerchiefs. It is that sort of thing that makes panhandlers out of Coal Oil Johnnies.

Two Dollars an Inch on Shoe Prices

A WASHINGTON, District of Columbia, shop merchant said that in 1914 he figured that about ten per cent of his trade could afford and would buy novelty shoes, meaning by novelty shoes, shoes of extreme styles. To-day he says that ninety per cent buy novelty shoes and only ten per cent conservative standard styles. Housemaids, he said, for example, think nothing of paying as much as $18 for a pair of fancy shoes. This dealer has on his shelves now a stock of shoes for women bought in 1914 with tops six inches high and with Cuban heels. He can sell them for from five to eight dollars a pair. These are what he calls conservative shoes. A novelty shoe this season is nine inches in height and costs from twelve dollars upward a pair. Every time a half inch is added to the height of a woman's shoe from one to two dollars is added to the price. But the buyers keep coming.

I sought and found in a representative city of about 200,000 people actual typical cases of what women who work are paying for their clothing. A man who is interested in the subject of promoting thrift sent one of his women employees out to discover from her friends, also working women, the actual cost of the clothes they stood in when they came downtown to work in the morning. She got the figures from eight women. Two of them were teachers, three were stenographers, one was a head stenographer and two were clerks. The result of the investigation was amazing and illuminating. Each of the women questioned told what she had paid for the things she had on at the time. These women had dressed themselves for business at a cost for an outfit ranging from $61.25 to $217.50. The girl who made the least money, a girl at a thousand

"Give Me the Next, Please! I Can't Let You Go"

TO MAYME LADD the morning had dragged through mechanically, the hours mere incidents of commerce—incidents which had necessitated the insertion of her nervous hands into various qualities of hosiery innumerable times; incidents which claimed her disinterested attention, threatening to sap her remaining strength after a sweltering night at Mrs. Winthrop's home boarding and rooming establishment.

Gwen Applebaum watched her narrowly and quizzically as she Frenched a stray strand of pale hair which had extracted itself from one of the hornlike protuberances at either ear, and chewed ruminatingly a bit of paper, at the same time irritating an elderly patron of Goldman & Co. to exasperation by her air of condescension assumed in answering an inquiry for cotton lisles at thirty-five cents the pair; murmuring as she resumed her chewing and Frenching after the patron's departure: "Don't they know they was a war?"

Her keen eyes soon returned to Mayme. Watching the drawn face with concern she said: "What ails you, Mayme? 'Tain't Peacock, is it? You'd think he owned this dump the way he struts up and down them aisles. He gits my goat. Hand me them eights—and Mayme, wait for me at State Street entrance t'-night. I got that henna Georgette $7.45, and Jim's coming out to take your little Gwen bye-bye. Cheero, kid." Then, addressing a tall spinster: "Three for a dollar-twenty-five. . . . Seconds of course, at that, deary."

The spinster retired, indignant.

"Can you beat it?" asked Gwen. "And me givin' service as is service! Go on, smile, kid! It's grub at 'leven-fifteen, and back at it. What ails ye?"

"Nothing, Gwen; nothing but this," answered Mayme, concluding with a little futile gesture. "And this and this," she went on, snapping three boxes of nine-and-a-halfs one on top of the other by way of emphasis. "There's nothing but this forever. I'm sick of seein' stockin's and thinkin' feet." She turned to hide her trembling lips and her hand shook as she slipped it through the leg of a black silk, extra size, for flaws. "Goldman's God. Anyway he's got my soul. I ain't nothin' but a stockin' box, and when I'm empty y' can find me in the dump. And that's it, Gwen; I'm nearly empty now. I'm all in and there ain't no way out. I know every day by heart and they ain't nothin' more for me to learn."

"Ain't you the morgue, though! Cut that stuff, Mayme, and tuck this under your dome: The world owes you a livin' and all you gotta do is collect. You don't find your little Gwen holdin' private Bullshevik meetin's. No, sir! It's the lively stuff for me.

"Mr. Peacock! Mr. Peacock!" Gwen's voice trailed out siren sweet. "A charge take, Mr. Peacock. O. K. it, will you? Lady's waiting. Thank you, Mr. Peacock. Here's the parcel, ma'am. Sorry to keep you waiting, ma'am."

Mr. Peacock leaned against the counter watching the departure of the charge-take customer with interest. Gwen also watched the somewhat overdeveloped figure make its way through the crowded space between footwear and ladies' undergarments, reflectively, and leaning over addressed Mr. Peacock confidentially: "Do you know who she is?"

Mr. Peacock smiled tolerantly as one might at an inquisitive child, and shook his head in the negative.

Gwen slipped her fingers about her trim belt and went on: "Well, that's Madam Martin. She's a clairvoyant—sees things, you know. I got one of her cards. Fifty cents a see. D'ye believe in fortunes?"

She presented the card to the elegant Mr. Peacock, who looked upon it as one might look upon some unknown monstrosity, and laying it down upon the counter moved toward the direction of another siren voice issuing from the neckwear department. Gwen cast a disgusted look after the vanishing figure and shrugged her well-formed shoulders in a manner that bespoke her total disregard for the fallacies of man, and turning her gaze to the clock's bland face announced that it was her relief and made ready for her departure. She tossed her sales book and black apron under the counter, stopping to slip an arm affectionately about Mayme's thin waist and whisper: "Cheer up, kid. Remember, the world owes you a livin'."

Mayme stood dully looking out upon the seething aisles, making sales mechanically when they presented themselves, but with no show of being conscious of the world about her. The little card which Mr. Peacock had left lying upon the counter gleamed whitely. Her hand idly took it up. With the same dull expression she read upon it:

MADAM M. MARTIN

CLAIRVOYANT

Advice in love and business

Why trust to luck? KNOW the future. Your fortune for 50 cents. Life readings, $2.00

Come to-day

TELLS THE PAST AND FUTURE

"Forward! Forward, please!" The voice of Mr. Peacock. "Miss Ladd, hose."

Mayme slipped the card into her blouse front and moved forward, her hands taking up a stack of boxes and setting them in order as she confronted the customer. Her expression had changed from disinterested tolerance to a semblance of interest. Her cheeks had flushed and there was a certain eagerness in her manner. The very tone of her voice had changed. Even Mr. Peacock noticed it and glanced keenly at her as he delivered to her service a rather confused gentleman who made a purchase of silk hosiery, to be charged and delivered, and who left a card with his address. Mayme copied from the card to her check: "Dr. McDermott Drew, Blank University," and stopped to read in small type: "Chair of Psychology." Thus engaged she was interrupted by the return of Gwen, who hung over her shoulder, reading with interest.

"Chair of Psychology—how do they get that way, Mayme? What's psychology?"

Mayme shrugged and laid the card upon the counter. "I dunno, Gwen, but they say psychology finds the reason of things—the wheels go round."

"Huh, Mayme, they ain't no reason fella buyin' six pairs of three-dollar blac for his ma. That's him. He does it re and there ain't no psychology in that, fer there ai reason; and if psychology's reason it can't be if ther no reason. You're wrong, kid, on psychology. It ai no reason. When you git psychology you're dip read about a girl that had it and thought she was body else and they had to tame her."

Mayme's eyes narrowed as she listened, and made check for two pairs of white lisles for a befrilled mi Gwen reached for a box she asked: "Say, Gwen, w happy?"

"Naw, just dippy, kid. I dunno though; maybe si happy. Lots of folks are that way. If they was sane hang themselves."

Goldman's ground out the remaining hours, lade confused labor; and five-thirty stopped the grind. were covered, stragglers hastened toward the entr the aisles smelled dusty and the empty spaces echoe voices and shuffling feet. Later a long file of emp moved through the exit, passed the inspector and o the sweltering heat. The pavement was scorching a tall walls gave up blasts of fury as the crowd passe the State Street entrance stood Gwen, burdened small parcel which contained the henna Georgette.

She showed no sign of the day's weariness as she to Mayme, who came uncertainly from the yawning way: "Righto! Chicago, kid! Come on. Jim's con eight, and it's us for the gay white way, eh?"

Mayme shook her head and hung in a withered n to the proffered arm.

"No, Gwen," she said, "I ain't goin'. I got an e ment."

"You're leadin' a double life, woman! No use! to the bad. Listen: I got a deviled crab from Coope a bottle of maraschino cherries. Us for a feed. Ch kid, don't boob the act."

The two made their way to the Elevated station further conversation, sank into a seat and watch dingy hot walls slip by until Thirty-third Street was Gwen led the way out from the station toward Wabas nue. Mayme followed, seeming absorbed in her th

g? Mayme nodded. "You ought to develop, deary,
es oups and groups of 'em round you. You could raise out of your vibrations and be happy. Do you know, deary, that us psychical people are that sensitive that we have to bathe ourselves to get rid of the vibrations; they settles on us like dust, you know. I feel your soul sphere is so high that you suffer. You was born in aqua. That's water, and that's what ails you. I sees the spirit of a beautiful Spanish lady. She says her name is Rosa Alvaro and she was a child of Napolyun Bonypart. She says she has watched over you since you was a child. Rosa says you must follow her to avenge her mother. She make the world acknowledge you. You will be big lady, Laughing Water say."

Mayme sat with her dull eyes staring straight into the shifty ones of Madam Martin. Something in their directness seemed to stop the prophecy and the madam led off in another direction: "Do you want to ask any questions?" she asked.

"Yes," Mayme answered. "Will I succeed?"

"Yes, yes, yes!" said the madam. "You will, deary. I see you successful, and they tell me you will meet a blond man, changin' your fortune. I sees lace and silk and gold, and sees you laughing. Any other question?"

"No." Mayme had risen, the dullness settling once more upon her.

"You should develop, deary. I ain't nothin' to what you'd be."

Madam Martin was opening the door and the hot street gleamed grayly under the street lights as Mayme descended the stone stairway and walked toward Wabash. She moved listlessly along until she reached Mrs. Winthrop's, climbed the hot stairs, opened the dusty screen, entered the dimly lit, musty, hot hall and climbed the stuffy padded stairs to the second floor. Walking the length of the long hall she opened her own door with its ridiculously large key, lighted the gas and sank into a chair and passed a shaking hand over her dripping brow.

Through the window at the end of the room came the tinny sound of a piano cart playing what sounded a little like Sicilian Rose. Mayme got up wearily and began to undress.

The card bearing Madam Martin's name fluttered to the floor. She stooped and took it up. "Know the future," she read, and smiled wanly, placing the card upon the dresser and slipping into a dull kimono and sitting before the window to listen. Presently she rose, procured a tablet and pencil, reseated herself and wrote with a swift hand upon the white surface: "The world owes you a living. All you got to do is collect."

After sitting for sometime considering the line she got up and pinned it to the frame of the looking-glass, stood for a moment silent, then flung herself across the bed and sobbed brokenly.

II

MAYME LADD boarded a street car at her usual embarking point, one of a crowd of early morning passengers who would start the sleeping heart of the city beating. She was pale and limp and her eyes betrayed sleeplessness. Her thin crêpe blouse clung to her flesh, accentuating her thin lines. She was swept about among the crowding passengers like a bit of waste, for she let them do their will, seeming not aware that she was trampled and swerved about, accepting it without interest as though it was quite to be expected and borne.

"Fare. Fare, you!" Dully she took in the fact that the conductor was addressing her. Then is when it happened.

The small head lifted, disclosing a face that was transformed. The thin lips spread in a timid smile which played over the drawn lines queerly. The eyes, half veiled by their heavy fringed lids, raised lazily to meet the scowl of the conductor.

"Don't take all day, you!" he said.

The veiled eyes opened ever so little wider and bestowed a glance which pleaded confusedly, while Mayme's lips drawled upon a purring voice: "I no spik Inglis, please." The car lurched, sending its passengers together in a mass, eliciting loud expressions of ill will in general. A burly workman rested his weight upon one of Mayme's slender feet. She winced and righted herself, repeating: "I no spik Inglis," and smiling broadly up into the conductor's face.

"Wop," he remarked, forcing a weak grin, then glowering at the offending workman and venting his ire: "Stand offen the lady's feet, you! Don't ye know how to treat a lady?" Then murmuring: "Them wops sure has eyes!

"Thoity-foist!" Kajang, kajang, kajang! The recording bell marked the toll on human baggage.

The remainder of the downtown ride was eventless. Mayme swung to a strap and watched with smoldering interest the effect of the incident. Men put down the shields of their morning papers and stared at her, some even admiringly and interestedly. Women looked kindly at her and smiled. One even made signs in pantomime offering to assist her if needed.

It was done. The first plunge was a success. Mayme's head was lifted and in her eyes shone a gleam of new brightness like a candlelight reflected in the water of a deep well. When the car stopped at Goldman's State Street entrance there emerged a young woman who walked with confidence and who turned and smiled back at the conductor as she sped toward the employees' entrance with alert feet.

The figure which passed the inspector was slightly under average height, of graceful lines though spare. It was Mayme's figure, but in some way changed. The usual air of dejection had given place to an assertive manner. The dark head was carried well up. The lazy eyes held mystery within them, and the long sweep of the black brows beneath the simple coiffure which left the forehead bare added to the face an individual charm. Even in the cavernous interior of the great store the lips still retained their queer calculating smile. Clerks descending from the locker rooms to their various departments exchanged greetings, abbreviated formalities with no real reason or value, a sort of verbal agreement with the day.

(Continued on Page 88)

IN ENEMY COUNTRY

By George Pattullo

APENWEIER, GERMANY. Here we are at last, with a place to sleep. Intended stopping in Offenburg to-night, but on arrival there round eight o'clock discovered that the town was full—not pickled, but crowded. We were told that two thousand refugees arrived in the place to-day from Alsace, part of the large numbers of persons of German extraction and sympathy who have either been expelled by the French or have left from choice or caution.

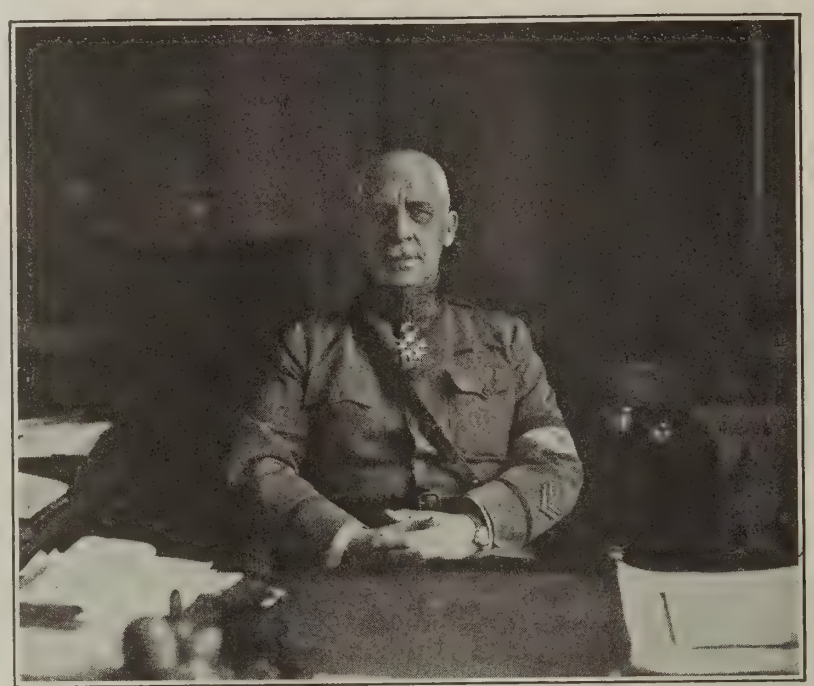
They narrate some harrowing experiences, and many of them looked rather hopeless. Probably half of their stories are lies—you have to take all refugee tales and the yarns returned prisoners tell you with plenty of salt. Nevertheless, it appears as though the French were making newly won territory safe for the future by getting rid of all doubtful elements. And so it goes—seesaw, seesaw!

A gorgeous beauty in a blue uniform and miles of gold braid is downstairs drinking beer. He stared hard at me while my companion and I were eating supper.

"A general?" I whispered.

"Works for the railroad," was the answer. In this country the railroad officials dress like Knights of Pythias on parade.

A young German has been traveling with me through force of circumstances—or design. It may be the latter, for he is pretty keen and so obliging to the stranger within the gates that I cannot understand it, unless he was assigned to watch and ascertain what I wanted by entering Germany at such a time as this.



Brigadier General George H. Harries, Head of American Section of Interallied Commission for the Repatriation of Prisoners of War in Germany

We had a fair supper of cold veal and sausage, potatoes, a salad and *Ersatz* coffee for seven marks each. At the present value of the mark that amounts to forty-two cents, but in the country districts the Germans still estimate the mark at almost its old value, it would appear; so probably the landlord thinks he is getting one dollar and seventy-five cents for each meal.

Politics and the Peace Conference

THE Germans seem to travel about a lot. Every train is crowded. In our compartment seven of us stood up for five hours. Among the passengers was a nun; a young soldier who must have guessed my nationality, for he carefully avoided looking at me; three or four farmers and their women folk; several young girls carrying small milk cans; a Swiss professor; and a Swiss drummer. All the Germans discussed politics and the peace conference. A fat old woman was bitter in her denunciation of the peace.

"Ah, yes, it is the French! I know! I know!" she cried. "They are trying to exterminate us. They need a slap in the face about every fifty years, these French!"

This sentiment met with universal approval. Sounds hopeful for the future, doesn't it? From that she progressed to home politics and in this field encountered opposition. I could not understand more than the drift of what she said, but a young matron, whose appearance suggested a comfortable position in life, hotly disagreed with her, and they argued for an hour. At last she turned to me and demanded my opinion. In vain I shook my head; she persisted, and of course as soon as I opened my mouth they knew I was a foreigner—if they hadn't guessed it before.

"What are you?" she demanded sharply.

"American."

Oo, là, là! The compartment was immediately all agog, but instead of rousing their hostility the information seemed to stir only their curiosity. They pressed round me. What was I doing there?

Luckily my knowledge of German is practically *nil*, so argument was out of the question, and they contented themselves with haranguing me instead, three or four all speaking at the same time. It speedily became apparent that they entertained the most fantastic hopes of the United States. They actually looked to us to save them from the penalty of their crime against the world; also to feed them and lend them financial aid.

The extraordinary selfishness of their viewpoint amazed me. They were so utterly unconscious of it too—but then selfishness always is oblivious. Here are the Germans looking confidently to a nation which they deliberately flouted and outraged, which they drove from a position of neutrality into war, for friendlier treatment and greater benefits than they could reasonably expect from an ally! How do they get that way?

Frankfurt-am-Main—Sometimes I have thought that certain portions of the United States had reached the limit of development. But the surface has barely been scratched. When America's possibilities are developed to the degree reached in the Fatherland, the United States ought to be able to take care of three hundred millions of people. The old prodigality must go, but there would be plenty.

Crops look splendid. And the Germans are working. If they ever heard of a forty-four-hour week in these parts they have forgotten it. We hear of strikes in the coal mines and in factories and on railroads—also of thousands of idlers who prefer to draw government aid instead of looking for jobs, but out in the rural regions they are going at it like ants, whatever the radical elemen the larger cities and industrial centers be doing.

I don't believe these people are so har for materials as they have so loudly claimed. We have seen from the car dows enormous parks of war material idle in the fields—wagons and carts, girders, pig iron, great quantities of lun However, what any observer may see country represents but a flyspeck again empire's needs; so it is possible that a d trous dearth of materials may exist.

However, I hear from every German whom I have talked that Germany enormous stocks of cotton and rubber copper, and so on, in the Americas, whic bought before the United States entere war and will import as soon as the All or Great Britain, as they always say—lif blockade. They made the majority of purchases with a view to using them afte war in their industries, knowing well could not be imported while the British held the seas. They seem to have pla far ahead, these boches, and were alread ganizing for peace competition long b fighting had ceased.

The country has not a run-down loo all. They have kept everything fairly up to the mark—a wonderful achiever considering the drain their war efforts have put upon them. Germany sugge land all set to go and only waiting fo word.

When I crossed the border from Basel they warne to carry plenty of food or I should starve to death bought a bag of sausage and bread and veal sandwi also a few cakes of chocolate. They wouldn't permit carry more than fifty francs—Swiss—out of the cou and I changed my money into marks. Had about a sand marks in each pocket of my trousers and coat vest, for the rate of exchange was three marks for a franc. The Swiss, by the way, hold their money worth more than American and will give less thar francs for a dollar, though in France we are getting francs at this writing.

May Day in Old Heidelberg

LUCKY thing I brought along my own chow, for they discontinued dining cars on the railroads and I sl have had nothing to eat from early morning until la night. A fellow passenger, who spoke English, struck conversation en route to Heidelberg and growing confi tial confessed that he had smuggled in a lot of choc and other contraband stuff in a false cover on his suit The admission made me suspicious. Unless he had w to draw me out along the same line, why should a p stranger tell me something might land him in jail? I su that petty smuggling is fairly eral between Germany and co uous neutral countries.

The guards at the frontie not strike me as being very s Their examination of my lug and papers was cursory—the with the other travelers. One they did search thoroughly, ever. Probably they had re for being dubious of him.

Spent a day in Fribourg. U tunately it rained, but I m round town just the same. Fi university town; students e where, all wearing caps. Foo games advertised, with ridicul small prices of admission—s eleven cents in our money. were putting on opera also.

They told me that the ur sities sent practically all thei dents of military age and younger to the war, which no cessitates completion of a def education. Patriotism among was at fever heat. To-day are bitter and unbeaten in s I have listened to some hair-ra denunciations of the British an French—they laid off the U

H Heidelberg s eminded me of at n eminent psylost of Princeton e emarked to me bord a steamer.

Te Germans are ngrous because y'e sentimental-," e said. "Sentintists are always ngrous, because y' so apt to run d. You ought to see grip of Germans id he ruins of Heibeg Castle on a onght night—you gh to hear their ch!'" If all sentintists are danger- t bulk of Americans ought to be locked up, for when cores to boiling sentimentality they take the cake.

The were general expectations that May Day would ngerious disturbances throughout Germany, but it m to have passed quietly. What demonstrations took ce ere in marked contrast to the occurrences in Paris, er evere street fighting went on, requiring the employnt f a considerable force of troops.

Falsified Census Figures

HD seen in a newspaper that trouble was anticipated in Heidelberg, where the Socialists had arranged a parade. e erman newspapers make a practice of playing up y a er city as hotbeds of unrest and Bolshevism to give e impression in Allied countries that the peace conditions an plunging the Fatherland into anarchy. But I have tic that no general uprising of the Spartacides ever cur One day it will be Berlin; next week it will be in una; following that, another city far removed. The tbreaks come in rotation; they never seem to flare up nultaneously, as revolutionary movements usually do.

I wnt to get a look at the demonstration in Heidelberg. wa about the tamest affair of its kind it has ever been y fortune to witness.

Th marched with banners and the flag of the new oubic; also a band. Then they gathered in the prinal quare and several orators harangued them from a leoy.

No isorder; no incendiary speeches. It was raining and e case crowd waited patiently in the drizzle while a bull-necked gentleman denounced the blockade, "which is killing our women and children by thousands." He also demanded the immediate return of the German prisoners of war held by the Allies. The demonstrators applauded now and again, but without much show of feeling.

The Germans have scant sympathy for quack political nostrums. Also they require something more substantial from leaders than a repertoire of catch phrases.

The demonstration broke up in good order—or, rather, it simply melted away. It's hard to sustain fervor with the rain dripping sadly on your Sunday clothes and your stomach crying out that it is supper time. So these stout Socialists of Heidelberg drifted off homeward. The crisis of May Day was over.

Every American who has been in Germany since the Armistice is struck by the large numbers of able-bodied men. The Fatherland's losses must have been appalling in the war, and therefore it comes as a surprise to see the high proportion of men of military age in the populations of the smaller cities and towns. France can show nothing to compare with it—poor broken France.

The explanation probably lies in a lie. Evidence accumulates that the Germans deliberately falsified their census returns to deceive other European countries as to their population. Our military experts used to speculate whence came the new reserves Germany was able to put into the field after staggering losses, and our Intelligence Section finally concluded from the information available that Germany's population exceeded by ten millions the figures of the census.

In all the towns occupied by the American Army of Occupation we noticed this discrepancy between official figures and the apparent size of the populations. Places which were credited with four thousand inhabitants were quite as large as communities of six thousand in the United States.

Frankfort, Goethe's birthplace, is a remarkably fine city.

"This place is very American," I remarked to the hotel porter.

He grinned and led me on a trip over the hotel. The elevator was of American manufacture; the chair in the barber shop bore on it, "St. Louis, U. S. A."; and "that telephone and these electric lights, they are all American inventions," he said.

In my wanderings I have seen many articles of unmistakable American manufacture—such as typewriters and office furniture—which bore the stamp of German make. A manufacturer I met in Paris had warned me what to expect.

"They buy lots of things from us, then put their own labels on them and resell them as German articles," he asserted.

At the outbreak of the war Frankfort was one of the principal railroad centers for mobilization of troops on the Western Front. Train after train ran through the city at ten-minute intervals for fifty days, carrying the German hordes which were to fall upon France. Not one accident; never a blockade of traffic, hardly a hitch in handling those millions. And all the while the populace cheering itself hoarse with patriotism and hopes of speedy victory.

"No, they are not cheering now," remarked a merchant sadly as I was buying some collars.

One of the Riots in Front of a Berlin Printing House

A Fairy Tale of Revolution

LEIPZIG. Met with the first signs of hostility from Germans to-day. First a police official bawled me out when I went to register.

"*Was machen Sie hier?*" he kept bellowing, and told me the place for Americans was back in America, and not in Germany. He was a little, straight, alert, cocky fellow with a pompadour—thoroughly representative of the old order—the sort who will strut and lord it over everybody when they have the whip hand, but are humble enough if you are in a position to strike back. He would doubtless be obsequious were he in the occupied area, or even close to it.

Three hoodlums ran after my cab as I was driving out to see the awesome statue in commemoration of the Battle of Leipzig, yelling "Get out," and "*Schweinhund!*" As the driver did not appear to be worried, I judged this was a reception committee and waved acknowledgment. Moreover, they did nothing but shout.

They tell me that Leipzig is a hotbed of Spartacism and was recently in the hands of the revolutionists. They said the same thing in Frankfort.

"But everything seems to be moving along well. Business about as usual and most of the people working?"

"Yes," assented my informant. "But all the working people have arms in their homes. They will behave as long as the authorities do what they want. But if they don't do what they want—pist!" And he waved his hands.

Sounds like a fine fairy tale. Imagine real revolutionists in possession of arms and the power to enforce their will leaving the authorities against whom they had risen still in control!

In spite of this talk that the city is sitting on a volcano which may erupt at any moment, they are holding their celebrated *Messe*, an exhibition to which manufacturers from all over Europe were wont to send their products in peacetime. The fair is a big success this year, with greatly increased exhibits and attendance.

Both here and in Frankfort they had many idle men early in the year. Now the situation has improved and the majority of idlers are those who remain so from choice. Was surprised to learn that many large corporations in Germany continue to pay their employees despite the closing of their plants owing to the lack of raw materials. This has been done for self and national preservation—to head off revolution. How long can they keep it up?

Every afternoon the tea room of this hotel is crowded with well-dressed men and women. They seem to have plenty of money to spend and deny themselves nothing, even at the low purchasing power of the mark. The theaters are open, the opera is on and there are plenty of movie places running to capacity. Heaven forbid that one should judge German tastes by German movies, for what a verdict against America could be brought in that way! But they are inexpressibly boring—morbid, often indecent—given to portraying disease.

These people amuse themselves, though at this very moment their fate as a nation hangs in the balance in Paris. It is the way of life. All you hold dear may be lying dead in the next room, but supper must be got and eaten.

Berlin. Putting up at the Adlon, remarkable just now for the heterogeneous character of its guests. We've got

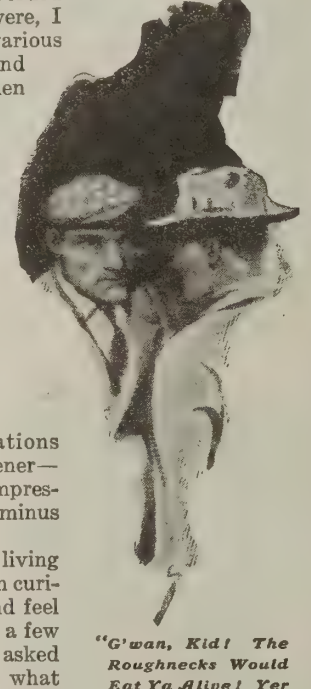
THE FIGHTING MACHINE

By John D. Swain

ILLUSTRATED BY FRANK STICK

THE recent death of Barnabas Pritchard was practically unnoticed outside of scientific circles. Some thirty of the societies of which he was a member engrossed resolutions, but as Professor Pritchard left no relatives these carefully worded and framed testimonials were, I suppose, hung for a time in various lecture halls, laboratories and committee rooms, and then disappeared to wherever it is such useless lumber goes.



"G'wan, Kid! The Roughnecks Would Eat Ya Alive! Yer No Scrapper"

Pritchard was a great physicist, biologist, chemist and inventor. Many of his contrivances are known to millions of users; but his patents being invariably sold outright few associate his name with any of them. At the time of his death he was at work on a soundless phonograph, whose vibrations were to convey to the listener—to speak loosely—the impression of music or speech, minus the noise.

I find myself the only living being familiar with a certain curious phase of his career, and feel it to be my duty to answer a few of the questions so often asked as to the facts concerning what was known as the Fighting Machine. Pritchard's name was never connected with his activities as a pugilist, and I am aware of the difficulty of persuading his venerable associates in abstruse research that he ever appeared in the squared circle, clad in tights, and wearing five-ounce mitts. Yet he did so, many times!

His motive was the simplest possible. He needed funds, being at the time a poor student paying his way through Harvard. We roomed together, and I alone shared his secret.

Barnabas Pritchard possessed only one natural qualification for the fighting game; and this one would not have led anyone but a scientist to suspect that he could succeed in it. I refer to his remarkable reaction time, as developed during the course in experimental psychology.

Everybody knows the simple apparatus that indicates the speed with which muscle answers mind. An impression is registered by one or more of the senses; the brain decides what action to take in the matter, and by the nervous system moves the necessary muscles, which move the limbs.

For example: Seated with a score of fellow pupils about a long table, each with a finger resting on a registering key, the instructor turned on a series of colored incandescents. When, let us say, a green light followed a blue one each student was to press the key. Invariably Pritchard beat his fellows.

There were of course other and much more elaborate contrivances, demanding more complicated mental processes, more perfect coördination. The result was the same. Pritchard outthought any other man in the class by an average of about one-sixteenth of a second.

In great athletes, as he observed, this ability was almost invariably present. It is found in the sprinter, who beats the pistol; in the tennis champion, who outthinks his opponent and instinctively, as we say, finds himself properly placed to receive his return; and superlatively in the skilled boxer, who meets the lightninglike moves of his assailant without conscious thought or without even being able to tell why he did what he did.

Apart, then, from what athletes call speed Pritchard had no equipment for the ring; nor indeed for any violent sport. He was merely a healthy normal young man, without unusual muscular development on the one hand or physical defect on the other. He never touched alcohol, and I can recall seeing him use tobacco but half a dozen times. One of these occasions, however, was so curious that I shall have occasion to refer to it again.

Of course though nobody ever heard of Barnabas Pritchard as a contender for welterweight honors many thousands of devotees followed the Fighting Machine, from gallery and ringside seats or in the sporting columns. He was the sensation of the day during the brief time he fought. He retired for as elemental a reason as that which led him to the unsavory and uncongenial ring. He patented and sold a few simple inventions, which brought him more money with an outlay of less energy.

He was the coldest man I have ever known; the applause of the pit never moved him in the slightest degree. He was unsocial, phlegmatic, almost inhuman.

You may have seen his Washtub Cultural Course advertised. That alone made him independently rich. There is no occasion when the brain is more vacant, more receptive, the mental pores wider open than when the body is engaged in some monotonous task. A mechanic who all day long performs over and over a few simple manipulations with a lever or a wheel, a washwoman over her tub, a slop-shop tailor, do not have to think about the work in hand. It is done automatically.

Pritchard devised a simple phonographic course for such people, embracing clearly enunciated world's masterpieces, poetry, great musical compositions, practical lectures on elementary history, economics, politics, astronomy. The records were copyrighted, sold at a fine profit, yet at a cost within the means of everyone, and when bought only half a dozen at a time entailed no single great outlay. Upon completing the course a simple written examination was given, and an ornately engrossed diploma sent free. There are thousands of them hanging on sitting-room walls, over cobblers' benches, in dingy sweatshops.

There were other inventions, too many to enumerate, all of them profitable. Pritchard invented one of the first sanitary drinking fountains, the application of the flashlight to the barrel of a pistol, and a simple wooden screw to keep the drop leaves of folding tables always trued up, since he had observed that after a few months these leaves invariably sag. It is Pritchard the Fighting Machine, in the days before his inventive genius had begun to function, that I know most about.

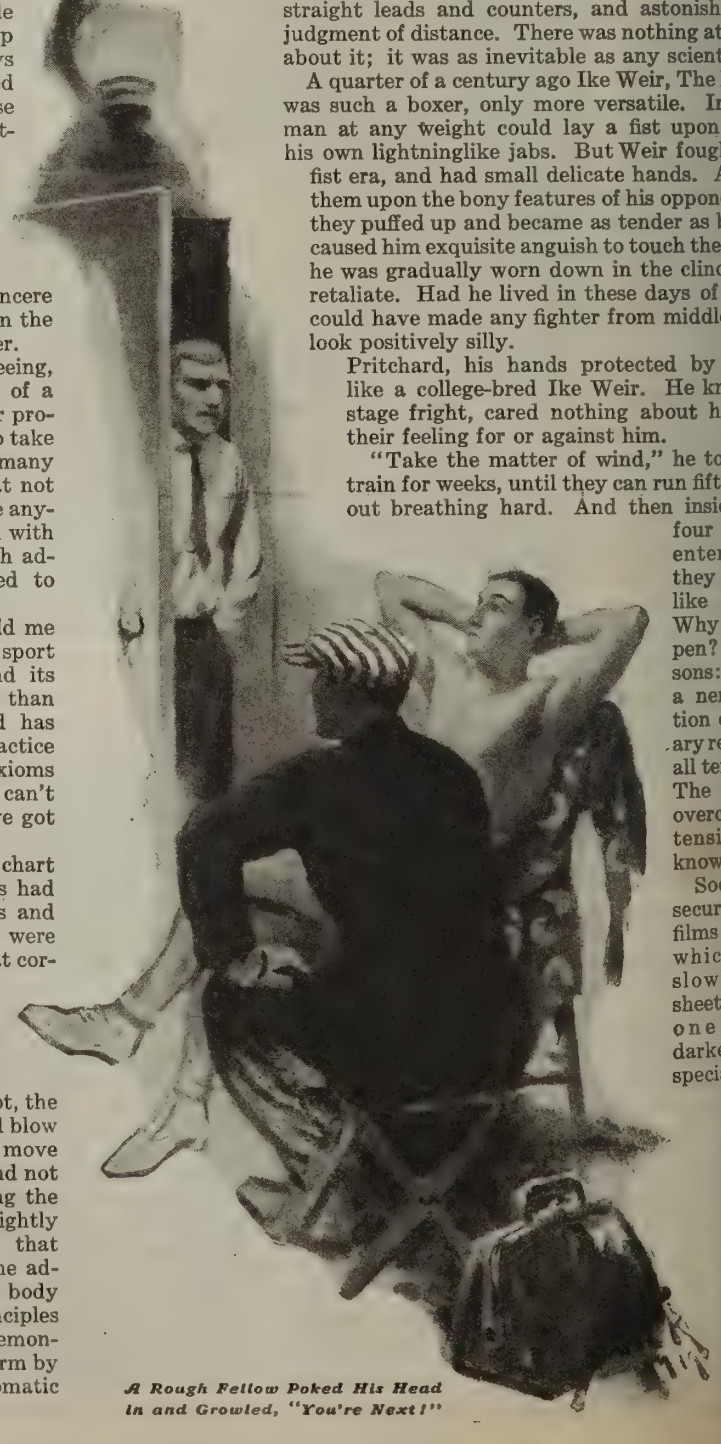
There are at least a dozen trainers who claim they taught him all he knew. They are sincere about it too; and all wrong. In the true sense he never had a trainer.

When he decided—after seeing, quite by chance, a photo film of a championship fight—to go in for professional boxing he proceeded to take half a dozen lessons from as many instructors. I may remark that not one of them considered him to be anything but a joke. He observed with scientific accuracy their uncouth admonitions, and then proceeded to draw up a chart.

"It stands to reason," he told me one night in our room, "that a sport which had its terminology and its traditions well established more than two thousand years ago, and has been in more or less constant practice ever since, must have certain axioms upon which I can safely rely. I can't bother to investigate these; I've got to have some starting point."

He found upon completing his chart that each of his six instructors had his own method, his prejudices and idiosyncrasies. So far apart were they that at first any attempt at correlation seemed hopeless; but Pritchard was able to point out that there were a few basic things upon which they all agreed.

That the weight should be chiefly balanced on the right foot, the left advanced; that when a hard blow is struck the whole body must move simultaneously with the arm and not slightly in advance, telegraphing the intention, as they say—nor slightly after, taking away the force; that the impact is doubled when the adversary is countered as his own body comes in; a few of these principles which Pritchard was able to demonstrate by his chart, and to confirm by further investigations, were axiomatic and unassailable.



A Rough Fellow Poked His Head in and Growled, "You're Next!"

There was a secondary list of rules on which p
cally every professional agreed, and which Prit
also accepted, holding that the exceptions repres
the personal peculiarity of an individual. To ex
what I mean, he found one man who instead of
ing his opponent in the eyes gazed steadily at his feet
promptly rejected this freakish idea, though pointin
to me that it possessed a certain psychological r
since it tended to distract the other fellow's eye.

Having, then, satisfied himself as to the basic prin
of the art of pugilism, he engaged the best man he
find, and insisted that he be perfected in them. For
he permitted himself to do nothing in his short lesso
practice the straight left for the head, with the p
guard. Later he took up footwork, learning ho
move round like a dancer without allowing his f
cross or get tangled up. He never bothered much
swings or hooks, uppercuts or chops.

"It's this way," he explained, drawing rapidly
blackboard with a crumb of chalk: "A straight line
shortest distance between two points; and that hol
time as well as distance."

None of his instructors could evade his straigh
once he had mastered it; his reaction time held j
good on the gymnasium floor as in the laboratory. A
by a sixteenth of a second or so he could beat them
lead. And for the same reason he could avoid thei
blows. Possessing an intelligence far superior to th
his teachers he could read their intentions better in
eyes, and the response of body to will was more p

What I wish to make clear is that he was never a s
boxer, since he had no repertoire of blows. He ha

it ard projected the round over again, at normal d; "cranking sixteen," as the camera men say. Seen th fatal blow was so swift that it was difficult to w and it appeared that the attempted parry started lt eously. He repeated it over and over, until my we able to detect the slight difference in starting.

Yo see, it is all a matter of reaction time," he said. he lighting Machine never trained at all. He merely l h usual sane normal life. Always a cold tub on rising, simple and wholesome food in moderation, long walks, and on rainy days half an hour on the gym apparatus. He had followed this routine ever since he matriculated.

His work with boxing instructors was soon completed, because he had, as he said, learned all they could teach him. He never tried to show off before them, and the warmest praise any of them ever vouchsafed was, "Kid, ya got a swell left! If ya had a punch and the old scrappin' instinct I could make a good prelim fighter of ya!"

Therefore, when he approached one of them, a hanger-on at the Armory Club, and requested his influence in getting him a chance in one of the next preliminaries, Muggsy O'Brien gasped in amazed protest:

"G'wan, kid! Them roughnecks would eat ya alive! You've got a nice left, an' handles yer feet swell; but yer no scrapper. Take it from me, an' lay off o' that stuff!"

Pritchard pleasantly insisted, and offered a ten-dollar bill as an inducement to O'Brien to get him matched.

As the Butcher Tore in He Was Met With the Stiffest Punch He Had Yet Received, Square in His Left Eye, With the Added Force of His Own Onrush to Drive it Home

The retired pug was a good-hearted lad, and hated to do it; but the ten dollars intrigued him. It was a shame to take the money, and he loudly and even profanely said so; but he saw the Armory officials, and not without some difficulty arranged to have the unknown put on against Kid Flaherty, who had cleaned up the Boston waterfront and won half a dozen three-round preliminaries already, and was regarded as a comer.

Barnabas Pritchard had borrowed money to take his boxing lessons, and also to rent the fight films. Had the charitable old gentleman who took an interest in his education dreamed of the manner in which his funds had been spent it is probable that he would have sought to have the student interned in a sanitarium.

Now a preliminary bout is a pretty small item in a boxing bill. The loser gets nothing, and the winner rarely more than ten or fifteen dollars, even in a big club. In smaller places he may get as little as five dollars, and take a cruel mauling as well.

I was not present at the début of my friend. Though I thought I knew him pretty intimately, and admired his mentality, to tell the truth I had taken not the slightest stock in his theories about fighting. I even begged him to give up the idea, and went so far as to offer to loan him enough money to relieve him from all financial embarrassment while pursuing his studies.

When he smilingly refused and took the Harvard Square car for Boston in company with the pessimistic O'Brien I sat alone in our room dreading the hour when a clanging ambulance would draw up before our dormitory and the battered remains of my chum would be tenderly borne in.

Instead he ran blithely up the stairs shortly before midnight, and when he entered the room there was not so much as a scratch upon him.

"I stayed on to see the other bouts," he explained. "I got only ten dollars—but it is merely an introduction anyhow. Later on I shall earn plenty!"

He refused to discuss his own bout, pleading the need of sleep because of an early lecture next day; and I was obliged to wait for the morning papers.

He was dismissed with a few lines stating that "The Fighting Machine, as he calls himself, a pale, studious-looking lad, proved too shifty for Kid Flaherty and made that promising North Ender look like a beginner. The Machine had no punch, but won easily on points."

"They were an amazingly clumsy lot," Pritchard commented while we were breakfasting at a little one-arm lunch.

Considering that the bill had included one New England champion and a pair of coming New York lightweights who were hot after the national title I thought this rather harsh criticism.

"By rule of thumb," Pritchard said between mouthfuls of toast, "I estimated that in the main bout alone there was over seven hundred feet of unnecessary ducking and parrying. Their heads were flat, like reptiles', and their reaction times pathetically slow. And the air! Fifteen minutes of it is enough to poison any man. Stirred the foul mess up by waving unsanitary towels. Whisky, onions, tobacco, perspiration, moth balls and bay rum, with a trace of a number of other ingredients! Gasoline, for instance."

About his own work I could not get him to say much of anything.

"It was tiresome. Not so interesting as the punching bag. That at least can be counted on to come back on a straight line, and as fast as you hit it, deducting friction and air pressure. Flaherty was helpless as a child. Strong and willing—but a clumsy moron."

I sat at the ringside the following week, and the week after that, and not being in any sense a fight fan or an expert I can only say that Pritchard moved about the ring with a sort of deadly calm, wasting not an ounce of effort, his attention never distracted by the catcalls and drunken songs from the audience or the devices of his opponents.

He looked weak and pallid under the powerful arc light, as compared with his brawny, hairy-chested, sunburned adversaries; but during all the three rounds his left licked out like the tongue of an anteater, stinging them on nose, eye, mouth, wherever he chose; and their hearty efforts seemed to graze his own face and body each time, but left no mark. He was careful to avoid clinches, in which rough work or a stealthy foul might count against him.

Illness in my family called me home for a couple of months that year, and I forgot about Barnabas Pritchard. On my return I learned that he had won a dozen more preliminaries on points, and had suffered nothing worse than two or three jolts delivered in breakaways.

He occupied quite a little space in the sporting columns now, but could not be said to have earned any popularity with the fraternity of fighters or the audiences which followed them. He despised them, and took no pains to conceal it. He never repaired to any of the sporting bars after a fight, to buy or accept drinks. He refused to be interviewed or to accept a manager or even a handler. He was called a tight wad, and a Willie boy.

Forty Years of a Diplomat's Lif

XXI

By BARON ROSEN

Former Ambassador From Russia to the United States

THOUGH I had no longer any connection with our Far Eastern affairs after my recall from Tokio in 1899 and could not have any expectation of ever being called upon to return to Japan, I could not help following with deep interest the course of events in that part of the world. The beginning of the year 1902 had been marked by an event the importance of which from the point of view of our interests in the Far East could not possibly be overrated—I mean the conclusion of the Anglo-Japanese alliance. It meant the realization of a political combination the possibility and extremely dangerous character of which I had pointed out in the memorandum I presented to our government in March, 1897, and which elementary prudence should have caused us to have tried to forestall by every means in our power. That such means had been within our reach can hardly be gainsaid.

However, we not only failed to avail ourselves of such means, when literally thrust upon us, but by our nonacceptance of the perfectly fair and advantageous offer made to us by the Japanese Government in March, 1898, we actually did our best to push Japan into the arms of Great Britain. As to the latter power, instead of seeking a friendly understanding which might have eliminated all causes of mutual rivalry and friction in regard to Asiatic affairs, an understanding which presumably would have been welcomed by the British Government at a time when Great Britain had her hands full with the Boer War, we chose to join the ranks of those powers whose senseless and futile animosity found expression in gestures correspondingly ineffectual but nevertheless sorely irritating to a proud and powerful nation.

It is but natural to ask oneself the question: How was it possible that our government should have failed to take advantage of such a manifestly favorable conjuncture of circumstances? To attribute this failure exclusively to the incapacity, the want of foresight or the irresolution of those in whose hands was placed the direction of Russia's foreign policy would not be fair. We must never lose sight of the fact that the government of Russia, though nominally an autocracy, or rather an autocratic bureaucracy, was very far indeed from being invested with that omnipotence which one is wont to associate with the idea of autocracy or tsarism. Besides being—in the words of one of our wittiest statesmen—"a powerless federation of independent departments whose relations to each other were not always friendly or even neutral and sometimes partaking of the character of almost open hostility," our government had to reckon with what was considered to be public opinion.

This element of public opinion was, so to speak, a newcomer in our polity. Up to the end of the reign of the Emperor Nicholas I—that is to say, up to the middle of last century—what is commonly understood by the term "public opinion" could hardly be said to have had any existence, let alone influence, in Russia. Every government under the sun, even the most tyrannical, will, of course, always have in its own interest to take into account to some extent what it supposes to be national or popular feeling as far as the drift of such a necessarily vague feeling is capable of being ascertained.

So it also had been in Russia till about the middle of last century, when the educated classes, the so-called intelligentzia, began to acquire some weight in matters of foreign policy which enabled it—mainly through the growing influence of the press and of the more enlightened part of the vast army of the bureaucracy, itself part and parcel of the intelligentzia—to create the illusion of a "public opinion" of Russia, though constituting itself but an infinitesimally thin layer of high-grade civilization floating on the surface of an ocean of more or less uncultured and politically quite inarticulate masses b This public opinion on the whole favored a for or let us call it imperialistic, policy; the grea jority only in regard to the Near East, in conn with the "Great Slav Cause" and stantinople and the Straits, at the time being opposed to all political a tures in the Far East, whereas th treme jingoistic wing of the intellige represented by the most widely nationalist organ of the press, the N Vremia, was wedded to an aggres anti-Japanese policy, as I had oc to convince myself when at our Leg in Tokio in the summer or autur 1898 I received the visit of a repre tive of that paper—a gentleman signed his articles with the pseudon "Sigma," under which name he ha quired quite a notoriety in Japan- blandly told me that he considered he, or rather his paper, was rende most meritorious service to our co by exciting public opinion in F against Japan.

is intriguers who were toadying on the then all-
minister. I also feel bound to state that, having
my life in the service of my country abroad, I
d taken any interest in the manifold stories cur-
ut intricate intrigues which were said to surround
e and therefore was totally ignorant of the fact—
I was to learn only much later when I had arrived
at Tokio on my second mission to Japan—that a
lique, having the ear of the sovereign, was engaged
ggle for power against Witte on the battle ground
ar Eastern question and that the position I had
had served to some extent to bring water to the
e clique hostile to him. Of course the knowledge
ter fact, if it had come to me in time, would not have
deterred me from expressing my views with the same unreserved directness, and I mention this circumstance only to show that if Witte at the time suspected me, as seems to have been the case, of having been a party to the intrigues directed against him, he did me a grievous injustice, of which, I think, he became convinced himself when we came to know each other better during the Portsmouth conferences.

The Manchurian question, as far as Russia was concerned, is covered by the general question whether territorial expansion practiced by a strong power at the cost of a weaker one is morally justifiable or not, a question which cannot be answered offhand, nor can it be answered categorically either in one sense or in the other. This is a question which can only be dealt with specifically in each case on its own merits.

The Crowded Waterfront at Chemulpo, Korea's Principal Seaport

What, for instance, has been the history of the phenomenal growth of these United States but the tale of the gradual expansion of the original thirteen states until they cover now the best part of the North American continent, an expansion achieved originally at the cost of the gradual extermination of the savage aborigines or by treaties with friendly powers, such as the Louisiana Purchase and the purchase of Alaska, or else by conquest, such as the acquisition of Texas, New Mexico and California? But who is there to deny that this expansion, howsoever achieved, has been an unmitigated blessing to all the parts of the continent absorbed into this great Union? Then again, take the British Empire, whose colossal expansion includes now some eight hundred thousand more square miles absorbed as a result of the world war, if the British Prime Minister's recent speech in the House of Commons is correctly reported by the newspapers. But blind prejudice alone, or such international hatred as has been bred by the world war, could deny that absorption in the confines of the British Empire has proved an inestimable boon to the countries and peoples brought under British rule and has powerfully advanced their material and moral welfare. Such of them as India and the former Boer republics have shown their appreciation of the privilege of living under the shelter of the Union Jack by their eagerness in joining the British colonies who were rushing with such enthusiastic unanimity and patriotism to the assistance of their mother country in the hour of her need.

In this connection I remember a conversation I had some thirty years ago on board a Pacific Mail steamer with a fellow passenger who happened to be the head of one of the important German firms at Hong-Kong.

He had been holding forth on the subject of the German colonial policy—of which he was a convinced opponent—and he wound up his discourse by saying that if by any chance Hong-Kong ever became a German colony he would the very next day emigrate and set up his tent in another British one.

Or could there be found anyone willing to deny that the French expansion in Africa and Asia has been of incalculable benefit to the native populations brought under France's sway and has converted such barbaric states as Algeria and Tunis into highly prosperous civilized communities?

When we come now to Russia we find that the colossal dimensions which the Russian Empire had reached before its downfall and suicide through the war and the revolution had been the result of the gradual expansion of its original nucleus, the comparatively small and insignificant Grand Duchy of Moscow. In the course of three centuries this expansion had been going on in three directions—to the west, the south and the east—at the cost of weaker neighbors or savage aborigines, as in Siberia.

The question of Russia's expansion to the west, of its causes, its result and its justification, is a subject which I shall have to treat in another chapter of these reminiscences.

As to our expansion to the south, the expulsion of the Turks from South Russia and the Crimea, of which little need be said, and as to the acquisition of Transcaucasia and such parts of what is known as Armenia which had been under Persian and Turkish rule, every fair-minded judge of historical developments will, I think, agree that the populations thereby brought under Russia's sway have derived from it all the incalculable benefits which a stable and powerful government, guaranteeing law and order and security of life and property, was able to confer on populations torn by perennial sanguinary race feuds or on helpless victims of Persian or Turkish tyranny.

To the beneficent effects of the extension of Russian dominion over Transcaucasia I am in a position to testify

THE CROSS PUL

By Hal G. Evarts

ILLUSTRATED BY FRANK B. HOFFMAN

THOSE who believed in the famous legend of the lost herd are gone and few men know the truth. History records the fact that when the last big herd of bison moved into the North on the spring migration it never returned. The hide hunters watched in vain for the southward movement in the fall, for it never came. The big gray buffalo wolves, too, had suddenly vanished from the plains. Strange rumors were heard about this mysterious evaporation of the shaggy horde—rumors which gave birth to the fable of the lost herd that would some day come grazing down out of the North.

Not only in legend was it lost, but lost in truth. Rather than once more run the gantlet of the guns along the Arkansas and the Platte the last herd departed from the customs of untold centuries and sought refuge in the hills. It chose the Land of Many Rivers in which to make its final stand.

The snow that falls in one small tangled mass of peaks and valleys feeds the headwaters of a score of rivers. The Wind River and the Grey Bull; the Gibbon and the Fire Hole; the Shoshone, Yellowstone, Green River and the Buffalo Fork of the Snake—each finds its source in one wild whirl of interlacing tributary streams.

Here in the Big Horns the Tetons and the Sunlight Peaks the herd scattered in small bands through the high mountain valleys in one last effort to exist. The bleached white skulls that dot the green meadows on the head reaches of Thoroughfare River and the basins of the Upper Yellowstone mark the spots where they died in the deep snow of the high country while the buffalo hunters of Dodge still waited for the fabled return of the lost herd.

Stockmen grazed their cows on the old range of the bison, pushing farther to the west each year until their cows fed on the first roll of the hills; farther north until they came to a spot where Nature, as if exhausted from piling wonder upon wonder with lavish hand, had left the bad lands of the Little Big Horn and the desolate foothills of the Grey Bull nestled under the very shadow of the Rainbow Peaks.

Then great wolves appeared, coming down out of the hills and taking heavy toll of the cows on the ranges; wolves of a kind the stockmen had never known—larger even than those of Siberia. Ranchers spoke of a new and savage breed. They distorted the word "logo"—the Shoshone Indian name for the bald-face grizzly—to "lobo," meaning grizzly wolf.

The ranchmen organized a war of extermination against this savage lobo tribe, placing an ever-increasing bounty on each one until an even hundred dollars was posted as the price on every scalp.

This created a new occupation for men, and soon the professional wolfer was scouring the brakes of the bad lands with poison, trap and gun for the last few survivors of a vanishing breed.

Old Dad Kinney was a wolfer and he had reason to believe that a single family of lobos were denned somewhere within forty miles of his spring camp. He knew, too, that Clark Moran was in the bad lands on the same quest.

Between them was an agreement whereby Kinney felt there was no possible way for him to lose. If either of them found the den Moran was to have one pup alive and Kinney was to draw the bounty on the rest.

A Sound Floated Up to Him as He Trotted Along a Crest and He Moved to the Edge and Looked Down

Moran seemed more interested in some lost herd that had died fifty years before than in bounty rewards—in some theory that this was not a new species, but an almost forgotten kind that had followed the lost herd into the hills and had now come back to the edge of its old range; that the rare lobo of the present was the buffalo gray of the past.

As Moran and Kinney lay rolled in their blankets ten miles apart, they formed two points of a human triangle of which Ash Brent, far up the slope of the hills, formed the third.

In common with most men who live their lives in the open, Kinney and Moran had come to draw a certain sense of companionship from the night sounds of the hills. But there is one note to which a man may listen for a thousand nights and on the next he will inevitably nestle a trifle closer into his bed roll when it sounds and feel the same chilly prickling of the skin along his spine. The far-off note of a lobo always carries an added ache of loneliness to the man in the open.

A lone lobo raised his voice, and as if connected by a mysterious current the three widely scattered men each felt the same sudden tensing of the muscles and tingling of the skin. In the reaction only did they differ.

While Kinney calculated a probable profit, Brent cursed fretfully at the wolf shiver which shook him at the sound, and Moran smiled over a pet theory of his own. He knew that any beast when angry or alarmed bristles his back hair into a roach along the spine. He felt that this was a heritage handed down to him through a thousand generations from the time when his primitive ancestors, garbed in hair instead of cloth, had bristled with a mixture of rage and fear at each call of their enemy, the wolf; that this sprouting of goose flesh between his own shoulder blades at the lobo call was but the age-old instinct to bristle the hair where hair had ceased to grow.

As always, the dread cry was followed by a vast, tense quiet, as if each dweller of the open hesitated to shatter the silence with his own voice and thus draw particular attention to himself. This was no paltry wolf—no straggler from the north, but an old dog lobo on his home range.

There was an answering call, and both Kinney and Moran raised on their elbows to catch the sound better.

The starting note was a hoarse imitation of her

"There goes the rest of your family, pup," said I
"You're an orphan now."

Kinney, leading two pack horses from which dang
remains of the rest of the wolf family, was just diss
ing in the direction of his camp, and the last den of l
the bad lands had fallen victims to the ranchmen's
war.

The father was a mighty lobo, almost a packload
horse; the mother was a half-breed, crossed bet
coyote and a dog. The rifled den had yielded a freal
of pups, as if each clashing strain of ancestry had str
to perpetuate its own. One was a fluffy yellow coyo
two a strange mixture of wolf and dog, and the fourt
blue-gray Scotch sheep dog with shaggy face and
splash on the breast. The one which Moran held b
his knees was pure lobo from tip to tip. Only in his
coyote eyes did a trace of off-color strain crop out.

"You're the prize pup of the lot," said Moran.
about it, old fellow, are you going to make friend
me?"

For answer the lobo pup writhed round in his wra
and made one swift slash at his captor's face.

"You're a game little youngster and as quic
flash," said Moran. "That's what I'll call you—
Come on, Flash, let's be pals."

For more than an hour Moran tried to win the
dence of the lobo pup, rubbing and scratching his ne
head behind the ears where the white fangs could no
his hand, and talking to him in an even, friendly t

Tl glare gradually died from his eyes, the lips settled w back and covered the fangs, and Moran knew then t e had won.

"Come on, Flash, let's go home," he said.

II

RMON was away and for two days Moran had the rest ranger's cabin on Spring Creek to himself. He n the time trying to wean Flash from his early training duce him to eat by tempting him with morsels of sl meat.

Tl first day the pup shrank away from it; on the next s fed it hungrily, but still refused to eat. He craved it h very fiber of his being, but there was one thing he He must never touch one bite of meat other than t which he himself had freshly killed—and after once vig that he must return to it no more.

his few hunts with his parents they had pulled down ei beef each trip. At first he had seen no reason why ws not allowed to go near other food, but gradually he l en many things which explained it all.

Or night the wind had borne the scent of stale meat, l ith the odor had come a clanking, grinding sound. oote leaped at the end of a chain and ground his teeth i t the steel thing that clamped his foot.

Later they had passed near a steer his father had killed two nights before. Two coyotes lay there dead and bloated, while a third ran in crazy circles and went into a series of horrible convulsions with a rattling cough in his throat before he died. He knew then that it was unsafe even to return to previous kills of their own.

All over the range the wolf family had found tempting bits of meat and fat. Flash had not known that each rider was furnished with strychnine to poison the carcass of every dead steer on the range; that they cut off those bits of meat, filled them with the deadly crystals and scattered them about for the coyotes to pick up.

His parents had known—and a wicked snap had warned the pups away from every such tempting morsel that they found. One of his sisters had broken over and swallowed just one tiny scrap, flattening her ears in anticipation of feeling her mother's teeth at this infraction of the rules. Instead, agony had clutched her from within. The rest of them had watched her die as the mad coyote had.

From these things Flash had come to know that the scent of cold meat meant not food, but death, and that only warm, quivering flesh was safe to eat.

Once more the blood of his ancestors exerted their cross currents in his puppy heart. Hunger and the doglike affection he was beginning to feel for Moran spurred the desire to take the food; wolf suspicion of man and the things he had seen of their works against his kind combined with his dread of the cold-meat scent to hold him back. He compromised by licking the meat Moran held out to him, but refusing to take it in his mouth. Evening of the second day found Moran still patiently tempting him to eat.

A horse clattered into the yard and Ash Brent dismounted before the house. His horse flinched nervously away from him as he stooped to loosen the cinch and Brent jerked savagely on the reins until blood trickled from the ends of the heavy spade bit.

He strode to the door and stood looking in—a big man with a too-small head set low upon wide shoulders. His light eyebrows showed up white against the baked red of his skin and from beneath them a pair of cold blue eyes peered bleakly forth upon the world and saw no good therein.

"Hello, Moran! I want to see Harmon," he said by way of greeting. "Is he anywhere round?"

"I'm looking for him any minute," said Moran. "Come in, Brent. Come in and wait."

The cordiality of the invitation masked Moran's vast dislike of this man—this maltreater of horses and cows. Moran was but a visitor at the ranger's, and Brent's business was with his host, so he could not reveal his real feeling for the man.

But toleration passed for friendship with Brent. Even in this new country peopled by hard men no one of them accorded him a warmer regard than that—and he paid them back in kind.

Rough men whose own hands were by no means light with horses shook their heads, disgusted by each new tale that was heard on the Grey Bull of Brent's frenzied atrocity when roused by some nervous or refractory horse.

"What have you drug in now?" Brent asked as he entered, jerking his thumb at the wolf pup.

"That's my new dog," said Moran. "What do you think of him?"

Brent's mouth expanded in a mirthless grin.

"He's a sulky little brute," he said. "Can't you make him eat?"

"That's intelligence," Moran explained. "His early training taught him not to gulp down everything he sees. I've only had him a day or two. He'll come out of it as soon as confidence in me overcomes that wolf caution of his."

As the two men talked the wolf pup noted their difference of tone. Then, too, they gave off a different scent. Moran's was friendly and quieting, while Brent radiated an atmosphere of cold-blooded cruelty toward every living thing. His only ascendancy over beasts would be the rule of fear.

Flash was already beginning to classify the world of men. Those who do not know speak of animal instinct

"There Goes the Rest of Your Family, Pup," Said Moran. "You're an Orphan Now"

THE LEAGUE OF NOTIONS

IX

By Holworthy Hall

ILLUSTRATED BY CHARLES D. MITCHELL

SUGDEN, at his desk in the club, which was growing so rapidly that it now occupied three big floors, reported five hundred members instead of four hundred; and a thousand associates; and a gross business that had once run close to $100,000 a week.

"But, of course, the overhead's increasing all the time," said Sugden, "and clerical help costs like fury. And the directors insist on my hiring a lot of people I don't want. You made a bull, John, when you framed your by-laws so I couldn't spend more than a fixed amount for overhead without their permission. They don't give me permission unless I let 'em name the personnel. And I ordered twelve more telephones a month ago, and they haven't come yet, so our delivery cost's getting atrocious."

"Well, what'll the rebate be?"

"Twenty-four per cent, I hoped. But the directors mauled me into some bum contracts, and your friend Kellogg's doing some plans for an eighth-of-a-million-dollar building, and the directors are talking about a building fund, so they may have to cut the actual rebate down to ten."

Mr. Bangs flinched.

"What's the architect's fee, Walter?"

"Oh, he volunteered to cut his rate for the club, but they thought it wasn't fair. Regular fee—five per cent."

Mr. Bangs bottled up his rage, which accrued to him partly because Kellogg was going to earn a fat fee, partly because the club had refused to accept a cut, and principally because Henry hadn't said anything about the windfall—but he reflected that, at the worst, conditions were hardly better than they used to be. He moodily resolved to delay as long as possible the employment of the cook, but Sylvia barely glanced up from her accounts.

"This is funny, Bruno."

"What is?"

"Why, this bunch of bills. Did Mr. Sugden say what our rebate would be? Because if it isn't at least twenty per cent, it's going to cost us just as much a month to live as it did before. And it was taking all your income for us to get along then."

"That's the car," said Mr. Bangs shortly.

"Yes, but I'm not counting the car. And besides, we bought it on what we figured we'd save! And it looks to me as though we'd bought an awful lot of other things out of what we saved. And it was only a hundred and fifty dollars anyway."

Mr. Bangs gritted his teeth. "Still, it's a lot better than being robbed by the retailers. I see another butcher shop closed today. By George! I'm glad of it! With thirty thousand people in Wellington we didn't need half as many shops as we had. The ones that are left will have a decent chance to make some money. Have a good time to-day, honey?"

"Not very."

"Play bridge?"

She looked at him sidewise. "The bridge club's disbanded, Bruno."

"Disbanded!"

Sylvia nodded. "Announced this morning. Oh, Bruno, I'm not going to be silly about it, but honestly it hurts. I didn't mean to tell you at all. Only—only I had a—I heard directly—they're going to play bridge up there just the same, without me. Four tables instead of three, and Ruth and Helen are going. And it's on account of you and Mr. Sugden. The Bowkers are saying that if it hadn't been for your dragging him in we'd been ten thousand dollars better off."

Mr. Bangs went white. Sylvia had never seen him so angry as this, and he frightened her. Yet his voice, when he spoke, was as gentle as though he were calming a child:

"That's coöperation, Sylvia. You and I plan to cut down the high cost of living, get an organization—and what happens? Everybody wants a private graft; everybody wants to use it for some infernal ambition or other. They get to bickering about things that haven't anything to do with the purpose of the club—and then they blame us. The bosses do—the people we know can't. I've been thinking it over. You can't always blame the other fellow for charging you high prices. I haven't noticed any car conductors or telephone operators getting rich. And my stenographer's got the right spirit. Her union wanted more money, but she says she feels she's got a bigger obligation to me, because her living expenses haven't really anything to do with what she's worth to me. They're as much up against it as we are. And simply to get together on coöperative buying isn't a universal panacea either; not unless you work and save. It doesn't settle this thing from our side any more than the unions settle it on the other side. It's a hold-up game. And the bosses get fat whether the members do or not. They can say what they like about us—I'm through."

"Through?" she faltered.

Mr. Bangs gestured forcibly. "Oh, don't get excited about it. We may have to give up the car and the cook both, but what's that in a lifetime?" He took up the restless pacing of the floor that was so familiar to her. "They're going to kill it, Sylvia; they're going to kill it. And it would have worked if they'd only stuck to their knitting and behaved themselves. Oh, when I say I'm through I don't mean that I'm going to kick up any riot. It isn't worth it. I'm not even going to resign. I'm going to work twice as hard and save twice as hard, and I'm going to regard it as my job to try to make the club see daylight. And the main thing they've got to see is that the community isn't just us—it's everybody. And to let the club get a strangle hold on the community is just as bad as to have the unions get it. Worse, maybe. We what we're doing. And the very first thing is politics and society out of it—and that mean Bowkers. This bridge business is Bowker politic it's the most rottenly managed politics I ever hea They figure I'm no use to them—I'm on the other s the fence—and Henry and Rupert are of use. Henr Rupert control some votes. I always knew the Bo were stupid, but this is the worst stupidness I ever h I'll get 'em for that!"

Sylvia started. "You're aiming pretty high, B aren't you?"

"Yes, but I've got to." He thought a moment. too bad we can't count on either the Eversons o Kelloggs, but Bowker's got 'em right where he want he's thrown business their way, and he's done it to d of others who didn't like him before that. And he's a us because he can blame Sugden and me for anythin hasn't been right so far. They think we're the agi against 'em; and they're dead right. Thank the Lor wouldn't let me be an officer! Now, how on earth a going to get 'em out?"

"What's more important, Bruno, is, when can I h cook?"

"Deary, I'm afraid ——"

"But, Bruno, I'm going to have one! If every else can strike I can too. You promised one to me, an going to have her."

"But I can't afford it, Sylvia! And I'm sat with ——"

"Then we can sell the car," she said. "I've stoo just as long as I can. I don't care if you are satisfie not! I'll do housework, and I'll look after baby, bu not a cook and I never was, and that isn't what you m me for, and I won't cook! Now!"

Despairingly he pleaded with her and eventually promised. He would try to see his way clear, withi weeks, to hire a cook, provided that Sylvia would u best efforts in the meantime to help him put in moti

For the force that would eject the Bowkers.

As a matter of fact stronger forces than Mr. Bangs ever summon were already working on that same pro For one thing, rentals on Main Street were slowly down; and club members who owned real estate were astonish discover rentals decr faster than rebates acc For another t the membe had become heavy, and overhead was leaping sky Finally, the was doing so business that vidual orde gan to go as it was virtu impossible t deliveries on and some men claimed that was a differen the quality.

To cap th max, the reta association vided itself several sections began to use s egy.

The grocery tion, for illustra had a small w house of its and began bu coöperatively distributing as fore; and the sections followe example. The prices of almost e common comm dropped appreci Not so mysterio four hundred of associate membe the reform c ceased to deal wit

"If You are Satisfied, I'm Not! I'm Not a Cook and I Never Was, and That isn't What You Married Me for, and I Won't Cook!"

Ad reason enough," said Sugden. "We gave 'em
r cent off, and made a profit. Now that the retailers
buying in bulk they can sell about as cheap as we can.
y Overhead. Why, man, you fellows in the club
ıt twenty-five-per-cent rebate on the gross business,
'vou? And you want it with all sorts of queer games
ıon too. The directors won't let me alone a second.
ll ın individual can take five per cent on his turnover
ake a fat living on it. A mighty fat one. Because
e hire and fire as he pleases, and keep down his over-
d o suit himself. And if they'd got together before
wouldn't have been any need of your club, would
re And one curious factor of it is that this reduction
e il prices doesn't make you any more money but it
e my commission down out of sight. Think it over."
Ve haven't had a strike in Wellington in two months,
uh," said Mr. Bangs.
Tue. People saved money by trading here. And
n that saving and the normal little wage advances
'e had they were fairly well satisfied. And besides,
ıl reason there haven't been any strikes isn't the
-it's because everybody's been waiting to see if the
ould really do anything. But the associates don't
s any more. And their dropping out cuts into our
i pretty deep. Last quarter, you see, we gave them
r cent, and then we made about fourteen on their
ıss."
Mr Bangs drew a long breath. "Walter, I'm going
s you a straight question: How long do you think
ub will keep going after you've gone?"
C, less than a year," said Sugden soberly.
Mr Bangs' jaw sagged. "Is that your honest
in?"
ulen became very serious. "John, these
ers almost never work among people like you.
yalmost always work among working people.
y Because you won't ever stick together.
er I first came here, and somebody asked if a
ke this was practicable, I said yes, if you
kogether. But you don't. You won't. You
s inted off. You play horse with it. Some of
vnt to use it like a raft to float you into
tis. Some of you are trying to make
ıe out of it direct. You won't let it alone.
I you know why the unions are so strong?
ecause no matter what happens they
wenough to stick together. You've
ırd a sort of union, to strike against high
e And then you let your leaders honey-
ıht with side issues. The retailers' asso-
ie will beat the club to a finish. Why? Because
sck to one idea—making a living for its members.
n that over. They won't put up a big building,
n ıembers cashing in on land, on architecture and
stiction, and all the odds and ends. They won't
er fancy jobs for their friends. They'll buy where
y ın buy the cheapest. They'll watch the pennies.
Ad this club hasn't actually saved you people a
e–not really saved it. Why not? Because you've all
ıt the savings—every one of you. Why, John, half
siness is in luxuries. And I checked up last quarter,
fund that in the week after the rebate checks went
tere was a perfect flood of orders for nonessential
g That isn't saving—it's robbing Peter to pay Paul.
u'e done some of it yourself, old man. I know you
e I'm hoping sometime to find a crowd that will
kogether and play the game, but this isn't it.
E the way, Bowker's asked me when the quarterly
tg comes, and I step out, to recommend his son-in-law
r job. I've looked the boy up. He's getting three
usnd a year now. That's part of the answer. I sup-
e ou'll all sit back and let him get away with it, and
n onder why the club's losing efficiency."
Mr Bangs nodded soberly. "You don't have to sell me
t. What would you think of the ethics of my going out
ibry Bowker? Would it injure the club too much?"
ulen grinned and reached into a pigeonhole of his
k. "This is confidential. But since the retailers began
ou as a group, and lowered their prices, these resig-
ios of active members have come in. Twenty-seven.
e layor's one of 'em—he's seen he can't afford to stay
ar longer. It would kill him politically. I rather
ib if they're talking about it, though, outside. Does
t ll you anything?"
Mr Bangs was horrified.
Et—the retailers said they wouldn't trade with any-
ly who ——"
Q, rubbish! That was just for a feeler. They won't
o their own noses. And I'll show you something else.
re a list of clerks and stenos, and so on, I've had to hire
le pressure of one director or another—forty-two of 'em.
e lpt that for a purpose. Just now I can't object too
en ously, because I'm tied up on a contract, and I don't
nto wreck anything, but—notice their salaries? And
e ot one more juicy bit for you. I've been looking
a hance to tell you. That land we bought. Owned by
w ork parties. Yes; two cousins of Bowker's. I had
u h that there was a family party somewhere, so I chased down the title and then the owners. They bought it eighteen months ago for twelve thousand. So when I say you'll last a year, that's liberal. And one last word, whether you decide to do anything about this or not, the retailers are looking for a good lawyer. In view of all the circumstances I don't know why you shouldn't represent them. Do you?"

x

HELEN KELLOGG, whose husband was busily engaged with his drafting, came over with heightened color to talk to Sylvia.

"My dear! The most outrageous thing you ever heard of in all your life!

The Voice Drifted to Them Through the Portal. "Well," Mr. Bowker Was Saying, "There's a Good Dinner Thrown Away on a Couple of Ingrates"

They say Mr. Bowker made a big personal profit on that land deal! I think that's awful, don't you? And there's a terrible squabble going on in the board of directors. It's some of the men against Mrs. Bowker. Somebody said if she couldn't leave her society manner at home they couldn't afford to waste any more time over it. They said if she couldn't remember she was a chairman and not a hostess they'd give it up. And the service is getting something dreadful, isn't it?"

Sylvia agreed disarmingly. "You can't get everything for nothing, you know."

"What puzzles me the most, though, is why we aren't saving any money. I've just been over my bills. Have you?"

Sylvia smiled unseen. "I notice you've got a maid finally."

"Oh, yes. Henry thought we were saving so much we could afford that. But between ourselves, dear, I'm beginning to wonder if the club isn't going to the dogs."

"It was a mistake to plan to build, I think."

"Oh, do you? I don't," said Helen ingenuously. "I think that part of it was perfectly sensible. But all this talk about buying the Herald, and that sort of thing—well, personally, I don't think it's anything but a waste of good money."

Sylvia preferred to be diplomatic about this, but the signs of a club revolution were as clear to her as the signs of her own revolution if she didn't get a cook. It was Mrs. Director Johnson—her husband owned the Herald—who led the agitation to let the building contract—if let to Mr. Councilor Hendrix—only on a cost plus five per cent basis. Mrs. Johnson thought that for Councilor Hendrix to make his usual ten per cent profit on that contract would be positively unfair.

Mrs. Hendrix, however, was quick to point out that Mrs. Johnson's niece, who had married the son of Mrs. Director Vaughn, was assistant secretary of the club, with a salary exactly twice what she had ever earned before. Beyond that, Mr. Vaughn was the local coal magnate, and the club had given him a practical monopoly.

But Mrs. Vaughn minimized this, and retorted that it was very funny that Councilor Hendrix had always been anti-Bowker until Mrs. Hendrix had wormed her way into Mrs. Bowker's bridge club, and it was funnier yet that Councilor Hendrix had got the building contract without competition.

So it always goes when there are more pickers than there are plums.

But all these eruptive disturbances were as nothing when the news leaked out that Mr. Bangs had accepted a retainer from the retailers' association. The council frothed with it, and the directorate boiled, and Mrs. Bowker herself came regally to cross-examine Sylvia and get the facts. To her mystified annoyance Sylvia appeared to see something very ludicrous in the situation. Sylvia and Mr. Bangs had debated lengthily over the expenditure of that retainer, and they had come to a very excellent understanding. For the first time in her married life Sylvia could feel that she was earning her allowance, and not merely parasiting it; and Mr. Bangs could feel that Sylvia was managing the home exactly as she wanted to, and that it was her own fault if she weren't.

"Why, he's a lawyer," said Sylvia, "and that's his regular business, and why shouldn't he have clients?"

"But, my dear girl," said Mrs. Bowker in her most elevated tone, "the purposes of the retailers' association are diametrically opposed to ours!"

"Oh, not at all. They want to cut down costs too."

"Surely, my dear, surely—but suppose there should come a time when Mr. Bangs should have to decide between his client and his club—suppose it came to a question between his fees as a lawyer and his duty to our organization—how could he decide between them? Isn't it rather a risk, my dear? Isn't it rather a risk to allow a personal gain to creep into this?"

Sylvia's laugh was unaffected. "Why, Mrs. Bowker, as far as I can judge, John's about the only man in the club who hasn't made any money out of it; and when this is something entirely separate ——"

"You're quite mistaken, Sylvia."

"Am I? Suppose Mr. Hendrix has to decide between doing us the cheapest possible building, and a little more extravagant one—when he gets a percentage of the cost, no matter what it is?

"Suppose Mr. Johnson has to decide between a low price and a high price for the Herald, when he knows the directors voted to buy it, and put a limit price on it before they spoke to him? Is he going to offer to take less than he knows they'll pay? I can't see that John's risking more than anybody else."

Mrs. Bowker played her last card. "But for several years, my dear, Mr. Bangs has had practically no practice. He's managed estates. He hasn't been either a counselor or a pleader. And for him to take, as his very first client, the retailers' association ——"

"John and I have made up our minds," said Sylvia a trifle more recessively, "that the best way for me to live is for John to do a little more work and for me to spend a little less money. And I don't honestly think, Mrs. Bowker, that it concerns much of anybody but John and me."

Representatives of Labor?

ONE salient fact stares out in the testimony of the steel-strike leaders before the Senatorial Committee like a searchlight from a black river: These men did not know their own business—from their own standpoint.

Did they know figures about the wages in the steel industry? They did not—and said so. Did they know facts about the actual hours that men worked in the steel industry? They did not. Did they know what percentage of employees—if any—were being physically crushed by overwork, as they freely claimed? They did not.

On the other hand, they knew and talked at length on a variety of things which were dark and sonorous in the telling but which proved on investigation either not to be so or to have nothing whatever to do with their case.

Leave aside the question of right or wrong in the steel strike. Look at it entirely from the standpoint of the striker who wants to win something. What kind of men are these, to hire to represent you and present your case?

The method and character of the representation of labor is much discussed these days. It should be. It is a central point of interest for all parties concerned. But labor for its own self-interest cannot want leaders who have shown the country at large—on their own testimony—that they do not know all the facts about the business under discussion.

The Foundations of Society

G. K. CHESTERTON, discussing Germany's debonair light-mindedness about her treaty engagements at the opening of the war, pointed out that her course of action was worse than war; it was a destruction of civilization. Because one corner stone of man's living in civilized society is the knowledge that the other man's promise will be fulfilled.

Now, we all remember still what we said of Germany; and what we said of her by instinct is exactly what Chesterton remarked of her in somewhat different language. The words we use for the man or woman who deliberately breaks faith are the old short, sharp, ugly words that lie far down at the bottom of the well of speech. "God hates a liar" is an expression of emotion which has been in common use now off and on for fifty to a hundred thousand years. For one of the earliest of our discoveries was that man cannot live in a world populated by liars, because in brief time there would not be any world to live in.
